Distress from Want of Employment.

Ordered,—[*Wednesday, 13th February* 1895]:—That a Select Committee be appointed to consider and report as to—(*a*) The extent to which Distress, arising from Want of Employment, prevails; (*b*) The powers at present possessed by Local or Central Authorities in relation to such cases; (*c*) Any steps which may be taken, whether by changes in Legislation or Administration, to deal with the evils arising therefrom; and (*d*) To make an Interim Report to the House at the earliest possible date on what steps should be taken either by Parliament, the Departments of State, or Local Authorities, to meet the Distress this Winter.

Ordered,—[*Friday, 15th February* 1895]:—That the Select Committee do consist of Twenty-five Members.

Committee nominated of—

Mr. Acland.
Mr. Bartley.
Mr. Benn.
Mr. Billson.
Mr. Thomas Henry Bolton.
Mr. Boscawen.
Mr. Bousfield.
Mr. John Burns.
Mr. Campbell-Bannerman.
Mr. Crean.
Mr. Keir-Hardie.
Mr. Heneage.
Mr. Wootton Isaacson.
Mr. Jackson.
Mr. Lawrence.
Mr. Logan.
Mr. Mather.
Mr. Pickersgill.
Mr. David Randell.
Mr. Renshaw.
Mr. Round.
Mr. Whiteley.
Mr. John Wilson (*Durham*).
Mr. John Wilson (*Govan*).
Mr. Stuart-Wortley.

That the Committee have power to send for Persons, Papers, and Records.

That Seven be the Quorum of the Committee.

Ordered,—[*Tuesday, 12th March* 1895]:—That Mr. Griffith-Boscawen be discharged from the Select Committee on Distress from Want of Employment.

That Mr. Heywood Johnstone be added to the Committee.

THIRD REPORT.

THE SELECT COMMITTEE appointed to consider and Report as to—

(*a*) The extent to which Distress, arising from want of Employment, prevails;

(*b*) The powers at present possessed by Local or Central Authorities in relation to such cases;

(*c*) Any steps which may be taken, whether by changes in Legislation or Administration, to deal with the evils arising therefrom; and

(*d*) To make an Interim Report to the House at the earliest possible Date on what steps should be taken either by Parliament, the Departments of State, or Local Authorities, to meet the Distress this Winter;

Have made further progress in the Matters to them referred; and have agreed to the following THIRD REPORT:—

YOUR Committee regret that owing to the sudden Dissolution of Parliament now impending they are unable to do more than present an incomplete Report on the evidence they have had before them.

They consider, however, that it is desirable to communicate the substance of the replies received in answer to the letter addressed to the Mayors of towns and Chairmen of District Councils in England and Wales, referred to in paragraph 2 of the First Report, in so far as they concern the nature and extent of prevailing distress.

This may be summed up by saying that out of 1,574 replies received from districts representing 26,591,394 persons: in 920 localities, representing a population of 10,291,600 persons, there was, at the time, no exceptional distress; in 475 localities, with a population of 11,792,527 persons, there was exceptional distress, due solely to the severity of the winter; and in 179 localities, with a population of 4,507,267, there was, apart from the want of employment due to the weather, an exceptional want of employment owing to slackness of trade, depression of agriculture, or to particular local or industrial causes. A more complete analysis of these figures will be found in an Appendix published with this Report, together with a special statement of the localities affected by slackness of trade, &c.

Your Committee have also heard the evidence of several witnesses since the issue of their First Report, among whom may be mentioned:—

(*a.*) Mr. *H. Llewellyn Smith*, representing the Labour Department of the Board of Trade;

Mr. *Charles Booth*, merchant, who has conducted an inquiry into the social and industrial condition of the people of London;

with reference to the general question of "Unemployment."

(*b.*) Representatives of the following vestries and Poor Law Unions in London:—

1. Camberwell,
2. Islington,
3. Battersea,
4. Wandsworth,
5. St. Olave's (Southwark),
6. St. George's-in-the-East,
7. Whitechapel,

with reference to the methods of conducting, and the desirability of initiating, relief works for the unemployed, and to the present powers of guardians and vestries in respect of these matters.

(*c.*) Representatives of other large towns in which the question of the unemployed was keenly felt, namely, Glasgow, Liverpool, and Swansea.

(*d.*) Representatives of institutions and societies particularly interested in the treatment of those suffering from want of employment, namely :—

The Salvation Army.
The Church Army.
The Charity Organization Society.
The Mansion House Unemployed Committee.

Special attention was also directed to :—

1. *The Tin-plate Trade*, as it appeared from the Returns mentioned above that this was the most clearly-defined instance of a large industry suffering from trade depression.
2. *The Building Trade*, as representative of a large industry directly affected by any severity in the weather.

Further, several representative members of the working classes in touch with those who were the chief sufferers during the severe weather in the early part of 1895, were summoned before your Committee and asked to give their opinions as to the best methods of preventing or remedying the evils that arise from want of employment.

Your Committee also took evidence on the management and working of Dutch and Belgian labour colonies, and considered a project for the institution of farm colonies in England, for the preparation of which their special thanks are due to one of their colleagues, Mr. W. Mather, M.P.

For the reason already stated, it is impossible for your Committee to discuss in this Report the various preventive and remedial measures that have been suggested to them.

Having regard, however, to the second clause of their reference, whereby they are instructed to report as to—

(*b*) The powers at present possessed by local or central authorities in relation to the relief of distress,

and having noticed the uncertainty that seemed to be felt by some members of boards of guardians who appeared before them as to the exact nature of their powers, they have obtained—

A Statement from the Local Government Board setting forth these powers in full, with additional notes as to—

(*a*) Out-relief to aged poor.
(*b*) Relief on loan, and its recovery.
(*c*) Employment of the poor by Board of Guardians for wages.
(*d*) Expedition of loan sanctions.
(*e*) Labour tests for able-bodied out-door poor.
(*f*) Powers of Boards of Guardians as regards making grants in aid of work that will anticipate pauperism, and acceptance of sums to be used by them in the anticipation of pauperism.

This statement will be found in the Appendix, No. 30, to this Report.

Your Committee desire to point out that there exist statutory powers under which Boards of Guardians might set poor persons to work at wages, but that such powers cannot be used until rules are made by the Local Government Board.

Your Committee recommend that the Local Government Board should consider the application of such powers, and make rules for the use of Boards of Guardians in relation thereto.

Further,

Further, your Committee have received various complaints from some of the witnesses as to the effect of the existing law which deprives of his franchise rights any recipient of Poor Law relief. It is represented to your Committee that this provision frequently prevents deserving men who have been, through no fault of their own, temporarily thrown out of work, from seeking any relief, thus inflicting great hardship upon them. Your Committee believe that this provision may have a salutary effect as a check upon ordinary Poor Law claims, and may thus foster independence of character and prevent unnecessary burden falling on the rates. But in cases of exceptional distress they do not see why it should be difficult to discriminate between the deserving man forced to become dependent upon public aid and the ordinary claimant for parish relief. Your Committee, therefore, are of opinion that it would be both humane and wise to exempt the former class from the disability as regards the franchise, whether local or Parliamentary.

Again, sufficient evidence having been brought before your Committee of the desirability of encouraging continuity of employment, they are of opinion that orders for indoor repair work and for new work, where feasible, should be given out by public bodies with reference to what are now the slack months, generally January and February, in so far as this course is consistent with efficiency of execution and with reasonable economy.

A statement of the works that could be promoted by local authorities, with reference to this recommendation, has been prepared by the Local Government Board, and is herewith appended. (*See* Appendix, No. 31.)

As regards London, your Committee beg to make the following recommendation:—

> The Guardians of any Metropolitan Union should be empowered, with the sanction of the London County Council, to agree with any Sanitary Authority within their Union that, in consideration of the latter employing such number of persons and during such period as may be agreed upon, the Guardians will make a contribution to the Sanitary Authority of an amount not exceeding one-half of the cost incurred in the employment of such persons, such contribution to be a charge on the Metropolitan Common Poor Fund.

With the exception of these particular points, which may affect the condition of matters if next winter presents a renewal of the distress which prevailed this year, and on which therefore the Committee have felt it right to make recommendations which may be of immediate use, the whole of this great subject cannot now, as has been already said, be adequately considered. The schemes especially which have been laid before the Committee by Mr. Hills, Mr. Mather, the Salvation Army, the Church Army, and others, and which will be found in the Appendix to this Report, all of them evincing great care and thought in elaboration, as well as the most philanthropic and generous spirit and intention, must be left without the full consideration they deserve. But your Committee would express the hope that in another Parliament the House will renew this inquiry in order that the Legislature may be guided to the adoption of some palliative for the evils to which many of the best and most industrious among our people are at present exposed.

Your Committee have not been able to consider the special circumstances of Scotland or Ireland, or to make any recommendation affecting them.

2 *July* 1895.

PROCEEDINGS OF THE COMMITTEE.

Friday, 15*th March* 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. John Burns.
Mr. Billson.
Mr. Bousfield.
Mr. Logan.
Mr. Pickersgill.
Mr. Keir-Hardie.
Mr. Bartley.
Mr. Jackson.
Mr. Stuart-Wortley.
Mr. Mather.
Mr. John Wilson (*Govan*).
Mr. Benn.

In the absence of the Chairman, Mr. ACLAND took the Chair.

Mr. *William Tagg* and Mr. *William F. Dewy* were examined.

The Committee deliberated.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 19*th March* 1895.

MEMBERS PRESENT:

Mr. CAMPBELL-BANNERMAN in the Chair.

Mr. Jackson.
Mr. John Burns.
Mr. Billson.
Mr. Lawrence.
Mr. Logan.
Mr. Pickersgill.
Mr. David Randell.
Mr. Keir-Hardie.
Mr. Heywood Johnstone.
Mr. John Wilson (*Durham*).
Mr. Whiteley.
Mr. Renshaw.
Mr. Stuart-Wortley.
Mr. Mather.
Mr. John Wilson (*Govan*).
Mr. Benn.
Mr. Round.

In the absence of the Chairman, Mr. JACKSON and Mr. STUART-WORTLEY took the Chair.

The Rev. *C. T. Griffith* and Mr. *W. H. Edwards* were examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 22*nd March* 1895.

MEMBERS PRESENT:

Mr. CAMPBELL-BANNERMAN in the Chair.

Mr. John Wilson (*Durham*).
Mr. Wootton Isaacson.
Mr. Bartley.
Mr. Whiteley.
Mr. Jackson.
Mr. Stuart-Wortley.
Mr. John Wilson (*Govan*).
Mr. Acland.
Mr. John Burns.
Mr. Billson.
Mr. Pickersgill.
Mr. David Randell.
Mr. Heywood Johnstone.
Mr. Keir-Hardie.
Mr. Thomas Henry Bolton.
Mr. Crean.
Mr. Round.
Mr. Renshaw.

Mr. *H. Llewellyn Smith* was examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 26*th March* 1895.

MEMBERS PRESENT:

Mr. CAMPBELL-BANNERMAN in the Chair.

Mr. John Wilson (*Durham*).	Mr. Billson.
Mr. Bartley.	Mr. Pickersgill.
Mr. Renshaw.	Mr. Heywood Johnstone.
Mr. Mather.	Mr. Stuart-Wortley.
Mr. John Wilson (*Govan*).	Mr. Round.
Mr. Acland.	Mr. Whiteley.
Mr. John Burns.	

Mr. *H. Llewellyn Smith* was further examined.

Mr. *John Thomas Pilditch* was examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 29*th March* 1895.

MEMBERS PRESENT:

Mr. CAMPBELL-BANNERMAN in the Chair.

Mr. Bartley.	Mr. Lawrence.
Mr. Whiteley.	Mr. Logan.
Mr. Stuart-Wortley.	Mr. David Randell.
Mr. John Wilson (*Govan*).	Mr. Heywood Johnstone.
Mr. John Burns.	Mr. Pickersgill.
Mr. Billson.	Mr. Acland.

Mr. *Alfred N. Henderson* and Mr. *Thomas Mackay* were examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 2*nd April* 1895.

MEMBERS PRESENT:

Mr. CAMPBELL-BANNERMAN in the Chair.

Mr. John Wilson (*Durham*).	Mr. John Burns.
Mr. Wootton Isaacson.	Mr. Lawrence.
Mr. Thomas Henry Bolton.	Mr. Logan.
Mr. Bartley.	Mr. Pickersgill.
Mr. Whiteley.	Mr. Benn.
Mr. Renshaw.	Mr. Heywood Johnstone.
Mr. Mather.	Mr. Billson.
Mr. John Wilson (*Govan*).	Mr. Crean.
Mr. Acland.	Mr. Stuart-Wortley.

In the absence of the Chairman, Mr. ACLAND took the Chair.

Mr. *Thomas Mackay* further examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 5th April 1895.

MEMBERS PRESENT:

Mr. CAMPBELL-BANNERMAN in the Chair.

Mr. Wootton Isaacson.
Mr. Bartley.
Mr. Whiteley.
Mr. Renshaw.
Mr. Stuart-Wortley.
Mr. John Wilson (*Govan*).
Mr. Acland.
Mr. John Burns.
Mr. Billson.
Mr. Lawrence.
Mr. Logan.
Mr. Pickersgill.
Mr. David Randell.
Mr. Keir-Hardie.
Mr. Heywood Johnstone.
Mr. Round.

Mr. *Thomas Mackay* further examined.

Mr. *Duncan Milligan*, F.R.A.S., Mr. *Augustus Shand*, and Mr. *E. Pitts Fenton* were examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 9th April 1895.

MEMBERS PRESENT:

Mr. CAMPBELL-BANNERMAN in the Chair.

Mr. John Wilson (*Durham*).
Mr. Wootton Isaacson.
Mr. Bartley.
Mr. Whiteley.
Mr. Stuart-Wortley.
Mr. Mather.
Mr. Lawrence.
Mr. Logan.
Mr. Keir-Hardie.
Mr. Heywood Johnstone.
Mr. John Burns.
Mr. Jackson.
Mr. John Wilson (*Govan*).
Mr. Billson.
Mr. Round.

Mr. *George H. Cox* examined.

[Adjourned till Friday 26th April, at Twelve o'clock.

Friday, 26th April 1895.

MEMBERS PRESENT:

Mr. CAMPBELL-BANNERMAN in the Chair.

Mr. John Wilson (*Durham*).
Mr. Wootton Isaacson.
Mr. Bartley.
Mr. Whiteley.
Mr. Renshaw.
Mr. John Wilson (*Govan*).
Mr. Acland.
Mr. Billson.
Mr. Lawrence.
Mr. Logan.
Mr. David Randell.
Mr. Keir-Hardie.

In the absence of the Chairman, Mr. JOHN BURNS took the Chair.

Mr. *Edward James Phillips* and Mr. *Philip Meadows Martineau* were examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 30th April 1895.

MEMBERS PRESENT:

Mr. CAMPBELL-BANNERMAN in the Chair.

Mr. Thomas Henry Bolton.
Mr. Bartley.
Mr. Renshaw.
Mr. Jackson.
Mr. Stuart-Wortley.
Mr. Mather.
Mr. John Wilson (*Govan*).
Mr. John Burns.
Mr. Lawrence.
Mr. Logan.
Mr. Pickersgill.
Mr. Heneage.
Mr. Keir-Hardie.
Mr. Heywood Johnstone.
Mr. Benn.

Rev. *W. Tuckwell* was examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 3rd May 1895.

MEMBERS PRESENT:

Mr. CAMPBELL-BANNERMAN in the Chair.

Mr. John Wilson (*Durham*).
Mr. Wootton Isaacson.
Mr. Thomas Henry Bolton.
Mr. Bartley.
Mr. Whiteley.
Mr. Renshaw.
Mr. Mather.
Mr. John Wilson (*Govan*).
Mr. Acland.
Mr. John Burns.
Mr. Billson.
Mr. Lawrence.
Mr. Bousfield.
Mr. Logan.
Mr. Pickersgill.
Mr. Keir-Hardie.
Mr. Heneage.
Mr. David Randell.
Mr. Stuart Wortley.

Mr. *John Theodore Dodd* was examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 7th May 1895.

MEMBERS PRESENT:

Mr. CAMPBELL-BANNERMAN in the Chair.

Mr. John Wilson (*Durham*).
Mr. Wootton Isaacson.
Mr. Bartley.
Mr. Renshaw.
Mr. Mather.
Mr. Heneage.
Mr. Acland.
Mr. John Wilson (*Govan*).
Mr. Billson.
Mr. Lawrence.
Mr. Logan.
Mr. Pickersgill.
Mr. David Randell.

In the absence of the Chairman, Mr. BILLSON took the Chair.

DRAFT SECOND REPORT, proposed by the *Chairman*, read the first time as follows:—

"Your Committee, in submitting their First, or interim Report, were unable to add to it the Returns they had received through the Local Government Board, from Local Authorities in England and Wales, in reply to a Circular Inquiry as to the extent of distress prevailing.

"While proceeding with the General Inquiry, they now submit to your Honourable House, Abstracts of these Returns as received up to date, together with certain other documents laid before your Committee."

Mr. *James Bell*, Lord Provost of *Glasgow*, and Mr. *James R. Motion* were examined.

Draft Second Report read a second time, and *agreed to*, without Amendment.

Ordered, To Report, together with an Appendix.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 10th May 1895.

MEMBERS PRESENT:

Mr. CAMPBELL-BANNERMAN in the Chair.

Mr. Bartley.	Mr. Lawrence.
Mr. Whiteley.	Mr. Logan.

In the absence of the Chairman, Mr. ACLAND took the Chair.

Mr. *E. Aves* and Mr. *James Morton* were examined.

[Adjourned till Friday next, at Twelve o'clock.

Friday, 21*st June* 1895.

MEMBERS PRESENT:

Mr. Bartley.	Mr. Benn.
Mr. John Wilson (*Govan*).	Mr. Round.
Mr. Mather.	Mr. Stuart-Wortley.
Mr. Lawrence.	Mr. Billson.

In the absence of the Chairman, Mr. ACLAND took the Chair.

The Rev. *Bolton Smart* and Mr. *Thomas Mansell* were examined.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 25*th June* 1895.

MEMBERS PRESENT:

Mr. CAMPBELL-BANNERMAN in the Chair.

Mr. Mather.	Mr. Heywood Johnstone.
Mr. John Wilson (*Durham*).	Mr. Bousfield.
Mr. Jackson.	Mr. John Burns.
Mr. Lawrence.	Mr. Acland.
Mr. David Randell.	Mr. Round.
Mr. Logan.	Mr. Wootton Isaacson
Mr. Pickersgill.	

In the absence of the Chairman, Mr. MATHER took the Chair.

Mr. *William Vallance* was examined.

[Adjourned till To-morrow, at One o'clock.

Wednesday, 26*th June* 1895.

MEMBERS PRESENT:

Mr. CAMPBELL-BANNERMAN in the Chair.

Mr. John Wilson (*Durham*).	Mr. Pickersgill.
Mr. Wootton Isaacson.	Mr. Heywood Johnstone.
Mr. Bolton.	Mr. David Randell.
Mr. Renshaw.	Mr. Billson.
Mr. John Wilson (*Govan*).	Mr. Whiteley.
Mr. Mather.	Mr. Round.
Mr. John Burns.	Mr. Acland.
Mr. Lawrence.	Mr. Benn.

The Committee deliberated.

Motion made, and Question proposed, That the Chairman prepare a Report submitting the Evidence to the House, stating the inability of the Committee, owing to the pending Dissolution of Parliament, to consider that Evidence, and advise the House thereupon, and suggesting that in the new Parliament the question should be further considered by a Committee—(Mr. *Bolton*).—Amendment proposed, to leave out all the words after "That" in order to insert the following words, "The Evidence be printed and presented to the House, and that the Chairman prepare a Draft Report, to be considered on Monday next, embodying immediate and practical remedies, dealing also with disfranchisement and the powers of all local authorities in cases of exceptional distress, and that the Committee recommend Parlia-

ment to appoint a Committee to continue the present inquiry" —(Mr. *John Burns*). —Question put, That the words proposed to be left out stand part of the Question.—The Committee divided:

Ayes, 8.	Noes, 8.
Mr. Bolton.	Mr. Acland.
Mr. Wootton Isaacson.	Mr. Benn.
Mr. Lawrence.	Mr. Billson.
Mr. Renshaw.	Mr. John Burns.
Mr. Round.	Mr. Mather.
Mr. Whiteley.	Mr. Pickersgill.
Mr. John Wilson (*Govan*).	Mr. David Randell.
Mr. Heywood Johnstone.	Mr. John Wilson (*Durham*).

Whereupon the *Chairman* declared himself with the *Noes*.

Words inserted.

Main Question, as amended, *agreed to*.

[Adjourned till Tuesday next, at Twelve o'clock.

Tuesday, 2nd July 1895.

MEMBERS PRESENT:

Mr. CAMPBELL-BANNERMAN in the Chair.

Mr. Acland.	Mr. Renshaw.
Mr. Burns.	Mr. Pickersgill.
Mr. Mather.	Mr. Benn.
Mr. Round.	Mr. Heywood Johnstone.
Mr. Logan.	Mr. Bousfield.
Mr. Heneage.	Mr. Bolton.
Mr. Randell.	Mr. Wootton Isaacson.
Mr. Stuart-Wortley.	Mr. John Wilson (*Durham*).

DRAFT REPORT, proposed by the *Chairman*, read the first time, as follows:—

"1. YOUR Committee regret that owing to the dissolution of Parliament they are unable to do more than present an incomplete Report on the evidence they have had before them.

"2. They consider, however, that it is desirable to communicate the substance of the replies received in answer to the letter addressed to the Mayors of towns and Chairmen of District Councils, referred to in paragraph 2 of the First Report, in so far as they concern the nature and extent of prevailing distress.

"This may be summed up by saying that out of 1,574 replies received from districts representing 26,591,394 persons: in 920 localities, representing a population of 10,291,600 persons, there was, at the time, no exceptional distress; in 475 localities, with a population of 11,792,527 persons, there was exceptional distress, due solely to the severity of the winter; and in 179 localities, with a population of 4,507,267, there was, apart from the want of employment due to the weather, an exceptional want of employment owing to slackness of trade, depression of agriculture, or to particular local or industrial causes. A more complete analysis of these figures will be found in an Appendix published with this Report, together with a special statement of the localities affected by slackness of trade, &c.

"3. Your Committee have also heard the evidence of several witnesses since the issue of their First Report, among whom may be mentioned:—

"(*a.*) Mr. *Llewellyn Smith*, Chief of the Labour Department of the Board of Trade;

"Mr. *Charles Booth*, merchant, and author of an inquiry into the social and industrial condition of the people of London; with reference to the general question of "Unemployment."

"(*b.*) Representatives of the following vestries and Poor Law Unions in London:—

"1. Camberwell,

"2. Islington,

"3. Battersea,

"4. Wandsworth,

"5. St. Olave's (Southwark),

"6. St. George's-in-the-East,

"7. Whitechapel,

with reference to the methods of conducting, and the desirability of initiating, relief works for the unemployed, and to the present powers of guardians and vestries in respect of these matters.

"(*c.*) Representatives

"(*c.*) Representatives of other large towns in which the unemployed question was keenly felt, namely, Glasgow, Liverpool, and Swansea.

"(*d.*) Representatives of institutions and societies particularly interested in the treatment of those suffering from want of employment, namely:—

"The Salvation Army.

"The Church Army.

"The Charity Organization Society.

"The Mansion House Unemployed Committee.

"4. Special attention was also directed to:—

"1. *The Tin-plate Trade*, as it appeared from the Returns mentioned above that this was the most clearly-defined instance of a large industry suffering from trade depression.

"2. *The Building Trade*, as representative of a large industry directly affected by any severity in the weather.

"5. Further, several representative members of the working classes, in touch with those who were the chief sufferers during the severe weather in early part of 1895, were summoned before your Committee and asked to give their opinions as to the best methods of preventing or remedying the evils that arise from want of employment.

"6. Your Committee also took evidence on the management and working of Dutch and Belgian labour colonies, and considered a project for the institution of farm colonies in England, for the preparation of which their special thanks are due to one of their colleagues, Mr. W. Mather, M.P.

"7. For the reason already stated, it is impossible for your Committee to discuss fully in this Report the various preventive and remedial measures that have been suggested to them.

"8. Having regard, however, to the second clause of their Reference, whereby they are instructed to report as to—

"(*b.*) The powers at present possessed by local or central authorities in relation to the relief of distress,

and having noticed the uncertainty that seemed to prevail among members of boards of guardians who appeared before them as to the exact nature of their powers, they have obtained a statement from the Local Government Board setting forth these powers in full, with additional notes as to—

"1. Relief of the aged poor.

"2. Relief on loan, and its recovery.

"3. The acquisition of land by guardians for the purpose of setting the poor to work at wages.

"This statement will be found in the Appendix to this Report.

"9. Further, your Committee have considered various complaints that have reached them as to the effect of the existing law which deprives of his franchise rights any recipient of Poor Law relief. It is represented to your Committee that this provision frequently prevents deserving men who have been, through no fault of their own, temporarily thrown out of work, from seeking any relief, thus inflicting great hardship upon them. Your Committee believe that this provision may have a salutary effect as a check upon ordinary Poor Law claims, and may thus foster independence of character and prevent unnecessary burden falling on the rates. But in cases of exceptional distress they do not see why it should be difficult to discriminate between the deserving man forced to become dependent upon public aid, and the ordinary claimant for parish relief. Your Committee, therefore, are of opinion that it would be both humane and wise to exempt the former class from the disability as regards the Parliamentary franchise, while retaining it, as heretofore, in the matter of the election of Poor Law guardians.

"10. Again, sufficient evidence having been brought before your Committee of the desirability of encouraging continuity of employment, they are of opinion that orders for in-door repair work and for new work, where feasible, should be given out by public bodies with reference to what are now the slack months, generally January and February, in so far as this course is consistent with efficiency of execution.

"A statement of the works that could be promoted by local authorities, with reference to this recommendation, has been prepared by the Local Government Board, and is herewith appended.

"11. With the exception of these particular points, which may affect the condition of matters if next winter presents a renewal of the distress which prevailed this year, and on which therefore the Committee have felt it right to make recommendations which may be of immediate use, the whole of this great subject cannot now, as has been already said, be adequately considered. The schemes especially which have been laid before the Committee by Mr. Hills, Mr. Mather, the Salvation Army, the Church Army, and others, all of them evincing great care and thought in elaboration, as well as the most philanthropic and generous spirit and intention, must be left without the full consideration they deserve. But your Committee would express the hope that in another Parliament the House will renew this inquiry in order that the Legislature may be guided to the adoption of some palliative for the evils to which many of the best and most industrious among our people are at present exposed."

DRAFT REPORT, proposed by the *Chairman*, read a second time, paragraph by paragraph.

Paragraphs 1—3, amended, and *agreed to*.

Paragraphs 4—6, *agreed to*.

Paragraphs 7—8, amended, and *agreed to*.

Amendment proposed, That the following new paragraph be inserted in the Report:—"Your Committee desire to point out that there exist statutory powers under which boards of guardians might set poor persons to work at wages, but that such powers cannot be used until rules are made by the Local Government Board"—(Mr. *Bousfield*).—Question put, That the proposed new paragraph be inserted in the Report.—The Committee divided:

Ayes, 11.	Noes, 3.
Mr. Acland.	Mr. Bolton.
Mr. Benn.	Mr. Renshaw.
Mr. Bousfield.	Mr. Stuart-Wortley.
Mr. Burns.	
Mr. Wootton Isaacson.	
Mr. Heywood Johnstone.	
Mr. Logan.	
Mr. Mather.	
Mr. Pickersgill.	
Mr. Randell.	
Mr. John Wilson (*Durham*).	

Another Amendment proposed, That the following new paragraph be inserted in the Report:—"Your Committee recommend that the Local Government Board should consider the application of such powers, and make rules for the use of boards of guardians in relation thereto"—(Mr. *Mather*).—Question put, That the proposed new paragraph be inserted in the Report.—The Committee divided:

Ayes, 9.	Noes, 3.
Mr. Acland.	Mr. Bolton.
Mr. Benn.	Mr. Heywood Johnstone.
Mr. Burns.	Mr. Stuart-Wortley.
Mr. Wootton Isaacson.	
Mr. Logan.	
Mr. Mather.	
Mr. Pickersgill.	
Mr. Randell.	
Mr. John Wilson (*Durham*).	

Paragraph 9.—Amendment proposed, in line 1, to leave out the word "considered," and insert the word "received"—(Mr. *Heywood Johnstone*).—Question, That the word "considered" stand part of the paragraph,—put, and *negatived*.

Question, That the word "received" be there inserted,—put, and *agreed to*.

Another Amendment proposed, in line 1, to leave out the words "that have reached them," and insert the words "from some of the witnesses"—(Mr. *Heywood Johnstone*).—Question, That the words proposed to be left out stand part of the paragraph,—put, and *negatived*.

Question, That those words be there inserted,—put, and *agreed to*.

Another Amendment proposed, to leave out from the words "It is represented," line 3, to the end of the paragraph, and insert the following words: "There was considerable difference of opinion among the witnesses, both as to the extent to which this disqualification operates, and as to the desirability of its removal, either absolutely or under conditions, and, as at present advised, your Committee are not able to make any recommendation thereon. They are, however, of opinion that the subject should be further considered with a view to any alteration which may be suggested becoming operative before the next revision of the voters' lists"—(Mr. *Heywood Johnstone*).—Question put, That the words "It is represented" stand part of the paragraph.—The Committee divided:

Ayes, 8.	Noes, 5.
Mr. Acland.	Mr. Bolton.
Mr. Benn.	Mr. Wootton Isaacson.
Mr. Burns.	Mr. Heywood Johnstone.
Mr. Logan.	Mr. Round.
Mr. Mather.	Mr. Stuart-Wortley.
Mr. Pickersgill.	
Mr. Randell.	
Mr. John Wilson (*Durham*).	

Another

Another Amendment proposed, to leave out from the words "Your Committee," line 5, to the words "the rates," line 7—(Mr. *Logan*).—Question put, That the words proposed to be left out stand part of the paragraph.—The Committee divided:

Ayes, 7.	Noes, 5.
Mr. Acland.	Mr. Benn.
Mr. Bolton.	Mr. Burns.
Mr. Wootton Isaacson.	Mr. Logan.
Mr. Mather.	Mr. Pickersgill.
Mr. Round.	Mr. Randell.
Mr. John Wilson (*Durham*).	
Mr. Stuart-Wortley.	

Another Amendment proposed, in line 11, to leave out the word "Parliamentary"—(Mr. *Logan*).—Question put, That the word "Parliamentary" stand part of the paragraph.—The Committee divided:

Ayes, 4.	Noes, 8.
Mr. Bolton.	Mr. Acland.
Mr. Wootton Isaacson.	Mr. Benn.
Mr. Round.	Mr. Burns.
Mr. Stuart-Wortley.	Mr. Logan.
	Mr. Mather.
	Mr. Pickersgill.
	Mr. Randell.
	Mr. John Wilson (*Durham*).

Another Amendment proposed, to leave out from the word "while," line 11, to the end of the paragraph, and add the words "whether local or Parliamentary"—(Mr. *Acland*).—Question, That the words proposed to be left out stand part of the paragraph,—put, and *negatived*.

Proposed words added.

Paragraph, as amended, *agreed to*.

Paragraph 10, amended, and *agreed to*.

Another Amendment proposed, That the following new paragraph be inserted in the Report:—"As regards London, your Committee beg to make the following recommendation: The guardians of any metropolitan union should be empowered, with the sanction of the Local Government Board, to agree with any sanitary authority within their union; that, in consideration of the latter employing such number of persons, and during such period as may be agreed upon, the guardians will make a contribution to the sanitary authority of an amount not exceeding one-half of the cost incurred in the employment of such persons, such contribution to be a charge upon the Metropolitan Common Poor Fund"—(Mr. *Pickersgill*).—Question proposed, That this paragraph be inserted in the Report.

Amendment proposed to the proposed Amendment, to leave out the words "Local Government Board," and insert the words "London County Council"—(Mr. *Stuart-Wortley*).—Question, That the words "Local Government Board" stand part of the proposed Amendment,—put, and *negatived*.

Proposed words inserted.—Question put, That the paragraph, as amended, be inserted in the Report.—The Committee divided:

Ayes, 8.	Noes, 4.
Mr. Acland.	Mr. Bolton.
Mr. Benn.	Mr. Wootton Isaacson.
Mr. Burns.	Mr. Round.
Mr. Logan.	Mr. Stuart-Wortley.
Mr. Mather.	
Mr. Pickersgill.	
Mr. Randell.	
Mr. John Wilson (*Durham*).	

Paragraph 11, amended, and *agreed to*.

Another Amendment proposed, That the following new paragraph be inserted in the Report:—"Your Committee have not been able to consider the special circumstances of Scotland or Ireland, or to make any recommendation affecting them"—(The *Chairman*).—Question, That this paragraph be inserted in the Report,—put, and *agreed to*.

Ordered, To Report, together with the Minutes of Evidence, and an Appendix.

MINUTES OF EVIDENCE.

Friday, 15*th March* 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. Bartley.
Mr. Benn.
Mr. Billson.
Mr. Bousfield.
Mr. John Burns.
Mr. Keir-Hardy.
Mr. Jackson.
Mr. Logan.
Mr. Mather.
Mr. Pickersgill.
Mr. John Wilson (Govan).
Mr. Stuart-Wortley.

THE RIGHT HONOURABLE ARTHUR HERBERT DYKE ACLAND, IN THE CHAIR.

Mr. CHARLES WILLIAM TAGG, called in; and Examined.

Chairman.

3278. You are, I believe, Clerk to the Vestry of Camberwell?—I am.

3279. Which is also the sanitary authority for the parish of Camberwell?—It is.

3280. Will you tell us what is the size and the population of the parish?—The area is 4,342 acres, and the estimated population on the 6th April 1894, calculated by the Registrar General for the purposes of the Equalisation of Rates Act, was 254,503. The rateable value is 1,063,234.

3281. Has the population increased since 1891?—Yes; at the 1891 Census the population was 235,344.

3282. Has the rateable value increased of late years?—It has slightly increased.

3283. But not very much?—Not in proportion to the population.

3284. What is the number of assessments?—The number of assessments is 39,135.

3285. Are they chiefly for small houses?—More than half are for rateable values of 20*l.* and under.

3286. Are there comparatively few large houses?—Comparatively few.

3287. Will you tell us how much the poor rates are in Camberwell, and the vestry rates?—The total poor rate is 4*s.* 1*d.* for the year ending 25th March.

3288. That is the whole poor rate?—Yes; it contains the whole of the amount levied under precepts by the guardians.

3289. What is the actual rate for the relief of the poor?—Two shillings and three pence.

3290. What are the vestry rates?—The actual amount levied by the vestry is 1*s.* 8*d.*; that is excluding the School Board precept.

3291. In your opinion has there been much exceptional distress this year in Camberwell?—Not beyond that caused by the severity of the weather.

3292. You think if you set apart the distress due to the frost, there has been nothing exceptional as compared with last year or the year before?—No.

Chairman—continued.

3293. Has there been any relief work offered by your vestry?—Yes; the vestry up to the present time have expended on relief work 1,546*l.* 5*s.*

3294. When did the relief work begin?—On the 31st January.

3295. After the frost had set in?—Yes.

3296. Would you say that it was in consequence of the frost; if there had been no frost would there have been no relief works?—It would not have gone on to the extent that it has; I could not say there would have been none.

3297. Will you tell us what kind of relief work was offered?—The work has been sweeping snow and sweeping the roads.

3298. Anything else?—No, nothing beyond the ordinary labourers' work: road sweeping and snow sweeping.

3299. What rate of remuneration did you offer?—Fivepence per hour for eight hours a day.

3300. How many days a week?—We had nearly 2,000 names on the register, and, for the week ending February 16th, the average daily number of men was 205, and the previous week 359; practically the men got about two days' work a week.

3301. That is to say, you did not offer them more than two days' work a week?—We were unable to give them more.

3302. You tried to spread the work you had among the applicants?—Yes; we tried to apportion it so that each man should get about two days' work a week.

3303. That is to say, you settled the sum of money which should be spent, or rather, I suppose, you settled the amount of work which should be undertaken?—No; that was left practically in the hands of the surveyor; he settled that. He had power from the Committee

Chairman—continued.

to take on as many men as he possibly could during the severe weather.

3304. And he was directed to divide the work among all the applicants?—Yes; We sent out postcards every day. We had lists of all the applicants arranged in alphabetical order, and we checked them so far as we could by the rate book; and in the case of men stating that they were lodgers we took the name of the landlord, and if that was correct we took them as being residents in the parish.

3305. Did you draw any distinction between men with families and men without families?—We endeavoured to do so; but it is a very difficult matter; we tried to discover whether they had families or not in some instances through the relieving officers, acting through the Guardians, and in any way we could.

3306. What was the kind of distinction that you were drawing; were you prepared to offer more work to a man with a family?—No; he would have the same proportion; but among the 2,000 we had so many boys of between 16 and 17 years of age, and our object was to exclude those where it was possible.

3307. It was not so much a distinction between grown-up married and grown-up single men?—No; we could not distinguish them so well.

3308. You were prepared to offer the same amount of relief to a grown-up man whether single or married?—Yes. The vestry passed a resolution to offer the work to married men first; but it was of course practically impossible to distinguish. There was no time to enquire; the postcards had to be sent for work to begin the next day.

3309. Those men whom you put on got 5*d.* an hour for eight hours a day?—Yes, 3*s.* 4*d.* a day.

Mr. *Bousfield.*

3310. If you put on each day 400 men out of the 2,000 on the list it would take five days to get through the list; but I thought you said the men would get two days' work a week?—It worked out to nearly two days a week; for you had cases where postcards were sent but the men did not attend at the depôts, because they overslept themselves, or for some reason, and extra men were taken on to take the place of those who did not turn up.

3311. So that you think the men got two days' work a week?—Yes; some may have got three days.

Chairman.

3312. I believe you set up a labour exchange?—We had one in 1892.

3313. Did you continue it in the winter of 1893–94?—No; we were advised it was an illegal expenditure. There was an answer given in the House of Commons on the subject.

3314. Was that the reason you gave it up in 1893?—For that reason, and because of the auditors surcharging the amount we spent upon it.

3315. What was the amount you spent upon it in 1892?—I should think it was under 250*l.* altogether, including the building. We had a building put up for it. But the amount the

Chairman—continued.

auditor surcharged was only 36*l.*, or something like that.

3316. He surcharged that because you had not the power to make such an expenditure?—Yes. There was an answer given in the House of Commons on the subject.

3317. The labour exchange involved certain clerical work, I presume?—Yes; we had a superintendent and a clerk.

3318. The object being to find employment for those out of employment by communication with employers of labour?—That was the object; but it was not a success.

3319. Can you give us any figures in regard to the persons registered in the labour exchange?—Yes. In the quarter ending the 25th March 1893 (that practically covers the period of the severe weather) the total number of persons registered, including 28 women servants, was 1,839. That, of course, does not include re-registering; they had to re-register every week. Out of that number work was found for 303, of whom 255 were employed in breaking the ice on the canal for the South Metropolitan Gas Company.

3320. That was only for a short time?—During the frost. During the same period the vestry engaged 2,246 men on various relief works throughout the parish.

3321. Is that 2,246 independent of the 1,839?—One thousand eight hundred and thirty-nine is the total number of persons registered; among the 2,246 there may be some duplicates.

3322. Then the labour exchange was practically given up because you were given to understand you had not the power to spend money upon it?—Yes; and beyond that practically the parish is a parish of workmen and not of employers; the workmen are employed not in the parish but in the city or the borough, or in various building operations round about, and employers will not come from those districts to a Camberwell Labour Exchange to engage men. Practically our parish is a parish of men who wish for work and not of employers; it is, so to speak, a dormitory parish; the men sleep in the parish but work elsewhere.

3323. Employers, you say, will not come to a labour exchange at Camberwell?—They will not come to Camberwell with the men working in Islington or the Borough.

3324. That exchange was not readopted this last winter, I understand?—No.

3325. What you spoke of as a registry of the names of applicants, was something quite different, was it not. That was merely making a list of those who told you they were out of employment?—The name and address of every man who applied was taken and entered in an alphabetical list.

3326. That was done with a view of giving them employment from the vestry?—Yes, actual relief work.

3327. Not with a view of bringing them into communication with employers?—No; we found that was not a success. We advertised it in every possible way; we had placards and bills put up throughout the parish, but there were no applications, or very few applications. The only applications I got were for domestic servants. I could

Chairman—continued.

could have supplied a great number of domestic servants.

3328. Can you give us any idea of the causes of the want of employment, or of the nature of the industries carried on in your district?—I had a list of all businesses in Camberwell which employ 20 men and upwards, made out by the 10 sanitary inspectors for their respective districts; and on going through that return you find that so far as the men employed in the parish of Camberwell are concerned, very few were out of employment for the winter months, excepting men employed in building and sanitary work, which was prevented by the frost. Practically it was about 800, I think; but the factories and our own works in the parish had very few men out of employment.

3329. They were going on with their work in spite of the frost, and were not affected by it?—That is so.

3330. What sort of industries are included in that list?—There are cart and van builders, and builders. Builders were all affected by the frost, and also the sanitary trades. Then there are ivory works and mineral water works. The number in mineral water works is always reduced in winter, it being a summer trade. Then sweet makers, coal merchants, lime wharf, whiting wharf, timber wharf, laundries, oil refining, saw mills, packing-case makers, bible factory, potteries, lime works, safe makers, iron works, haddock smokers, hand grenade, washing machine makers, and the the South Metropolitan Gas Company. The South Metropolitan Gas Company have usually a staff of 2,000 men, and they increase by 500 in the winter.

3331. So that that takes up a certain number of those who are out of employment in the winter?—Yes; but of course they are not all Camberwell men. Some of them live in Bermondsey and Deptford.

3332. Have you attempted to make any total of those who fell out of employment during the frost?—I have not got the total before me at the moment.

3333. Is your relief work still going on?—No, it has ceased.

3334. When did you bring it to a close?—On the 27th of February. Since that date we have had a few men, but nothing like the number we had previously.

3335. Practically you have brought your arrangements for employing these men to an end?—That is so; our ordinary weekly labour bill for the permanent employees of the vestry averages about 675*l.*

3336. Can you give us the figures for the weeks of frost, showing how much it was increased?—I have not got it in weeks; I have it in days.

3337. What is the total amount?—The total amount expended on relief and snow works this winter has been 1,546*l.* 5*s.*

3338. Between what dates would that be?—Between the 31st of January and the 27th of February.

Mr. *Jackson.*

3339. That is exclusive of what you call your permanent labour?—Yes; it is entirely relief works.

Chairman.

3340. So that in about four weeks you spent an additional 1,500*l.*, over and above your normal wage bill of 675*l.* a week?—That is so.

3341. Do you wish to call attention to the resolutions your vestry have passed on matters of this sort?—We have passed a great number of resolutions.

3342. Is there anything in them you specially want to point out?—No.

3343. Have you had any correspondence with any board of guardians?—With the Camberwell Board of Guardians we have had correspondence, and we have had conferences. We convened, in 1892, a conference of the guardians and vestries of London upon this subject. There was not a very large attendance. We convened that conference, I think, in the beginning of 1893.

3344. That is some time ago?—Yes. Delegates were appointed by the vestry to attend a conference of vestries, district boards, and boards of guardians of the Metropolis for the purpose of taking united action to obtain additional powers for relieving the unemployed. The following resolution was passed at that conference: "That this conference is of opinion that the London County Council should apply forthwith for statutory powers for dealing with the surplus labour in the Metropolis, by establishing colonies or centres away from the towns, whereby the unemployed workers may have opportunity for supplying their own necessities, the initial cost to be raised by a charge on London ground rents;" and it was resolved that a copy of that resolution should be sent round to the Local Government Board, the London County Council, and the various vestries, district boards, and boards of guardians of the Metropolis.

3345. As to your correspondence with your own board of guardians, did anything come of that?—Nothing beyond several resolutions.

Mr. *Jackson.*

3346. Was the conference you have referred to largely attended?—No, it was not largely attended; there were very few representatives there.

3347. You have not been communicating with the board of guardians during your arrangements for relief?—Only informally with the relieving officers; if the relieving officers knew of special cases of distress, we added those to our list.

3348. You would take from the relieving officer a list of names of those whom he knew to be specially needing work?—Yes. The difficulty was that the relieving officers at that time were so pressed with their own relief matters that they were practically unable to give us any assistance, they were so busy themselves in attending to the ordinary poor-law work.

Chairman.

3349. You were perfectly willing to accept any names they might bring before you?—Yes.

3350. Were there any special suggestions or offers of relief other than those you undertook?—Only the suggestions of the Local Government Board in their circular letter. Of course it is quite impossible to carry out those suggestions in London.

Chairman—continued.

3351. Have your vestry ever sent any special memorial on this subject to the Government?—Yes, we sent a memorial to the Government.

3352. What was the nature of that memorial?—There was a conference of Camberwell Vestry and the guardians held in November 1893, which passed certain resolutions which the vestry did not adopt when they came up to them for confirmation.

3353. You have nothing special to say about those resolutions?—No; I can only say they have passed a great many resolutions.

3354. Is it increased powers that they wish for, for instance?—Yes; for the Government to confer upon them increased powers.

3355. Are the powers which they wish for defined in any way?—I have not seen any definition of them.

3356. Can you define yourself, as clerk to the vestry, the further powers that are desirable?—No.

Mr. *Bartley.*

3357. Let us have that quite clear; do you say they were asking for increased powers, but did not define what powers they wanted?—Yes; there was a resolution passed by the conference of the vestry and the guardians of Camberwell, but, as the vestry did not approve of the resolution passed by the conference, I cannot bring it forward as the resolution of the vestry.

Chairman.

3358. Have the vestry passed any resolutions themselves asking for increased powers; you are not aware of any, I understand?—I do not see any.

3359. Was this the resolution of the conference which the vestry did not adopt: "That, in the opinion of this conference of vestrymen and guardians, the Metropolitan Boards of Guardians should at once purchase land outside London for the formation of labour colonies, and this conference strongly urges the Camberwell Guardians to commence operations in that direction without delay"; that is the 8th November, 1893?—The vestry resolved to receive that recommendation, and they received it.

3360. But they did not adopt it?—No, they only received it.

3361. I understand you to say that the men who have been relieved by you come from your own parish?—As nearly as we can possibly check them. This you will remember is really all emergency work, and it is very difficult to check it, but we have checked them by the rate-books as far as possible.

3362. You made a definite endeavour to check outsiders from coming?—We tried to do so, but I am afraid it was not a success, I am afraid men came from various parts of London and slept in lodging-houses in Camberwell. We have a number of cheap lodging-houses, and, beyond that, I believe they got addresses where they could get postcards sent, with the object of getting these postcards sent to them. Two years ago I used to go to the various vestry depôts in the morning, and there were crowds of men there, and it was so difficult to prevent the strongest men

Chairman—continued.

getting the work (it was a fight every morning) that the vestry adopted the suggestion that we ought to post the card the day before to the addresses given, and, on the production of the postcards the men got a day's work.

3363. The postcards were sent to men who were intended to be employed?—Yes, it was sent to the address they gave.

3364. The selection was made the day before?—Yes, from an alphabetical list.

3365. Only those that got cards were employed?—Yes; but several of the men got addresses in the parish where they could have postcards sent to them. I had cases of men giving different names and getting work two or three days a week under different names.

3366. You think that to some extent the offer of two days' work was an attraction to people living outside?—Yes, it was an attraction.

3367. As to the kind of work which was done, can you tell us how far this 1,500*l.* was remunerative expenditure; did you get fairly good work for the money?—The men were engaged eight hours a day, but the work depended a great deal upon the men. There is no doubt a great many of the men worked very hard and consistently the whole time; but in several cases I saw they did not.

3368. I suppose some were much more fit for work than others; they varied in physical capacity?—Yes; there were a great many cases of poverty where the men had not the stamina to do the work, where they practically had to come to work without food, and they were unable to carry out some of the heavy work. They were first put upon sweeping the pavements. In our parish we have 120 miles of roads, but with the exception of two main roads they are all flint and macadam roads. We have only two pitched roads, the Old Kent-road, the Peckham-road, and part of the Camberwell New-road. The surveyor says, after a thaw on macadam or flint roads, these men did a great deal of harm by indiscriminate sweeping; they practically swept the crown of the road away.

3369. When you say that some of these men came on to work without food, does that imply that there are not charitable agencies enough in Camberwell to provide food for men in destitution in periods of severe distress?—There are charitable agencies in Camberwell. For instance, I was secretary to a relief committee which distributed 150*l.* in three months in tickets for food; but I do not think it is the men whom that relief is intended for who always get hold of it. We distributed it through local committees, and it is very difficult to know that it gets into the right hands.

3370. You think that very often the men for whom it is intended, the most deserving men, do not apply for such help?—Yes; some of the people are better acquainted with the ways to get these tickets than others, and they know straight away where to go to, and a man who has not had the previous experience of getting relief tickets does not go straight away for a ticket as the man who gets them every year does, and by the time he reaches the goal the tickets have gone.

3371. And men of that sort may be undergoing

Chairman—continued.

going a considerable amount of privation?—Yes; I saw the whole of these men who came to the vestry hall for relief every day for a month, and I am quite sure a great number of those men were absolutely worthy of support, and absolutely without food and means.

3372. How far do you think your efforts really met the case of the deserving men?—I think really to a very slight extent.

3373. It was only a small alleviation?—Yes. We had about 200 to 250 men a day at work out of the 2,000; the others had to wait.

3374. Can you give us any figures about outdoor relief; or, perhaps, that is not within your power?—I believe it practically doubled in Camberwell. But that is a matter for the guardians.

3375. You think that, practically, the number receiving outdoor relief doubled during the severe weather?—Yes. The guardians of Camberwell gave outdoor relief; they gave a great deal of food away.

3376. Did they open a stoneyard?—No; they have no stoneyard; they gave no relief except food.

3377. That was outdoor relief given in kind?—In kind.

3378. And no money?—I cannot say as to money; but I believe their relief was in food chiefly.

3379. The additional amount of relief they gave in time of distress over and above the ordinary, you believe to be almost entirely in food?—Yes. I know they passed a resolution to say that there was exceptional distress, and they would give outdoor relief.

3380. They did not provide any test?—No test whatever.

3381. Were you employing some of those men on your relief work?—Doubtless.

3382. You might be employing some able-bodied men who were also receiving relief from the guardians?—Doubtless. The wives would go and get relief from the guardians and the men would get work on the roads. You cannot prevent that.

3383. You did not make any inquiry about them?—No. This is emergency work, you will remember, and we had not time; it is all in a rush.

3384. Of course that applied only to a certain number out of the 2,000?—Yes.

3385. Perhaps only a small portion were getting both kinds of relief?—Yes. I believe a large number of men will not receive relief from the guardians because of the disqualification from voting which it involves. There is really a very strong feeling among the men upon that.

3386. You think that a large proportion of the 2,000 would not receive relief from the guardians?—Not until they were pushed to the last extremity. We had two or three cases of deaths from starvation, I do not mean among the men on relief works, but we had three or four inquests in one week on people who died of starvation.

3387. You think the desire not to lose the franchise has a considerable effect on the minds of the men, in preventing them from applying to the guardians?—I am quite sure it does upon those men who are thrown out of employment

Chairman—continued.

from severity of the weather, builders, labourers and so on. We carry out a great deal of sanitary work through our inspectors, and all those men were thrown out.

3388. That would apply, would it not, to a very considerable number of men among the 2,000?—A very large number.

3389. Is there anything you wish to add to your evidence in chief which I have omitted to ask?—I only wish to point out that in my opinion, and in the opinion, I think, of the vestry, it is exceedingly hard that a parish like Camberwell, which has a large number of poor people living in it, should have practically to bear their relief and keep them when they are out of employment, their usual employment being in other parts of London. They only sleep in our parish; we do not get the fruits of their labour in our parish.

3390. Have you any suggestions to make to remedy that?—I think the relief works should be charged to the whole of London.

3391. You say a great number of your working people do work outside the parish altogether?—Yes.

3392. In places where the rateable value is higher, I suppose?—Yes, practically. When a man is out of work in the winter time, he stops at home because it is no good going to his work, and so he comes to the nearest parish to relieve him.

3393. Do you consider you have less industrial work in factories and other forms of employment going on in Camberwell than in most London parishes?—Not less than in most London parishes, but less than most poor London parishes.

3394. It is rather on that kind of ground that you would claim some relief, if you could get it, by some central arrangement?—Yes. The guardians get 8*d.* or 9*d.* a day for every indoor pauper under the Common Grant, but when they give outdoor relief in these times of distress they do not get relief from the Common Poor Fund.

3395. Is there anything else you wish to mention?—The only thing, so far as the vestry of the parish is concerned, is this: it is quite impossible in the winter time to give any other relief beyond that of clearing the snow and sweeping the roads. I mean that channelling and paving, and that kind of work, can only be done by skilled men; and it could not be done during times of frost, for the ground is too hard.

3396. Just at the time when the suffering is greatest, the kind of work you might otherwise enter upon is impossible owing to the weather?—Yes, work of that kind. At times when it can be done we can always get skilled men to carry it out at the ordinary rate of wages. If it were possible to do it through this unemployed labour, we should not get it done in a way that would be of service to us.

3397. You mean that some of your work would not be economically carried out if you employed some of the men whom you have been employing lately in sweeping the roads?—They scarcely could carry it out.

3398. For want of special skill?—Yes; they would have to be paviors to do the work properly.

Chairman – continued.

Then with regard to the suggestion in the Local Government Board Circular, the first is that we should carry out new street works. With regard to that, I may point out that these new street works are carried out at the expense of the owners of the property abutting on the road, and those owners claim that the vestry should employ skilled men, and practically carry it out at the least possible expense. We have a rate clause in all our contracts. Then, "cleansing of streets, not usually undertaken by the local authorities," is one of the suggestions in the Circular. The duty is thrown upon us to cleanse all streets; we have no option; we have to cleanse all streets. Then another suggestion is "laying out and paving of new streets, &c." That can only be done during weather suitable for it; not during frost. Then another suggestion is "paving of unpaved streets and making of footpaths in country roads"; that has to be done by skilled labour, and not in times of frost. Then there is "spade industry on sewage farms." We have no chance of doing that. Then as to "laying out of open spaces," and so on; all our open spaces are laid out.

3399. You understand that these suggestions are made not with regard to times of frost?—I quite understand that all I wish to say is that all the work we can carry out in Camberwell we are carrying out; and, in addition to the unemployed working men in Camberwell, we have an immense army of clerks earning very low incomes residing in the parish; and every increase of the rates comes very hard upon them, and upon the small shopkeepers. Practically, any money we expend in relief works has to be paid in the parish, and it comes very hard upon the small shopkeeper class and small clerks, who have to find the difference.

Mr. *Mather.*

3400. Among the 2,000 men who applied to you to have their names placed on your register, I suppose you would have men of all sorts, following various occupations when they were in full work?—Yes; I tested them one morning. I went through the applicants, taking a section of them and asking them their different trades, and out of 12 men, I think, we had seven or eight who described themselves as general labourers. One man was a stoker or a locomotive driver; and we had one man who called himself a builders' labourer; but a very large proportion, I should think quite 75 per cent., described themselves as general labourers.

3401. Do you think that in addition to this 2,000 there was a considerable number out of employment who did not apply for their names to be put on your register, and did not apply to the guardians for outdoor relief?—No doubt there were a considerable number of men out of employment who did not come to us at all.

3402. Who did not apply either to you or to the guardians?—Certainly; men who had saved a little money and were able to tide it over.

3403. You said you had 200 men employed daily, but each person only for two days per week?—Yes, as nearly as we could do so.

3404. You paid them *3s. 4d.* a day; so that each of the men who were employed would get between *6s.* and *7s.* a week?—Six shillings and eightpence a week.

Mr. *Mather*—continued.

3405. Were any of these men, so far as you know, skilled men, working at regular occupations at other times when there was no distress?—Several of these men were skilled navvies and labourers that were thrown out by the severity of the weather.

3406. With regard to these men following the various occupations you have named as being peculiar to Camberwell, and being thrown out of work during the winter months, you said, for instance, that in mineral water manufacture the work became in the winter time very slack; would any of that class of men come to you?—Undoubtedly there would be some of them.

3407. Would these 200 men be men of such a class as would, from your observation, prefer to get relief by doing work, and would rather suffer, if that were not possible, than take money or food?—I believe a great number of these men preferred waiting for their work from the vestry rather than to go to the guardians; they waited as long as they possibly could.

3408. You said when those men came before you, you were struck by their earnestness and respectability?—Yes, that was so, no doubt, as regards a great number of them.

3409. The work you gave them did not disfranchise them?—No.

3410. Did the vestry make any provision for these men other than giving them money for their labour?—They made no other provision.

2411. You said that these men came to their work at times without food; was there no provision made to give those men a breakfast before they commenced the day's work?—No.

3412. To your knowledge those men came to work without food, and worked three or four hours without food?—Not from my own knowledge; but from the circumstances in which those men were placed I should certainly say so.

3413. I suppose they had an hour for dinner in the middle of the day?—Yes.

3414. How would they provide the food during that hour?—I do not know how they did that.

3415. But you know, as a positive fact, those men were working under those conditions without sustenance?—I do not know it as a positive fact; I can only say, judging from the rate at which some of these men were working, and the lack of energy they were putting into their blows, they evidently had not much stamina.

3416. Would any of those 200 men you employed be entitled to go to the depôts of relief established by the guardians and get food before they came on for the day?—No; I believe they had to get that relief through the relieving officers; and that would be practically during the same time that they were working.

3417. Was there any reason why the authorities of Camberwell, either the guardians or the vestry, should not have prevented such a terrible state of things as men working without food for many hours together, or these cases of starvation such as you have mentioned?—I consider the authorities of Camberwell took every precaution they could to prevent that state of things. The guardians

Mr. *Mather*—continued.

guardians said it was a time of exceptional distress, and they would provide food for everybody in a distressed state, and the vestry said they would take on as many men as they could to work upon the roads.

3418. The vestry could have established, could they not, in a couple of days, a place to give coffee or bread to the 200 men before they started work in the morning?—I do not know that the vestry have any power at present to establish a coffee stall, or anything of that sort.

3419. Are we to understand that neither by the charitable public, nor the guardians, nor the vestry of Camberwell, was any provision made for these men who were determined to work rather than receive relief or food from the guardians, and who altogether declined to work under the guardians, but came to you for employment?—The vestry provided the men with work and the guardians provided the men with food.

3420. So that these men who wished to earn their own living had no means of getting food, and came to your work after they had got to the lowest state of privation?—That is so in many cases; of course the circumstances varied. The men have no objection to working for the vestry at 3*s.* 4*d.* a day, beginning as early as they can in the day; but, of course, they had to take their turn. Our rates are limited; we have not an unlimited sum to spend upon that work.

3421. Your suggestion is, as I understand, that all these difficulties would be met if the guardians or vestry were to receive substantial assistance from the general funds of London?—I do not say that at all; I say it is not a difficulty that the vestry can solve at all; I say the vestry do the best they can under existing circumstances; but the hardship to a vestry or parish like Camberwell is that these men have to be relieved when they get out of work in the parish where they sleep, and we have to provide the money in a poor parish practically for that purpose; but I do not say that is going to solve or settle the question.

3422. You alluded to that as one means to help you in your administration?—I was only saying that it would be fairer if the share for London was spread over the whole; if, for instance, it came under a grant, like the Equalisation of Rates Grant, or something like that.

3423. Have you knowledge from your own observation that a large number of these unfortunate men of the regular working class object altogether to appeal to the guardians for relief in case of distress?—Yes, I believe that these men do. The really working classes do not wish to go to the guardians until they are pushed to the last extremity, that is my belief.

Mr. *Stuart-Wortley.*

3424. Are you aware that it has been given in evidence before this Committee that St. Olave's and Camberwell show an exceptional increase in the number of persons relieved this winter, far exceeding the increase shown in any other parish?—Yes.

3425. As regards Camberwell, you have told us that is partly due to the fact that it is what you call a dormitory parish; have you any other reason to assign for the great increase in Camber-

Mr. *Stuart-Wortley*—continued.

well; can you account for it in any other way: is there any additional cause you can name?—No, I do not think so. Most of the London parishes, or a great many of the London parishes, have given extra work during the frost to men out of employment.

3426. Camberwell is not contiguous with St. Olave's, is it?—No.

3427. What lies between?—St. George-the-Martyr and Newington. We are practically, I should think, two and a-half miles from St. Olave's. Bermondsey comes in between and a lot of other parishes.

3428. Does Camberwell include any suburban area?—Yes, it includes Dulwich. It extends from Bermondsey New-road to the Crystal Palace; we take in part of the Crystal Palace.

3429. There is a large villa population there, is there not?—Yes, in the Dulwich district; there are very large houses there. We go, roughly speaking, from Camberwell Gate to New Cross Gate.

3430. You say there were men who did not apply to the vestry for work, probably, in your opinion, because they had saved money?—No. The question was asked whether the 2,000 represented the whole of the unemployed in Camberwell, and I said, no, I should not think it did, because there are many skilled artisans and skilled workmen who are out of employment in in the winter who have, however, a little put by to stem the tide with, and who wait.

3431. I understand you to say in your opinion some do something out of what they receive in other times with which they do tide over the hard times?—Very few.

3432. Those who do apply to the vestry, you say, are mostly general labourers; there were some skilled artisans, were there not?—There were men describing themselves as painters and paper-hangers.

3433. Receiving what sort of wages?—They are paid at a rate per hour, and it would depend upon the number of hours they worked.

3434. Can you give us any estimate of the wages they are receiving in fairly good times?—I could not say.

Mr. *Jackson.*

3435. Do you not employ any of those men on your own work?—Yes; we pay all the men we employ the trades union rate; that is, a fixed rate.

3436. Does not that enable you to answer the honourable Member's question?—I can give you the rate per hour. Our painters we pay 30*s.* a week to, I think it is 8½*d.* or 9*d.* an hour; wheelwrights we pay 9*d.* an hour.

Mr. *Stuart-Wortley.*

3437. Do any men of that class come to you for employment on this relief work?—There are some of them.

3438. Would they form any considerable proportion of the 205 daily average?—No; two-thirds of that number, or more, would be the general labouring class, I should think.

3439. You say that men out of work show an

Mr. *Stuart-Wortley* – continued.

eagerness to come to get this relief work from the vestry?—Yes, they do.

3440. Is that the reason why you think there is a widespread objection to the disfranchisement resulting from accepting relief from the guardians? —No, I do not think that is the reason. I think the natural reason is that the men like to enjoy the privilege of having a vote.

3441. Is that conclusion founded upon anything more than a general *à priori* opinion of yours?—No.

3442. Have any men said anything about it to you; can you give the Committee any grounds for that opinion?—The workmen have told me distinctly the reason they object to going to the guardians is the disfranchisement.

3443. Have they told you that in sufficient numbers to lead you to the conclusion that it is a widespread opinion?—Yes, I have heard it from the secretaries of trades unions and different men that have spoken to me.

3444. But have you heard it from members of trades unions; have they told you so in at all large numbers?—No; a secretary, I take it, practically represents his union.

3445. Is that the ground upon which you form that opinion?—I think they object to it because they like to have their vote.

3446. They have, in some few isolated instances, said so to you, I understand?—I have heard it stated distinctly. I think I may say that is the general feeling among these men.

Mr. *Jackson.*

3447. That is your opinion?—Yes. I can give nothing more than an opinion. I can only say that is what I gather.

3448. You have no personal experience yourself in connection with guardians' work, have you?—No, not beyond the fact that the offices of the vestry and the guardians adjoin. I have not been engaged in guardians' work.

3449. You have not filled the office of guardian?—Not at all.

3450. You, I understand, represent the vestry of the parish?—That is so.

3451. Is that area co-terminous with the area of the guardians?—Exactly.

3452. As the rate of remuneration on this relief work, do I understand that the men receive 5*d.* an hour for eight hours a day?—Yes, 3*s.* 4*d.* a day.

3453. How does that compare with the rate you pay for ordinary labour?—We pay ordinary labourers 6*d.* an hour.

3454. Then it is one-sixth less?—Yes, a penny an hour less. I might supplement that by saying that our ordinary labourers on the road are graded; the old men receive less. There are three grades for actual road men.

3455. Is 6*d.* an hour the lowest?—Yes, I think so. They are paid weekly.

3456. And some receive more than 6*d.*?—Yes.

3457. The point of my question, as you will see, is whether you pay to the men engaged on the relief work a less rate of wages than you pay to the least efficient of the men you employ ordinarily?—They were paid at a less rate.

Mr. *Jackson*—continued.

3458. You spoke of your district being a poor district; but is not that to some extent modified by the fact that you have a large population, more or less suburban?—No. I think the proof that it is practically a poor district is taken from the action of the Equalisation of Rates Act. We get a grant of about 5½*d.*

3459. That does not depend upon poverty, does it?—Yes; it is based on population and rateable value.

3460. But it is paid on population only, is it not?—No; on population and rateable value.

3461. Could you tell the Committee what the actual basis is of the equalisation of rates?—It is a calculation made upon the actual population as against the rateable value.

Mr. *Bousfield.*

3462. Let me put it this way: a rate of 6*d.* is collected upon the rateable value and it is distributed in proportion to population; the balance is paid or received; is not that so?—That is so.

Mr. *Jackson.*

3463. The reason you get a contribution from the fund is not because your rateable value is low, but because your population is high; is not that the reason?—No, not exactly; our contribution is governed by our rateable value but our receipts by our population.

3464. Your contribution to the fund is governed by your rateable value?—That is so.

3465. But the amount of relief given to you is based upon population?—That is so.

3466. Therefore the fact of your receiving from this fund is no proof that you are poor, but it is a proof that you are populous?—No; I take it rather the other way. We have 39,135 assessments, and more than half of those houses have a rateable value of under 20*l.*

3467. In what way does that affect it; that affects your contribution to the fund, not the receipts from it?—That affects our rateable value.

3468. Do you know how your rateable value per head compares with, say, Islington?—I do not know.

3469. Or any of the other adjoining parishes?—I have not the figures before me.

3470. Do you know what happens with regard to St. Olave's; do they receive from that fund?—The union of St. Olave's is made up, I believe, of three or four parishes; they are separate rateable parishes. I should think that St. Olave's pays to the equalisation of rates. They have a very large assessment and a very small population; they have large wharves in St. Olave's, which would have a very large rateable value, with a small population.

3471. Would you say that your population, taken as a population, is a poorer population than the average in St. Olave's?—I could not answer that.

3472. I suppose you would be inclined to think it was not?—It is very difficult to answer, because our population varies so much. We have several families living in one room, and then we have cases round the Crystal Palace of large

Mr. *Jackson*—continued.

large mansions, so that it is extremely difficult to tell.

3473. You would not put it that St. Olave's contributes, and you receive under the Equalisation of Rates Bill, is any evidence, or may be taken as proof, that the residents in St. Olave's are better off than the residents, as a whole, in your district?—I could not say as to whether the residents were better off.

3474. I mean the population residing in the district?—Yes; but there is no doubt the rateable value in St. Olave's is far better than in Camberwell.

3475. I am speaking of the class of persons who live there?—I take it, a person who could afford to live anywhere in St. Olave's would possibly live in Camberwell or further out still in one of the large houses; but the people who live in St. Olave's are people who have to live there in order to be near their work. It is a poor district.

3476. It is a poorer district than yours?—It is a poorer district to reside in. In the Census Return of 1891 there was a table given showing the tenements with less than five rooms, distinguishing those occupied by various numbers of persons in the sanitary area of Camberwell, which would give some information upon your point. The columns are headed "Rooms in tenements, 1, 2, 3, 4" and "Number of tenements with less than five rooms"; and I see in Camberwell there are 4,650 with one room, 6,000 and odd with two rooms, 8,000 and odd with three rooms, and 7,711 with four rooms.

3477. Have you got the figures for St. Olave's?—No, I have only got the Camberwell figures.

3478. I rather gathered that you thought it would be better, so far as your district is concerned, if you received a contribution from other districts presumably better off?—Yes; what I said was practically that the districts where the men work and earn their money should contribute to keep them in any time of distress.

3479. Would you say that, because a man earns his money in one district and spends it in another, that is an additional reason why the district in which he earns it should contribute?—I do not know that he does spend it in the other district; I should say that he spends it between the two; but there is no doubt that the product of his labour, or his work, is benefiting the parish where he works; it is not benefiting our parish beyond the rent that he pays.

3480. Is it not benefiting the inhabitants of your parish if it provides him with his wages and food, and so on?—Yes, but it only provides him with wages as long as there is work going on; directly the work stops the man comes back to our parish to keep him.

3481. Then directly the relief work stops would you stop the contribution from that district; how would it work?—I should think it would work in the same way as the contribution now works for indoor paupers or the equalisation of rates.

3482. I understand you have a great many builders in your parish?—Yes.

3483. They may be working, let us say, in St. Olave's, or Chelsea, or in Westminster, upon

Mr. *Jackson*—continued.

building operations going on there; but would you say that was a sufficient reason why those districts should contribute towards your rates?—I should say it is one of the chief reasons why it should be equally distributed. It is unfair for one parish to have to sustain and keep these men during the time they are out of work.

3484. Would you say that because a man living in your parish works at the Docks, therefore the Docks district should contribute towards your rates?—Yes; I think there should be one common charge for London for this purpose.

3485. That is rather another question; but would that really benefit you?—It would benefit us.

3486. Are there no districts poorer than yours?—Yes.

3487. Might you not have to contribute to them if there was a general rate?—We might have to; but that would not alter the idea I have that it should be a common charge for this extra work.

3488. But it would very much alter the result, would it not?—I am not afraid of the result so far as Camberwell is concerned.

3489. You mean you might not have to contribute?—I do not mean that; I mean that as regards this relief work the payment for the work should be spread over the whole of London, and not fall on the unfortunate parishes where the men happen to sleep.

3490. How would that affect your parish?—I do not know how it would affect it. We probably might gain slightly over it.

3491. At the present time, on the balance, do you receive or pay to the Common Poor Fund?—I think we receive from the Common Poor Fund. That is a question for the guardians, but I believe, as a matter of fact, we do receive.

3492. You receive from the Common Poor Fund, and you receive also from the equalisation of rates?—Yes.

3493. Do you know what you do receive from the equalisation of rates?—Yes; the amount we receive is equal to just over a 5*d.* rate on our district for the year, about 5½*d.* I think it comes out on the calculation for this year that the amount for Camberwell is about 23,000*l.*, and a penny rate is, roughly speaking, 4,000*l.*

Mr. *Bartley.*

3494. Then by the equalisation of rates you are relieved to the extent of 5½*d.*, and the adjoining parish of St. Olave's has to contribute?—I am not sure whether that is so in St. Olave's; I think so.

3495. We had it in evidence it was so; do you think that is a satisfactory arrangement?—Yes.

3496. For Camberwell, anyway?—It is, because St. Olave's comprises very large warehouses and places of very large rateable value; whereas ours is very small.

Mr. *Stuart-Wortley.*

3497. You have the South Metropolitan Gasworks in Camberwell, have you not?—Yes.

Mr. *Bartley.*

3498. And the Crystal Palace?—Only a portion of the Crystal Palace. That is very small.

3499. But there are large houses round the Crystal Palace, are there not?—The large houses round the Crystal Palace are not of a large rateable value; the rents there are reducing very much.

3500. Still all the rates in Camberwell are reduced by the Equalisation of Rates Act?—Yes.

3501. With regard to your system of relief at Camberwell, do you say that everybody applying was put on to the list?—Yes.

3502. You sent out these postcards in alphabetical order, I understand?—Yes. We took the names in alphabetical order.

3503. You say some of these men did not turn up?—Yes.

3504. Some of them overslept themselves, you say?—Yes.

3505. Do you think that those men were very anxious for work?—It was only a very small number of men did that.

3506. You mentioned it, I think, in your earlier evidence?—Yes, but the question was asked as to the number of men summoned, and the number of days a week each man would work, and I said that there were a very few cases where the men did not turn up at the depôts in time, and his place was taken by others.

3507. Did you take any means to strike them off the list where the men did not turn up because they overslept themselves?—We dealt with each case on its merits.

3508. Did you ever strike any off of the list?—Yes.

3509. Why did you strike them off?—We struck some off the list because they did not attend at the time they were summoned for; and we struck off some men because the work they were doing was not satisfactory; they were really not working.

3510. Do you know how many men were treated in that way?—No.

3511. Was it any large proportion?—Not a large proportion.

3512. Has pauperism increased in Camberwell within the last few years?—Yes.

3513. Can you give us any figures to show that?—I have not the figures.

3514. Has general distress increased in Camberwell; is there an exceptional amount of distress at the present time?—It is not exceptional at the present time. At the present time there is a great deal of work being done in Camberwell; nearly all the water mains have burst, and the water pipes, and a great number of men are getting work now repairing the mains for the water companies.

3515. Do you know of any special reason why Camberwell should be worse off than any other part of London?—Nothing beyond the fact that the rents are very cheap in Camberwell, and that the men can easily get from there to other parts of London.

3516. Do you mean that the fact of rents being cheap in a district is a reason why the people are poor?—No; it is a reason why poor people should go to live there.

Mr. *Bartley*—continued.

3517. I think you said that the wives got relief from the guardians while the men went to work; did you take any means to see that there was not an overlapping in that way?—No. I said what might happen would be that whilst the men were engaged in sweeping the roads, in a few cases the wives might get food from the guardians; I did not say that as an actual fact they did.

3518. Have you any reason to suppose that they did?—No, nothing beyond the fact that they could have done it. The relief is given at times when the men would be working.

3519. There was no test of any sort?—There was no test.

3520. Do you think that is a proper way of relieving distress?—Do you mean so far as the guardians or the vestry are concerned.

3521. The vestry and the guardians combined?—So far as the vestry was concerned, there was a test: the men had to sweep and clear away the snow; they had to work. So far as the guardians were concerned there was no test.

3522. You said that these men were employed on this relief work for two days a week; did you take means to know what they were doing the other days of the week?—No; I should think most of them were waiting outside the vestry hall on the other days of the week. We used to have 500 or 600 men every day waiting outside the vestry hall.

3523. Do you know whether they were all from your own district?—No; the only means we had to test that was by sending the postcard to the address given.

3524. Do you think those postcards were dealt with or sold in the district?—I heard of only one case where a postcard was sold for 6*d.*, or something of that sort.

3525. As a matter of fact, these cards might have been sold, and I understand were sold occasionally?—I heard only of one case where a postcard was sold.

3526. You told us that the men sometimes gave two or three addresses?—We had a case or two of that sort.

3527. Did those men get two or three postcards?—They would.

3528. What could they do with the postcards, except sell them?—They might get cards for different days.

3529. Do you think such a system as that is likely to reduce destitution, or to encourage it?—I do not see that that system would alter the destitution in any way; but in the opinion of the vestry that was the only way we had of dealing with the matter on an emergency.

3530. It was the best thing the vestry could do?—Yes.

3531. Except to pass resolutions; they passed resolutions, did they not?—Yes, a great many.

3532. Was there any result from those resolutions?—No.

Mr. *Keir-Hardie.*

3533. Could you give us an idea of what the character of the resolutions to which you have been referring was?—The resolutions were the resolutions that have been passed in many parts of London. One of the resolutions was, "That the

15 *March* 1895.] Mr. TAGG. *Continued.*

Mr. *Keir-Hardie*—continued.

the vestry approve of the appointment of a Royal Commission, and that a letter be sent to the Local Government Board asking them to select one of their Commissioners from Camberwell." The vestry passed that resolution in December 1892.

3534. Would it be correct to say that the gist of them was that the vestry was unable to deal with the distress arising from want of employment, and asked the Government for help in the matter?—Yes. It was practically this, that the vestry had no funds at their disposal to relieve the distress, beyond the ordinary rates.

3535. You have told the Committee that, with the exception of the distress due to the late frost, there is no exceptional distress in Camberwell this winter; but that does not mean, I presume, that there is no distress from want of employment?—It does not mean that there are no men out of work.

3536. You mean there is nothing beyond the normal condition?—Yes.

3537. You also told us that you adopted the postcard system and crowds of men applied for work?—Yes. I am speaking of two years ago.

3538. Would that be the normal condition, that crowds of men would be applying for work?—Yes, there is naturally a good number of men in a poor parish like Camberwell anxious to work for the vestry, where they get 3*s.* 4*d.* a day.

3539. In your opinion would it be desirable, if it were possible, to organise some system whereby these men would find employment afforded them which should be provided through the vestry?—I do not quite follow.

3540. Your vestry is driven to despair almost in its attempt to find work for these men. They are put to do a class of work part of which is skilled work, such as channelling, which ought to be done by skilled men?—Excuse me; we have not put any of these men on channelling; the actual channelling is done by skilled men. The excavations for channelling may be done by unskilled men; but of course that work could not be done during the frost.

3541. Would not the work be better done if done in the ordinary way instead of a relief work?—Certainly.

3542. That would mean that some employment other than relief work will require to be found for the men out of work, if it could be done; I do not mean by the vestry?—Yes; if relief works were established, no doubt you would find men anxious to work upon them.

Mr. *Pickersgill.*

3543. I do not think you told us the amount in the £. of the total rates in Camberwell?—If you take it for the complete year ending March this year, it is 3*s.* 6*d.* and 3*s.* 2*d.*, that is to say 6*s.* 8*d.*; but, of course, in the last six months of the year, from September to March, there is the relief of 2½*d.* under the Equalisation of Rates Act.

3544. Is that allowed for in this 6*s.* 8*d.*?—Yes; it is allowed for.

3545. Then the total rates in the pound were 6*s.* 1*d.*?—6*s.* 8*d.* levied.

3546. Then you told us that these men on the relief works received 5*d.* per hour; was that rate

Mr. *Pickersgill*—continued.

of remuneration fixed by the vestry, or how was it determined?—It was fixed by the standing committee of the vestry to whom it was referred.

3547. Through whom did you make such inquiries as were made with regard to the *bona fides* of these applicants?—We made no inquiries beyond searching the rate books to see if the names the men had given to us were entered on the rate books. Certain inquiries were made of the relieving officers. Practically we had no time to deal with the cases in any other way.

3548. Did you not send men to the addresses given to make inquiries?—No; we had no staff to do that.

3549. You did not get any extra staff for the purpose?—No.

3550. Are you aware that in some localities the local authorities engaged extra men for the purpose of making special inquiries as to the *bona fides* of the applicants for employment?—No.

3551. With regard to what you told us about the surcharging of the expenses for the labour exchange, I understand the labour exchange cost on the whole about 200*l.*?—I should think that is about it.

3552. And that the auditors surcharged only 36*l.*?—Yes, it was only a proportion of the time that was surcharged; it was really the amount expended in salaries to the superintendent and clerks, after the answer to the question was given in the House of Commons.

3553. May I take it, then, that the expenditure incurred before that answer in the House of Commons was allowed by the auditors, but that the expenditure subsequently to that answer was disallowed?—That is so.

3554. You have told us that there was a very strong feeling against disfranchisement amongst men thrown out of employment?—Yes.

3555. Supposing that disfranchising condition were removed, do you think there would still be a strong reluctance among the same class of persons to apply to the guardians for relief?—I think the feeling would not be so strong. They prefer to have work through the vestry rather than through the guardians.

3556. I wish to ask just a question or two about the effect of the Equalisation of Rates Act. The benefit which a locality receives from that Act depends, does not it, up on two factors, viz., population and rateable value?—We pay on rateable value, and receive on population.

3557. So that it depends upon the two factors, and not on population alone?—Certainly.

3558. In the first place an estimate is made of what the locality ought to pay on the rateable value?—That is so.

3559. So that the rateable value is one of the factors, and regulates the contribution to or from the locality?—That is so.

3560. Then the grant to the locality is based upon population?—It is distributed on population.

3561. I think it says in the Act, 6*d.* on the rateable value shall be the sum to be apportioned against the different parishes; when the whole of that sum has been collected, if the parish is in the

Mr. *Pickersgill*—continued.

condition either to receive or pay, the difference is either paid or received from that parish by the council.

3562. Is it the fact that an estimate is made, or that money is actually paid with regard to the contribution?—The council, for instance, sent us about a month ago a cheque for the six months on 2½*d.*; that is for the six months from September to March.

3563. Then it is only the balance that is paid or received?—Only the balance. That is provided for in the Act. You do not have to collect your money; they only deal with balances.

3564. Then I will repeat the question I put a moment ago: the manner in which a locality is affected by the Act depends upon two factors, not upon one; the two factors being the population and the rateable value of the locality?—That is so; they are charged on rateable value and receive on population.

3565. So that if you have two localities with the same population, but one with a higher rateable value than the other, there would be a difference in the benefit received in the two localities?—Certainly; I presume that is exactly the case in St. Olave's. St. Olave's has a very large rateable value and a very low population.

3566. Camberwell and St. Olave's have been contrasted; are you aware that the rateable value per head of the population in Camberwell is 4*l.* 8*s.* 1*d.*, whereas in St. Olave's it is 50*l.* 11*s.* 11*d.*; you would not dispute that?—I believe our rateable value is about 4*l.* 10*s.* I do not know about St. Olave's.

3567. You have no reason to suppose that I am not correctly stating the rateable value per head in St. Olave's when I say it is over 50*l.* per head?—Of course I am quite unable to answer that question.

3568. At all events, you believe that the rateable value of St. Olave's per head is very much higher than the rateable value is in Camberwell?—Yes; I explained it must be so.

Mr. *Logan.*

3569. You, of course, have seen the reference to this Committee that we have to consider and report not only as to the extent of distress through want of employment, but as to whether any steps, either by legislative changes, or by changes in administration, will be likely to remedy the evils arising from want of employment; you have seen the reference to the Committee, perhaps?—I believe I read it in the newspapers.

3570. Have you ever thought about this question of the unemployed with a view of seeing whether there is not any permanent remedy for the want of employment amongst men willing to work?—I have thought about this question of the unemployed a great deal, but I have not been able to think of any permanent remedy for it.

3571. In your opinion (and you have had a good deal to do with these questions) is the number of unemployed increasing year by year?—I could not say; I can only deal with Camberwell. In Camberwell we seem to get more

Mr. *Logan*—continued.

applications every year. We only really touch the unemployed during the winter season.

3572. Has it ever occurred to you that our present system of land tenure and the way in which the land is dealt with may be largely responsible for the want of employment amongst men willing to work?—I attend here really as an official witness, and I should prefer not to give a personal opinion upon a question of that sort. It is not a question we deal with as a vestry.

3573. Have the ground values in your neighbourhood increased in recent years?—Greatly.

3574. And are still increasing?—Yes, they are still increasing.

3575. Is that increase owing to the needs of the people for land to live upon caused by the increase in their population?—Practically; through the necessity to build houses in Camberwell.

3576. Is there therefore a large increase in the value of the land, entirely apart from any capital expended by the landowners?—I could only answer that question by saying that undoubtedly building land in Camberwell has largely increased in value during the last twenty years.

3577. Apart from any capital expended upon that land?—Not in every case.

3578. In very many cases?—In some cases. It depends upon when the man acquired it.

3579. Has it ever occurred to you that these increased values might be intercepted by taxation and applied for the benefit of the people?—It has occurred to me that that might be, certainly.

3580. Have your vestry considered whether by any radical change in our system of land tenure, either the nation or the municipality becoming possessed of the land and applying the increased values for the benefit of the community, such a state of things might not be brought about as practically to do away with what we now have, that is to say, this number of men anxious and willing to work walking about unable to get work?—I believe in the past our vestry has passed resolutions on those lines; but the vestry of to-day, I venture to say, would not pass such a resolution.

3581. You said it was impossible for your vestry to carry out the Local Government Board's suggestions, therefore these various suggestions of the Local Government Board were, in your opinion, practically useless as providing any remedy for want of employment?—I may read, perhaps, the recommendation that one of the committees have laid before the vestry now on that circular. It expresses the opinion of the committee.

3582. I understood you to say that it was impossible to carry out the Local Government Board's suggestions?—I do not say it is impossible The vestry carry out all the works that are contained in this circular now, but it is impossible to pave streets and put channelling in during the frosty weather.

3583. So that the circular did not do much to solve the difficulty?—It has not solved any difficulty at all. The circular told us practically what we knew already.

3584. It has not helped you in point of fact?—It

Mr. *Logan*—continued.

—It is of no assistance to us. The vestry fully appreciate their duty in the matter.

Mr. *Bousfield.*

3585. You said you had a labour exchange in 1892, and you found that that exchange failed to answer its purpose?—Yes, we failed to get employment through it.

3586. But would not your experience lead you to the conclusion that possibly a labour exchange over a larger area might succeed, notwithstanding that in a smaller area it has failed?—If you could carry out a labour exchange for the whole of London practically, to which the whole of the employers of London would go, it might answer.

3587. As to the labour registry, some system of that sort is absolutely necessary to you to enable you to get the names of people who want to be put on the relief works?—We have people coming up in such numbers that the only way we can deal with it practically is taking their names and addresses.

3588. Really to register the names of all and sundry who choose to apply is the most convenient form, is it not, of knowing how many people there are who want employment, and selecting the best of them to whom you can give employment?—It enables us to know the names and addresses of persons wishing employment, but it does not afford very much assistance in seeing that they are the best to give employment to.

3589. Do you not put down on the register whether a man is married or single, and how long he has been out of work, and so on; are not those particulars put down?—Yes, we put down the answers that they give on these questions; but we have so many put down as married; they are all anxious to get work.

3590. Do you check the answers in any way; do you make any inquiries?—No, there is no canvass.

3591. I understand they have to re-register every week?—No, that was the system under the old labour exchange.

3592. I think you said you found it difficult to utilise the unemployed labour, because it was of a low grade, on your ordinary vestry work?—I do not think I used those words.

Mr. *John Burns.*

3593. You said it was relatively unskilled?—I said, practically, the great bulk of the men were general labourers; practically unskilled labour.

Mr. *Bousfield.*

3594. I understood you to say, in referring to the sort of work which your vestry had to do, that the class of people out of employment were not the people fitted to do that sort of work?—No; I said the work the vestry gave them to do, sweeping roads and footpaths, they were able to carry out.

3595. But I am referring to the paving and other regular vestry work?—They were not fitted to do that work; that is to say, the bulk of them. Of course there may have been some

Mr. *Bousfield*—continued.

paviors or such skilled men among them who were out of employment.

3596. You told us that resolutions with regard to a labour colony had been put before your vestry; have they ever considered the question of labour colonies as a means of advantageously setting to work that low grade class of labour?—They passed a resolution in favour of the County Council applying for power to establish a labour colony.

3597. When was that?—In March 1893. That is the resolution which I have already read. A copy was sent to the Local Government Board, the County Council, and the various vestries and boards of guardians.

3598. Now with regard to disfranchisement, you say you think that is an operative motive in leading people not to go to the guardians until they are obliged to?—I do.

3599. Then I gather from you this fact of disfranchisement leads people rather to prefer to come to the vestry for employment than to go to the guardians for relief?—Yes.

3600. Do you not think that is a desirable thing?—Certainly; that is exactly what I have said.

3601. With regard to charitable relief, you made the observation that you yourself have distributed some charitable relief?—Yes, I was secretary to a relief committee.

3602. I understand you found difficulty in knowing that the money got into the hands of those who really wanted it?—No; I said that we distributed it through a local committee, but these funds do not always get straight into the hands of the most deserving people; I mean there are people who know the quickest way to get tickets and that tickets are gone before the other people, who may be more deserving, get there.

3603. There are a certain number of people who are always ready to prey upon relief of any kind?—Yes, who are always waiting for relief.

3604. Does the result of your experience show that it is desirable to have some kind of barrier to deter people from asking for relief before they actually require it?—Yes. You mean, I presume, some test.

3605. Either a test or any other form of barrier which keeps them back from asking for relief until it is absolutely wanted; that is desirable, is it not?—I certainly agree with that.

Mr. *John Burns.*

3606. What do you do as a parish to adapt the execution of your local public works and exceptional works to slack and depressed times?—We constructed an underground urinal which we started in the winter months practically to try and assist as much as we could; but I do not think we had any other works. We painted our park railings during the winter time.

Mr. *Jackson.*

3607. Is that a good plan?—The criticisms upon it were rather severe, they said it was the wrong time of year for the work, but the vestry did it with the intention of relieving the distress.

 3608. You

Mr. *John Burns.*

3608. You told us that you painted Camberwell Park railings in the winter; was it in frost time?—There was some frost, I believe; it was in January, not this year, but two years ago.

3609. When do you paint your lavatories and water-carts, and street name-plates and stand-pipes, and do your numerous other local works?—We have a permanent staff of painters.

3610. Does your surveyor, about September, bring up a list of local works to be carried out in the coming months, and to some extent relieve the local unemployed market?—No; we do our painting work with our own permanent staff. It is spread out; it is done in the spring time chiefly for stand-pipes and hydrants.

3611. What do you do with regard to your stables and depôts, and so forth; do you do that kind of work always in the summer when there is a brisk demand for labour?—No, we really take no extra labour on for that purpose; we do that at our own time.

3612. Then may I take it that Camberwell does not specially adapt the carrying out of its local public work to the exigencies of the depressed labour market?—Only in regard to street sweeping and street cleansing, and such work as I have described. We have permanent men on the other work.

3613. From the point of view of providing work for the unemployed, Camberwell has not yet apparently set its house in order?—It has not discovered any way of doing it beyond street cleansing. We keep our painters on all the year round.

3614. You said under the Equalisation of Rates Act you received over 5*d.* in the pound relief; how much of that 5*d.* in the pound, or 23,000*l.* in all, which you received in the last year, have you devoted to the relief of your unemployed?—Under the Act it has to be spent on special circumstances.

3615. What are the special circumstances?—The equalisation will assist, practically, the 1,500*l.* that we have spent in relieving the unemployed this year.

3616. I gather that out of the 23,000*l.* you received under the Equalisation of Rates Act you have spent only 1,500*l.* for local work for the unemployed?—Of course the 23,000*l.* is for the whole year; during the last month we spent 1,500*l.*

3617. What have you done with the remainder?—We have reduced the rates in the pound on the September to April quarter by 2½*d.*, and we shall reduce it in the forthcoming quarter.

3618. You have relieved the ratepayers and the shopkeepers, but you have not proportionately relieved the unemployed?—We have relieved everybody that is rated.

3619. Now I come from that point to your resolution calling on the County Council to start labour colonies. Has it ever struck your vestry that that 23,000*l.* which they get from the equalisation of rates might be properly devoted by the vestry itself to the purchase of land for the purpose of a labour colony on its initiative, and on its own responsibility?—I do not think the vestry has any power to establish labour colonies.

Mr. *John Burns*—continued.

3620. What steps have you taken to ascertain that?—I am only guided by the Metropolis Management Act, where our duties are defined.

3621. Have you ever been applied to the Local Government Board to allow you to devote half of this 23,000*l.* to the purchase of land for a labour colony?—I think the Local Government Board's answer would be that there was no power to do so.

3622. Have you ever done so?—No.

3623. Have you taken joint action with any other parish to have a joint labour colony established?—No.

3624. Supposing the Local Government Board was willing to let you use 10,000*l.* out of the 23,000*l.* for the relief of the unemployed by you alone, as a parish having a labour colony, would you assume responsibility as a vestry for doing that?—I should think the present vestry would first see how it was going to be worked.

3625. I am to assume by that that you want the County Council to try the experiment of a labour colony first?—I think the vestry would prefer that.

3626. Do you think that a decentralised body like the London County Council would be able to conduct a labour colony on which Camberwell men exclusively were employed with that success, with that amount of local knowledge which means success, and generally with that information without which no colony or any piece of work can be carried out?—I do not think we should expect the County Council to establish a labour colony for Camberwell.

3627. But your resolution of March 1893 called upon the London County Council to establish labour colonies for the London unemployed?—Not for Camberwell.

3628. But you would want a colony for Camberwell with that number of unemployed?—No, we should not want a special colony.

3629. You had 2,000 out of work in 1893; if they were all willing to go to a labour colony that would be a fairly decent colony to start with, would it not?—We do not wish to take the whole of the colony.

3630. But 2,000 on a colony is a fairly good start, is it not?—I should think it would be a fairly good colony.

3631. Supposing the County Council were to deduct half your 5*d.* relief rate under the Equalisation of Rates Act for the purposes of a scheme of metropolitan labour colonies, do you think your vestry would cheerfully assent to that deduction?—I think our vestry as present constituted would want to know what benefit Camberwell was going to derive from the 10,000*l.* on the labour colony.

3632. Surely the assumption would be if the central body withheld from you half the relief you derive from the Equalisation of Rates Act, then proportionately you would have your unemployed relieved to that extent?—I should think the vestry would prefer to have the 10,000*l.* to expend themselves.

3633. You are under the impression that if the vestry had to contribute 10,000*l.* towards a labour

Mr. *John Burns*—continued.

labour colony they would rather spend it themselves?—Certainly.

3634. Why do you think they would prefer to spend it themselves; is it not because they know more of the local conditions of the men who are treated on the labour colony?—No; I should think they would consider that they were better or equally able to judge of the nature of the work as the London County Council.

3635. Would they not be better qualified by their local knowledge of the inhabitants who were to be relieved?—I do not think they would be better qualified; because I think the men out of employment in our parish are, as I say, general labourers who do not belong exclusively to our parish.

3636. But generally they reside in the district?—Yes, they reside in Camberwell.

3637. You agree that to have local men dealing with local difficulties is better than strangers grappling with them?—I say Camberwell is quite able to manage its own local affairs, and deal with its own unemployed.

3638. Even to the extent of running its own labour colony?—I do not say, I think, it should run a labour colony.

3639. Who should?—I very much doubt, personally, whether anybody should.

3640. Do you think that the Camberwell unemployed would like to go to labour colonies, say, in the New Forest, or the clay lands in Essex, in winter time?—No; my experience of the unemployed is that they would not like to go out of Camberwell.

3641. But we cannot have labour colonies in Camberwell?—No; the Camberwell unemployed would prefer to spend their time with their wives and families.

3642. Has the Camberwell vestry discussed the question of the social, sexual, and marital side of labour colonies?—The discussion on the labour colonies took place in November 1893. They have discussed the matter from nearly every point of view, but I really forget how the discussion ran on that point. Our discussions are not at all curtailed on any matter, and no doubt they have fully discussed the whole of the question.

3643. Has the vestry expressed any opinion as to the social and sexual disadvantage of having 500 single men or 500 married men without their wives on a labour colony?—I was present at the vestry meeting in November 1893, when they discussed this resolution about labour colonies. I should like to explain that this was a resolution passed by the delegates appointed by the vestrymen and Camberwell guardians; but the Camberwell Vestry did not pronounce any opinion on the labour colonies, they only received the recommendation.

3644. But they sent it on, did they not?—The conference sent it on.

3645. The conference sent it on to the County Council?—I think so.

Chairman.

3646. Was not that the resolution you referred to when I examined you?—We had two or three resolutions on labour colonies. I think I was

Chairman—continued.

looking at the wrong one. The delegates of the vestries, district boards, and boards of guardians, passed this resolution on labour colonies and ordered it to be sent on to those different bodies. When the report of the conference was sent to the Camberwell Vestry, the vestry did not pronounce any opinion upon it; they received the recommendation.

3647. They did not adopt it?—They simply received it; they did not approve or dissent.

Mr. *John Burns.*

3648. Am I to gather that the Camberwell Vestry as a public body has not officially endorsed the theory of labour colonies for the relief of the Camberwell unemployed?—Not to the best of my memory.

3649. Without pressing you for an answer, because I recognise your position, may I take it you do not think that any large proportion of the Camberwell unemployed would go to labour colonies, whether they were started by the London County Council or by Camberwell?—I do not think they would myself.

3650. I see the Social Democratic Federation submitted to you a number of sensible sanitary propositions for work, such as on streets, urinals, drains, playgrounds, insanitary houses, and so on?—Yes, I have their proposals before me.

3651. What did the vestry do to carry out those suggestions?—The vestry employ as many men as they possibly can in sweeping the streets and channelling. They have made an estimate of 5,000*l.* to be spent this year. As to the urinals, we are erecting underground urinals. As to drains, we have an efficient house-to-house inspection of drains. As to playgrounds we have no means of dealing with that. The labour exchange, as I say, we had to close. As to insanitary, houses that sort of work we do by our very large staff of sanitary inspectors; we have a very large staff.

3652. Supposing that 10,000*l.* out of the 23,000*l.* you have secured under the Equalisation of Rates Act was spent in carrying out the sensible suggestions made by this body, do not you think you would have been able to have dealt with more unemployed than you have done last winter?—I do not see really how we are able to carry out these suggestions more extensively than we do. We practically carry out all these suggestions.

3653. Surely there are many streets in Camberwell, as in nearly every parish, that are not quite as clean, or quite as sweet, or quite as well swept as they might be; is not that so?—I do not quite agree that. We have in Camberwell streets that could be better, swept but we sweep as many as we possibly can.

3654. As many as you can afford to?—I do not say that.

3655. Are not your medical officer and surveyor somewhat circumscribed by the rates?—We have 400 men on the permanent staff.

3656. That expresses nothing, unless we know the relative figures. Do you not think, if the surveyor had half of the 23,000*l.* to spend in carrying out such work as I have mentioned, the streets could be swept cleaner, and the medical

Mr. *John Burns*—continued.

officer would have a much more cheerful report than he can present now?—The surveyor practically spends this money now.

3657. He could spend more if he had it?—Yes, the surveyor could spend more, no doubt.

3658. Have you a refuse depôt and a farm in the country?—No.

3659. You contemplated having one, did you not?—We did.

3660. Why did you abandon the idea?—Because the vestry have not been able to see yet that they would save any money upon the present system; they think the present system is the cheapest.

3661. The reason why you did not adopt it was because the railway rates were very heavy, in fact prohibitive; was not that so?—Yes; both the railway and canal rates. We had a special committee which went very fully into the matter.

Mr. William Francis Dewey, is called in; and Examined as follows:

Chairman.

3662. You are the Vestry Clerk for Islington, are you not?—I am.

3663. What is the population of the parish of St. Mary, Islington?—The population at the present time is estimated to be 323,853. That is estimated upon the Registrar General's mode of calculating; it is a very difficult thing to arrive at really. The population at the census of 1891 was 319,143.

3664. Yours is one of the largest parishes in the United Kingdom?—I think the largest parish in point of population.

3665. What is the character of the parish; is it mainly a residential parish?—Essentially so, I should think; there are very few large manufactories or warehouses in it.

3666. Then the bulk of the working people who live in the parish go outside to their work, do they?—Well, a large number of them would be engaged, probably, in the building trades and matters of that kind.

Mr. *Stuart-Wortley.*

3667. Within the parish?—Within the parish a considerable number of them; but I should say a large number would go outside.

Chairman.

3668. Will you tell us what the rateable value of the parish is?—The rateable value during the year up to the present Lady Day was 1,717,571*l.*

3669. Is that an increase upon the rateable value of 1891?—Yes, the rateable value then was 1,675,138*l.*

3670. Then both the rateable value and the population have somewhat increased since 1891?—Yes.

3671. Not very largely, but to a certain extent?—Yes; Islington I was going to say, sir, is practically full; I do not think it can increase to any large extent; it is almost entirely built over, and I should almost say, I was going to say, as full as it can well be, having regard to the class.

3672. There is hardly any vacant space left?—Scarcely any.

3673. Then what are the rates?—The rates for the past year up to Lady Day, 1895, were 5*s.* 8½*d.* in the £.

3674. Is that calculating all the rates?—That includes all the rates. They were divided roughly in this way: the Poor, which includes the County and Poor Rate, as you know for the purpose of incidence, sir, was 3*s.* 3½*d.*; and the vestry, and what I will call the General Rate, the Vestry, School Board, and Baths Commissioners, 2*s.* 5*d.*

Chairman—continued.

3675. Did you get any relief under the Equalisation of Rates Act?—Yes, but I do not think it affected that rate. We have received during the current half-year (at least about a month ago) I think something like 10,000*l.* for the half-year.

3676. What would that be equivalent to?—That would be equivalent to a rate of 2*d.* in the £., or 4*d.* in the £. for the year.

3677. Can you tell us what the rateable value is per head of the population?—I was not prepared with a calculation, sir, but I heard you inquire that from Mr. Tagg: The rateable value is 1,717,000*l.*, and the population 323,000; I should say about 5*l.* is the rateable value; something like that.

Mr. *John Wilson.*

3678. For a man, woman, and child?—Yes, that is per head of the whole population.

Chairman.

3679. Can you tell us anything about the chief trades as stated in the census returns; what were the principal occupations of the persons in the district?—That I should obtain from the census returns, sir. You will see by the copy I have furnished to you that the total number engaged in the building trades are 10,861; "commercial" (without going through them *seriatim*), 11,148; "labour service and transport," 18,756; that latter item, I imagine, is largely due to its close neighbourhood to the large railways, the Great Northern, the London and North-Western, and the Midland.

3680. And "Commercial," I suppose, means largely clerks?—Clerks, I should say.

3681. You have a large number?—A very large number, I should imagine.

3682. Are the great bulk of your houses and tenements of small value?—Yes, I should say between 30*l.* and 40*l.*; not much over 30*l.* probably, average rateable value.

3683. You have not a large number of large houses?—Not a large number.

3684. I observe that you established a labour bureau at the beginning of last year?—Yes.

3685. Can you tell us anything about that?—Well, the facts connected with it are contained in the

Chairman—continued.

the labour bureau committee's report. It was established in December 1893, principally owing to the fact that some pressure had been brought to bear upon some members of the vestry because similar bureaus had been established elsewhere, and the committee reported at the end of nine months what the result had been. They said: "During the nine months that the bureau had been in existence, 3,572 men and 533 women (making a total of 4,105 persons) have applied for employment. The names of these have all been carefully registered, the applicants being required to put in an appearance at the end of every seven days, should they desire their names still to stand on the register." A small staff was employed to make inquiries, and so far as their inquiries went (which were made in 2,810 cases) the information received was in 2,517 cases satisfactory, and in 293 unsatisfactory; of that number, 293, many being unknown at the address given.

3686. How far did it result in getting employment for those who were registered at the bureau?—They go on to state in the report, sir, that "1,465 applications have been received from employers, 1,279 being for men, and 186 for women; and in this way the bureau has been a channel through which occupation of some kind has been found." They submit with their report a table showing these statistics, that during the nine months there were 1,383 general labourers registered, of whom 1,098 obtained (it is said) employment, but you will understand, of course, that that employment was probably very temporary; of the building trades 508 were registered, 113 of whom obtained employment; porters and messengers, 459, were registered, of whom 190 obtained employment; carmen and horse-keepers, 375 were registered, of whom 56 obtained employment; engineering and metal trades, 191 were registered, of whom 19 obtained employment; wood-working and furniture, 160 were registered, of whom 15 obtained employment; clerks and warehousemen, 130 were registered, of whom nine obtained employment; unstated occupations, 63 were registered, of whom 19 obtained employment; printing and book-binding, 48 were registered, of whom three obtained employment; outfitters, 23 were registered, of whom three obtained employment; as lads and boys, 232 were registered, of whom 61 obtained employment. Then, under the head of women:—For daily charing, 325 were registered, of whom 60 obtained employment; as general servants, 119 were registered, of whom 38 obtained employment; dressmakers and seamstresses, 54 were registered, of whom eight obtained employment; other occupations, 35 were registered, of whom 15 obtained employment; the total being 4,105 registered, and 1,707 obtained, to some extent, employment.

3687. Was that considered on the whole a success?—Well, the committee report it as a fair success.

3688. Was it renewed this last winter?—Yes; they are now continuing it.

3689. Have you been overcharged any expenses in connection with it?—No.

3690. You incurred some expenses, I suppose, last year?—Yes.

Chairman—continued.

3691. I do not want to know the details, but you did incur some expenses?—Yes.

3692. And you have not been overcharged?—No.

3693. Then you are not of opinion that there is any difficulty in paying?—The auditors have no power to enforce any surcharge. It is a surcharge upon the general rate; the auditors are not empowered to make any surcharge.

3694. Has there been, in your opinion, any increase of persons out of employment this last winter?—As I state, in my evidence, my official knowledge is limited, if I may say so, to my experience of the rate collection and my experience of this labour bureau, and as far as I am able to judge there has been very little, nothing abnormal, except during the four weeks of frost, then no doubt our building trades were thrown very much out of gear.

3695. Then what did you do during those exceptional four or five weeks as a vestry?—During 10 days in the month of February we employed an average of 904 additional sweepers daily.

3696. How long did that go on?—I should mention, sir, that my evidence was prepared really up to the end of the month of February. I think I might say that this relief was given practically, during 10 days only; there was really nothing to do during the intense frost, when, as you are aware, there was no snow really to be removed, nothing to be swept even.

3697. Then it was only while there was snow on the ground that this could be done?—Yes, and during, perhaps, the earlier stages of the frost.

3698. And you think the whole thing was limited to about 10 days?—I should think to about 10 days. I should say, perhaps, occasionally some additional sweepers have been put on since the break-up of the frost.

3699. What was the expenditure involved?—About 1,500*l.*

3700. What was the rate at which these men were paid?—Fourpence per hour.

3701. How many hours a day?—I cannot tell you exactly, sir, how many hours a day; unfortunately I have not got that, but I should imagine they were employed about eight or nine hours probably.

3702. Do you know how many days a week they were allowed to work?—No; but I think the men were taken on in shifts.

3703. Was this carried out, then, under the directions of your surveyor?—Yes.

3704. Did you give him the charge of the arrangements?—The vestry did.

3705. But you were cognizant of what the directions were, were you not?—Yes; the directions would be general; they would not be in detail exactly.

3706. Then these were left largely to him?—Yes.

3707. The number of days?—The number of days, yes. I think the men were supplied, to some extent, through the labour bureau, who would send men over, as it were, in alternate shifts.

Chairman—continued.

3708. Do you know the total number of men who were employed?—No, I do not.

3709. Do you know how many men stood on the register asking for employment?—Only by the return from the labour bureau. I have got a supplemental return showing the number of men on the labour bureau. I see that in January 1895, there were 1,117 registered themselves, and in February 1895, 889; so that those employed would be principally out of those men.

3710. But you are not able to tell us how many men were employed as additional workers; I think I have seen it in your evidence?—I beg your pardon, sir; I think I told you that an average of 904 were engaged for 10 days during the month of February: an average of 904 daily.

3711. And you think that those 904 men were working all those 10 days?—Not the same men.

3712. Not the same men?—No; not the same men. What I mean is that on those 10 days there were 904 men additional to our ordinary staff employed, and on each one of those 10 days.

3713. But not necessarily the same individuals?—No.

3714. When that 10 days were over you did no more?—We may have taken on some since.

3715. Practically not to a large extent?—No.

3716. Then you were not able to provide additional labour during the whole period of the frost by any means?—Oh, no.

3717. Were there any other efforts made to meet the distress?—As a matter of fact, there were not; because during the time that the distress was, as I say, abnormal, owing to the frost, no works of any kind were in progress. During the time that the distress in Islington was abnormal, owing to the frost, all work was suspended.

3718. But were there any other private sources of relief from which those who were out of work could obtain help?—I have no doubt there are numbers of them. I am not personally cognisant of their management.

3719. All you could do was to give employment while snow was on the ground?—Quite so.

3720. During the rest of the frost you were able to do nothing?—That is so; the vestry have not thought it their duty to give relief purely as relief unless they could get some return in the nature of work.

3721. Do you think there was a fairly good return for the 1,500*l.*, as far as the character of the work was concerned, the sweeping?—Yes, fairly good; these men are recognised as not being up to the ordinary class of men who would be engaged by the vestry; not the majority of them.

3722. You are not able to give us any information about the increase, or otherwise, of relief from the board of guardians?—From the Poor Law Guardians?

3723. Yes?—I have it indirectly from the clerk to the guardians, as an appendix obtained from Mr. Davey, the clerk to the guardians. I find that for the week ending the 23rd February

Chairman—continued.

1894 there were 1,543 adults not able-bodied relieved, and for the same week 1895, 1,725.

3724. Being an increase of how many?—About 175, I think.

Mr. *Stuart-Wortley.*

3725. Is that indoor or outdoor?—I am speaking of outdoor relief, now. I can give the particulars of indoor relief obtained from the same source, the clerk to the guardians. The total outdoor relief was 4,008, including able-bodied and children, in 1894; and, in 1895, 4,298; so that there were 290 additional during the last week of this year, to what there were in the corresponding week of the previous year.

Chairman.

3726. Have you any later figures?—No, I have not, sir.

3727. Then that would seem to imply that the guardians have not really very largely increased the amount of the relief given?—No, I think the general experience in Islington is that there has been no very largely increased distress except probably, as I say, during those four weeks.

3728. Were there any special private funds started, to your knowledge, for relief?—I cannot say that I know of any. There are a number of soup kitchens, dinner associations for the school board children, and so on, in the parish, but I do not think they were supposed to be much more in requisition during the past two months than they were in the same two months twelve months ago.

3729. They may have been slightly more active?—Yes.

3730. But you are not aware of any new associations?—I am not aware of any new agencies.

3731. Associations started to meet these special difficulties?—No.

3732. Then your general impression is that the exceptional distress was not very great, and that the ordinary distress was not largely increased, that is to say, not largely increased during this winter?—That is my experience. I give some statistics with regard to summonses.

3733. Yes, I have seen them. I do not think we need go closely into that. Now, what is your view about the Local Government Board's circular letter?—We have looked upon it as an utterly useless, and, if I may say so, not only useless, but rather misleading circular, because it induces persons who are wanting relief to fancy that the vestries and guardians are almost instructed to provide it. We have had numerous deputations of persons who were distressed, not this year, but in times past, coming to the vestry and almost demanding relief in accordance with what they have said they understood to be the instructions of the Local Government Board.

3734. Have you not had such deputations this winter?—I do not think we have had one such this season.

3735. Did the vestry reply to this letter in any way?—Not on this occasion.

3736. Have they on former occasions?—I am not quite sure, but I think they have.

3737. But you do not consider that the circular

Chairman—continued.

cular has been of any particular assistance to you?—No, for these reasons: first, you see, the Board attach these conditions, work which will not attach the stigma of pauperism; work which all can perform whatever may have been their previous avocation (which is almost at once an impossibility); work which does not compete with other labourers in employment (which again is almost an impossibility), and they proceed to classify these works as follows——

3738. We have got that fully before us; we know the list of works; but you have not found yourselves able to put in force any of those works?—At the time when this circular was issued, I think on nearly every occasion we were actually stopped by frost from carrying out the works suggested.

3739. But you are carrying out some of those works in the ordinary course of your business as a vestry?—Yes, when not stopped by frost.

3740. Quite so; you feel the difficulty that when distress arises from frost, some of these very suggestions cannot be carried out because of the frost?—I should say all of them, probably.

3741. You are aware that these circulars are not issued with reference to times of frost?—No, they are issued regularly every year.

Mr. *John Burns.*

3742. Oh no, not regularly?—I think we have had them for the last five years regularly.

Chairman.

3743. I think we need not go into detail on that; I mean they are not issued purely with reference to the frost, they are issued with reference to the want of employment, especially during the winter, no doubt?—They are.

3744. It may be an open winter, or a frosty winter?—Quite so.

3745. Are you of opinion that some of these things can be performed with advantage apart from the question of severe weather?—No; I think not.

3746. You do not think that any of these things can be performed by you with advantage for the employment of those who are out of employment?—No, for this reason; that we immediately conflict with one of the conditions of the board, and one which I apprehend this Committee will attach importance to; that is, that we interfere with the employment of regular labour.

3747. Then is the view of your labour bureau that they ought not to employ during the winter men who are out of employment in any case?—No; as I have said, we have employed a large number of additional men for such things as sweeping the streets; snow cleaning.

3748. I beg your pardon, I meant outside the question of the special frost?—Well, I think I might say that it is the opinion of the vestry that it is undesirable to create work, that is (shall I say) useless, for the purpose simply of employing the unemployed.

3749. But let me take the question of laying out and paving of streets, or cleansing of streets which are not otherwise cleansed. Apart from the question of severe weather, is it your view, or the view of your vestry, that they ought not to

Chairman—continued.

employ those who are out of work during the winter on works of this sort, for fear of affecting those who might be employed otherwise?—I should say that that would be their view with regard to all the classes of labour except the sweeping of the streets.

3750. With regard to almost every other class of labour, in your opinion, you might be affecting those who are already in work?—Quite so.

3751. Or expecting work in the ordinary way?—Quite so; and turn them into the class of unemployed.

3752. Then that partly accounts for your limiting your relief this year to the 10 days when there was snow on the ground?—I think so.

3753. Then have you any suggestions to offer on the general question as to those who are out of employment?—No, I do not think I have. As I say, the matter has not apparently pressed so much in Islington as I daresay it has in such parishes as West Ham and other districts.

3754. Your view on the whole is that, apart from severe weather, the bulk of the working people living in your parish are fairly well employed throughout the year?—I think so.

3755. And therefore in your case the question of the relief of the unemployed hardly arises?—It does not press, at all events, to the same extent that it does, no doubt, in other places.

3756. It does not press to the extent that your vestry think it necessary to devise any methods of employment?—No; having regard, of course, you will understand, sir, to their statutory powers and what they consider their duties to their ratepayers. I mean to say they are not formed with the intention, as the guardians may be, of giving relief.

3757. No, but if it had been assumed that it was a very much more pressing question than you considered it to be, then, of course, the vestry might have considered it their duty to act differently to what they have?—I think so.

3758. Their action has been largely based, at any rate, upon the fact that they think the distress has not been very exceptional or very great?—Yes; there has been no very great pressure brought to bear.

3759. Is there anything special you would wish to add?—I should like to say a word upon a matter which I have heard spoken of. Of course, I have read the evidence which has been taken before this Committee with some interest, as I was summoned to attend here, and I have heard Mr. Tagg's evidence; I think, myself, that a great deal too much has been made of the question of the disfranchisement of the persons who seek out relief: I have had an experience of 25 years in the preparation of the lists of voters of probably the largest parish, the largest borough, in England, and so very few out of the 45,000 on the lists are, I should say, disfranchised owing to parochial relief, and so very few who have received relief ever come forward and attempt to claim their vote that I could never have supposed that any importance was attached to it whatever, until I read it in the evidence given before your Committee. I have not the slightest doubt that it does

Chairman—continued.

affect some men of strong political views, but I think a very small proportion.

3760. You think that very few men who have fallen into great distress, perhaps by accident or misfortune, would consider the question of losing their vote, before they applied to the Board of Guardians?—I should not think one in a hundred. I venture to say this, that if the law were amended in that respect (I am speaking because I have seen the evidence), I doubt whether it would increase the out-door relief to an appreciable amount over the kingdom.

3761. You think it would not have much effect?—Not the slightest.

Mr. *John Burns.*

3762. You said, sir, that you thought the Local Government Board's Circular rather did more harm than good?—Yes.

3763. Why do you say that, sir, apart from the individual instances you have given us?—Because it leads the working classes unemployed to suppose, and almost to insist upon, relief being obtained from the vestries who are unable to give it.

3764. Can you suggest or devise any means by which the Local Government Board, acting for the Imperial authority, can communicate to vestries and local authorities instructions providing for special distress arising from want of employment, except through a circular?—No.

3765. Well, failing a local authority taking the initiative in grappling with its own distress, can you suggest any means by which the Local Government Board can stimulate the local initiative, and at the same time not do a slight amount of harm?—No; nor do I think it necessary that the Local Government Board should seek to stimulate it, because I think the local authorities in the metropolis would always be stimulated by their own ratepayers in matters of the kind.

3766. But is it not a fact that just in proportion, during the last 10 years, as the local authorities have been stimulated by a Local Government Board Circular, greater attention has been paid to relief works for the unemployed?—I do not think so particularly; I do not think it has been owing to these circulars.

3767. Is it not a fact that the vestries and the guardians to-day do consider and discuss the question of the unemployed and relief works more frequently than they did 10 years ago, when no circulars were issued?—Yes; I think it due to the same cause as that which brings the circulars out, namely, that there is a pressure brought to bear upon the vestries and district boards.

3768. Then I am to gather from you that the fact that the Local Government Board's Circular is issued, and the initiative greater than it was, is due to the same pressure upon the authority as that which exerts itself upon Parliament?—I think so.

3769. That is agitation and organisation of discontent with existing distress?—I think very likely the "organisation of discontent."

3770. Are you aware that in 1893 96 local authorities, through the circular, gave employment in England and Wales to 30,000 men, who, without the circular, would not have been employed?—No; you will understand I was only speaking of Islington.

Mr. *John Burns*—continued.

3771. Quite so?—I was not speaking of my experience outside.

3772. What does Islington do in the way of adapting its local work to slack times?—I have told you what it did during the 10 days.

3773. I do not call that local work. I mean what does Islington, as a parish, through its surveyor and Works Committee, do in making up old roads, or in making new roads, and doing sanitary work in regard to the general condition of unemployed labour in slack times?—Nothing at all.

3774. Does not the surveyor bear that in his mind when he is bringing up propositions to the Works Committee?—Well, I should hardly like to speak for him, but I should doubt whether he does much, except during a time of frost such as we have recently had.

3775. I am putting frost on one side?—I do not think that he would.

3776. May I put this to you: if the vestry had five roads to channel, and a proposition was brought up that these roads should be done in June, July, and August, when the building trades and work for navvies and bricklayers was fairly brisk, do you think the vestry would push on with those roads in June, July, and August rather than leave them to October, November, and December?—I should say undoubtedly they would.

3777. They would?—I am assuming, of course, that the work was considered to be necessary.

3778. Was urgently necessary?—Yes.

3779. But is it not a fact that local parish work of that kind can generally wait a few months?—Well, possibly so.

3780. Let me put it in this way: if you had 2,000*l.* to spend in the relief of distress arising from want of employment in Islington, would you not, if possible, rather spend that 2,000*l.* by having the test of public work that would benefit the community than have 500*l.* of that 2,000*l.* spent in the relief of distress either through food or outdoor relief, or in other ways?—Oh, I would certainly rather get value for the money.

3781. Then I am to gather that Islington has not specially pursued the plan that some vestries have done of adapting its ordinary and extraordinary local work to what is known as the unemployed building season?—I think not.

3782. Do you see any objection to that being done?—Well, the objection to that is this; we will take the principal matter to which you refer, the making of new streets; the making of new streets is a charge upon the owner; and after we have obtained his money, which we have to do first, we consider it is our duty to return a *quid pro quo* and make the road as quickly as possible.

3783. You very frequently take their money and do not do the roads for months?—In this sense, that we do not get the whole of it in.

3784. Well, we have some experience of that?—Would you allow me to add, in reply to that statement which you have made, that although as you say there is no doubt abundance of labour in June, July and August, yet I venture to think that

Mr. *John Burns*—continued.

that those are the months which probably would be selected, because, as you know well enough, they are the months in which the work can be carried on probably to greater advantage than if you let it run into November, when there is a probability of frost, or December.

3785. Of course I do not want to argue this with you, but is it not your experience that road making, apart from frost, can be done equally as well in October, November, and January and February, as in June, July, and August?—I think not, not during very wet months I should say; I am not speaking though as a practical man, mind.

3786. We would like the surveyor in the box on this question?—If I may say so, this would answer your question right off: we should probably do a great deal more work of the kind you have mentioned to-day, if I may venture to say so, from March to October, than we should during the five winter months.

3787. That is just the point?—Mind, you will understand, simply on account of the work being carried out, from the surveyor's point of view, better.

3788. Let me put it in this way: supposing your parish can for any three months of the year give employment to 100 unemployed painters, would not you advise, as a matter of public business, and of public convenience, and of public profit, that those 100 painters should be employed at that three months of the year when their trade was the most slack, subject, of course, to the weather allowing their work to be done?—Well, I confess I should hardly like to answer that question off-hand; there are other points.

3789. You believe that prevention is better than cure in everything, do not you?—Oh, yes.

3790. Then would not you rather have that 100 men employed in that three months of the year, when they would be prevented accepting charity or outdoor relief, and get their relief in wages through a proper amount of work being done; have you considered that point as a vestry?—I do not think we have.

3791. You know that some parishes have deliberately set apart certain work for certain months as a means of acting as a buffer to the unemployed?—Yes; I do not think Islington has; perhaps that is what I had better say.

Mr. *Pickersgill.*

3792. Have you much compounding for rates in your parish?—Not a very large amount.

3793. I found my question upon this: I notice that at Christmas 1894, the number of persons who did not pay their rates when they were summoned was very largely increased as compared with 1890?—Something like 400.

3794. Something like 400; 2,500 in 1890?—Two thousand nine hundred as compared with 2,500.

3795. My question is this: would not that indicate a considerable amount of pressure or distress amongst the smaller ratepayers in Islington?—I think not, because when I look to the number of persons who, as a consequence, were excused, I find there were 94 as against 85 in the corresponding period four years before.

Mr. *Pickersgill*—continued.

3796. But, as a rule, do not you find that the bulk of the people who are summoned pay when they are summoned, and do not appear when summoned?—Yes.

3797. And there is a considerable increase amongst those who were summoned?—Yes; you will remember the rates were 6*d.* more in the £.

3798. Do you think that affected it?—Yes, I think that would considerably affect the appearances to the summonses.

Mr. *Benn.*

3799. You spoke with regard to the franchise in connection with the giving of outdoor relief?—Yes.

3800. And you expressed an opinion that you did not think it was generally a question of consideration?—I do not attach the slightest consideration to it myself; I am only speaking of my own experience.

3801. You mentioned that you have been reading some of the evidence given before this Committee?—Yes.

3802. You recognise that if outdoor relief was given at the rate of the St. Olave's or Camberwell standard it would very seriously affect the register?—I do not think I noticed that; I should not have thought that it could have done so.

3803. All those who received relief from the stoneyard would in the natural course of things be struck off the register?—Yes, if they were entitled otherwise to be on it; but a very small proportion, I should say, of those persons are entitled to be on it.

3804. But you are aware that the residential test was applied in a large number of cases, so that that would seem to indicate that they would be on the register, many of them?—I do not see that.

3805. Any extensive destitution would affect the register supposing it was given to those who resided in the district, would it not; you think that is a matter of no great consequence?—What I said, or what I desired to say, was this, that I did not think that the fact that they would lose the franchise would deter a man from applying for relief to any great extent.

Mr. *Bartley.*

3806. Islington is a very densely populated parish, is it not?—Yes.

3807. And there is a great number of what are usually called the poorer persons living there?—Yes. There are flats containing what would be called poor people, and so on.

3808. And a very large number of families in one?—Yes, tenements.

3809. A very large number?—Yes.

3810. Therefore there is a population that might readily ask for relief works if they existed, I suppose?—I should have thought so.

3811. And do I gather from you that you think that opening relief works, and the talk by circulars and other things, tends to produce the demand for works?—Well, it has tended to bring about a sort of dissatisfaction with the vestry and board of guardians for not finding what these persons have thought they were entitled to.

Mr. *Bartley*—continued.

3812. Do you think that is an evil?—Well, I think it is an evil that they should be led to suppose that they could have what the vestry has no power to give them.

3813. Do you think it prevents them depending upon themselves and makes them rather depend upon the vestry?—Possibly. It would prevent their seeking work elsewhere, possibly.

3814. Now as regards the work which the vestry does, an honourable Member referred to 100 painters; do I understand that the vestry works as an ordinary employer to get the best it can for itself in the way of work?—Yes.

3815. It does not act on the philanthropic line at all, but for its work considers itself an employer responsible to the ratepayers to get the best it can from the rates?—Yes; and it considers itself responsible to the ratepayers, and especially to the smaller class, who, any of them, might by excessive rates be turned into the class of the unemployed.

3816. There are a great number of that class, are there not, in Islington?—A very large number.

3817. Who are just on the border line, so to speak?—Yes.

3818. And any relaxation in that way, or philanthropy might really inflict considerable hardship upon many deserving people?—I think the vestry have thought that.

3819. Then as regards the rate of payment, you gave, for the special works during the eight or ten days, as I understand, fourpence an hour?—Yes.

3820. Is that below the ordinary wages?—Yes, slightly; they pay fivepence an hour to the ordinary sweeper.

3821. And is fourpence given as a matter of principle to keep it below the ordinary standard?—Undoubtedly. The vestry think that for these works (supererogatory works, if I may so term them) that they do they should not pay the ordinary rate of wage.

3822. So that by that means the men will find work as soon as they can for themselves?—That is the idea.

3823. You think that is borne out by the facts of employment this winter?—I think so.

3824. You think that is really a benefit to the poor themselves?—Yes; it is in the nature of what the vestry consider relief works, and they think that if they create them specially they should not be paid for (I do not know whether I am using the right term) at the union rate, or regular rate, of wages.

3825. You think, as a matter of principle, that that ought to be below so as to secure persons leaving that work as soon as possible?—Yes.

3826. You do not wish to see the vestry a large employer of casual labour, I suppose?—No, not personally, and I do not think the vestry wish to.

3827. You think it would be an evil to the poor themselves if they came to rely upon the vestry?—Yes, unless, of course, the works were necessary.

3828. Of course?—I apprehend, if I may say so, that every member of the Committee would think that to employ a large staff of men in unnecessary work for the sake of giving them relief would certainly be an evil.

3829. Then I gather that Islington is somewhat exceptional in this way; that although a fairly prosperous parish it has an immense number of persons in it whose means are comparatively small?—I should think so.

3830. But the rates are fairly low, are they not?—Yes, very low, as compared with most of the metropolitan parishes. Out of 60, beginning with St. James's, Westminster, as the lowest, I think Islington comes tenth.

3831. Then Islington gets a large relief from the Equalisation of Rates Act?—20,000*l.* per annum at the present time.

3832. Is that because the population is so dense?—Yes.

3833. Do you know whether it is one of the most densely populated districts in London?—I should think it is, because the area is very much smaller than either Lambeth, Camberwell, Lewisham, or Hackney, I think, whilst it has a much larger population.

3834. Do you know the 37th Report of the Medical Officer of Health; does that at page 98 give the population per acre at 105, as compared with London, 37?—I have not that before me.

3835. Do you consider the density of the population does affect this want of employment?—I should think it would.

3836. You think the more densely a district is populated, the greater the chances are that the question of the want of employment will be more acute there than in a less densely populated district?—I should think so unless there were special reasons, such as Docks in the neighbourhood, or something of that sort.

3837. That does not occur in Islington?—No.

3838. So that from the population of Islington one might expect as much distress there as anywhere else?—I think so.

3839. Then the general result of your evidence is, that as far as Islington is concerned there has not been any extraordinary amount of distress this winter except from the frost?—I think that is so.

Mr. *Stuart-Wortley.*

3840. I believe it has been established that with the exception of one or two of the most wealthy parishes in London, Islington has shown less increase in the amount of pauperism this winter than almost any other district in the Metropolis?—Yes. I am not acquainted with the Poor Law returns as regards the indoor relief except what I have given you from the clerk to the guardians, but from my own knowledge I should think it has.

3841. Do you know what the number of your assessments is?—The number of rateable hereditaments is 44,441.

3842. Do you know what proportion of them are houses below 20*l.*?—No, I could not tell you what number are below 20*l.*, but there is not a large number below 20*l.* The average would be something over 30*l.* probably, about 30*l.*

3843. It

Mr. *Stuart-Wortley*—continued.

3843. It is essentially a residential district, is it not?—Yes.

3844. You heard the whole of the evidence of the last witness, I think?—Very nearly the whole, I think.

3845. Can you suggest why, with so many points in common between yourselves and Camberwell, you have such a markedly different degree of distress this winter?—No, I did not gather that they had a very large amount of exceptional distress from the witness. I thought he gave evidence rather in the other direction.

3846. The figures of pauperism in Camberwell are phenomenal?—I did not gather that from his evidence.

Mr. *John Wilson.*

3847. I think you stated that the parish of Islington was nearly all built over?—Yes.

3848. You have no unbuilt ground remaining?—Very little.

3849. Are you aware whether there is any overcrowding in the district on account of the want of house accommodation?—Well, occasionally, of course, cases come to the medical officer's knowledge which call attention to the fact that a room (or two rooms) is occupied by an excessive number of persons. But there is nothing very serious in that.

3850. I think from the statement you have put in that the great body of the people in your parish are engaged in the building trades?—And commercially, as clerks.

3851. And transport work and commercial work. I suppose by the word "commercial" you mean that they are employed in shops or warehouses?—And as clerks, but not in Islington.

3852. I suppose the winter would have no effect upon that class of individuals in your community?—On the building trades it would.

3853. No, but the commercial?—No, I should say not to a large extent.

3854. In the building trades of course it would?—Yes.

3855. And the labourers?—Yes.

3856. Then I suppose that both those engaged in the building trades and labourers in ordinary times get very favourable wages, do they?—I should think so.

3857. Then do you think that during the time of the severe weather, when these trades were suspended and labour could not be carried on out of doors, that the people having good employment previously was the great means of protecting them against asking relief from the guardians?—Yes, I think so.

3858. Still there were some that were unemployed some 10 days out of the time that the frost lasted?—Yes, but I do not wish the Committee to understand that I meant that those persons are persons who would have been employed; probably many of them came from the ordinary unemployed class.

3859. Then you do not think they were people that had been employed, but that they came from the ordinary unemployed class?—I have no reason to think that the number of persons who registered themselves as wanting employment was greatly increased even during that frost.

3860. You do not think so?—I do not think so.

3861. If unemployed you think they were able to maintain themselves without asking relief?—I should think a large proportion of them.

3862. Those that were employed by the guardians at 4*s.* a day, or 5½*d.* an hour, of course would be very ill off, I presume?—You mean the ordinary employées of the vestry, the ordinary workmen?

3863. Were they ordinary workmen?—They are in regular employment by the vestry.

3864. I thought you had given employment for some 10 days during the severe weather?—Yes, to persons who were out of employment, and who had registered themselves at the labour bureau; those persons we employed, during the period of exceptional distress, to sweep the roads.

3865. And they would be very ill off, I presume, before they would ask relief?—Well, they registered themselves as wanting employment.

3866. Do not you think they would be very far through, that is to say, that they would have no other resource when they asked relief from the board, or some employment?—They did not ask it in the sense of outdoor relief at all; it was given by the vestry to men who had registered themselves as wanting employment; they said: "If you want employment, we will take you on to sweep the streets."

3867. But my point is this, that those individuals that you talk of would be in a worse position than those who did not ask for such work?—Yes, I suppose they would.

3868. Did it occur to the guardians of the poor to give these men any food before they began their work?—No; I think not. I am not the clerk to the guardians; I know nothing of the proceedings of the guardians.

3869. Do you know whether there was any provision made for the children or for the wives of men who were out of employment and could not get pay with which to get food?—No; except through the ordinary outdoor relief channels, I know of none.

Tuesday, 19*th March* 1895.

MEMBERS PRESENT :

Mr. Bartley.
Mr. Benn.
Mr. Billson.
Mr. John Burns.
Mr. Campbell-Bannerman.
Mr. Keir-Hardie.
Mr. Jackson.
Mr. Heywood Johnstone.
Mr. Lawrence.
Mr. Logan.
Mr. Mather.
Mr. Pickersgill.
Mr. David Randell.
Mr. Renshaw.
Mr. Round.
Mr. Whiteley.
Mr. John Wilson (Durham).
Mr. John Wilson (Govan).
Mr. Stuart-Wortley.

THE RIGHT HONOURABLE WILLIAM L. JACKSON, IN THE CHAIR.

The Reverend E. C. T. GRIFFITH, called in; and Examined.

Chairman.

3870. YOU are the vicar of a district which includes Pontypool, are you not?—I am vicar of Trevethin, which includes the town of Pontypool.

3871. You are the rural dean of Blaeangwent?—Yes.

3872. Do you come before the Committee in your capacity as one who knows this district, or do you come to represent any official body?—I come with a personal knowledge of the district, and as the chairman of the relief committee which has been formed there.

3873. That was a committee formed for the purpose of dealing with the distress?—Yes; it has been working for two winters.

3874. Has it been sitting continuously, or only during the winter?—During the winter.

3875. Will you tell the Committee the area of the district dealt with?—About three miles long by one mile broad.

3876. What is the population?—We estimate the population at about 16,000.

3877. Was employment fairly general up to August 1893?—Yes, on the whole very fair.

3878. Was there any strike about that time?—There was a strike among the colliers.

3879. Was there any connection between the strike and the depressed times which set in about that period?—I should hardly like to say that there was; but the strike seemed to disjoint and dislocate trade in the district very much.

3880. It was rather coincident than consequent, you think?—It affected the tinplate trade, and therefore I do not feel quite qualified to say absolutely whether the depression was in any way the result of the coal strike; I should think it was, it was a wider question, perhaps.

3881. What would you say were the causes of the want of employment?—The facts which we have before us are that the works giving employment in the district have ceased to give employment.

Chairman—continued.

3882. Is it the fact that three tinworks, up to September 1893, employed about 600 men, and paid weekly wages of about 650*l.*?—Yes.

3883. Had those works been working with a fair amount of regularity up to that time?—They had.

3884. Was the date at which the works ceased to give employment, 1893?—Two out of the three works ceased to give employment then.

3885. Will you tell us the names of those works?—The Osborne Tin Works, and the Pontymoile Tin Works.

3886. What proportion of the 600 men would those two works give employment to?—About 400 out of the 600.

3887. In September of that year those two works were closed down, I understand?—Yes.

3888. Have they since resumed work?—The Pontymoile Tin Works resumed work for about four weeks in the autumn of last year, and then only partially.

3889. With regard to the other works, the Town Forges, will you tell us what has occurred?—That has been going on very intermittently, sometimes ceasing altogether for long periods.

3890. Is that works still going on?—It is going on at this moment, and has been going on for a fortnight past, after a long stoppage.

3891. Does that mean that the trade shows any revival; or have there been some special orders?—I have been told that, in a particular kind of plate that is made there, viz., the black plate, which is sold in Canada, a little revival may be expected at this time of the year, as the ports open.

3892. Is

Chairman—continued.

3892. Is there a colliery in the district known as the Glyn Colliery?—There is.

3893. Does that colliery give employment to a considerable number of men and boys?—About 550 men and boys.

3894. Has that colliery been closed?—It was closed in April 1894.

3895. Has it continued closed, or has it been re-opened?—It has continued entirely closed.

3896. Do you know anything of the cause of its being closed?—The company who leased the colliery got into financial difficulties. That is the cause as it is known to me.

3897. Are there any iron and steel works in the district?—Yes, there is the Pontnewynydd Iron Sheet Works.

3898. How much employment do those works give?—They give employment to at least 400 men and boys, and the boys represent a very small percentage.

3899. Do you know anything of the aggregate amount of wages paid at those works?—It is about 550*l.* a week.

3900. Are those works closed?—Entirely closed.

3901. Since when have they been closed?—Since December of last year.

3902. What was the cause of the closing of those works?—The cause of the closing was the failure of the proprietors to carry on business owing to financial difficulties.

3903. Is it the fact that, between September 1893 and December 1894, at least 1,350 men have lost their employment in the district?—Yes, it is the fact.

3904. Do the 200 men who are still employed at the town forges only work intermittently?—That is so.

3905. Have there been any means taken to meet the distress in your district?—A committee was formed in January 1894 for the purpose of giving relief, and a subscription was raised in the town. The amount collected was about 300*l.* This committee worked for about 12 weeks during the winter of 1894.

3906. Was any register kept of the unemployed?—A register was carefully kept of those in receipt of relief under this committee.

3907. Was the relief given in money or in kind?—It was given at that time in orders upon grocers, and the children were fed with a daily meal of soup and bread in the Market House. I should like to say, besides that steps were taken by the head of an Undenominational mission in the town, a Mr. Dintle, who gave a certain amount of relief.

3908. That was given independently of your committee?—Entirely independently.

3909. Was there any relief work of any kind started?—The Local Board offered stone-breaking.

3910. Was that availed of to any extent?—It was not very largely taken up, and when it was taken up it was not found that the work was very satisfactorily done on all occasions.

3911. Was the work offered at the piece-work rate?—The rate was 1*s.* 3*d.* per cubic yard.

3912. Do you know whether that is the price ordinarily paid for such work in the district?—I believe it is.

3913. Was the result satisfactory as to the work done?—No; men who are soft from working in hot places or from working underground are not fitted, in our opinion, for out-door labour, especially at that time of the year; and they were not able to accomplish a great deal of work.

3914. What happened, then, at the end of the 12 weeks; those works, you have told the Committee, continued closed; how did the men in the district find employment after the 12 weeks during which assistance was given by the committee you spoke of?—As regards the colliers, a certain proportion of them found work out of the district, but they retained their homes in the district, and they were thus put to the double expense of paying for lodgings and also retaining their homes. Some of the tin-works men, I think, have filtered away and got work in other districts.

3915. Did your relief committee think they had met for the time being the most acute form of distress at the end of the three months of work?—They thought they had done their best to do so. I should point out that during the greater portion of the time when the committee was giving relief, all three of the tin-works were closed, but, as I pointed out, one of them has since been working intermittently.

3916. Was there another relief fund started in January of this year?—There was.

3917. Was there any local cause which led to the starting of the relief fund at this particular time?—The immediate cause of the starting of the relief committee was the closing of the Iron Sheet Works in Pontnewynydd. The distress was very acute in that district; 400 men were thrown out of employment without any notice whatever; and a relief committee was formed in the district.

3918. You yourself were chairman, were you not?—Not of that committee. I was going to explain that a fortnight later in the Pontypool district another relief committee was formed; and, as it was found that the two districts overlapped, it was decided to amalgamate the two committees, with myself as chairman.

3919. Will you tell the Committee what distance there is between those two places?—As between Pontnewynydd and Pontypool, the houses touch one another; there is no break at all.

3920. Are they both included within the area of three miles you spoke of?—Yes, they are both included within that area.

3921. How much money was collected?—Altogether we have collected this year about 500*l.*

3922. Have you spent it all?—We have not spent it all; we have a certain amount left.

3923. Is that since January of this year?—Yes.

3924. In what form was the relief given?—There were two distributions of bread weekly, and a daily distribution of soup.

3925. Was there any limit of quantity or any discrimination as to the amount of relief given in particular cases?—We give, on a general rule,

Chairman—continued.

one quart of soup per diem to every three persons, and we give one four pound loaf twice a week for every three persons.

3926. Was there any test of destitution applied in any of those cases in which you gave relief?—Every applicant for relief has to appear before a committee, which sits twice weekly. It is a large and representative committee, consisting of all ministers of religion in the district, all the doctors, and a large number of people besides, including the chairman of the urban district council. Every applicant for relief, as I say, has to appear before that committee, and it is very unusual, in a small district such as ours, if the applicant is not known actually personally to one of the committee. We have sometimes as many as 20 and 30 people sitting upon the committee. If there is any doubt whatever about a case, the house is visited and the case investigated. The list is revised carefully once at least a week. I should say that all relief is given by ticket.

3927. Were any coals distributed?—About 25 tons of coal were given by the various collieries to the committee, and were distributed in loads of 1 cwt. and 2 cwt.

3928. Can you tell the Committee the number of those now receiving relief?—About 1,800 persons.

3929. When you say "now," does that mean actually at the present time?—Those figures were given about a fortnight ago, but I have no reason whatever to modify them to any appreciable extent at this moment.

Mr. *Logan.*

3930. Does the 1,800 include men, women, and children?—Yes.

Mr. *Whiteley.*

3931. That is 1,800 receiving relief out of how many; what is the total population of the district?—Sixteen thousand.

Chairman.

3932. Has there been any estimate made of the number of out-door labourers, or persons with out-door occupations, who were unable to work during the frost?—It was estimated during the frost that owing to all causes about 1,000 men were absolutely without employment.

3933. Would that be at an end now that the frost has gone?—That would only affect at the most between 200 and 300 out of the 1,000.

3934. Have you anything to say as to the prospects of any revival of the tin-plate trade?—I am afraid not. We feel that nothing but a revival of the tin-plate trade will help us with regard to the tin works in our district. There has been a little show of work during the last fortnight; but I am informed that it is very uncertain whether the present work will last more than another fortnight.

3935. How have the tin-plate workers lived between the period when your relief works closed last year and began this year?—I do not reckon that all of them are still without employment; some of them have undoubtedly got employment of different kinds. I do not think many of them have found employment in their own work, but I think that some of them have, during the time, had odd jobs of various kinds which have kept them going; others have saved money and have lived upon their savings.

Chairman—continued.

Mr. *John Burns.*

3936. When you say "odd jobs," what do you mean?—Labouring.

3937. For whom?—Underground; or some possibly got jobs of labouring in the ironworks as long as they were going.

Chairman.

3938. Has the Glyn Colliery been re-opened?—No.

3939. Is there any prospect of its being re-opened?—It was considered to be very uncertain whether it would be re-opened. We have nothing to lead us to conclude that it is likely to be re-opened.

3940. Can you tell the Committee what class of coal is got in the Glyn Colliery?—I believe it is a house coal.

3941. Is there no steam coal?—I should not like to say that there certainly is not, but I think it is a house coal colliery.

3942. Have you any suggestions to make to the Committee?—I should like to suggest to the Committee that when our local funds are exhausted, which they shortly will be, we shall still be in a condition of acute distress, and the question before us is, how this distress is to be met. We think we have taxed our local resources during the last two winters very severely, when it is remembered that the people who contribute to this fund are largely tradespeople, and are themselves suffering from the same causes. I think I should be correct if I were to say that of the 800*l.* that has been collected in two winters, with one exception only, there has been no donation of above 5*l.* That will give the Committee an idea of the means of the neighbourhood. We think we have enough to go on as we have been going on for a month or so. We do not claim that we feed the people; we only claim that we keep them from starvation. We try to help them to eke out in that way what they themselves can obtain; but even that we think must come to an end in another month, and then we may have to appeal again; but it seems to be rather unlikely that we shall be very successful in such an appeal in our own district.

3943. Did you spend last year all the money you collected?—We carried forward a balance of about 7*l.* this year. We feel we have met this distress entirely out of our own local resources.

Mr. *John Wilson* (Durham).

3944. I think you broke off before you had finished the suggestion you were about to make; would you complete your answer on that point?—I would add that, if there is any fund available out of which we might receive a grant, we think it would be of very great service to us.

Chairman.

3945. Do you mean by that any fund belonging to the Government?—Yes, that is my suggestion.

Chairman—continued.

3946. Are there any funds belonging to other districts in Wales from which you could draw?—No, not that I know of.

3947. If there are no funds available what shall you do?—We shall not let the people starve if we can help it; but we feel that, while the people are filtering away, there must be still a period of acute distress, and that the charge laid upon us now is to look after these people as well as we can.

3948. Will you tell the Committee what is in your mind when you speak about the people "filtering away?"—When a works is suddenly closed, as the Iron Sheet Works were suddenly closed last December, I think with the revival in trade those ironworkers will get work again in various parts of the country; many of them, for instance, will return to Staffordshire, from which place many of them came originally; but work seems to be so greatly depressed at present, outside our district as well as in it, that I think a considerable time must elapse before these men find employment elsewhere; they will dribble away, or filter away, as I said, one or two at a time.

3949. Do you think a grant would benefit your district, beyond providing some additional relief for the time being; do you think the benefit would be permanent?—I looked at it in the light of meeting this present acute distress.

3950. But looking a little further ahead; supposing the tin-plate trade does not revive, and supposing the ironworks in your district do not provide additional employment, will it be a benefit to the men to keep them in the district without work rather than they should filter away to districts where they can get work?—I do not think any relief given as our relief has been given is likely to keep men in the district.

3951. Do you mean that the relief you give is not sufficient to sustain them?—I do not think it is sufficient to sustain them without anything else.

3952. But would it not keep them in the district?—No; I do not think it keeps them in the district. I think these men are using every means that is open to find work.

3953. Has the number of men in the district diminished to any considerable extent?—Not to any considerable extent; because, as I explained, many of them have found employment out of the district in neighbouring places, and lodge away for the week, but return at the end of the week, and keep their houses on.

3954. But you do not propose any relief for those men?—We are not relieving them. They are in bad circumstances, but they are not in absolute want.

3955. Do the men belonging to the tin-plate trade belong to any union; is it one of the trades which has a union amongst its men?—It is.

3956. Does the union give any relief from its funds during the time they are out of work?—The union gave some assistance last winter; I am not aware that any assistance has been given this winter.

3957. Is that due to want of funds, or some other cause?—I should not like to say that no assistance has been given, because I am not aware; but I have not heard of any being given, and I could not say what the cause was.

Chairman—continued.

3958. Do you see or do you hear of any prospect of the revival of the tin-plate trade?—I do not hear of anything very prosperous in our immediate district.

3959. Will you please just amplify that a little; does that mean that in other districts the tin-plate trade is being carried on successfully, and not in yours?—I have not sufficient knowledge of the trade to say; but I understand we have been worse off than a great many districts.

3960. But you do not know the reason of that?—No, I can assign no reason for it.

3961. Is there any general reason assigned for the closing of the tin-plate works in your particular district?—No.

3962. There are districts in Wales in which the tin-plate trade is still carried on, are there not?—There are, I believe.

3963. But you know of no reason why it should be carried on in other parts of Wales and closed in your district?—No; but I should like to remind you that the tin-plate works are not entirely closed in our district; one works out of the three is working intermittently.

3964. Have you anything else to suggest to the Committee, or have I put the questions you desired to have put to you?—I think you have put just the points I should like to have raised. I think I have sufficiently emphasised the suggestion that if we can receive any assistance from outside we think we are qualified to receive it.

Mr. *John Burns.*

3965. You said that you were feeding the children with bread and soup in the market house?—Yes, that was so in the winter 1893-94.

3966. As apart from the benefit that the children undoubtedly derive from this soup and bread dinner, are there any disadvantages, in your opinion, attaching to this collective method of feeding children?—We were not entirely satisfied with it, and we abandoned it this year.

3967. Why did you abandon it?—We thought it better, for many reasons, that the soup should be taken home; we found it easier to deal with it, and we had a larger number.

3968. You found that the children had their meal at home under more comfortable and less demoralising circumstances; is that so?—I do not think we thought it a demoralising circumstance.

3969. Was there at your place, as frequently happens, a scramble on the part of the children for the bread and soup?—Oh, no.

3970. Was it properly distributed?—It was properly distributed.

3971. And yet, in spite of the proper distribution, you abandoned that collective system for an individual disbursement?—Yes; we gave so much per child per house.

3972. Your experience suggests that you would rather have individual distribution of soup through the mother at home than in collective soup kitchens with four or five hundred children present?—Yes.

3973. In speaking about stone-breaking, you said the men received 1*s.* 3*d.* per yard, and that

Mr. *John Burns*—continued.

yet the work at that price was not satisfactory; what do mean by "not satisfactory"; could not the men turn out the amount per day?—When I said the work was not satisfactory, I meant in one sense it was not always satisfactorily done.

3974. But do you mean as to the quantity, or as to the size and quality of the work done?—Both; it was not satisfactory to either side.

3975. The men did not break to gauge, or break the amount?—In some cases the men did not break it to gauge, and they were not able to break it in sufficient quantities as to make it satisfactory on their side.

3976. Had you tried day work before you had the 1*s.* 3*d.* per yard?—I do not think so; I do not remember it.

3977. What was the amount they earned per day at 1*s.* 3*d.* per yard?—I was told that it was possible for them to cut two yards in a day.

3978. That would be 2*s.* 6*d.* a day?—That would be 2*s.* 6*d.* a day.

3979. Working eight or nine hours a day, I suppose?—The men themselves have told me that they could not do that.

3980. But what reason did the men assign for their incapacity to break one yard or two yards of stone a day?—The stuff that is given them to break in our district is, to my thinking, exceptionally difficult; it is not limestone, but it is what is known as "clinkers," which is the refuse from the furnaces.

3981. It is slag?—It is slag, and there is a great deal of iron in the clinkers, and it is extremely hard to break; a great deal has to be thrown aside.

3982. Did the men's hands give out?—Yes, very many.

3983. Yet these men are in the habit of handling iron work, and so forth?—I think the action of a stone hammer and sledge would be very different to the strain of their ordinary work.

3984. You think the change in the character of the work unfitted them for the slag-breaking?—Yes; I think their hands are a great deal too tender to be subjected to these conditions.

3985. Apart from the physical difficulty of their hands holding out, did the exposure to cold tell upon them?—It did tell upon them, and if it had been taken up in larger numbers it would undoubtedly have told more; there were not a great number of men that took it up.

3986. Was the frost on when the stone-breaking was in operation?—This was in the winter of 1894, and we had very little frost then, I think.

3987. Even then, I understand, stone-breaking was not satisfactory as a method of relief?—Not to either side.

3988. Supposing there had been no stone or slag-breaking, do you think that those men would have welcomed heavy spade labour on agricultural land?—The same objection applies to the class of men we are now dealing with, that they are not fitted without a considerable amount of training for such work.

3989. Then I am to gather from your answer that a tin-plater, who is used to handling iron and who works in a hot temperature, is unsuited, except after some considerable amount of training, to do either stone-breaking or the heavy work that would be given to him in agricultural operations?—I think that is certainly so. I think that is particularly true of tin-plate workmen.

3990. You said that when your local funds were exhausted, and if there were any State funds to be distributed, you would respectfully claim some portion of them?—We should put in a claim.

3991. I gathered from you that when you spoke of the exhaustion of your local funds, you meant charitable funds only?—Entirely voluntary contributions.

3992. What has your district done by means of moneys raised out of an increased rate to meet the local distress?—I am not aware of anything exceptional having been done.

3993. Have the local authority, either the Town Council or County Council, contributed towards the relief of your local distress?—No.

3994. Have the rates been increased in your neighbourhood?—The rates have been increased.

3995. What is your rate at the present moment?—During the two last half years it has been 1*s.* 5*d.* and 1*s.* 4*d.* for the poor rate.

3996. That is 2*s.* 9*d.* for the year for the poor rate; but what are the other rates?—I do not know.

3997. Are they 6*s.* in the £, do you think?—I am afraid I must not say.

3998. It is very important; could you not give us that information?—I can get you the information.

3999. Have you appealed to the county council of your district for help?—At the first meeting of our committee we asked them to help.

4000. What did the council say?—The council, so far as I remember, replied that they were not able to help us; they did not see in what way they could help us.

4001. Did you suggest to them the undertaking of relief works of some kind, the cost to be defrayed by them?—We did.

4002. What was the nature of those relief works?—We did not suggest the nature of the works. We only made the suggestion that if they could put some work of that sort in hand it would be desirable at that time.

4003. Such as road-making and sewage works, and so forth, I suppose?—Yes; I may say the urban district council offered, about three weeks ago, stone-breaking again; that has been the only offer they have made.

4004. Would the stones that were broken in that way be used for the roads in the urban district?—They were broken on the sides of the roads at the very places where they were to be used.

4005. When trade is busy in this now distressed district, how do the men work; is it on two shifts of 12 hours?—I understand the tin works would work three shifts of eight hours; and I might say here that in the tin works, which is now working in our district, they are working four shifts of six hours in order to give a larger number of men a share in the employment.

4006. That was done at the suggestion of the men, who wished to distribute it over a larger number?

Mr. *John Burns*—continued.

number?—I believe the suggestion came from the men.

4007. But apart from the tin-plate trade, is not overtime generally very prevalent in your district when trade is brisk?—No. In the iron-works they would work by results very largely; they would be paid by the piece very largely.

4008. Am I to gather from you that, apart from the suggestion that you should have some money from some fund, you have no other remedy for the exceptional distress that arises in your district from the sudden cessation of work?—None whatever, except an appeal again for voluntary help; and we think that we have already taxed ourselves very fully.

4009. Has your committee considered the question of colonisation at all?—No, they have not dealt with that.

4010. Have you not discussed labour colonies?—No.

4011. Have you considered emigration?—No.

4012. Then beyond meeting the exceptional distress by providing children and women with soup and bread, and the male parents with stone-breaking, you have done nothing?—No; but I think it should be understood that the stone-breaking is so small a factor that it can hardly be counted at all.

4013. What are your guardians doing in this particular district with regard to distress?—I do not know that they are doing anything.

4014. Then, am I to gather from you that a private voluntary committee is feeding 1,800 people in a district where the population amounts to 16,000, and that the responsible poor law guardians are not doing anything for this exceptional distress?—I have been given to understand that if an able-bodied man has presented himself and asked for relief, he is told he is not qualified to receive it.

Mr. *John Burns*—continued.

4015. Has it ever dawned upon your committee that in proportion as this voluntary committee is taking the work out of the hands of the guardians, the guardians have ceased to interest themselves in what would otherwise fall to them; has that happened, in your opinion?—No. It came to this: at the beginning of this year we saw that nothing was being done, and we were obliged to take up the work.

4016. Did you not make some effort, before you started on your soup kitchens and so forth, to stimulate the guardians to do themselves what you were impelled to do?—I personally encouraged everybody I came in contact with to seek that relief.

4017. But the guardians were outside your powers of stimulation?—I did not attack them.

4018. Have any of them visited your kitchens?—Some of the committee are guardians.

4019. What has the local authority, as apart from the guardians, done to assist you; have they co-operated with you?—Yes; the urban district council have co-operated with us in every way.

4020. Have the guardians co-operated with you?—Individually.

4021. But as a body?—We have had no active expression of sympathy from them as a body that I am aware of.

4022. Neither have you had financial help from them?—No; we have had no financial help from them.

MR. STUART-WORTLEY TOOK THE CHAIR.

Mr. *Billson.*

4023. You are not in touch officially with the guardians?—No.

4024. Was not there a member of the guardians present as a representative of the guardians at your relief committee?—Not as a representative.

4025. Do you not think it would have been a good plan for the guardians to have been constantly in touch with you and represented at your committee meetings?—As a matter of fact one member of the committee, who has sat at every committee meeting almost without exception, is a guardian.

4026. Was the charitable sum you raised, which was about 500*l.*, all raised in the district?—Almost entirely.

4027. Have you had any experience of the district in previous years?—I have always lived and worked in similar districts, and I remember very well the very acute distress in the year 1875.

4028. But I should like to know whether last year there was the same kind of effort made voluntarily by charity?—There was.

4029. How much was raised then?—£.300.

4030. On your relief committee, or acting for your relief committee, is there any experienced

Mr. *Billson*—continued.

almoner, as one may call it, who was engaged in looking after the cases?—We have a man who devotes almost his whole time to it.

4031. As an amateur?—We give him a small salary.

4032. What business was he engaged in?—He was originally a collier; then he became an insurance agent, and he is now, in fact, an insurance agent in a small way.

4033. How long is he engaged by you; have you taken him on for the winter?—We do not pay him a real wage; it is only a little recognition of his service; he gives his service, which is far beyond the wage we pay. We pay him 10*s.* a week.

4034. Does it occur to you that if you had an official distributor of charity, employed and retained by a charitable organisation, it would be better than having a casual person from year to year?—The distribution is not in his hands; one member or another of the committee is always present at the distribution of bread.

4035. I gather that you feel the charitable fund of the district is exhausted?—We have about 100*l.* left, and we are spending at the rate of at least 20*l.* a week over the whole district.

Mr. *Billson*—continued.

4036. You said something about a contribution by some outside authority; would not that at once dry up your charitable resources?—Not if it were judiciously allotted. I think if it were given in proportion to the amount raised locally, it would be a different question.

4037. Would you like that grant in proportion to come from an Imperial fund or from a local fund; from the poor rate?—We have already taxed our district heavily voluntarily.

Mr. *Lawrence.*

4038. How long have you occupied your present post?—Four years.

4039. Have you had experience of similar populations before that, and for how long?—I was, five years before that, vicar of the industrial parish of Blaenavon, which has a population of 14,000, entirely composed of the industrial class.

4040. I hear your committee is composed of all ministers of religion; may I ask, though perhaps it is rather a curious question to ask, is there, as a matter of fact, much competition between the Church and the sects to obtain influence through these means amongst the people?—Not the slightest.

4041. As to what you said about the closing of the works; do you mean that certain works were closed absolutely without notice?—I think the notice in the case of the ironworks was very short indeed. I presume, in the case of the closing of the colliery, there must have been a month's notice.

4042. But generally was there not a pretty prevalent opinion that in a month or two's time the works would certainly close?—Quite the contrary. In the case of the ironworks it had been going to its very fullest extent, and nothing was more unexpected.

4043. What is the ordinary rate of wages for these skilled men; is it about 25*s.* to 2*l.* a week?—Do you mean in the tinplate or the ironworks.

4044. I presume they are a highly-paid class of labourers, generally?—They would differ very much; but, on the whole, they are highly-paid.

Chairman.

4045. Are they paid by the piece?—Yes, by the piece, largely.

Mr. *Lawrence.*

4046. Would it be between 30*s.* and 50*s.* per week?—Not if you take the average, I should say. I can give you the amount paid as against the number employed. With 600 men employed there is a weekly wage of 650*l.*

Chairman.

4047. That includes boys, does it not?—In the tinplate works it would include boys and men; but the boys are not a large proportion.

Mr. *Lawrence.*

4048. Are you at all conversant with how far provident habits prevail there; are clubs largely used?—Yes; benefit clubs are largely used.

4049. Among the applicants who apply to you, have you taken any cognisance as to how many belonged to clubs and how many did not?—No, except in the case of sickness; because if they do belong to clubs it is no benefit to them when they are out of work; in fact it is a heavy drag upon them to have to pay the subscriptions.

4050. Of course it would be a great test as to character, if you found the applicant was a provident man who had done all he could to lay by against an evil day; if you had that information, it would raise him in your estimation and form an index as to the propriety of generally helping the mass to which he belongs. Have you thought out the wider question, beyond your particular district, as to what would be the result of the State stepping in and providing funds to relieve those working at a decaying industry?—I have not thought it out beyond meeting an acute existing distress.

4051. Would it not seem to you that, if a district is losing its trade, the sooner the population is shifted the better for all parties?—I think it is better for the men to leave the district and get work elsewhere if there is no work in the district. But they cannot do that at once; that is the point that presents itself to me.

4052. Is there not a very great danger, if an outside authority of such magnitude as the State should by any inducement hold out a reason for a man not seeking work, that it would probably in the long run intensify the distress and also waste a lot of good money?—It would depend upon the way in which the money so given was administered. If it was administered merely to keep him from starvation while he must remain in the district, I do not think it would be any inducement to him to remain there.

4053. Have you ever sat upon a board of guardians?—No.

4054. I suppose you are not aware how many people there are who will avail themselves of charitable relief, however insignificant, if only their self-exertion is not stimulated?—I am aware of the existence of that consideration; but I think, in dealing with this class of workmen, who are a highly-paid class, they will not remain longer in that position than they can possibly help. They are used to having a considerable amount of money at their command, and I think the position of being in want is a very trying one for them.

4055. I daresay you have heard the saying that hard cases makes bad law. *A propos* of the relief work, especially the stone-breaking, I think you said it was not satisfactory to your committee; did your committee think the work was badly done as regards shirking, or was there a genuine effort upon the part of the men to do the work?—I am not aware; I said it was unsatisfactory to the committee as a committee. It was thought to be unsatisfactory amongst those who spoke of it; but we did not speak of it as a committee. I do not wish to commit the committee to that statement.

4056. Were you, as a committee, satisfied with the way in which the relief work you gave was done, as to whether it was done in a whole-hearted way, or whether there was any shirking?—It was not taken up heartily at all, and I have been told that some of the work (a very small proportion of it) was not done quite honestly.

4057. Are

Mr. *Logan.*

4057. Are the Committee to understand from you that you think that at 1*s.* 3*d.* a yard for stone-breaking, it would be only a competent man accustomed to the work of stone-breaking who could earn a decent living at that rate?—Yes, I think so.

4058. Then you are not surprised that these men, who are not accustomed to the work, find difficulty in breaking the full quantity so as to earn a comfortable living?—I am not surprised.

4059. Do you say of your own knowledge that 1*s.* 3*d.* per yard was the price paid in your neighbourhood for that kind of work?—Yes, I understand that to be so.

4060. You do not know that it is a low price?—No, I do not know that.

4061. I could not quite understand one portion of your evidence: you said that during the late severe frost there were about 1,000 men out of work?—Yes.

4062. And you thought out of that number between 200 and 300 only were out of work owing to the frost?—Yes.

4063. So that would leave 750 out of work now?—Yes; I should put it at about that.

4064. Then you said in another part of your evidence there were 1,800 people out of work: that represents men and women and children out of work?—Yes.

4065. Do you take this 750 men who were out of work as the equivalent of the 1,800 men, women, and children; that is to say, do the 1,800 men, women, and children represent the number of men with their families coming for relief consequent upon these 750 men being out of work?—Of course, all the men who are out of work are not upon our relief list.

4066. It is the 1,800 men, women, and children who are on your relief list?—Yes.

4067. Do you know the rateable value of the district, in which you have told us you have 16,000 inhabitants?—No, I do not.

4068. You said that on your subscription list you have no subscription higher than 5*l.*?—I think I said with one exception.

4069. I gather from that that the people who have been engaged in carrying on these various works have practically lost so much money that they are unable to subscribe; or have they, in your opinion, done their share?—Fully; because we have no leisured well-to-do people. We draw entirely from the shop-keeper class for our voluntary contributions. We have no gentry.

4070. You think the proprietors of the works have done their share?—Certainly.

4071. I ask the question, because in days gone by a good bit of money was made out of the tin-plate trade in South Wales?—Yes.

4072. Then are we to understand that of the last 500*l.* you collected you spent 400*l.* during January and February and a portion of March, or say, during the two months of the severe weather this winter?—Yes.

4073. Are you aware that that, worked out per head, amounts to relief to the extent of 1*d.* per head per day?—I have not worked it out.

4074. Is that all that these people have had to exist upon?—No. As I have already said,

Mr. *Logan*—continued.

we only supplement other help; we do not undertake to feed these people; they do get help from other sources; they get help from their neighbours. If it were not for the help from their neighbours they would be starved.

4075. The relief you have been able to give these people, to the amount, as I calculate it, of 1*d.* per head per day, would not have kept them alive by itself?—No.

Mr. *Pickersgill.*

4076. How long has the tin-plate industry been established in your district?—I could not say exactly, but I think it was one of the oldest tin-plate works.

4077. Has it been established there many years?—Yes.

4078. It has attracted workers from other parts of the country, I understand?—That would apply more to the iron-plate works, not so much to the tin works.

4079. You told us about some men coming from Staffordshire?—Yes, that was to the iron-sheet works.

4080. When would that be; was it recently or many years ago?—There would be a constant interchange, I should say, going and coming; men do not always settle down for life there; they go back again, and others come.

Chairman.

4081. Do the Staffordshire men form a large proportion of the iron-sheet workers?—Yes, a considerable proportion.

Mr. *Pickersgill.*

4082. Have you known this district longer than the four years you have been in your present position?—Yes, to a certain extent; my late parish was only seven miles away.

4083. Within the time you have known the district, has the population materially increased, or not?—The population has increased very much of late years, and is increasing.

4084. Is it increasing even now in the bad times?—It may not be increasing this year, and perhaps not last year, but up to that time it was increasing.

4085. That would be increasing naturally, I suppose?—Increasing naturally.

4086. Not from immigration from other parts?—No; I do not think there would be anything to bring men there at present.

4087. You told us 16,000 was the estimated population?—Yes.

4088. Do you know the population of that district according to the Census of 1891?—No; because the district I have selected is taken out of three parishes; it is an arbitrary district. I could give you the census of one of those parishes for 1891, but I could not give you it for the others.

4089. You told us you thought it very desirable that these men who are out of work should remove to some other districts where work might be found?—I think it is no use their staying in our district if there is no work for them.

4090. I was going to found upon that this question: whether your committee has done any-

Mr. *Pickersgill*—continued.

thing to stimulate these men to endeavour to find work elsewhere?—Yes, and I may say personally, also, whenever a man has appeared before the committee, especially a young man, I have always urged him to leave the district.

4091. Have you used your fund for the purpose of helping men to migrate?—No.

4092. Not in any case?—No.

4093. Do you think that the committee would be disposed to do that in suitable cases, to pay railway fares for instance, and things of that kind?—I am not sure whether it would be a proper use of the money.

Mr. *Pickersgill*—continued.

4094. Would not it relieve the distress?—It would relieve it at a considerable cost, however; the railway fare of one man would hardly be correspondent to the relief which would follow from his being helped.

4095. You think it would be a good thing to get the men away?—Yes.

4096. But you think it would hardly come within the purview of your relief fund?—No; I think our relief fund is to administer relief to them in kind. I do not think it would come within that fund; our fund is not large enough for that.

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN TOOK THE CHAIR.

Mr. *David Randell.*

4097. Immediately outside the area you have spoken to, I mean Pontypool and its immediate district, there are several large tin-plate works not very far away in the same county, are there not?—Yes.

4098. They also suffer from the same depression as those at Pontypool, do they not?—I believe so.

4099. So that, taking the county of Monmouth, these figures you have given would be considerably augmented?—Very much, for the whole county.

4100. I think the depression or slackness of trade in the tin-plate trade dates from August 1893, does not it?—That was when we began to feel it.

4101. Now, going over your figures again, confining it to the actual state of things to-day, I take it these Osborne Tin Works, and the Pontymoile Tin Works, engaging 400 hands, have been permanently out of employment since September 1893?—With the exception of four weeks, as I have stated, when the Pontymoile works was partially re-started.

4102. With the exception of those four weeks, the men of both these works have been out of employment since September 1893. In regard to the Pontypool Town Tin Works, you spoke of them as being intermittently employed; what do you mean by that; have they worked a fourth of the year?—Yes, they worked a fourth of last year, I should say, certainly, if not more.

4103. What about the preceding year, 1893?—The Pontypool Town Tin Works went well in 1893 for part of the year.

4104. You spoke of the black plate being made for Canada in one of the tin-plate works; is that the Pontypool Town Works?—Yes; they made a great deal of black plate.

4105. But as a matter of fact the amount made there now for Canadian purposes is very insignificant, is it not?—Of late, very; it is only now that there seems to be a demand at all.

4106. Is that an expectation or is it the actual work they are doing now?—I believe they are actually working it now.

4107. At the Pontnewynydd Iron Sheet Works, you spoke of the men being Staffordshire men mostly?—Not quite mostly, but a large number.

Mr. *David Randell*—continued.

4108. Could those men return to their homes to seek employment?—A good many, since the works have stopped, have returned there, and have been unable to get work, and have come back again.

4109. They have come back again, stating that they have not had employment in their own native places; so that they are still at Pontypool or in the Pontypool district?—Yes.

4110. Now with regard to the relief that you afford these people in the way of soup and bread, I take it that you do not consider that in any way adequate for the needs of the people?—By no means.

4111. May I take it that really, so far as regards these 750 or 800 tin-plate men you spoke of, and those dependent upon them, they are practically in a state of starvation?—Certainly a great number of them are in a state of distinct want.

4112. It is a state of keen want?—Yes, in many instances very keen. I have seen, this winter, more acute instances of distress amongst this class than I have ever seen in my experience before.

4113. As regards the test you spoke of, the stoneyard test, that, as I understand, has been simply applied since this Committee has met?—Yes, it has only been very latterly applied.

4114. How long ago?—About three weeks.

4115. It is only three weeks ago that the Pontypool Urban District Council submitted this test to the men?—Yes.

4116. From September 1893 down to three weeks ago there was no test at all, and when those men applied for poor law relief they were told, I think I understood from you, in cases where they were able-bodied men, that no relief whatever could be afforded them; has that been the attitude of the guardians?—That is what I was informed by people who applied themselves.

4117. Have you a register of the unemployed?—We keep a very careful register of the applicants, not of the unemployed.

4118. Taking the number on the relief list to-day, 1,800, that, I assume, does not nearly represent the actual state of things as regards the poverty or destitution of the place?—Nothing like it.

4119. I take it there is a natural reluctance on the

Mr. *David Randell*—continued.

the part of the people engaged in the tin-plate and other industries, not only to apply for Poor Law relief, but even to apply to this committee which you have spoken of?—Some might apply readily, according to their character, but some would not apply until they were driven to the most urgent extremity; they would put off applying to the committee till the very last moment.

4120. Taking that class of people who, from pride or other reasons, would not apply for relief, have you reason to believe they are many in number?—Yes; I think we have no knowledge as a committee of a very large number of most acute cases.

4121. Then, although your committee have practically sat since September 1893, and have devoted a large amount of close attention to this work, you still think there is a large margin of honest destitution, quite beyond your observation and notice?—I am quite certain of it.

4122. Do you know whether, especially among the tin-plate men, they have saved in many instances what is for them a considerable amount of money, and that during the period of a year and a half's cessation of employment, they have exhausted those private means of theirs?—Yes, I am sure that a large number of them have saved money; many have done so to my own knowledge.

4123. Do you find from your inquiries that these people who you say had saved money, have exhausted their savings?—Yes. Even within the last two or three weeks we have had fresh people applying to us, and our question to them has been "Why have you not come before?" and the answer has in many cases been "Because we have been living upon what we had saved and that has come to an end."

4124. Those people, rather than come upon your relief committee in any way whatever, have practically been living on their savings for all this length of time?—Yes.

4125. Can you give a typical case to the Committee of that?—Yes. I was given a case by a father of a family only about a week ago; he told me that he had saved 280*l.*, and that it had all been spent.

Mr. *Stuart-Wortley.*

4126. Can you say in what period of time he had saved that amount of money?—He was an old man of 60, and he has sons working.

Mr. *David Randell.*

4127. It would be the savings of a life-time?—I should say so.

4128. In that case all the savings are gone?—There has been great sickness in the house and it has all gone.

4129. As to the local resources, is it the case that hitherto one class of operatives, say the miners, for example, who are better off, have rendered assistance to the tin-plate workers, and the tin-plate workers to the miners; that is, each class has rendered the other considerable mutual aid?—Yes, immense.

4130. Has it been your experience in these industrial districts that one set of men help the other set of men?—Always, with great generosity.

4131. But in your district you appear to be in this unfortunate position, that you have all the

Mr. *David Randell*—continued.

industries, coal, iron, and tin-plate, out of employment now?—Our coal trade has not been at all brisk during the winter.

4132. The colliery you spoke of in your immediate district has been closed?—And the collieries that have been working have been working very little.

4133. As regards another resource which these workmen earning fair wages have from the credit given to them by tradesmen, do you say that so far as that credit is concerned, it is really stopped now?—Last year, when the distress might be called comparatively new, men who had been in receipt of good wages were able to get a considerable amount of credit from their grocers. This year, not having been able to pay off their credit of last year, the grocers are not able to extend the credit, and therefore the distress is more acute for that reason.

4134. As regards the bulk of these men you do not attribute the distress to the question of weather at all?—No; whether the winter had been mild or not, we should have had practically the same amount of distress. Of course the cold weather rendered it more acute and intense.

4135. You said that your only hope was in the improvement of the tin-plate trade; assuming there is no likelihood of improvement in the tin-plate trade for the next three or four months, what would be your dilemma in Pontypool?—Our dilemma would be, how we are to keep the people who are unemployed from starvation.

4136. With regard to the question of migration, the tin-plate industry, with the exception of a few works in the county of Gloucester, is restricted to Monmouthshire and South Wales, is it not?—Yes.

4137. You have already told us the depression is general; I presume, therefore, it would be perfectly useless for these men, who have been brought up in this one industry, to leave their homes with the hope of securing work elsewhere in other tin-plate districts?—I should say it would be quite hopeless in the tin-plate work. To my knowledge many have walked great distances to no purpose, and have returned.

4138. At any rate many of them have made an attempt to secure work elsewhere and have been obliged to return home?—Yes, a great many.

4139. In this extremity you have indicated that so far as your district is concerned, you would recommend a certain grant-in-aid?—Yes, I would, if it could be had.

4140. Do you think, in the position of things you have narrated to this Committee, it would be imperative that you should get some extraneous aid?—It is imperative that we must get increased aid, within or without; and I think the likelihood of getting it within is very much lessened by the fact that we have already so extensively drawn upon our resources within.

4141. As a matter of fact, the Pontypool Urban District Council have long since exceeded their borrowing powers, have they not?—I believe that is so.

4142. So that there is no hope of any relief employment being afforded by the local authority, is there?—None, I should say.

4143. Do you think, judging from a long experience of the people in industrial districts in

Mr. *David Randell*—continued.

South Wales, in these circumstances any relief from State aid would tend to pauperise the people?—Not if it were judiciously administered.

4144. That is to say, if it were administered with the efficiency and care that you, as a committee, have administered the voluntary funds at your disposal, you think a grant-in-aid would do no more to pauperise the people than the voluntary contribution which you dole out to them at present?—I cannot see any reason why it should.

4145. One question as to the comparative degree of poverty existing at present in this district; I think your father is the famous rector of Merthyr, who took a great interest in the great strike of 1875, in Merthyr?—Yes.

4146. You were there at that time and had personal experience of what took place then?—Yes.

4147. A large fund was collected, was it not?—Yes, between 6,000*l.* and 7,000*l.*

Chairman.

4148. What was it that brought about that condition of things in Merthyr?—It was the lock-out; all the colliers were locked out in the whole district. We fed 3,000 children every day for more than six months.

Mr. *David Randell.*

4149. You had a very large voluntary fund at your disposal, had you not?—Yes, of between 6,000*l.* and 7,000*l.*

4150. Having regard to the great distress which prevailed in Merthyr, in 1875, and the distress that comes under your observation in Pontypool now, what have you to say to the Committee as to the degree of the intensity of poverty in Pontypool as compared with what you have experienced in other places at other times?—I think it is the most acute I have ever known, and the most difficult to deal with, because it has been long sustained and will be long sustained in my thinking for the reasons which have been already expressed, that the men have spent their savings and have exhausted their credit. With regard to the acuteness, I do not know whether I need tell the Committee that I have seen indications of distress this winter that I have never seen before in our district; that is, I have seen houses this winter without a fire, and I have never seen that before this winter in what we call the coal districts of Wales.

4151. With regard to the question put to you by one honourable Member of the Committee, as to the assistance which the tinplate men may have received from their trades union, it is not one of the objects of the trades union to grant relief to the members of the union, but their funds are simply for trade purposes?—Yes.

4152. But, notwithstanding that fact, I think the Tinplate Trade Union has granted relief to a certain extent to some of the men in the Monmouthshire district; some of the people in Pontypool have received it, did they not?—They did last year.

4153. But not this year?—If they have, I have not heard of it.

Mr. *Keir-Hardie.*

4154. Would you tell us something more about the register which you have formed in your district. You have 1,800 names, I understand, men, women, and children. When the head of a family applies for relief, do you put down the total number of the dependants in the family?—We did.

4155. And all those are counted in the 1,800?—Yes.

4156. You rather gave the impression to my mind, in reply to a question put by the honourable Member for Battersea (Mr. Burns) that you would put spade labour on the land on a level with breaking stones in the stone-yard?—I would, as regards climatic conditions.

4157. But taking men who are used, as these men are, to handling tools and to hard laborious work, would there be any great difficulty in the men adapting themselves to spade labour if they found it necessary to do so to enable them to earn a living?—Of the two it would be preferable work to take up.

4158. Working in the stone-yard is very hard and disagreeable?—Yes, I think so.

4159. You have been going on, through the agency of the committee you mentioned, distributing relief; would you mind expressing an opinion as to whether it would not be more desirable if a proper opportunity were given these men to earn a living, rather than have them continue to depend upon the committee for the aid you are able to give?—You mean that they should give work for the relief afforded.

4160. Yes. What I am asking is whether the granting of charity, without any return being given, to able-bodied persons, will not tend to have a distinctly demoralising effect upon them; would it not be better that they should be able to work and give value for what they receive?—I think it would be better if suitable work could be found; but I should like to qualify that by saying I have not found that the receipt of this voluntary relief does demoralise to the extent that is sometimes thought.

4161. I was not assuming that it would; but the assumption of a large number of persons is that it does; now, are there any gardens attached to the houses in which the tinplate workers and the colliers and ironworkers live?—It would be more so in the case of the colliers than any of the others.

4162. Supposing these 1,800 persons, men, women, and children, found themselves cast adrift on a desert island, we will say, with a supply of food for a year, and farm stock and seeds in their possession, do you think they would starve after the year was out?—No, I do not think they would.

4163. In your opinion you think they would be quite capable of producing what they required to maintain themselves, given proper conditions as to soil and climate?—Yes, because they would be forced to do so. I do not think it would be congenial altogether.

4164. If the only alternative be to continue to receive relief from the soup kitchen and being dependent upon their friends, would not the compulsion of requiring them to provide for themselves be more congenial to those men than to remain in a helpless condition?—I think their present condition is abhorrent to them.

4165. I presume most of these men who have come from Staffordshire and other parts of the country

Mr. *Keir-Hardie*—continued.

country are probably in correspondence with friends in the parts which they have come from?—I know they are.

4166. If there was work to be found there they would know of it?—A great many of them would.

4167. It is a reasonable assumption that if they do not leave Pontypool to go elsewhere, it is because they have no prospect of finding work anywhere else?—Yes, entirely. If the Staffordshire men had been able to find work in their own county they would have left in a body, I believe.

Mr. *Heywood Johnstone.*

4168. The distress you speak of is caused by the decay or depression of a particular industry?—Yes.

4169. The revival of that industry would cure the distress permanently?—Part of it. We are dealing with the iron and tin-plate trade. Some of our distress is due to the state of the iron-plate trade.

4170. I understand that; but, speaking generally, it is due to the depression, that may be a temporary one, in those two trades?—Yes.

4171. The revival of those two trades would mainly cure it?—It would entirely cure it.

4172. Meanwhile, all you can hope for is the absorption of those who have been hitherto engaged in those trades either in similar work elsewhere or on new work?—Yes; I see nothing else.

4173. The problem you have to deal with is how to maintain these men until they are absorbed?—Quite so.

4174. I understand you have applied to the county council to provide them with some temporary work?—We have applied to the urban district council.

4175. I understood, in answer to an honourable Member, you said you had applied to the county council?—If I did, I should have said the urban district council.

4176. As a matter of fact, you have not applied to the county council?—No.

4177. You have applied to the urban district council, which, I understand you to say, has already exceeded its borrowing powers?—Yes.

4178. But, apart from that, it is suggested that the urban district council should supply these men with some work to keep them going?—Yes.

4179. But I think you have told us they are men trained to special work?—Yes.

4180. Do you suggest that the urban district council should provide them with employment in that special branch of industry?—Not for a moment.

4181. You would be satisfied if the urban district council set them to work at road-making or spade labour?—Yes, although not in the coldest weather; I think they would hardly be fit for it in the coldest weather.

4182. But they should be provided with a form of work irrespective of their special training, and in which their special training would be of no benefit?—Yes.

4183. You would suggest that the urban district council should undertake relief work on which these men should be employed?—Yes, if they could.

Mr. *Heywood Johnstone*—continued.

4184. What security would you have that the work would ever be completed. Supposing, for instance, the men were set to work to form a road from A. to B., and that when they had got halfway they were drafted off to other employment, or found work on better terms, might not that work prove absolutely unremunerative to the ratepayers at whose expense the work was done. Is not that always a danger incident to undertaking relief work?—Surely the work done would not be thrown away.

4185. Suppose the road was taken half-way between the two points and then abandoned (and I could take you to one within 11 miles of this spot), might not the work be thrown away entirely?—Is it to be inferred that the work is done at a very low rate of wage?

4186. No. However, I will not press you for an answer further. I understood you to say that there has been virtually no increase in your rates?—There has been an increase in the poor rate.

4187. I understood you to say, in answer to an honourable Member, that you were not aware of any increase in the rate. You said that your poor rate for the last two half-years was 1*s.* 5*d.* and 1*s.* 4*d.*?—I thought I said the poor rate had gone up, but I could not tell what was the position of the other rates. I know the poor rate has increased.

4188. You cannot tell the Committee how much it has increased?—I cannot tell that exactly, but it has increased, certainly, a penny in the last half-year.

4189. From 1*s.* 4*d.*?—Yes.

4190. Is that the winter half-year?—No; we have not yet had the assessment for the winter half-year, which will be undoubtedly increased again, as I was informed by the present authority.

4191. So far as you know, a penny represents the present increase in the poor rate?—In the last two half-years.

4192. Have there been many applications to the guardians for outdoor relief in your district?—I think a good many.

4193. Have they all been refused in the case of able-bodied men?—Yes, to the best of my knowledge.

4194. The relief these men have received has been through your voluntary committee?—Entirely.

4195. That committee is composed of gentlemen most of whom have a personal knowledge of the applicants, or the means of tracing the applicants' circumstances?—Yes.

4196. Do you see any objection to outdoor relief being granted where the guardians have that personal knowledge of the applicants, and where the applicants have come before them in person in the way they do before your committee?—I should like to see the outdoor relief extended to the able-bodied, under certain conditions.

4197. Subject to the qualification that there should be this personal knowledge of the applicants on the part of the members of the relieving body?—Yes.

4198. Can you tell us how the rents for the houses in which these men live have been paid?—The rents are not being paid in many instances.

Mr. *Heywood Johnstone*—continued.

4199. The owners are content to wait for their rent or stand out of it?—As a whole that is so; not altogether.

4200. May I ask what are the average rents in your district?—The rents are very high in certain parts of the district. The tin plate workers would pay something a little under 7*s.* a week for their houses.

4201. How many rooms would they get for that?—They would get a good cottage of two rooms downstairs, or practically three, a front room, a back room, and a scullery, with three bed-rooms as well.

4202. Would he get that for 7*s.* a week?—Yes, for something under 7*s.* a week.

4203. And any garden?—Probably not.

Mr. *Keir-Hardie.*

4204. Would you say that where outdoor relief is given to an able-bodied man, you would disfranchise him in consequence?—No, certainly not.

Mr. *Heywood Johnstone.*

4205. Would you say that without qualification. For instance, if a man receives outdoor relief for 12 months or 12 years?—I said I should like to extend it under certain conditions.

4206. The honourable Member for West Ham suggested that outdoor relief should be no disqualification for the electoral franchise; you say you agree to that on certain conditions?—I agree to it, subject to the same conditions as those upon which I would agree to the extension of relief itself.

4207. May I ask would you put any limit to the time of the relief that should disqualify a man from exercising the electoral franchise?—I have not thought of that.

Chairman.

4208. May I interpose this question: do you see any impropriety in a man who has received outdoor relief still retaining his vote for the election of the guardians who administer the relief?—There should not be any impropriety in it.

4209. You think that, besides the Parliamentary franchise, a man should not be disqualified in any degree from what I may call the poor law franchise either?—I do not see why he should.

4210. You think it would be a judicious and safe thing to allow a man who has been in receipt of the outdoor relief that you speak of, to vote for the guardians who admit him to it. I put the question because many people see great objection to that being allowed?—I see the point of the question; I have not thought it over. I only said it should not be a danger. It might be; but I think it ought not to be.

Mr. *Round.*

4211. Yours is not a district, is it, where the distress has been increased by labourers coming in from agricultural parishes?—A great many of our labourers in the works have come from agricultural parishes.

4212. Is the same thing going on in your parts which is going on in the east of England, namely, that the labourers are unable to obtain the same employment in the country parishes, and therefore they are attracted to the towns?—I should say so, certainly.

Mr. *Round*—continued.

4213. You were saying that these men you have been relieving are anxious to obtain work elsewhere; would they be prepared to go to agricultural districts where wages are low and take work there if they could get it?—I do not think they would willingly take such work.

4214. Then with regard to the increase of the poor rate, it has been recommended by the Royal Commission that sat in 1878 that the cost of the indoor poor should be spread over the whole community; that is to say, it should be paid out of Imperial funds; would it be of assistance in your district if that reform were carried out?—The burden would not fall so heavily upon the locality in that case, because, as I have already said, owing to this distress, a large amount of rateable value has become void.

4215. Should you be in favour of that reform?—I have not considered that question; but it seems to me it would help such a district as ours now.

Mr. *John Wilson* (Durham).

4216. Do I understand that your locality is composed entirely of workmen working at the collieries, the iron works, and tin works?—Yes.

4217. Is there just one colliery in the district?—No; there are a great number of collieries in the neighbourhood.

4218. But I mean within the district you are speaking of?—Practically within the district I am speaking of there would be only one besides the one I have already mentioned.

4219. That is entirely stopped?—One has.

4220. Have you ever tried to ascertain the cause why this colliery has stopped?—I have not gone into that question.

4221. Are there any local causes why it has stopped?—I know of no local causes.

4222. You know that a Commission sat to inquire into the subject of royalty rents?—Yes.

4223. How many men were there at work at this colliery every day?—About 550.

4224. Then may we suppose that about 1,500 tons of coal came out every day; would three tons per man be a fair average?—I do not think they raised as much as that.

4225. We will say two tons per man on the average?—Yes.

4226. That represents 1,000 tons?—Yes.

4227. Did you ever try to ascertain what was the amount of royalty rents that the colliery paid?—I do not know.

4228. Would it have any influence on the stopping of the colliery if it was 6*d.* a ton?—I never heard that it did.

4229. Let me put it in this way: here is a colliery that cannot work, and there is 6*d.* a ton charged by way of royalty rent; would that 6*d.* a ton have any influence in stopping the colliery, or, to put it in another way, supposing the employer had had 6*d.* a ton more for his coal, would he have been able to keep his colliery working?—Do you mean this particular colliery?

4230. Yes; or taking the tin-plate and iron works in the same way, having to pay 6*d.* a ton more might make the difference between paying and not paying; however, I will not press the question

Mr. *John Wilson* (Durham)—continued.

question further. You spoke as to the sources of relief, and of those who are paying for the relief given to these people?—Yes.

4231. May I be allowed to ask if the royalty owners pay anything towards supporting these people?—The large subscriber of whom I spoke is a royalty owner.

4232. Is he the only one in the district?—He is the largest.

4233. Yes, but is he the only one; you have tin works and iron works, and a big colliery?—Yes.

4234. Is he the only royalty owner in the district?—No, I should think not.

4235. Then is he the only one who has paid to your relief committee?—I could not say that.

4236. The matter is this: the contribution, I think you said the largest except one, was about 5*l.*?—They were not individual subscriptions.

4237. Therefore it would be right to assume that there was only one royalty owner paid, because that would be a small subscription for him?—I do not think it is a right assumption, is it?

4238. I will not press the matter any further?—I should like to say that the one royalty owner who did subscribe (I do not know that he is the only one, but he is one who did subscribe, and he gave a most generous subscription) is always disposed to be most generous in these ways.

4239. Do you know, as a matter of fact, that the trades unions do pay for this class of relief that you have in your district; that there are trades unions that pay out-of-work relief?—I do not know that there are.

4240. But, as a matter of fact, the trades unions do not in your district?—They gave a little help last year.

4241. Now as to the State aid; I think I heard you express your answer in reference to a question put to you, that you would not be in favour of starting works in your neighbourhood by State aid?—I do not think I understand you.

4242. It was put to you about 1,500 men being landed on an island with seed, and so on; do you think it is possible to start one in your district with 500 men?—No, I think there is great difficulty of finding work for any sort of men in our district.

4243. The coal trade and iron trade and tin trade being stopped in your district, there is no possibility of finding work for these men in that district?—I know of none.

4244. You could not suggest any kind of work supposing the State was to start one?—I could not now.

4245. Then as to the State aid or grant, yours is not the only district that is depressed at the present time?—No.

4246. There are districts where there are more men lying idle I should think?—There may be.

4247. Then if you got State aid in your district, will not that be laying the burden upon those other districts that are depressed as well as yours?—I should like to know how much the other districts have done to help themselves first.

4248. Supposing they have given the people 10*s.* a week?—I mean in voluntary aid.

4249. Yes, in voluntary aid; supposing they are doing that, would this contribution, or would this disbursement from the national fund be a burden *pro ratâ* upon these districts?—I do not think it could be a very heavy one.

Mr. *John Wilson* (Durham)—continued.

4250. I think you will grant that it would be a burden; it would, would it not?—It would be a slight burden I should say.

4251. Just this one other question, because I am rather egotistic in this question of mining matters; what is there peculiar about the miner and iron worker and tin worker that he cannot break stones on a road (slag from the furnaces), apart from climatic conditions?—Peculiar about him?

4252. Yes, I will put this to you further: Is he not used to handle a pick and hammer; are not these his daily tools?—It would be for a collier.

4253. Well, colliers; cannot they break slag?—I think it is very different work to that which they are engaged in; they could learn to break it, I think.

4254. Breaking stones is very different to breaking coal, you think?—Cutting coal is very different to breaking slag.

Mr. *Whiteley.*

4255. You say you have collected in the district 800*l.* within the last 15 months, and 500*l.* of that amount during the present year?—Yes.

4256. And that, practically, has exhausted the local supply that you think is obtainable?—I do not say that if we make an appeal again we shall not get any return.

4257. Do you think it has been an exceedingly heavy burden upon the locality?—I do; an exceedingly heavy burden, because the people who pay it are the tradespeople who are themselves suffering extremely.

4258. Not following out the calculation of Mr. Logan, though you do not pretend you have kept them altogether, still even a penny a day will provide, according to what I am told, a fair meal of soup and bread per head; is not that so?—It must be remembered that in those 1,800 persons a good many of them, or some of them, would be quite young children; we will take the case of five in a family, one or two of them would be quite small children.

4259. The Poor Law authorities do not seem, according to your evidence, to have done anything to meet this case of exceptional distress?—They have not to my knowledge.

4260. Can you account for that in any way?—I can only account for it by asking myself: what could they have done?

4261. As a matter of fact, if it had not been for your voluntary agency, your people would have starved?—They were what one may call starving when we commenced, they were ravenous.

4262. Therefore, so far as a machine for coping with such distress as this is concerned, the Poor Law has proved itself to be entirely useless?—I think so.

4263. Do you think that additional powers granted to them would enable them to cope with these difficulties?—I think it would be a simple way of dealing with them.

4264. Mr. Burns has suggested that a further contribution might have the effect of chaining

Mr. *Whiteley*—continued.

people down to the spot, that it was more desirable that they should migrate; do you think that would be the case?—No, because as I have said, the relief should be administered in such a way as merely to keep them alive in the district.

4265. As a matter of fact, you contemplate just keeping them alive and no more?—That is all we can do.

4266. And if a man can get wages elsewhere he will undoubtedly move, rather than stop in a district in order to be kept just on the verge of starving, between starving and living?—I think certainly; and it is especially true of men who earn high wages as a rule.

4267. With regard to your grant from the State; you think that having done so much you have a fair claim upon the State funds for something to assist you?—I think we have shown the *bonâ fides* of our intention.

4268. Practically, the distress in your locality is of such a nature that it almost becomes a matter of national concern rather than of local concern?—Yes, I do think so; I think the community should do the best for itself as long as it can, but I think you may reach the end of that.

4269. Well, practically, your contention is this, that in the case of such very severe exceptional distress as you have in your locality, after you have made every exertion you possibly can, then you have a claim upon the State to step in and assist you?—Yes.

Mr. *Renshaw.*

4270. You suggest that there ought to be additional powers, and you suggest that you would try State aid in order to relieve the exceptional distress in your district?—Yes.

4271. Would you have those exceptional powers given to a local body or to a board of guardians, or both?—Do you mean a voluntary body when you speak of a "local body"?

4272. Yes?—I think after the long experience we have had, that if a sum of money was given to us as a voluntary committee, if it is not too arrogant a thing to say, I think we should deal with it now judiciously.

4273. That, of course, would not apply to the whole of the United Kingdom?—No; we have learnt a good deal by our experience.

4274. When you suggest that additional powers ought to be given, does not it seem to you that the powers which the boards of guardians have at present, and which in many parts of the United Kingdom they are putting in operation, with regard to out-door relief, might have been put in operation in the district which you represent here to-day?—My conception of the power of the board of guardians is that they cannot deal, generally speaking, with able-bodied men.

4275. I think we have had it in evidence already; I think we had it from Sir Hugh Owen, that, practically, the boards of guardians can give a very large amount of out-door relief, provided it is partly given in money and partly given in kind; and that that is practically the only restriction which is put upon the administration of out-door relief by the Local Government Board; are you aware of that?—I am not aware of it.

4276. Then does it not seem to you that the board of guardians of this particular locality ought to have done more than they have done up to the present date to relieve such an exceptional state of matters as that to which you have referred?—Most certainly, if they have such powers.

Mr. *Renshaw*—continued.

Mr. *David Randell.*

4277. What would be the effect if all these people went together to the Poor Law guardians: have they means at their disposal to afford any relief such as is indicated by the honourable Member, assuming that they went together?—I presume they would raise the rate. I can state that individuals have come to me and that I have advised them to go to the board of guardians, and whether they have ever reached the board of guardians themselves or not I should not like to say straight off, but they have been to the relieving officer, and the story which I have heard has been that the relieving officer has said that he cannot help able-bodied men.

Mr. *Renshaw.*

4278. But it was not within your knowledge that the board of guardians has the wide power to which I have referred, and which I put to you just now?—No; I am not a guardian, and I am not an expert on the matter at all.

Mr. *Stuart-Wortley.*

4279. This mine that stopped working was exceptionally deep, and required an exceptional amount of pumping to be done; were there any exceptional causes which made it, for instance, unworkable, do you know?—I do not know very much about the colliery.

4280. Had it been long opened?—Oh, yes; it is an old pit.

4281. Is the district exceptionally unfavourably situated as regards railway carriage or canal carriage, or otherwise?—It is exceptionally well situated, I should say.

4282. It is?—Yes; we are very near a good centre.

4283. Are there railway sidings from the pit to the railway?—In this particular pit?

4284. Yes?—It is very close to the railway.

4285. Is the land in this district mostly owned by one landowner or by many?—There is one very large landowner.

4286. Who is he?—Mr. Hanbury, of Pontypool Park.

4287. Are there other landowners?—Yes, there are others, they are not so large.

4288. Is Mr. Hanbury resident?—Yes.

4289. You told us, I think, that rents have been a good deal not paid?—Yes.

4290. Did your committee make application to landowners for contributions?—We issued a general appeal.

4291. Was it met by that class?—Yes, it was generously met.

Chairman.

4292. The rents which you say were not paid were cottage rents, were they?—Cottage rents.

Mr. *Stuart-Wortley.*

4293. I think you said there were two collieries in the district?—Two collieries in the district which I represent. There are a large number of collieries

Mr. *Stuart-Wortley*—continued.

collieries in the neighbouring district; and (I wish to say that if I may) a good many of the men who are thrown out of work at that pit have found a certain amount of work; but the pits, owing to that, are very much overcrowded, the men are pushing in very much, and the amount of wage that can be earned is small.

4294. Did this pit which stopped belong to a limited liability company or to a private owner?—The pit, I think, was leased originally from Mr. Hanbury (of whom we have spoken) by the Ebbw Vale Company, and was sublet by them to a Scotch company, and the Scotch company got into financial difficulties.

Mr. *Stuart-Wortley*—continued.

4295. Can you suggest any reason why the one pit stopped and the other did not?—The other pit is an entirely new pit, it is hardly opened yet. I should like to make one remark, it is a sentimental one perhaps, and that is, that in my experience one cannot say too much of the patient endurance with which this distress has been borne.

Mr. W. H. EDWARDS, called in; and Examined.

Chairman.

4296. You are Mayor of Swansea, are you not?—Yes.

4297. What is the population of Swansea; will you tell the Committee?—One hundred thousand.

4298. Have you had much distress in the borough during this last winter?—During the last winter, yes.

4299. And does it still exist?—To a great extent, but not to the same extent.

4300. Can you give any estimate, or guess at the numbers subject to that distress out of employment?—Well, I take them at 18,800 now, but out of that number I have to take 13,000 that work intermittently, so that there would be 5,800 unprovided for.

4301. You think that at this present moment there are 18,800 out of employment?—Less the 13,000 that have worked occasionally. There are so many mills, and the work is so divided between the workmen, that they now have two men to do the work of one.

4302. Thirteen thousand odd are partially employed?—That is so, yes.

4303. Was the distress principally in some particular trade?—Well, it was all trades during the severe weather, but since the weather has broken up it is mainly the tin-plate workmen.

Mr. *Renshaw.*

4304. Are these figures as to population?—No; the numbers dependent upon those unemployed.

4305. It is not the actual unemployed?—No, not the actual unemployed.

Chairman.

4306. You mean all the children and belongings of the unemployed?—That is so.

4307. But still that is the total number of unemployed, or only partially and scantily employed; 18,800 out of 100,000 inhabitants?—That is so, yes; but 13,000 of them have to come out as being half-timers; that is what it would be.

4308. What is the cause of the want of employment in the tin-plate industry, and has it been long prevailing?—Well, it has been bad since the passage of the M'Kinley Bill.

4309. When was that?—That was three years ago, but it has been worse within the last 12 months than it had ever been previously, and although the M'Kinley Bill was repealed and the Wilson Bill passed, yet the tin-plate trade has not improved, on account of the financial state of

Chairman—continued.

America, the financial state of the States, and also on account of some American competition.

4310. American competition in this country, do you mean?—No; they make some of their own plates on the other side now, whereas we used to make them here.

4311. Is the tin-plate industry a separate thing from the iron-plate industry?—There is no iron-plate industry; it is homogeneous iron, but call it steel plate, and tin-plates in connection with the steel trade; that is to say, the tin-plates are made of steel.

4312. Do the same men work on the steel plates and the tin-plates?—The steel men work the bars in preparation for the tin-plate men.

4313. Is steel plate industry then depressed in the same way as the tin-plate?—Yes; they are dependent upon each other.

Mr. *Renshaw.*

4314. May we understand exactly what the nature of this tin-plate industry is; are these tin-plates rolled out of steel bars?—That is so.

4315. And then tinned?—That is so.

4316. I think the last witness gave us evidence as to the making of tin-plates in the state of black plate?—The black plates are plates that have not been coated with tin.

4317. Is that trade increasing?—This is the time of the year when the market opens, but it is to such an inappreciable extent that it is not worth mention, I think.

Chairman.

4318. Is the tin found in your district, or does it come from Cornwall or abroad?—Oh, no; we get Australian tin.

4319. Australian?—Yes.

4320. This distress prevailing, did you take any part as head of the community to meet the requirements of the case?—Well, I became Chairman of the Central Fund to receive voluntary subscriptions, and at Morriston, which is a part of the borough and is three miles out, they started a soup kitchen on their own account, independent of Swansea proper.

4321. You had several soup kitchens in Swansea, had you not?—Oh, yes, a great many of them.

4322. Did you open a register, or take any step of that sort?—Yes, at the Guildhall.

4323. And was that successful?—It was only there during the very severe weather, and we had about 300 or 400 names put down of those unemployed, but that is no guide at all as to the numbers who were unemployed.

Chairman—continued.

4324. In the severe weather your numbers were augmented by the building trades, and other trades of that sort, I suppose?—Yes, that is so.

4325. You were at the head of the committee of a voluntary organisation?—Yes, I was.

4326. Did you supply work, or only relief?—Do you mean the committee?

4327. Your committee?—The committee for receiving voluntary contributions, do you mean?

4328. Your committee received the contributions, what did you do with them?—Then we divided the town into wards, there are ten wards, and the alderman of each ward presided over each committee, then he had the assistance of the ministers of various denominations and a few laymen with him, and they saw to the destitution in kind, and not in money.

4329. In food, in fact?—Yes, in food; orders were printed worth a shilling each, and those were taken to the trades people, and by them the goods were supplied.

4330. What did you do, or did you do anything, in the way of providing work for the unemployed?—Well, we did what we could during that severe weather, but we could do but very little. Masons could do nothing, they could do nothing with the roads. What we were able to do was to clear away the snow principally; we engaged about 250 men outside our own hands then.

4331. Was that done by your committee, or by the corporation?—That was done by the corporation.

4332. Now, have you any suggestion to make, from your experience, as to the best way of meeting an emergency such as you have been passing through?—Well, I do not know that I have; there is only one, and that is a very delicate matter to touch upon, I being an employer myself.

4333. What is that?—Well, what I have to say is this: the tin-plate workmen themselves say that they are prepared to accept a reduction of wages provided we, as employers, can prove to them that we are not making a profit. Well, it is a very difficult matter for any employer to convince them; but what I should like to see myself would be some independent person to go into the state of the tin-plate trade and see whether employers are making any profit or not, and that the men should accept any reasonable suggestion or reduction proposed by the independent person; because we have to face the American competition, and it is no use our waiting until they have put up the mills in America and taken the trade from us, we had better fight shoulder to shoulder now, and work at as cheap a cost as we possibly can, that is the only way in which we can retain the trade.

4334. Then you think that the wages will have to come down?—Wages will have to come down, there is no doubt about that.

4335. In order to have a profitable industry?—Yes, and prevent them making their plates in America; but what I say is the sooner they make a substantial concession the better, instead of doing it in driblets.

4336. Is it your idea that that would be sufficient to prevent the trade going away?—Well, it is bound to prevent some of it going, because the cheaper we make the better, and the less they make on the other side the better; but I have reason to believe that we might go to a very great extent towards the stopping of the making of any plates at all.

4337. Are the wages a large item in the cost of the manufacture?—Well, the cost of making a box of tin-plates is about 9*s.*; anybody who works from the steel bar on to the finished tin-plate would have half-a-crown a box.

Mr. *John Wilson* (Durham).

4338. That is for labour, you mean?—That is for labour only.

4339. Then you have the cost of the bar before it comes to you?—Yes.

4340. That will be included in the 9*s.*?—Yes, that would be included in the 9*s.*

Chairman.

4341. I think you have an idea, which a little affects me personally, as to the training of the militia?—Yes, it is not my idea, I admit that at once, but it has been suggested to me.

4342. You put it forward?—It was suggested to me, and I thought I would put it forward.

4343. To what effect is that?—It was suggested to me by a military man that instead of having the militia called out at the same, or somewhere near the same, period of the year they should be called out in localities where distress existed at any time of the year.

4344. As Minister for War, I am glad to be able to infer that the militia constitute a large portion of your population; in other parts of the world, they are not so very numerous a body as to really materially affect the question?—I promised to put it forward, and that I have done.

4345. Every little helps on an occasion like this?—Yes.

4346. There would be some difficulty in drilling and training the militia in the snow and in winter weather, of course?—Yes; but, still, snow does not last.

4347. How are the militia housed with you?—We have an arsenal.

4348. They have barracks?—Yes, barracks.

4349. Then how are you off for communications in the neighbourhood of Swansea?—With regard to railways?

4350. Yes?—Well, of course we have a very narrow peninsula running from Swansea down to Worm's Head, and we have a tract of 18 miles in length there without any railway at all, without any railway of any sort. We thought that a light railway down there would be the means of bringing the agriculturists' produce into town at a very much cheaper rate, and that we should help them by doing that.

4351. Is that in the south-west direction, as it were?—In the south-west direction, yes.

4352. That is an agricultural district?—Yes, entirely.

4353. And cut off from communication?—There is 18 miles without any railway at all.

4354. Of course the making of railways would, for the moment, furnish employment for those who

Chairman—continued.

who have no other employment?—Yes, and it would open out the peninsula.

4355. Do not you think that men who are out of employment in the tinplate and steelplate industries can do effectively ordinary work; road-making, and so forth?—They can do a certain share, but they cannot do as much as men who have been accustomed to it.

4356. But it would not spoil them for their own industry?—I should not like to put them out in very severe weather. They would be able to do that after they had been acclimatised. Just after they had been working in front of their furnaces, and that sort of thing, it would be very dangerous to take them at once to such work; but after working at it during a summer they could go on during the winter, I take it.

4357. There is nothing in the muscular or physical exertion which a man has to make at such work which is inconsistent with his old occupation?—Nothing that he would not get over in a reasonable time.

4358. Of course, if you had a scheme for light railways in the Gower peninsula that would be a great benefit to the agricultural community as well as to yourselves?—As well as to the town, yes.

4359. Are the agricultural community pretty well off, in your district?—Yes, very well off in that part.

4360. Except in the hard winter, I suppose?—No. I think they are fairly well off all the year round.

4361. What is the nature of the agriculture, sheep or dairy, or what?—Sheep and dairy, I think.

4362. Have the guardians of the poor done much for the relief of the unemployed?—They have done nothing, so far as I know.

4363. Are the rates heavy with you?—Well, yes, our rates are rather heavy, but our assessments are low.

4364. But the Poor Rate proper, is it heavy?—No, it is not very heavy.

Mr. *Renshaw.*

4365. What is it?—Our rates altogether come to about 7*s.* 6*d.* in the pound.

Chairman.

4366. But that includes all your Borough Rates?—All, School Board and everything else.

4367. Can you say how much of that is Poor Rate proper?—I think it is 2*s.* I am not sure; I should not like to be certain about that.

4368. It is not because they dare not put another penny on that the guardians have done nothing?—Oh, no.

4369. There would be a little margin there?—They could have done something, but I understood they had not the power to do so.

4370. Do you know if they allege the want of power?—They did when I was a guardian; that was about six or seven years ago, and I know that they sent a deputation to the Corporation recently during the distress to ask us what we could do for them. They said that they could do nothing.

4371. That they could do nothing?—Yes.

4372. You are not aware that they have very large powers for relieving actual distress in the case of people who are in danger of starvation, provided they give it half in kind and half in money?—I was not aware of it until I heard it here this morning.

Mr. *Lawrence.*

4373. What is the approximate rate of wage in the tin-plate trade, or in that district there?—You mean for a grown-up man, I suppose?

4374. Yes, for a grown-up man?—I should say in the tin-plate trade an average of about 2*l.* per week.

4375. So high as that?—Yes.

4376. An average of 2*l.* per week?—Yes.

4377. So that when we heard from the previous witness that 600 people had 650*l.*, that would include the children?—I should say so, or they had not been working full time.

4378. Are you prepared to say what amount of reduction is likely to tempt back the trade that is liable to leave us, the reduction in rate of pay, say; what percentage would you think?—I do not know what exactly would enable us to do that; but if I were a workman I should suggest the making of a reduction of 25 to 30 per cent. at once.

4379. We have heard that works similar to tin-plate works have been suddenly closed without any notice; in your business experience is that likely to be the case?—Well, a great many works have been working from day to day recently on account of the irregular orders coming in, instead of from month to month, as they used to.

4380. Then I conclude, although it is a sudden notice, yet the notice was not really sudden; it must have been anticipated over the previous weeks, if not months?—At some works they have been working very irregularly; at other works, again, they have been going fully, but even where they have been working fully, they have taken the precaution to have their men working on from day to day.

Mr. *Logan.*

4381. When you say 2*l.* is the average wage, do you mean, taking all the year round, that a man will earn in the year 104*l.*?—Working full time, yes.

4382. What will the average wage be that the man does earn?—They were accustomed to earn previous to this M'Kinley Bill at least 104*l.* all the year round, before this distress.

4383. That is to say, they would work full time and make 2*l.* a week?—Yes, on the average; some of them would earn up to 3*l.*

4384. Why do you think a reduction of wages would enable you to compete with America?—Because I hear from the other side that they have as much as they can do now to compete with us, and if we had this concession I think we should stop their putting up any more mills.

4385. Is the reason that the Americans cannot compete with you that they pay higher wages, do you know?—Well, they would not be able to pay the higher wages if they had not the protection; they are paying far higher wages than we pay, but they are able to do it by protection.

4386. Have you any idea what they pay over there?—They pay over there, I suppose, about a

Mr. *Logan*—continued.

hundred to one hundred and fifty per cent. more than we pay.

4387. Indeed! Then the other costs of the tin-plate, excepting the cost of labour, is cheaper over there, is it not; they can produce their steel cheaper than we do?—Well, I believe they do, although there is not much in that.

4388. So that it is really a question of wages?—A question of wages. Yes. Everything is exhausted, except, perhaps, sixpence a box; and if we can come down sixpence then, I think, the trade may remain with us; that is to say, the five shillings a box protection has been exhausted.

4389. What it really amounts to then is that to keep the tin-plate trade in England there must be competition between the English workmen and the American?—There must be, yes.

Mr. *David Randell.*

4390. I understood you to say that to-day there are 5,800 men out of employment?—Yes.

4391. Is that not by a long way an underestimate of the condition of things?—Allowing that the works working at all divide their work fairly between their workmen; of course, they may work only one-half of them, and the other half would be destitute altogether then.

4392. Let us analyse the matter: there are 80 mills, I believe, in the borough of Swansea?—Yes, that is so.

4393. How many of them do you compute to be idle?—There are fifteen of them at a total stand.

4394. What about the others?—They can either keep forty sets of men to keep forty mills going, or they can, by dividing the work, keep the 65 sets going.

4395. What about the difference between the fifteen and the eighty that are partially idle. How many are partially idle?—Sixty-five are partially idle.

4396. How many are in regular employment?—Forty mills are in regular employment.

4397. How many hands are there to a mill?—Dependent on each mill, say 200.

4398. How many hands?—Eighty.

Chairman.

4399. Eighty to a mill?—Yes, on an average; but then there are included in these children, and in order to get at the number dependent on the 80 I multiply that by two and a-half. I have got the figures from the large works, and that is what it works out to

Mr. *David Randell.*

4400. How many of these mills do you compute to be going regularly?—Forty.

4401. Then we have forty to account for?—Yes.

4402. Fifteen of these you say are permanently stopped?—Yes, that is so.

4403. Then as to the others, they have intermittent employment?—Yes, the other 25 sets of men have to go into the 40 mills and deprive the men working in the 40 mills of part of their work.

4404. What percentage of these men to your knowledge are allowed to "work round," as they call it, and are given work; can you say with any reliance that half of these people are so employed?—No; I should not like to say that more than half of them would be. That would be a fair estimate, about half of them would be taken on in shifts, what we call "working round."

Mr. *David Randell*—continued.

4405. Still, there is half of 25 to be accounted for?—Yes.

4406. So far as your knowledge is concerned these people would be out of employment?—Yes.

4407. Take the steel trade of the district with the tin-plate trade, one is interdependent on the other; how many people are employed in the steel trade of the borough?—In the steel trade, 400.

4408. They are out of employment absolutely?—Some of them, yes.

4409. They would not be able to "work round" at tin works?—No.

4410. So that they have no work whatever other than their own occupation?—No.

4411. Now, in reference to the suggested remedy; I understand from you, as a manufacturer, that you advocate a large concession of wage as a means out of the difficulty?—Yes.

4412. I take your words, 25 to 30 per cent.?—That is including the 12½ that they have already given.

4413. That is to say, that at some works the men have already given 12½, but you would include that 12½ in your 25 or 30 per cent.?—That is so.

4414. With the object of saving the trade?—Yes.

4415. Do you know that very recently an American tin-plate manufacturer, together with a local manufacturer, who has put down plant in America, attempted to get out of their men a concession of 25 to 30 per cent.?—Yes.

4416. And they had a struggle over it?—Yes.

4417. And the men capitulated, giving, I believe, 15 per cent.?—That was in the case of a strike in America.

4418. Many of these operatives are Welsh operatives, are they not?—Yes.

4419. Do not you think, if you managed to get the men to make a further concession of 20 or 25 per cent., that the American manufacturer would immediately seek to obtain a larger concession from his workmen on the other side of the water?—I do not think they would be successful, because the sheet-iron men would step in at once, and say: You must not bring down wages in this way, or you will bring us down too.

4420. That is a supposition on your part?—Oh, no.

4421. Did not the sheet men, as a matter of fact, assist the tin-plate men considerably in resisting the attempt of the American masters to get this concession?—Yes.

4422. Do you think to-day we have an active American competition to deal with?—Yes, we have to some extent.

4423. Would not that be to a very small extent?—Well, I hope so, but it will be very much bigger if we do not move.

4424. What do you think, with your knowledge as a manufacturer, as to whether there is really any formidable active competition on the other side of the water?—Oh, yes, there is.

4425. Something

Mr. *David Randell*—continued.

4425. Something that you need to be afraid of?—Yes.

4426. Are you not a member of the Joint Board of Control, that has recently been created?—I attended one meeting the other day, and by virtue of my office I was put in the chair.

4427. Then I take it that being in the chair you sympathised, in a measure at all events, with the object of this Board of Control?—No, I did not.

4428. Are you a member of that Board of Control?—I have attended no meetings since.

4429. The president of that Joint Committee is Sir John Jones Jenkins, is he not?—Yes.

4430. He is one of our largest manufacturers?—Yes.

4431. Have you noticed that only last week Sir John Jones Jenkins as the President of that Board of Control on one side representing masters, and Mr. Lewis Richards, the President of the tin-plate makers representing the men?—Sir John is not President.

4432. What is he, Chairman?—No.

4433. At any rate, he takes an active interest in it?—Yes.

4434. Have you noticed that only last week Sir John Jones Jenkins and Mr. Richards issued a kind of manifesto to the trade, in which they say that "Even if you reduce cost by constant reductions in wages, it is not our opinion that we could close the American works by so doing, and therefore when we have so reduced them, we shall still be in the same position as we are now, and still making one-third more than the consumption calls for; in this way it is clear that a reduction of wages is no remedy"; do you agree with that opinion?—No, I do not.

Chairman.

4435. You do not agree with the opinion so expressed?—No, I do not.

Mr. *David Randell.*

4436. I am afraid from your observations that, at any rate, whatever part you take in this present Board of Control, you do think it advisable, in the interest of this trade, that there should be joint action between the masters and the men if it could be brought about?—Yes, I do.

4437. It is a desirable thing?—Oh, yes.

4438. Assuming that this board could come into existence, and that the men accepted your advice and made this large concession, would you as a master recommend when times got better that a return should be made to the men of a concession equal to that which they give now?—Well, we should be very pleased to do it if trade would admit of our doing it.

4439. Would you recommend mutuality?—Certainly; a joint board would be of no use unless we had that.

4440. Referring to the McKinley Bill as having first tended to dislocate the trade, the masters, I think, made a large percentage of profits in anticipation of what was going to happen in the States?—Some of them; yes.

4441. You do not know whether the masters have given any sort of additional wage to the men in consequence of those increased profits?—What I said as to that is simply my opinion.

Mr. *David Randell*—continued.

4442. In reference to the agricultural part of the Gower peninsula (that is purely agricultural) you think that if a light railway were taken into the peninsula it would be the means of bringing the produce from that district into Swansea?—Yes, I certainly think so.

4443. And I think a large amount of produce lies really waste on account of the difficulty of bringing it into the market in consequence of no railway facilities?—Yes.

Chairman.

4444. What sort of produce is it that lies waste?—Well, I suppose it would be more vegetables than anything else; the distance is too far, the cartage would be too heavy.

Mr. *David Randell.*

4445. In reference to the Poor Law Guardians, I understand from you that really they have been under the impression that they are unable to afford any relief to the men?—Yes.

4446. In reference to the electoral vote what is your opinion, do you think that the men in receipt of any relief should be disfranchised parliamentarily?—No, not parliamentarily; but so far as the board of guardians goes, the people who administer the relief, I think they should be disfranchised.

4447. As to the immediate future of the trade, are you hopeful?—Well, it depends entirely upon the state of America; the trade seems to be reviving a little there.

4448. In America?—Well, trade generally is reviving there, but it is very very slow.

4449. So you do not anticipate an immediate relief so as to alter the condition of poverty which these people are in?—No, I do not.

Mr. *Heywood Johnstone.*

4450. You think that a man in receipt of relief should not lose his Parliamentary vote?—I do not think he should.

4451. Do you say that without qualification?—Yes, I cannot think of any qualification at present.

4452. Do you draw any distinction between indoor and outdoor relief?—Yes, I do.

4453. Why?—Well, because I take it it is only in exceptional cases that you would give an outdoor man relief, but an indoor man would be there permanently.

4454. Then it is only a question of time?—Yes.

4455. You would simply make the dividing line the question of time?—Yes.

4456. Irrespective of outdoor or indoor relief?—Yes.

4457. A man might be in, say, for three weeks; you would not apply any distinction there, it is merely an instance; I am not giving you an exact time; the only distinction you make is a distinction of time?—Yes, I think so.

4458. Now, I will pass from that; your committee was able to deal with the distress?—Yes, to some extent.

4459. And where it was not able it was, I suppose, simply a question of funds?—Yes.

4460. If you had had funds enough you would have been able entirely to deal with the distress?—Well,

Mr. *Heywood Johnstone*—continued.

—Well, I think we did deal with it fairly well during the severe weather.

4461. And your relief, I take it, was given in kind?—In orders on the tradespeople.

4462. And if the guardians had the power to give the relief partly in money and partly in kind, the law as it at present stands would be sufficient from your experience to deal with cases of distress?—So far as we have experienced it at Swansea.

4463. You have suggested that the militia might be called out at times when work is slack?—Yes.

4464. Do you know of this condition of things: that a man in the Naval Reserve puts in his drill when he comes off a voyage at any time that is convenient, has it ever occurred to you that men might, either in the Militia or in the Reserve, be allowed to go to the depôt centre and put in their drill there when they have no other work to do?—No, I was not aware of that.

4465. That has not occurred to you?—No.

4466. That might possibly tide a man over a difficult three weeks or so?—Yes.

Mr. *John Wilson* (Durham).

4467. About the stoppage of these works; I think the main cause, so far as your opinion is concerned, was the amount of wages that was being paid to the men?—What I mean is this: We could keep more of the trade in our country if there was a reduction of wages.

4468. Is that the only means now capable of application to save the trade, is there not any other thing you could apply to?—I should like to mention this point: you asked the other witness this morning as to the question of royalty; every little helps us.

4469. You consider the royalties an element in the cause of stagnation?—It must enter into it.

4470. Can you give us your reasons for saying that?—If we had no royalties to pay it would be all the easier to compete with foreign competition.

4471. Can you tell us the amount of royalty per ton that might enter into the competition in steel, say, or anything of that sort, at Swansea?—I could not follow it up right through the manufacturing, but I think the royalty on coal is about 9*d.* a ton.

4472. Then you have the coal, the iron, the ironstone, and all the other elements that go to make up the ingredients in the cost of production?—We have to import the iron.

4473. Where from; where do you get the iron from?—Bilbao, a great deal.

4474. Where do you get the limestone; where does it come from, principally?—I do not know that they use very much limestone.

4475. Would it be anything unfair to say that a shilling or eighteen pence would be too much royalty in a ton of iron?—Not a shilling; I do not know about eighteen pence; of course, I do not know anything at all about manufacturing iron.

4476. Now as to these wages, did I hear you aright when you said that the Americans were paying 150 cent. more wages than we are paying?—Yes.

4477. How would 25 per cent. less wage save you then?—Because they have 5*s.* a box or 5*s.* a hundredweight protection, and the 150 per cent. on wages is a very small thing as compared with that.

Mr. *John Wilson* (Durham)—continued.

4478. Then the result is that although the workmen in America get 150 per cent. more wages than the workmen here, they are really no better off on account of protection, is that what you mean?—I do not think they are.

4479. That is what you mean?—Yes.

4480. Now, about this Board of Joint Control; is it a joint committee of employers and employed?—Yes.

4481. With a chairman appointed?—Not a permanent chairman.

4482. But is it something like what we call a conciliation board?—As a matter of fact, it has arrived at a stage at which you could call it anything. There have never been more than six manufacturers in any meeting yet, out of about a hundred, I suppose.

4483. Suppose the workmen in the neighbourhood were willing to meet you and the rest of the employers, and form a conciliation board, would not that facilitate the settlement of the wages?—Not unless the workmen would agree to a reference failing their coming to a decision with regard to the rate of wages.

4484. Let me quote a case to you. A conciliation board has been formed in a very large district in this country where the employers will expose their books to the employées on the board for the board's use; would you have any objection to the formation of a conciliation board of that kind (I have the rules in my pocket) in order that the men might satisfy themselves whether you were asking for that which is reasonable or not?—That is what I wanted the independent person for, to satisfy himself, and then for him to act accordingly.

4485. Suppose you had a conciliation board formed on the lines of mutuality, and the workmen were (I think those are the words you used) satisfied that you were making no profit, and then were willing to submit to a reduction of 25 per cent., would it not facilitate the settlement of your case if you were to set about forming a board of that kind?—I should certainly be prepared to fall in with it; I am speaking for myself personally.

4486. Would that be something different to this Board of Control?—No, I think it would mean the same thing in the end; it would have to come to that.

4487. Now, as to this wage; it is 2*l.* a week, you say, on an average?—Yes.

4488. Of course, some men would be getting more, and some less?—Yes.

4489. Twenty-five per cent. of that 2*l.* would be 10*s.* a week?—Yes.

4490. That is a big reduction?—Yes, it is; still they have already given 5 of it, you see.

4491. That means that the man works every day all the year round?—Yes.

4492. Can you tell us what amount of lost time these men have had during the year?—During this last year they have had a great deal of lost time; that has been in consequence of the depression in America.

4493. So that we might safely say the wage would

Mr. *John Wilson* (Durham)—*continued.*

would not amount to more than 1*l.* a week last year about Swansea?—All those who worked last year earned about 35*s.* a week.

4494. I thought you said they were relieving each other, and sharing the 2*l.*?—Yes, now.

4495. How long has that been going on?—It has never been to the same extent before that it is going on now.

4496. Just to sum up my two points, the remedy to which you look would be a reduction in the wages of the workmen?—Yes.

4497. And some easement in the royalty rents?—Yes.

Mr. *Bartley.*

4498. Do I understand that practically this whole distress is due to the depression in this particular trade?—Of course, a month ago there was a great deal due to the state of the weather; there is a little still.

4499. The real cause of the depression is the changes in the trade?—Yes.

4500. Is there any possible way of meeting that depression except by either re-arranging the trade or effecting some reduced cost in the manufacture?—I do not know.

4501. It must be one or other, must it not?—Yes.

4502. But you think that the reduction of the wages is one means of doing it?—Yes, I think so.

4503. As regards the wages that have been earned of late, you say they average about 2*l.* a week all the year round when at full work; but during the depressed times I suppose they do not average nearly that, do they?—Well, it depends a great deal on where they are working; some works are going regularly.

4504. Taking them all round, I suppose you would say the average wages would be considerably under 30*s.* a week now?—No, where the works are closed altogether you would not take them into account, I take it.

4505. I think I should; I mean taking the whole industry as one?—I do not suppose it would be more than 30*s.* a week now.

4506. Then, practically speaking, the men are giving up even now as much as you think, if they gave it up regularly, would lead to the revival of trade?—Yes; and more of them would be employed.

4507. Supposing your statement is correct, that the masters are making no profit, if they would assent to this arrangement they would be practically better off, or as well off as they are now, and the industry might revive?—Yes, that is what I believe.

Mr. *John Wilson* (Govan).

4508. I think you stated that the wages in America were much higher than they were here?—Yes.

4509. Do you think, notwithstanding that, that but for the American tariff the Welsh people would be quite able to hold their own with the Americans?—Well, I hope so; but whether we can hold the whole trade or not, we can hold some of it by minimising our cost.

4510. How does it affect the Canadian trade; I suppose you have the Canadian trade almost

0.45.

Mr. *John Wilson* (Govan)—continued.

to yourselves?—We have the Canadian trade still.

4511. Notwithstanding the competition of the Americans?—Oh, yes; they cannot export anything.

4512. Then, besides tin plates and steel plates, there is a large trade done in black iron sheets for stove piping in Canada?—Well, there is a trade in it, but you cannot call it a large trade as compared with the total output of the trade.

4513. That is owing, I suppose, to the depression which has occurred there as everywhere else just now?—No, the consumption of black plates in Canada has never been so very large that it was worth taking into account.

4514. Is it not a fact that, so far as every other part of the world is concerned, except America, the Welsh people in the tin-plate trade and the black sheet-iron trade can hold their own?—They can hold their own.

4515. They have really the market?—Yes, I think so.

Chairman.

4516. Except as against America?—Except as against America, yes.

Mr. *John Wilson* (Govan).

4517. Except as against America they really have the markets?—Yes.

4518. So that when a revival in trade takes place generally all over the world, as we hope to see it some day, you hope to resume, I suppose, work as usual in the district where there is so much depression at the present time?—Oh, yes; we hope so.

4519. And the great feature just now is to tide over the difficulty, and to provide the means of sustenance to the individuals who are thrown out of employment at the present time?—Exactly.

Chairman.

4520. I understand that the difficulty you spoke of arising from their competition is in America?—Yes.

4521. They do not compete with you in other markets?—No.

Mr. *Renshaw.*

4522. Is it not the case that in respect of your particular industry you have succeeded in holding trade in America, while very few trades in the country have been able to hold it?—Yes.

4523. And that you are rather the exception to the general trades of the United Kingdom up to the present time in being able to export your goods to America, whilst almost every other manufacturing industry in the country has lost its trade there owing to the very high duties?—Yes.

4524. So that they have been practically the last trade to lose their hold of the American market?—We have not entirely lost the market yet.

Mr. *Bartley.*

4525. You can beat them in spite of Protection?—It depends on the amount of Protection; were there now a reduction of wages, I think we might.

Friday, 22nd March 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. Bartley.
Mr. Billson.
Mr. Thomas Henry Bolton.
Mr. John Burns.
Mr. Campbell-Bannerman.
Mr. Crean.
Mr. Keir-Hardie.
Mr. Wootton Isaacson.
Mr. Jackson.
Mr. Heywood Johnstone.
Mr. Pickersgill.
Mr. David Randell.
Mr. Renshaw.
Mr. Round.
Mr. Whiteley.
Mr. John Wilson (Durham).
Mr. John Wilson (Govan).
Mr. Stuart-Wortley.

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN, IN THE CHAIR.

THE *Chairman* handed in the following letters:—

"Office of the Secretary for Scotland,
"Whitehall, S.W.,
"Sir, 20 March 1895.

"In continuation of my letter of the 20th ultimo, I am directed by the Secretary for Scotland to inform you that the Local Government Board for Scotland are tabulating the replies of the municipal and parochial authorities to the queries in the Board's recent circular, and hope in a few days to be able to furnish the information called for by the Select Committee on the Unemployed.

"I am, &c.,
"(signed) *Colin Scott Moncrieff,*
"Reginald Dickinson, Esq.,
"House of Commons."

"Irish Office,
"Great Queen Street, S.W.,
"Sir, 21 March 1895.

"WITH reference to your letter of 19th February, with its enclosure, asking for information from the local authorities in Ireland with regard to the existence of exceptional distress, similar to that called for from the local authorities in England, I beg to say that, as the Chairman is doubtless aware, there is no one body in Ireland corresponding to the English District Council. In Ireland the functions of the latter body are discharged by the rural sanitary authority, the grand jury, or the board of guardians.

"Apart, however, from this aspect of the case, the distress now existing in Ireland has been mainly due to a partial failure of the potato crop, and this has been specially dealt with by money obtained from Parliament for the purpose.

"Having regard to these circumstances, it does not seem to me that any statistics or other facts could be collected in Ireland at the present time which would be of assistance to the Select Committee in their deliberations.

"I shall be glad if you will submit this view to the Chairman and to the Committee.

"I am, &c.
"(signed) *John Morley.*"
"Reginald Dickinson, Esq.,
"Committee Office,
"House of Commons."

Mr. H. LLEWELLYN SMITH, called in; and Examined.

Chairman.

4526. YOU hold the post of Commissioner for Labour in charge of the Labour Department of the Board of Trade, do you not?—Yes.

4527. How long have you occupied that position?—Since the beginning of 1893.

4528. Could you give us, in the first place, a general idea of the scope and arrangement of the evidence you propose to give?—I have considered in what way I could best be of use to the Committee in its inquiry, and, with their consent, I propose to arrange my evidence in three parts:—first of all, dealing briefly with the general statistics of employment and its fluctuations; secondly, comparing the present state of employment with that prevailing a year ago; and, thirdly, adding to and bringing up to date some of the information as to the various remedial agencies which are dealt with in the Board of Trade Report on the Unemployed.

Chairman—continued.

4529. Will you tell the Committee, in general terms, the nature of the information with regard to the state of employment which is in the possession of your department?—The information in the possession of the Labour Department of the Board of Trade as to the state of employment is of two kinds: in the first place, current information

Chairman—continued.

tion which we obtain at frequent intervals from various sources (which I will describe) as to changes in employment. This information is summarised month by month in our journal, the "Labour Gazette." Secondly, we have information derived from special inquiries into particular questions, of which an example is the Report on the Unemployed to which I have referred, and another example is the inquiry which we are now conducting, and which is not complete, with regard to the irregularity of work in certain trades.

Mr. *Jackson.*

4530. Do you say "irregularity of employment"?—Irregularity of employment and of work.

4531. I put the question, because irregularity of work might not result from want of employment?—That is so.

Chairman.

4532. Will you say what is the nature of the machinery you use to obtain the information?—In the first place, in the central office we have a staff of investigators, including four labour correspondents, of whom Mr. Burnett is the chief, and three other special investigators. In the second place, we are in communication with a considerable number (it is now 32) of local correspondents in various parts of the United Kingdom, each covering a district. In the third place, we receive periodical reports from a number of other Government Departments as to matters within their own cognisance, and from consuls and other representatives abroad, as to changes affecting labour in various countries. In the fourth place, we have a large number of monthly returns from employers, from workmen's organisations, and employers' organisations, from labour bureaux and other agencies. We find, on the whole, that we receive and analyse for the purpose of each number of the "Labour Gazette" nearly 2,000 reports and returns of this kind every month. That, briefly, is the nature of the machinery.

4533. Will you tell us what use is made of this information when collected; in what form is it published?—As I have already stated, the chief form in which the current information is published is in the monthly "Labour Gazette," a copy of which is, I think, in the hands of every Member of this Committee. We group the information in two ways: first, by districts, in the form of district reports, which enable the condition of employment in particular disticts to be compared from month to month; and, secondly, by trades, in the form of special reports on particular industries, that is to say, such industries as lend themselves to that method of treatment. For example, coal mining, iron mining, pig iron manufacture, agricultural labour, dock labour, seamen, and so forth, are all treated specially. Finally, a summary of the whole of the information is prepared, which takes the form of a monthly memorandum on the state of the labour market. That is the first article which always appears in the "Labour Gazette," and also appears in a summarised form in the Board of Trade Journal.

Chairman—continued.

4534. The Committee would like to know the general conclusions which are to be derived from the information which you have described with regard to the extent and character of the want of employment in the various trades; can you give us that information?—Before going into detail in answering that question, may I be allowed to state, in the first place, that the conclusions to be drawn from our statistics are for the most part conclusions with regard to the state of employment rather than the state of distress. Of course, the one has an important bearing on the other. Incidentally, the subject of distress may be treated by our local correspondents; incidentally, it is dealt with in the returns we receive on pauperism. But, in the main, our statistics deal rather with trade conditions than with distress; and in that respect any statistics I should give would be of a different scope from those given by Sir Hugh Owen, who dealt only with persons within the scope of the Poor Law.

4535. You attack the question from another point of view?—Yes. Then, answering your question further as to the conclusions to be derived from our statistics, I may first make a rough division between what I may call the stable industries, such as railway service, domestic service, and certain branches of agriculture, in which there is little difference of employment from year to year, and the fluctuating industries, such as shipbuilding, engineering, the building trades, mining, and dock labour, which show more or less marked oscillations from time to time in employment. It is in the fluctuating trades that the evils of want of employment are chiefly found; and it is therefore to them that any evidence I give will be for the most part confined. But I want to emphasise the existence and importance of the other group of trades, the stable industries; because otherwise there is a tendency to generalise unduly from the oscillations found in the fluctuating trades, and to apply them equally to the whole field of industry, and that is an illegitimate generalisation. Having said that, I shall not say much more about the stable industries.

4536. Would you explain a little further how you draw the distinction between the stable and the fluctuating industries, and give us some instance; for instance, how would you class engineering?—Engineering I put among the fluctuating trades; it is a very fluctuating trade. The examples I gave of stable industries were such industries as railway service or domestic service, and there are some branches of agriculture which would come under the same heading where long-period hirings prevail.

4537. Take such a trade as the textile trade, how would you class that?—That is not so fluctuating as engineering or shipbuilding, but I should place it among the fluctuating trades. Of course, there is no line drawn by nature dividing off sharply the one group from the other; they shade into each other by imperceptible gradations. But there are some which are more stable than others, and some so stable as to justify us in speaking of them as stable trades.

 4538. Would

Mr. *Jackson.*

4538. Would you not rather say "employments" than "trades"; you could hardly call domestic service a trade?—"Employment" would be a better term.

Chairman.

4539. Taking the instance you quoted, of engineering, perhaps you would explain in what sense it is fluctuating, and upon what do its fluctuations depend in order to elucidate the nature of the fluctuating trades?—Engineering is an employment which shows a cycle of fluctuations. It is not so fluctuating within a given year as the building trades, for example; but if a period of years be taken, it shows a very marked fluctuation. I intended to go into that later, if I may, with some figures. I am at present only classifying; I am not going into the figures.

4540. Confining our attention for the moment to the fluctuating trades, is there any difference among them, in the mode of their fluctuation, as regards the effect on employment?—Yes, industries differ very greatly in the mode of their fluctuation; I mean in the methods by which they adjust themselves to contractions or inflations in the demand for labour. Looking at the question broadly, we may distinguish two main methods. The first general method is by short time, or short work, for all or the majority of those employed. A good example of that is mining, in which, for the most part, the contractions do not result so much in throwing out a certain number of colliers altogether, but in the colliery working a smaller number of days per week. Another example would be the boot and shoe trade; (I mean apart, for the moment, from the great factories where machinery is used, but where it is carried on on the ordinary piece-work system), in which in slack times there are not many people entirely unemployed, but a very large number of people will have a short amount of work. The second method, which applies in other industries, is not by working short time, but by throwing out of work a certain proportion of the workers who form a fluctuating margin of unemployed. Examples of such trades are the building, engineering, and shipbuilding trades. I do not mean to say there is not short time known in any of those trades, or that overtime is not worked in times of inflation; but the main method by which they adjust themselves to a change in demand is by throwing out workers or taking on more workers. Those are the trades in which we get the phenomenon of the unemployed.

4541. Have your investigations led you to consider whether it is in the trades in which piece-work is more largely worked than in others that this adjustment takes the form in the first instance of what you have described as not throwing entirely out of employment but working short time?—I may say, generally, though it would not be universally true, that piece-work trades tend more often to contract and expand by the first method; that is, by short work or short time, and the time-work trades by the other method. That would not be universally true, but it is generally true. Both the examples I took, the mining and the boot and shoe trades, are piece-work trades chiefly; and the examples I took of the other method, such as building, are time-work trades.

Chairman—continued.

Mr. *Jackson.*

4542. Would that apply to engineering?—Engineering is a mixed trade.

4543. You classified engineering with building, did you not?—I did for this purpose.

4544. Is there not much piece-work in engineering?—There is a good deal of piece-work worked in engineering; but I should suppose all over the country the large majority of persons engaged in the trade are paid at time rates.

Chairman.

4545. Of course, this distinction which you speak of is not a rigid distinction?—No.

4546. Is it a constant distinction, or should you say that trades tend to move from one class to the other?—I should say that is so; and there are transitions of that kind going on at the present time. For example, to take a trade I have already mentioned, the boot and shoe trade, the introduction of the factory system and machinery into that trade is tending, so far as it extends, to convert that industry from one fluctuating by means of short work into one fluctuating by means of decreasing or increasing the numbers employed. A somewhat similar transition, though not due to the same causes, may be observed in dock labour in London, owing to the increase of the permanent element in dock labour. The fluctuations tend now, less than they did a few years ago, to take the form of sharing an irregular amount of work among the whole number of men, and rather to throw out entirely a certain number, and to keep those that are employed still at more or less permanent work.

4547. Passing from the question of the modes of fluctuation, is there any further difference you would like to call attention to as regards the character of the fluctuations in different trades?—Yes. I should like at this stage just to name a few of the more important differences, and afterwards to illustrate them by some figures. I may say the chief differences to which I wish to allude are as regards the periods and the causes of oscillation. In the first place, I may mention the seasonal fluctuations, which may be due either to changes of demand or to the physical difficulty of carrying on the work in particular seasons. Of course, the building trades are one good example, and the clothing trades are another good example of the trades liable to seasonal fluctuations. In the second place, we have what I call cyclical fluctuations; that is to say, fluctuations the period of which extends over a number of years. They affect many very important groups of trades, and the periods correspond with what we sometimes call periods of inflation and depression of trade. They appear to affect in a special degree industries connected with shipbuilding, machine-making, and allied industries; the trades which Mr. Walter Bagehot used to call the "instrumental" trades. But in a secondary degree their influence

Chairman—continued.

influence extends from those trades more or less over a great part of the field of industry. What the ultimate cause of these cycles may be, perhaps it is scarcely within the scope of this inquiry to investigate; but from whatever cause they originally arose, it appears that they are connected with slight variations in the total volume of production in the country. The total volume of production in the country (I am speaking of volumes, not values; of course in values there is a considerable variation) appears to vary slightly from year to year over a period. The range of that fluctuation is probably very small; but even these slight changes are sufficient to throw into violent oscillation the trades connected with the manufacture of the instruments of production. I shall show how violent these oscillations are when I come to deal with the actual figures. These oscillations I wish to call in my evidence "cyclical oscillations." In the third place there are the irregular fluctuations due to weather (such as the influence of wet or snow on farm labour, of fog on dock labour, and of frost on the building trades) which are not quite the same as seasonal fluctuations; they depend upon irregular climatic causes. In the fourth place, we have local fluctuations, which are not necessarily connected with variations of the total volume of work in the country at all, but are connected with the migration of work and industry from one place to another. The removal of shipbuilding from the Thames to the North is an example of that. In the next place, you have the influences of the changes of process or fashion, such as the introduction of new processes which throw out persons engaged in work which has become obsolete. In the sixth place, I should like to notice the influence of trade disputes on employment in allied trades. I will give an example of that presently. Of course I do not mean to say that that exhausts the kinds of fluctuations; but those are the six important classes which I wish to deal with.

4548. Which of those do you consider the most important?—I should think far the most important of these classes of oscillations, from the point of view of the country as a whole, is the class of what I have called cyclical fluctuation. Seasonal or irregular changes due to weather, of course may produce a pinch for a time; but they rather affect the distribution of work over the year than the total volume of employment during the year; work postponed is very often accumulated, but the cycles corresponding to inflation and depression of trade are of a more serious character. Of course, from the point of view of the individual, no doubt displacement by changes of process is the most serious thing, because he loses the value of his acquired skill; but speaking of the effect on employment in the country as a whole, I think incomparably the most serious kind of fluctuations are those I have spoken of as cyclical oscillations.

Mr. *Jackson.*

4549. In the case of displacement by change of process, a man may not only suffer that loss temporarily, but perhaps for all time?—Yes.

Chairman.

4550. Could you give the Committee some figures, illustrating from different trades the various kinds of fluctuation to which you have called attention?—I have some figures that I want to place before the Committee; but before I go into the figures you will perhaps allow me to describe to the Committee how these particular figures are arrived at, and what their basis is; that is to say, how we attempt to measure the changes of employment. It is not practicable to apply the same test to all industries. There are some trades in which we are able to measure, with more or less accuracy, the actual fluctuations in the total numbers employed from time to time. We do this, for example, in the "Labour Gazette," for dock labour in London; we do it for blast furnace-men throughout the United Kingdom, and we do it for a very large number of mines employing colliers and iron miners. That is a method which is a very useful one so far as it could be extended, but it is one which it is impracticable to apply, except in the case of a few special industries, because it belongs to a class of statistical methods which depend entirely for their value on getting a wide range of observations. It is one which you cannot apply by sample; for this reason, that the oscillations of a particular business are altogether out of proportion to the total oscillations of the whole number of businesses. Therefore the only classes of employment to which we can apply this test are those in which we are able to get so large a sample as to be able to say that it must be representative of the industry as a whole. For example, we get almost complete returns covering all the persons employed in the docks in London.

4551. From whom do you get the figures as to dock employment?—We get the figures supplied by all the dock companies as to those employed by them, and we get returns collected from the shipowners in the Albert and Victoria Docks, who do their own discharging, and we are now trying to obtain similar figures from the wharves. With regard to the blast furnace-men we get returns from the ironmasters, which cover over 90 per cent. of the whole number of blast furnaces in the United Kingdom.

Mr. *Isaacson.*

4552. Is there any return made from steel works?—We are now extending the inquiry to steel workers. We have not yet got the steel works in the same way as the pig iron. Our returns of employment at present cover pig iron, but not steel. As regards coal mining, we get monthly returns from over 1,100 collieries employing 275,000 persons, and we consider that a good enough sample.

Chairman.

4553. Those are cases where you get the actual data?—Yes, where we get the data of the number of people employed. But as an example of how unsafe it would be to apply this method, unless we get a very large number of returns, I may take an illustration from the returns of employment of labour in the docks in London. During

BIBL. LONDIN. UNIV.

Chairman—continued.

last month I find the numbers employed varied from 9,360 to 6,050, that is to say a variation of 35 per cent.; whereas the numbers employed in a particular dock during the same period varied from 2,742 to 1,267, or a variation of 54 per cent. If we had attempted to take that dock as a sample we should have got entirely wrong results.

Mr. *Isaacson.*

4554. Does that include casual labour as well?—That includes the whole of the labour staff, casual and permanent. I should mention that this method, which we apply when we can, is the one employed very largely in American statistics, and on it are based the figures indicating "the range of unemployment" as it is called, which are published by the Massachusetts Bureau of Labour Statistics. These percentages are based on this method I have described. That is to say, they take as their "range of unemployment," as they call it, in any industry, the difference in any year between the minimum average monthly number employed, as shown in their returns, and the maximum.

Mr. *Stuart-Wortley.*

4555. Could you say what proportion the 1,100 coal mines from which you have returns would bear to the whole number?—I could give you the proportion which the number of men employed at those mines bears to the total number employed in the industry. It is roughly 40 per cent.

Chairman.

4556. You have been describing one of the methods by which the fluctuations in industries are measured?—Yes; perhaps I may now pass to the second method. The second method, which is applicable to a great many industries in which the first is impracticable, is to use as our index of changes in the labour market, the percentage of unemployed members of trades unions giving unemployed benefit, connected with various trades.

Mr. *Jackson.*

4557. You mean the trades unions giving unemployed benefit to men belonging to those particular trades?—Yes. And we not only deal with particular trades in this way, but we publish monthly a percentage based on all the returns, as a general index of changes in employment. This method has this advantage, that with a certain reservation it is one that can be applied by sample; it does not depend necessarily for its accuracy on covering the whole field of employment. You do not need to cover a very large proportion of a trade in order to get a fairly representative figure, provided, of course, your sample is chosen at random, and that there are not any peculiarities about your sample that mark it off from the rest of the trade.

Chairman.

4558. Which trades are chiefly represented in the returns which you obtain in this matter?—The chief strength of the unions which make monthly returns of unemployed members lies in the engineering, shipbuilding, and the metal group.

Mr. *John Wilson* (Durham).

4559. Do you include coal miners in the metal group?—No, I do not include coal mining. I find that the metal group accounts for 46 per cent. of the whole number covered by our trade union returns. The other groups are the building and furnishing trades, which account for 21 per cent.; mining, 19 per cent.; printing and kindred trades, 10 per cent.; textile, 3 per cent.; and others, 1 per cent.; so that you see some groups are far more largely represented in proportion than others.

Chairman.

4560. From that 3 per cent. in the textile trade, for instance, do you think you are entitled to draw a conclusion as to the whole industry?—No; I do not think so with any degree of accuracy such as that which we can draw inferences for the trades which are more largely covered, and we do not, as a fact, draw such inferences.

4561. Of course there is a difference among trades in the habit of giving unemployed benefit, is there not?—Yes; we get returns from any unions which give unemployed benefit, and are willing to supply the returns, provided the unemployed benefit lasts for a substantial period. There are some unions which have an unemployed fund which give benefit for so short a period that the number receiving benefit may be a very small fraction of the number of unemployed; in such a case it would not be a good index, and we should not include those cases.

4562. Do you hold that this percentage derived from the trades you spoke of is a good indication of the changes in employment over the whole field of industry?—Yes, I think it is a very good index of the changes of employment generally; because the trades included are chiefly those which are affected most violently by cyclical fluctuations, and hence, so far as that kind of fluctuation is concerned, our index numbers afford a very sensitive barometer of this kind of change in the labour market; of course the fluctuations, for the very reasons I have mentioned, would be exaggerated in our index number.

4563. Owing to its sensitiveness?—Owing to the over-representation of those trades. But what we are mainly concerned with is to find an index number which will always move in the right direction, that is, will always go up when employment is worse and go down when employment is better; and that we think we have got by this percentage. It also has this advantage, as distinguished from the index number which I described as employed by the Massachusetts Labour Bureau of Labour Statistics, that it represents, within its limits, an absolute real number of persons in a given trade out of work at a given time. It is only when it is generalised and applied to other trades, that it is necessary to regard it as purely an index number.

4564. While you consider that the percentage of unemployed members of trade unions making returns to the Labour Department is a good barometer of the state of the labour market generally, you do not consider that the percentage itself can be fairly applied to the industry generally in order to arrive at the total number of

Chairman—continued.

of unemployed?—No; within the limits of the particular industry to which the percentage applies with certain reservations, I think it is a good measure; but it can only be legitimately used as an indication of the changes in the way I have stated. To assume that the same proportion of persons are out of work in the country as a whole, would be quite illegitimate; because, in the first place, it neglects the fact I called attention to at the beginning of my evidence, of the existence of stable trades, and in the second place, because, even among fluctuating trades, those which are most violently affected by cyclical oscillations are most largely represented in our returns. For example, even confining ourselves to the actual trades represented in our returns, but assigning them their due proportionate weight, so far as this can be estimated from the census returns, I find that this reduced the percentage very considerably. We have, for example, the shipbuilding group very much over represented. But supposing we got the percentage of unemployed in the shipbuilding group, as shown by our returns, and applied it, not to the number of persons covered by the trades unions, but to the number of persons shown in the census to be employed in that group of trades, and did the same with all the other percentages, and so arrived at what I may call the corrected percentage, it would come out much lower; in fact, in the particular month in which I tried it, that process reduced it from 7 to 4·2.

Mr. *Jackson.*

4565. Could you give us an illustration of that; apparently you have followed out this particular trade; could you tell us in figures what the margin of error was, as shown by applying the unemployed test to shipbuilding?—Do you mean the margin of error in the whole return?

4566. As I understand you, taking shipbuilding as an example, you said that they were over-represented, and that therefore, to apply the percentage figure of unemployed and work it out on the census figure of the total number employed in that particular trade, would give as a result a much larger number of unemployed than were actually unemployed?—What I meant to say was, not that it would alter the percentage or correct the percentage of the unemployed for that given trade (that is probably a fairly correct percentage as we publish it; it would be applicable to the whole of the shipbuilding trade, I think). But what I meant was that that is a very high percentage, there being at the present time, in a time of depression, a very large number of people unemployed in the shipbuilding trade. Now the shipbuilding and engineering group account for 46 per cent. of the whole of the persons covered by our returns; but if we look in the Census Returns for the number of people employed in these particular trades, it is, of course, nothing like 46 per cent. of the total number engaged in the industries represented in our returns. Therefore, it is clear that the effect of that over-representation is to raise our general percentage, the trades with a high number of unemployed being more largely represented than they should be. There is not necessarily any error in the percentage in any particular trade; but the general percentage is distorted, because the trades

Mr. *Jackson*—continued.

are not represented in their right proportion. Then there is a third reason why it is rather unwise to generalise from the percentage, which tells on the other side, and that is, that our returns omit a mass of unskilled labour which is specially affected by seasonal fluctuations. That leads me to suppose seasonal changes are under-represented, more or less, just as the cyclical fluctuations are over-represented.

Chairman.

4567. Will you give the Committee some illustrations of the various kinds of fluctuations of which you have spoken?—Having explained how I get these figures, may (*see App.* 28) I call the attention of the Committee to a table and some accompanying charts, which I think have been distributed, on which I wish to comment. The table is compiled, as is stated, from the monthly returns received from the trade unions; and it will be seen that the percentage of the unemployed varies, within the group of years shown in the table, from 1888 to 1894, from 10·2 in December 1892, to 1·4 in the months of January and February 1890.

Mr. *Jackson.*

4568. It appears from the heading that this is not the total number of unemployed, but the total number "in receipt of unemployed benefit." That is rather an important difference, is it not?—I am glad my attention has been called to that. The heading is not quite accurate; because we add in those who have run out of unemployed benefit wherever we can ascertain the number; but in most of the unions that give us returns, the numbers are practically identical. There are a few in which that is not so, and then we try to get the number of those still unemployed who have exhausted their benefit, and those would be included and the table made correct.

4569. What words would you use instead of "in receipt of unemployed benefit"?—I think the best words to use would be "who were unemployed." The vast majority of those covered by the returns are in receipt of unemployed benefit.

Chairman.

4570. You were quoting certain figures; you said the highest percentage was in December 1892?—Yes, and the lowest is in January and February 1890. In order to show the fluctuations, both within each year and from year to year, in a graphic form, I have prepared a chart, which is the chart numbered 1, which embodies the same particulars as those given in the table, only they are thrown into a graphic form. I further thought it desirable, in order to separate these two kinds of fluctuation and show them separately, to obtain both the mean percentages of unemployed for each year and the mean percentage for each month over the period of years, and you will find those figures in heavy type along the bottom row, and in the right hand column of the first table. By taking the mean of the seven years from the figures in the right-hand column, I eliminate the effect of the cyclical changes, and get the mean percentage

Chairman—continued.

percentage for January, and the mean percentage for February, and so forth. In the same way, by taking the mean for all the months of each year, I eliminate the effect of seasonal variations, and get figures which are the mean for 1888, the mean for 1889, and the mean for 1890. I get at it by the simple process of adding up the percentages and dividing by seven in one case and twelve in the other. Doubtless the geometric mean would in some ways be more exact, but the difference is not perceptible.

4571. You put these figures before us, but we may not be acute enough to see what they prove or what they tend to show. Would you give us occasionally a little hint (you may develop it later, if you like) by way of pointing out what the significance of the figures seems to be. Speaking on behalf of myself and other honourable Members who may not be sharp enough to see it at the moment, I shall be glad if you will tell us what you think they prove?—I was hoping to go on to that in a moment.

4572. Perhaps you would prefer to come to it afterwards?—It will come next very conveniently; in fact, it is in order to show the significance of these figures that I have thrown them into a chart form. The first three charts are exactly an analysis of the tables.

Mr. *Whiteley.*

4573. Would you not allow that these returns are in some degree misleading; does not the fact of not having exactly the same number of returns from all the various trades render this mean average figure somewhat misleading as a basis?—There is a slight degree of inaccuracy, due to the cause to which I have called attention in the note at the bottom of the table. But after going into the figures, taking the additional unions which have made these returns for the last year of the period and not for the first, and seeing what difference was made to the percentages thereby, I found it was not sufficient to make the table as a whole seriously misleading. There must be a slightly misleading element in almost all tables, but on the whole it is not of sufficient magnitude to materially affect the conclusions I am going to give to the Committee. The figures which are collected here have all appeared in the "Labour Gazette," and as to the charts, the first chart is a chart brought up to date from one that has already appeared in the "Labour Gazette." These other charts which I am going to put before the Committee were also prepared in connection with our work for the "Gazette," but they have not yet been used, and I thought the Committee would like to have them before them. The first chart (*see Chart I.*) shows the general course of the inflation and depression of trade; a gradually diminishing proportion of unemployed throughout 1888 and 1889, a low proportion during 1890, a gradually increasing proportion in 1891, then a rapidly increasing proportion in 1892, and then stagnation since. That is brought out fairly well by the first chart. The second one (*see Chart II.*) has been prepared to show the seasonal fluctuations only, and it is based on the figures which appear in the last column of the table, which is the key to all these

Mr. *Whiteley*—continued.

charts. It will be seen, taking the whole of the trades that make returns to us, there is not a very marked seasonal variation, and that is due to the fact that the busy seasons of some employments occur during the slack seasons of others. But it appears from an examination of the chart that on the whole the months of May, June, and July are the best for employment, and the worst are December, January, and February; which is a conclusion that might be expected.

Mr. *Stuart-Wortley.*

4574. Why have you left January blank in that chart?—This chart refers to the percentages at the end of each month. Then in order to bring out more clearly the seasonal fluctuations in certain trades, I have prepared a detailed chart, No. 3 (*see Chart III.*). I can supply the figures on which that chart is based. As a matter of fact they have not been distributed to the Committee, but it is prepared in exactly the same way as the second chart, except that the percentages are those derived from particular trades rather than from all the trades combined.

Mr. *Jackson.*

4575. What do the figures in the first column represent?—Those are percentages of unemployed. That chart shows the fluctuations throughout the year of a certain group of trades, viz., the building, furnishing, shipbuilding, engineering, and printing trades, which I have taken as examples. It has been found most convenient to take the year from February to February, instead of from January to January, because in trades like the building trade and furnishing trade (which show a very marked seasonal fluctuation), the period rather runs from February to February than from January to January.

4576. Do these fluctuations accurately correspond with each of the years from 1888 to 1894?—No; it is the mean that is shown.

Chairman.

4577. I observe that the beginning of October is a remarkably unhappy period both for the printing and book trade, and for the cabinet and furnishing trade. Is there any particular reason for that. Why does the printing and book trade go so rapidly to the bad in July and August and then recover equally rapidly in October and November?—It seems to be the case that that part of the printing trade that is concerned with the printing of books rather than newspapers is always slack in that period of the year. That is not an answer to the question, perhaps, but only putting it in another form.

4578. I thought all the three-volume novels and new books came out in the autumn?—It rapidly gets better from October to December.

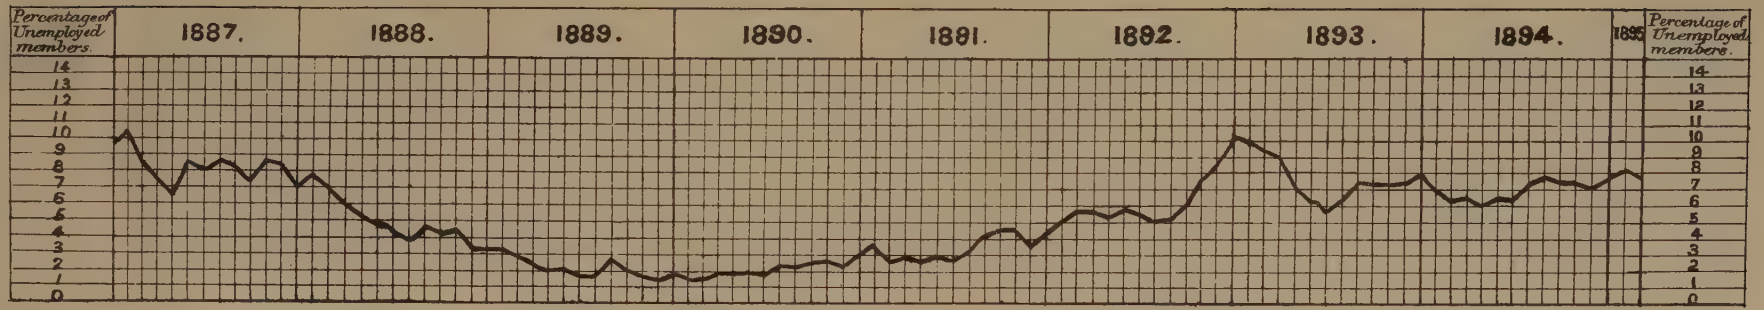
Mr. *John Burns.*

4579. Is it not due to the fact that the holiday demand is worked out in the summer and the Christmas demand has not probably begun at the beginning of October?—Probably that is the explanation of it. It will be seen from the examination of the chart that the most marked variations

I.

Seasonal and Cyclical Fluctuations in Employment.

Chart showing percentage of unemployed members of Trade Unions making returns to the Board of Trade at end of each month Dec^r 1886. - Feb^y 1895.

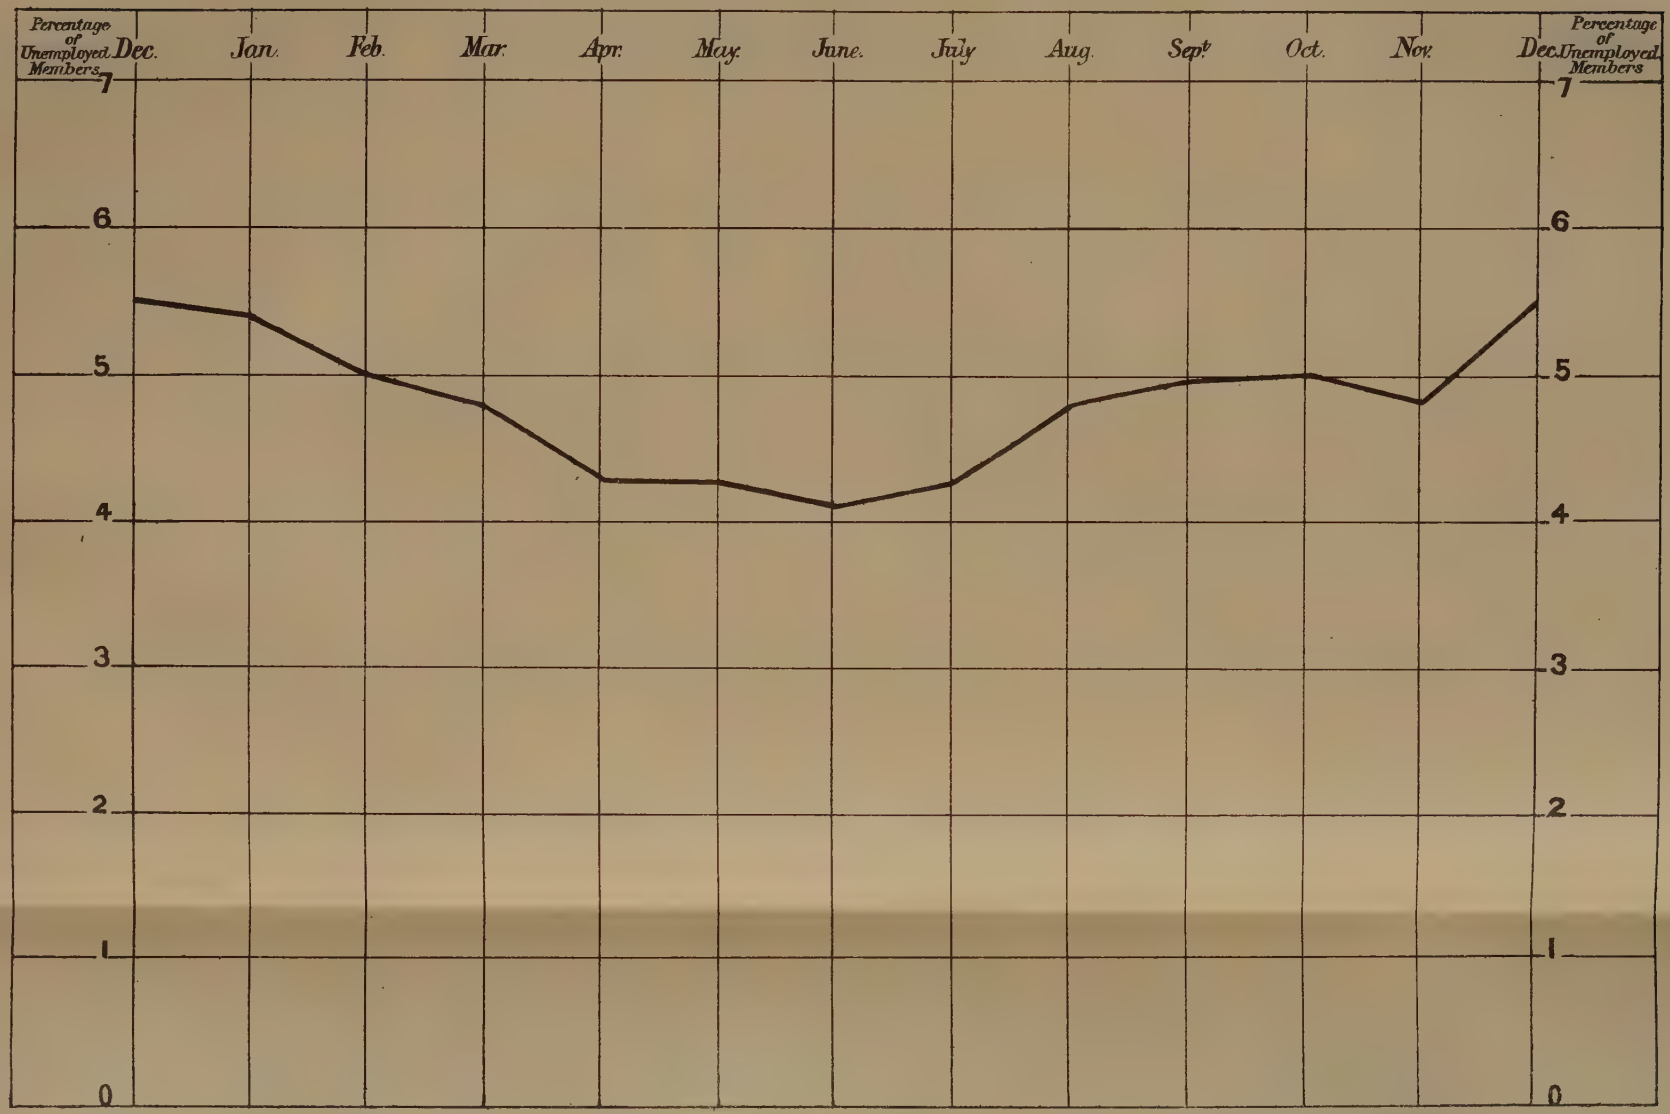


(Each division in the above diagram indicates one month.)

Wyman & Sons, Ltd. Lith. 7142 · 2·95

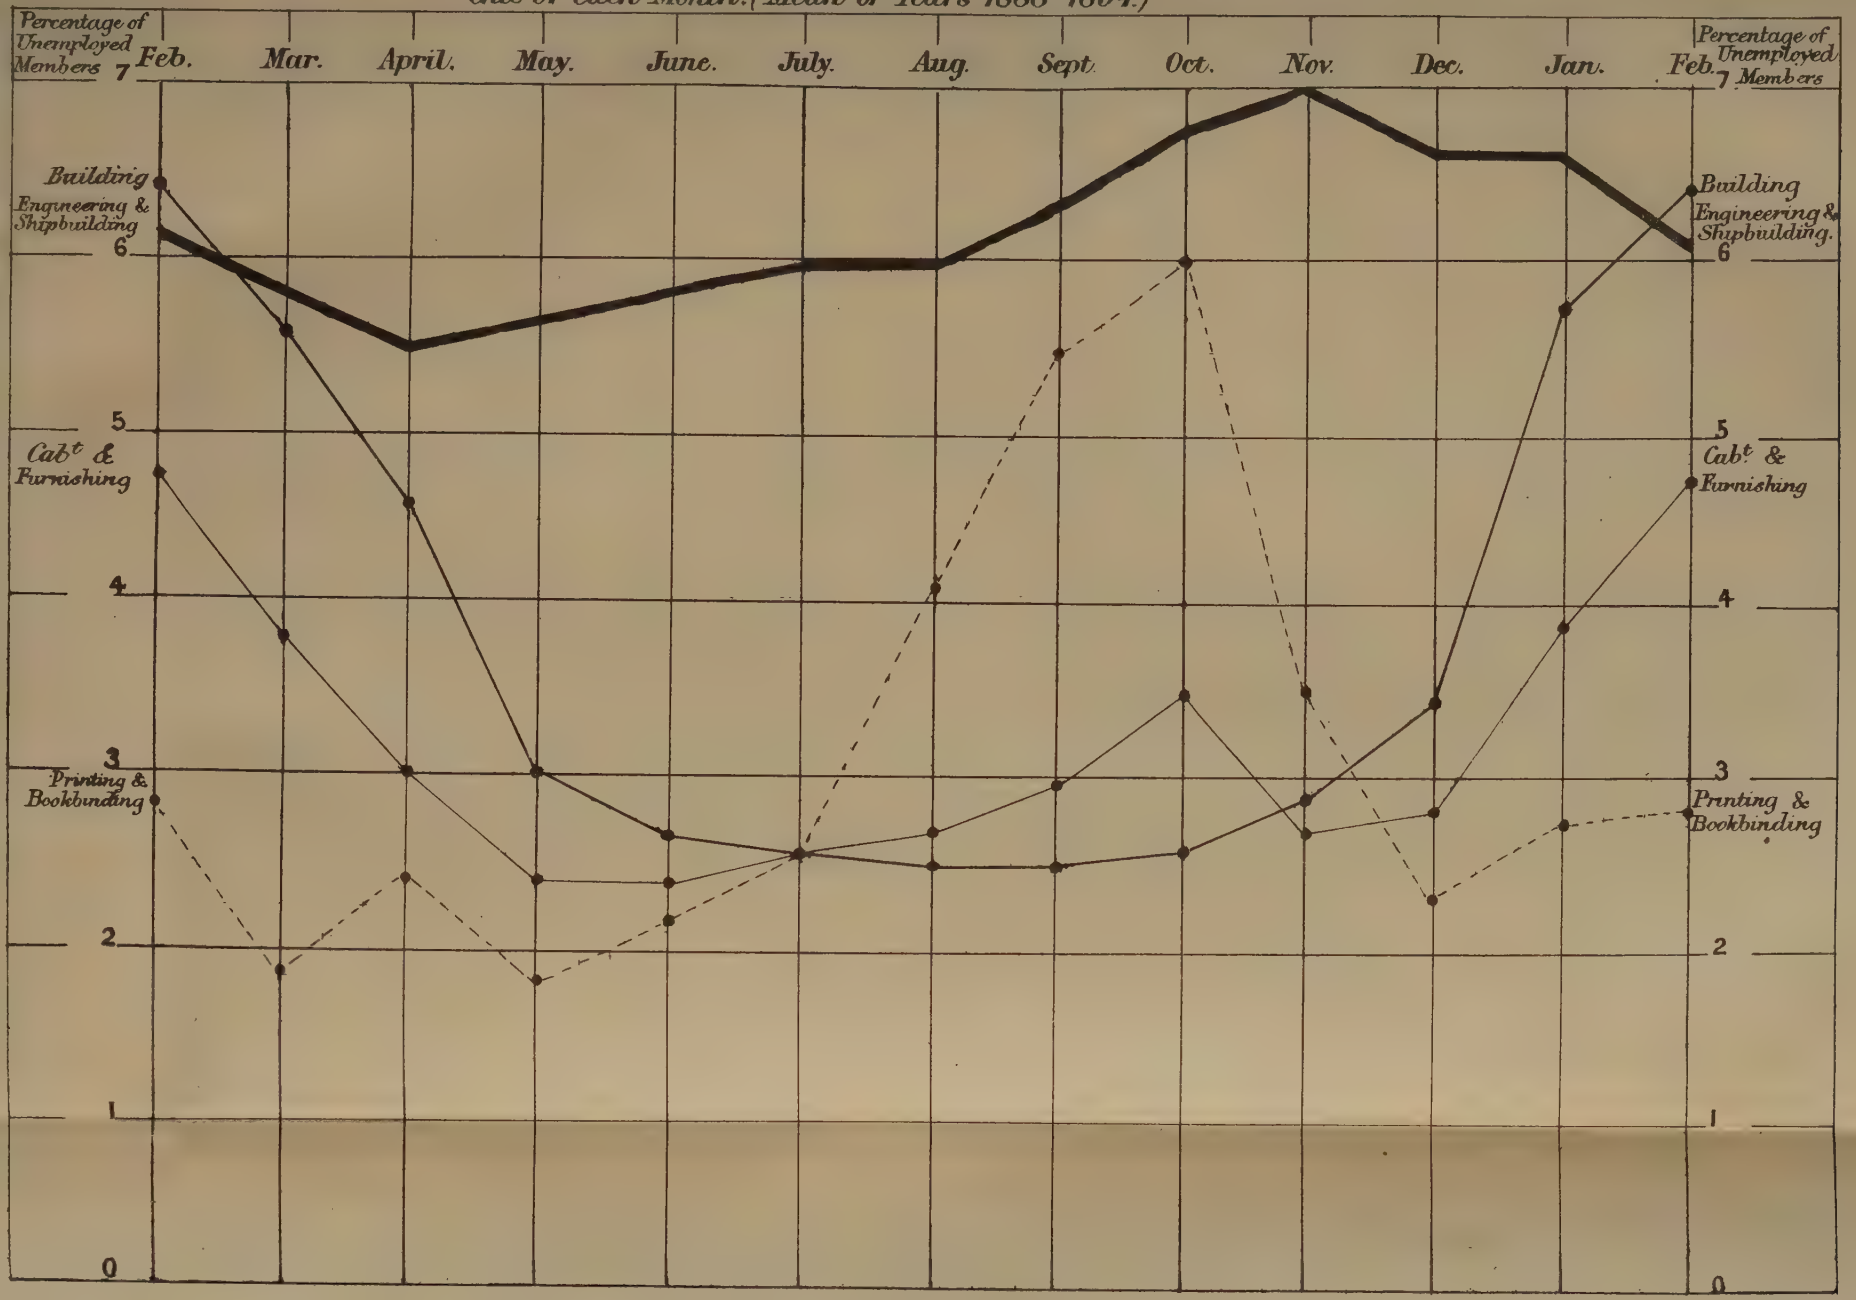
II.- SEASONAL FLUCTUATIONS IN EMPLOYMENT.

Chart showing Variations in Mean Per-centage of Unemployed Members of Trade Unions making returns to the Board of Trade, at the end of each Month. (Mean of Years 1888-94.)



Wyman & Sons, Ltd, Lith, 63, Carter Lane. 7142. 4-95.

-bers of Trade Unions connected with certain Groups of Trades, at the end of each Month. (Mean of Years 1888-1894.)



Wyman & Sons, Ltd, Lith.

Mr. *John Burns*—continued.

variations are shown by the building and printing trades, though the slack season of the one corresponds roughly with the busy season of the other.

Chairman.

4580. The line in the printing and book trade is much more eccentric; the building trade is very even in its ups and downs, but the printing and book trade goes zig-zagging about all over the place. It is an interesting fact, but I do not know whether it is very material?—With regard to the small fluctuation in April, in the printing trade, I am not convinced that, if we had taken a longer period of years instead of only seven years to take the mean upon, we might not find that that was due to accident; it may be due to the fact that our period of years is not long enough. The shipbuilding and engineering trades, it will be seen, have a high percentage of unemployed; but they do not show any very marked seasonal fluctuation as a whole. I find the mean difference of employment due to seasonal causes between the best month and the worst month is, for engineering and shipbuilding, only $1\frac{1}{3}$ per cent., and in building it is about $3\frac{1}{4}$ per cent.

Mr. *Stuart-Wortley.*

4581. Have you anything to say about the cabinet or furnishing trade, by way of comment, before we leave this chart?—No, I have no special comment to make upon it, except in answer to any question that may be put. I pass next to the fourth chart (*see Chart IV.*). Here we are leaving seasonal changes and passing to cyclical changes. The chart is based on the figures showing the mean proportion of unemployed from year to year in the table, and it will be seen that the best years were 1889 and 1890, and that after that the percentage of unemployed increased gradually until 1893, when it again gradually diminished.

Chairman.

4582. It began badly in 1887, apparently?—I cannot say definitely what it was in 1886, because 1887 was the first year in which these figures were collected.

Mr. *John Burns.*

4583. One thousand eight hundred and eighty-six was worse?—It was probably worse; we have no means of knowing precisely.

Mr. *Jackson.*

4584. Does this line headed "1894" include the year 1894?—It includes the year 1894.

4585. Therefore the end of your diagram is the end of the year 1894, is it?—It is the mean for 1894.

4586. What I mean is, there appears to have been, according to this chart, an improvement as between 1893 and 1894?—That is so.

4587. The percentage of unemployed in 1894 is less than it was in 1893?—Yes, to put it into figures, it was 6·9 in 1894 compared with 7·5 for 1893. Again I have decomposed this cyclical curve in Chart 5 (*see Chart V.*) into a series of curves which show the same kind of cyclical variations in various groups of trades, and it will be observed from this chart that the position is now reversed. The group that is most violently affected by oscillations, as I have already stated, is the engineering and shipbuilding group, while the building and furnishing, and the printing trades, are far less influenced by these changes, though they, all of them, are influenced to some extent. Thus the mean difference in employment in the engineering and shipbuilding group due to cyclical causes is no less than 9·2 per cent., while in the building group it is only $3\frac{3}{4}$. In other words, the cyclical variation or difference in the unemployed in the engineering and shipbuilding group between good and bad years is over six times as great as the difference between good or bad months in any one year, while in the building trade the cyclical difference is only slightly in excess of the seasonal.

Mr. *Jackson*—continued.

Chairman.

4588. The last years 1889 and 1890 were the best for all trades apparently?—They were the best for all trades. And I should like to call the attention of the Committee to the very remarkable fact that these trades in which there is a difference in all other respects as regards oscillation of employment show nearly an identical percentage of unemployed at the best time of employment. In 1889 and 1890 the percentages in the printing trades, in the furnishing trades, in the building trades, and in the engineering and shipbuilding trades, differ very slightly. The curves all interlace at that point, whereas they diverge very greatly in times of depression.

Mr. *Stuart-Wortley.*

4589. In other words, all the percentages go down to about 2 per cent.?—Yes, there seems to be an irreducible minimum of about 2 per cent.

Mr. *Jackson.*

4590. Would that represent men permanently unemployed, men of the loafer class?—It rather suggests that that is the percentage which is unemployed at the best of times, partly, perhaps, in order to enable the industry to go on.

4591. Would this table include sickness?—It would not include sickness.

4592. It only includes benefit by reason of being out of employment?—That is so; it would not include strikes.

4593. I would suggest for your consideration whether it would not be desirable to include sickness?—Yes.

Mr. *John Burns.*

4594. And perhaps you would also put in superannuation, because, as trade gets brisk, men will go off superannuation?—I will bear those suggestions in mind.

Mr. *Cream.*

4595. As it stands, it simply represents want of work?—Want of work. I have the figures with regard to the building trade here, in case any honourable Member would like to have the actual figures for any month or any year, but I have not had them handed round.

Chairman.

4596. As the heading of the table stood, it showed the percentage of those "who were in receipt of unemployed benefit, but I understand it includes men out of employment who are excluded from unemployed pay?—Yes, men who have run through the unemployed pay to which they are entitled, and have still not got a job so far as we can obtain that number. In order to bring out further the character of these cyclical oscillations of industry, I have some more figures here which show the same thing in rather a different way, that is to say, the variations in the amount per head paid by certain trades unions for unemployed benefit over a period of years. I can take this over a longer period of years than that for which I have given the other figures, because we can go back in the published reports earlier than we could collect these figures. I have taken the period from 1883 to 1893. I find that in the Boilermakers and Iron Shipbuilders Union, which has in its ranks a very large proportion of the persons engaged in shipbuilding, the amount paid in unemployed benefit varied from 2*s.* 4*d.* in one year to 1*l.* 19*s.* 11*d.* per head per year; that is to say, in the worst year of the cycle it was 17 times as great as in the best year.

Mr. *John Burns.*

4597. Which was the worst year?—It was in 1889 that it sank to 2*s.* 4*d.* per head, and in 1884 that it was 1*l.* 19*s.* 11*d.*

Mr. *John Wilson* (Durham).

4598. Do you mean that is the contribution per member?—No, I mean the payments per head, not the contribution.

Mr. *Jackson.*

4599. You mean the payment by the society of a sum which divided over the whole number gives that amount?—That is so. Next, if I take the Friendly Society of Ironfounders, it varied from 7*s.* 8*d.* to 2*l.* 14*s.* 7*d.*, that is to say, in the worst year it was seven times as great as in the best year, as compared with 17 times as great in the Boilermakers Union.

Mr. *Acland.*

4600. You used the words friendly society, that of course means trades union?—It is a trades union, but the name is Friendly Society of Ironfounders. Then in the Amalgamated Engineers it varied from 9*s.* 9*d.* up to 1*l.* 16*s.* 5*d.*, that is to say, in the worst year it was three and three-quarter times as great as in the best year. I now take the Amalgamated Carpenters and Joiners; in their case it varied from 9*s.* 3*d.* up to 1*l.* 12*s.* 7*d.*, which shows that in the worst year it was three and a-half times as great as in the best. That is apparently not quite in keeping with the evidence I gave before, but I should explain that the Amalgamated Carpenters and Joiners includes a considerable number of ship's joiners in some centres which are affected by the variations in shipbuilding. In the case of the Amalgamated Cotton Spinners it varied from 9*s.* 11*d.* to 1*l.* 7*s.* 3*d.*, showing that the amount paid in the worst year was two and three-quarter

Mr. *Acland*—continued.

times as great as in the best year; finally, in the Typographical Association, which is the largest union in the printing trades, it varied from 4*s.* 7*d.* to 8*s.* 6*d.*, showing in the worst year that the amount given was rather less than twice as great as in the best year.

Mr. *Jackson.*

4601. Of course the aggregate amount paid would depend upon the amount of benefit given by the particular trades union, would it not?—Yes, it is only the range which is comparable. These figures are backed up by the returns published yearly as to the tonnage of shipbuilding turned out from the United Kingdom. It shows enormous variations. I have the figures, but perhaps the Committee will not care to have them in detail.

4602. Do they more or less confirm this chart that 1889 and 1890 were the best years?—Yes, they confirmed this chart; for instance, if I take the tonnage built in 1884 (which is the first year that I have the figures for) as one thousand (just to give us a standard), in 1889 it was 1,453, and in 1890 it was 1,381. Those are the two maximum figures. In 1886 it was down to 564. I could read the figures, they are not long, if honourable Members would like to hear them.

4603. Do the figures come down to the year 1894?—They come down to the end of 1893. The tonnage built in 1884 was (omitting the odd hundreds) 588,000 tons; in 1885, 441,000; in 1886, 332,000; in 1887, 377,000; in 1888, 574,000; in 1889, 855,000; in 1890, 813,000; in 1891, 809,000; in 1892, 802,000; and in 1893, 585,000.

Mr. *Stuart-Wortley.*

4604. Where are your figures of the tonnage built got from?—They are not collected by the Labour Department at all; I took them from the annual statement of navigation and shipping for the United Kingdom which is published annually, but I can inquire into the source of them; I have not gone behind those figures.

4605. Are shipbuilders bound to make any such returns?—I will find that out.

Mr. *John Wilson* (Durham).

4606. Have you got the figures relating to the miners' unions showing the money paid to the members?—I have not got the figures here for mining, but, of course, I have the materials for getting them, and I will get them out.

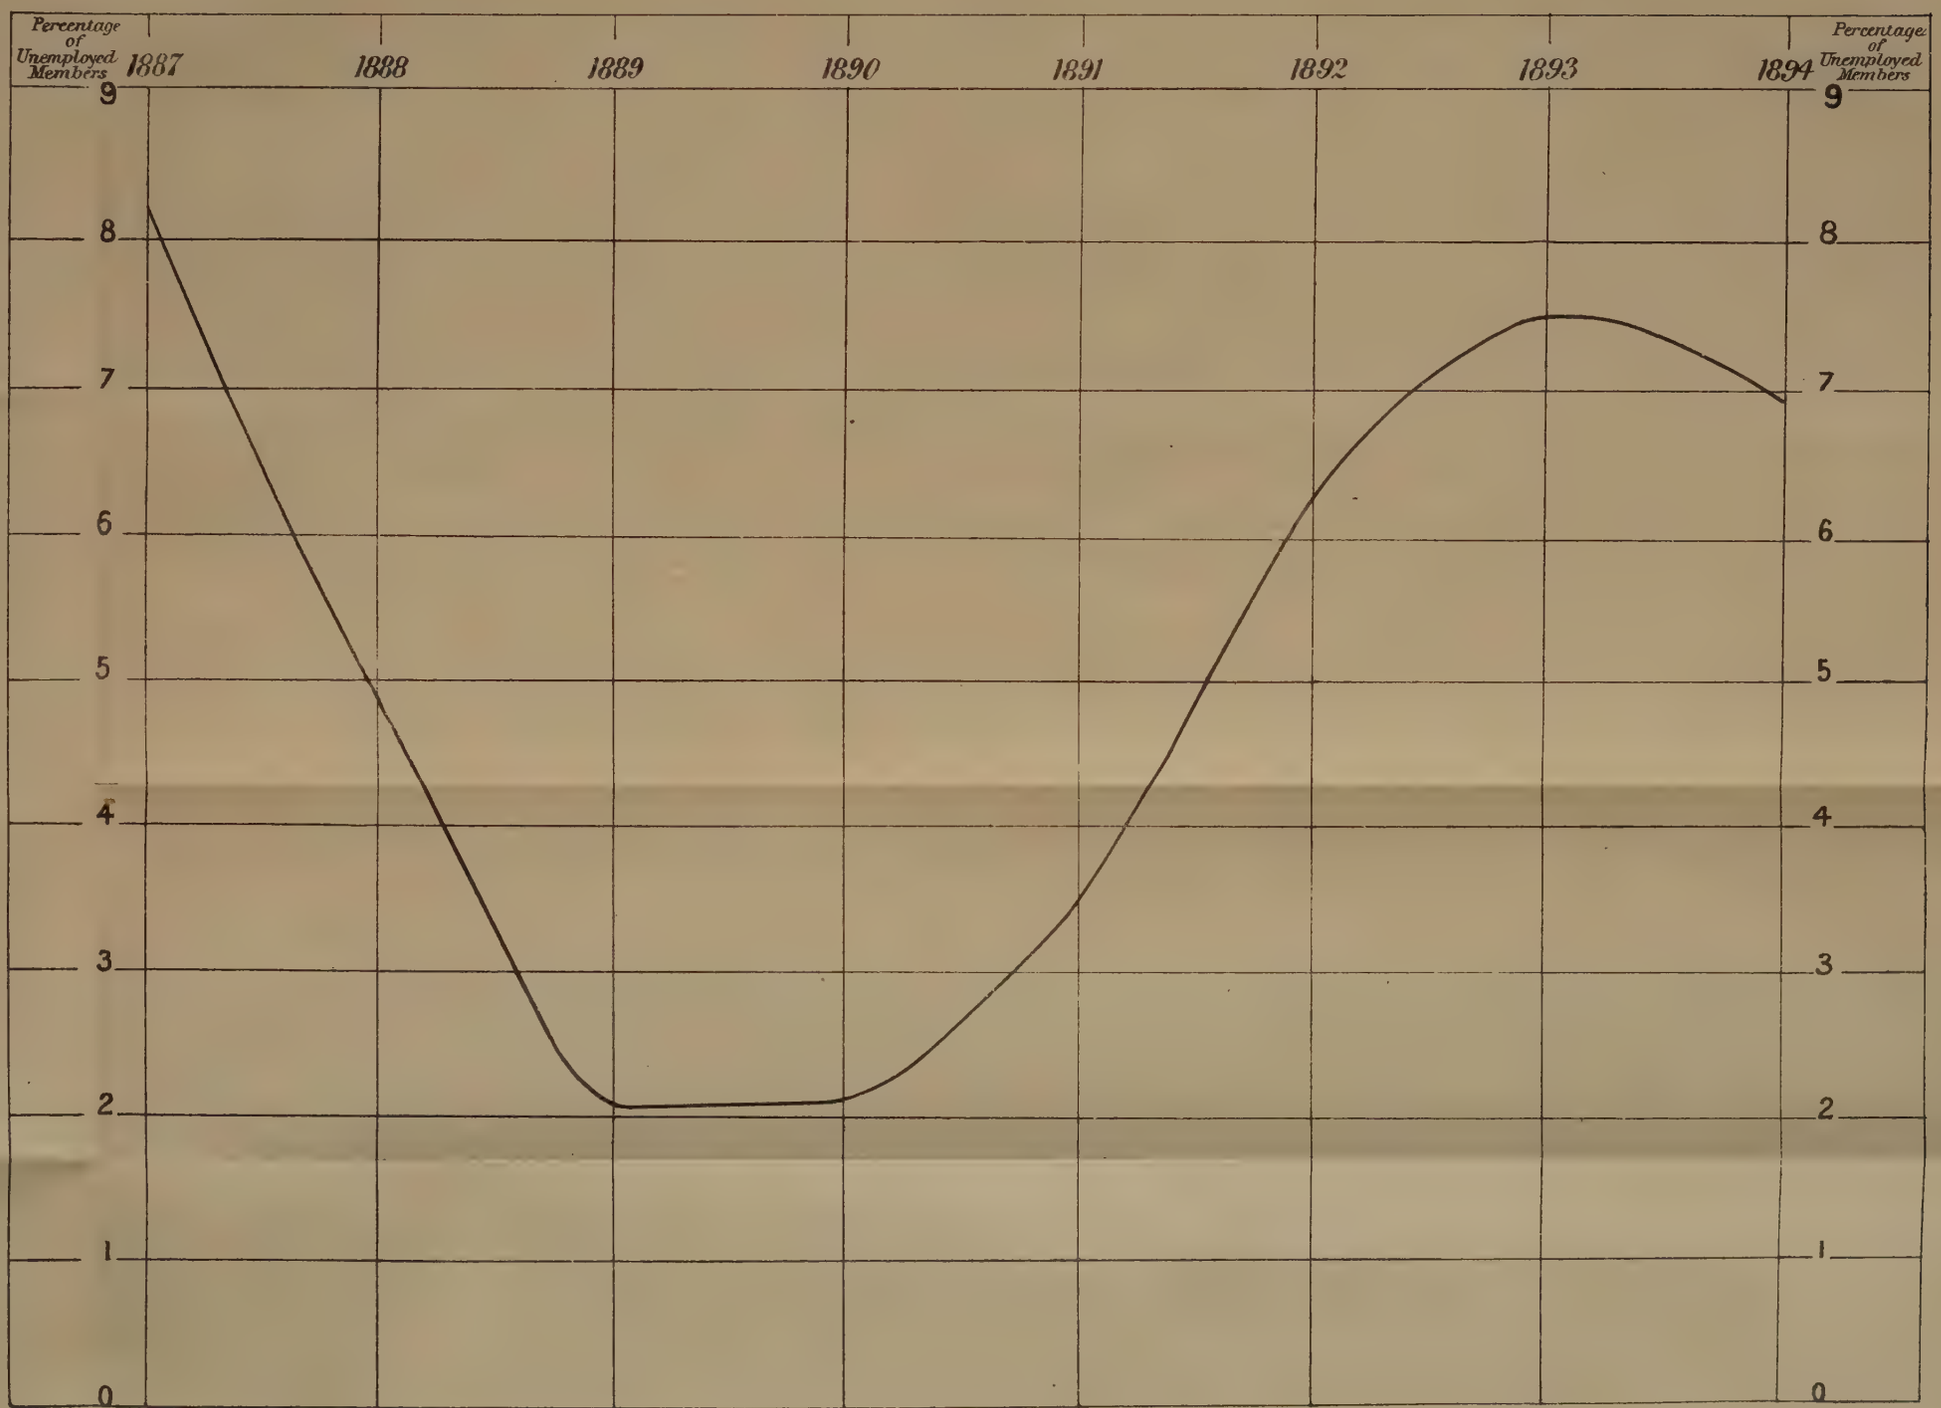
Mr. *Jackson.*

4607. Have you the figures for any other trades besides those you have given us?—Those are the only ones which I have brought the figures for, but any others I could get.

4608. You have the materials?—I have them with this limitation, that in the case of unorganised trades in which there is not unemployed benefit paid, we cannot get the percentage. Passing away from the cyclical changes, the next set of figures I have are to illustrate the irregular fluctuations of an industry affected by all kinds of

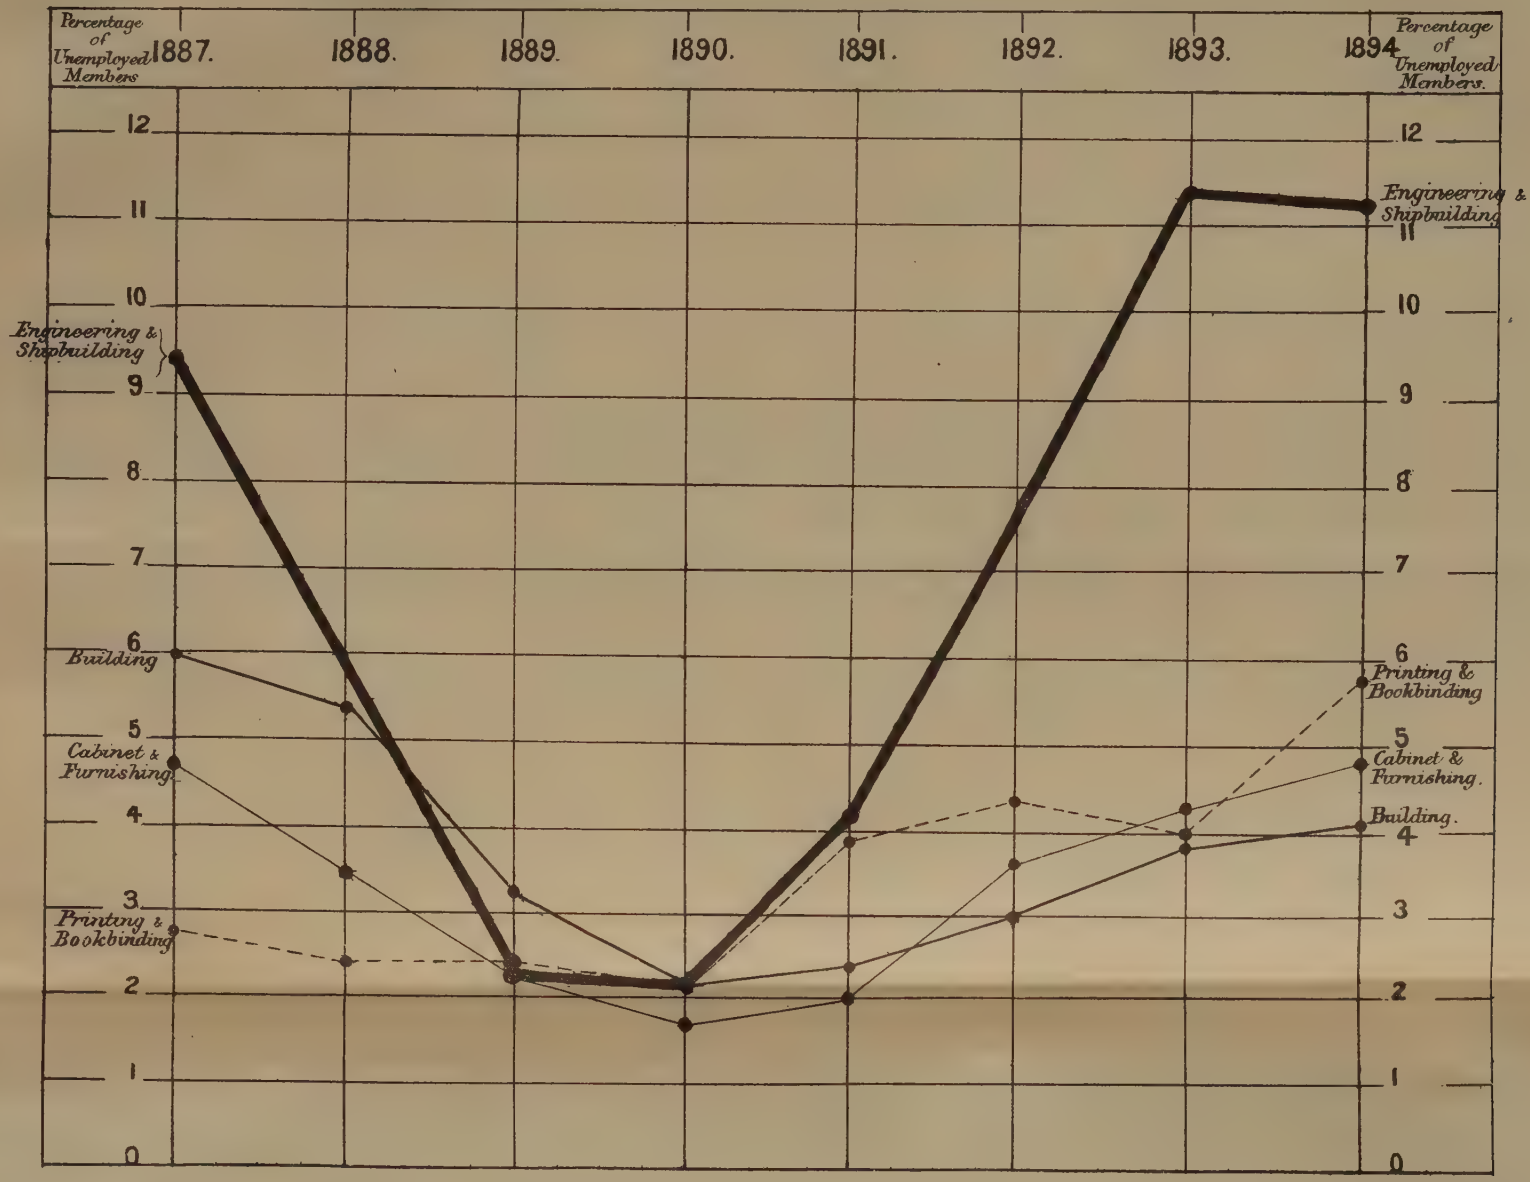
IV._ Cyclical Fluctuations in Employment. (1887-94.)

Chart showing Variations in the Mean Percentage of Unemployed Members of Trade Unions, making returns to the Board of Trade, during each of the Years 1887-94.)



V.- Cyclical Fluctuations in Employment in Special Trades. (1887-94.)

Chart showing Variations in the Mean Per-centage of Unemployed Mem-bers of Trade Unions connected with certain Groups of Trades, during each of the Years 1887-94.



Wyman & Sons, Ltd, Lith, 63, Carter Lane.

Mr. *Jackson*—continued.

of oscillations due to seasonal, cyclical, and local causes, and to weather; I mean dock labour in London. I have already explained to the Committee how we measure these fluctuations by comparing the computed number of persons taken on at the docks at different times. The figures I have here cover all labour employed by the dock companies either directly or through contractors.

4609. Does that refer only to London?—It is simply a study of the dock employment in London. I may say in most ports where the labour is employed direct by the shipowners, it is a much greater business to collect it. It is not centralised in the same way. I have here the average monthly numbers for 1893, 1894, and the first two months of 1895, and the effect is shown that in 1893 the average monthly number ranged from 7,305 in December to 5,584 in March, and in 1894 from 7,817 in November to 6,308 in March. Of course it will be understood that the greater figures show the better trade, because we are dealing with the number of people employed, not the number of people unemployed. The average for 1894 was 369 in excess of that for 1893. I thought that figure might be interesting to the Committee as showing whether the employment of dock labour in London was greater or less last year than the year before.

4610. From November to March?—November was the maximum and March was the minimum. The first was December, but December and November were brisk months.

4611. And March was a slack month?—March was a slack month.

4612. In both years?—In both years.

Mr. *Billson.*

4613. What proportion is that on the number employed?—About 5 or 6 per cent.

Mr. *Keir-Hardie.*

4614. Do the figures apply to all the persons employed in the docks or to the permanent staff only?—They apply to all the persons employed by the dock company either directly or through contractors, but those figures which I am now giving you do not apply to the labourers engaged directly by shipowners. I have those figures now, but I have only got those since the beginning of the present year, and therefore I cannot use them for comparative purposes.

Mr. *John Burns.*

4615. Do those figures apply to what are known as the A., B., C., and D. men?—Yes, it applies to them all.

Mr. *Jackson.*

4616. Just to clear this up. When you say November and December was the best time, and March the slack time, does that mean that those figures show that November and December is the busiest time of the whole year, and that that is the maximum, and that March is the opposite?—That is so for those two years. The reason is a clear one. An important wool sale (of course there are several wool sales in the year) is in November and December, and that employs a great number of people.

Mr. *Stuart-Wortley.*

4617. Have you the figures for January and February 1895?—Yes; the average number in January was 6,985 and in February 6,371. The average for the two months was 612 less this year than last; that shows the effect of the weather, but it was 306 greater than in January and February 1893.

Mr. *Wootton Isaacson.*

4618. That is the increase monthly?—That is the average daily increase over the two months. Those figures apply to averages; but in order to show the actual daily fluctuations, which are very marked in an industry of this kind, more clearly, I have prepared a chart (*see Chart VI.*), which I have not been able to have printed, but which I should like to hand in. That chart shows the actual daily fluctuations in the employment of all dock labour employed by the London and India Docks Joint Committee, that is to say, the London and St. Katherine Docks, the East and West India Docks, the Albert and Victoria Docks. It does not include Millwall and Surrey, because we are not able to get more than a weekly average for those. You will notice the very remarkable synchronism of the fluctuations. In spite of the irregularity, the big movement up and down occurs very nearly at the same period in each year, and the most important cause of that is the periodicity of the wool sales. The dates of the wool sales I have written down on the chart, and it will be noticed that the most potent elements in the great fluctuation in the employment of that class of labour are the wool sales.

Mr. *Billson.*

4619. You will have this chart put in with the others in the Appendix?—If it is thought worth while: I am having a chart prepared for a longer period of years and trying to get more scientific results from the figures. These are rather provisional.

Mr. *Whiteley.*

4620. Why should the wool sales affect it?—There is a considerable amount of labour wanted for unloading, and also for work connected with the warehousing. I do not know whether the Committee would like to have the detailed figures of dock employment from month to month, but if so I can hand them in.

Chairman.

4621. Yes, they had better go on the Notes. [*The Table was handed in, and is as follows*]:—

Dock Labour in London

Table showing the estimated Daily Average Number of Dock Labourers employed during the undermentioned Months by the Dock Companies in the Port of London (excluding Tilbury).

Employment by Dock Companies.

Month.	1893.	1894.	Increase.	Decrease.
	1893:	1894:		
January	6,317	7,491	1,174	—
February	6,428	7,089	661	—
March	5,584	6,308	724	—
April	6,797	6,428	—	369
May	6,103	7,059	956	—
June	6,638	7,017	379	—
July	6,880	7,310	430	—
August	7,092	6,586	—	506
September	6,947	6,840	—	107
October	6,699	7,126	427	—
November	7,151	7,817	666	—
December	7,305	7,293	—	12
	1894:	1895:		
January	7,491	6,985	—	506
February	7,089	6,371	—	718

4621A. What is the next point to which you wish to refer?—The next point I want to illustrate is the effect of trade disputes in producing fluctuations of employment in associated trades. It will be understood I am not referring to the persons actually affected directly by stoppages of work, people on strike or locked-out. I am not referring either to any loss of trade which is attributable to disputes, but simply to the temporary effect of the stoppage of one industry on employment in another. A very striking example of this is afforded by the statistics of employment of blast furnace men, which, as I have said, we have obtained nearly complete from month to month. I have taken the number employed in January 1895, as the standard on this chart, and I have constructed the chart which is marked No. 7 (*see Chart VII.*). I have not the percentage of unemployed, but the total number employed from month to month, and it is only necessary to mark the dates of that English coal dispute and the Scotch coal dispute to show the effect which it had upon employment in that industry. Of course I need hardly say the effect is not always, as in this case, in the direction of contraction. Sometimes the stoppage of one trade causes an inflation in a kindred trade.

Mr. *Wootton-Isaacson.*

4622. That was the case with the Scotch coal trade?—No doubt that caused an inflation of the English coal trade in some districts. I have the actual figures on which that chart is based.

Mr. *David Randell.*

4623. I think you said you had not taken into calculation the blast furnace men employed in the steel trade?—No, it is simply pig iron.

4624. You exclude that?—Yes.

Mr. *Jackson.*

4625. But it does include the blast furnace men employed in Scotland, and employed in England and Wales?—Yes, but it does not include steel works. We are extending it to that this month.

4626. Will you tell us how you read this chart, and what it shows?—This chart shows that for every 1,000 men employed in those blast furnaces included in the return in July 1893, only 796 were employed at the end of November 1893, the period between July and November being that occupied by the great coal dispute in England. From that time, the dispute having been settled in November, the numbers gradually rose until they reached 1,011 (for every 1,000) at the end of May 1894, and they have declined until they fell to 969 at the end of August, and 976 at the end of September, that period from June to October having been occupied by the Scotch coal dispute, after which they rose again to about their former level. I do not think there is any important conclusion to be drawn from the chart, but it brought out the effect so clearly that I thought it might be interesting to have it in this shape. It is a very obvious thing that the stoppage in one trade must affect a kindred trade, but it is not often that it is so marked.

4627. It is a closely allied trade?—Yes.

Mr. *Wootton Isaacson.*

4628. May I ask whether you are issuing a chart which will include the Welsh coal trade as well as the English coal trade. We have only the English and Scotch in this chart?—If the Welsh miners should strike we should include it.

4629. But they did strike?—They only struck for a comparatively short time during the English coal dispute, and the effect upon employment, of course, was merged in the general effect of the English coal dispute. Perhaps it would be more accurate to describe this as the English and Welsh coal dispute; it occurred during the same period.

Mr. *John Wilson* (Durham).

4630. The miners only struck for a day or two, and there were only a few of them?—It was a comparatively short dispute.

Mr. *Jackson.*

4631. Before we pass from this, could you give the Committee a little more information as to what you include in the engineering trades. Do you, for instance, include what we call machine makers?—Yes, we include machine makers.

4632. "Engineering" is rather a wide term, and you couple it with shipbuilding?—We include tool makers, iron founders, and pattern makers, although, of course, they are not working in metal. The exact title of the group is "engineering, shipbuilding, and metal." We include machine makers and smiths, steam engine makers, engineers, ironmoulders, brass workers and brass founders, and a number of other classes.

4633. Practically, then, you include the whole of what are known as the engineering trades?—Yes.

4634. Do

(Paper handed in by Mr H. Llewellyn Smith (See questions 4618-4619.)

VI.-FLUCTUATIONS IN DOCK EMPLOYMENT IN LONDON.

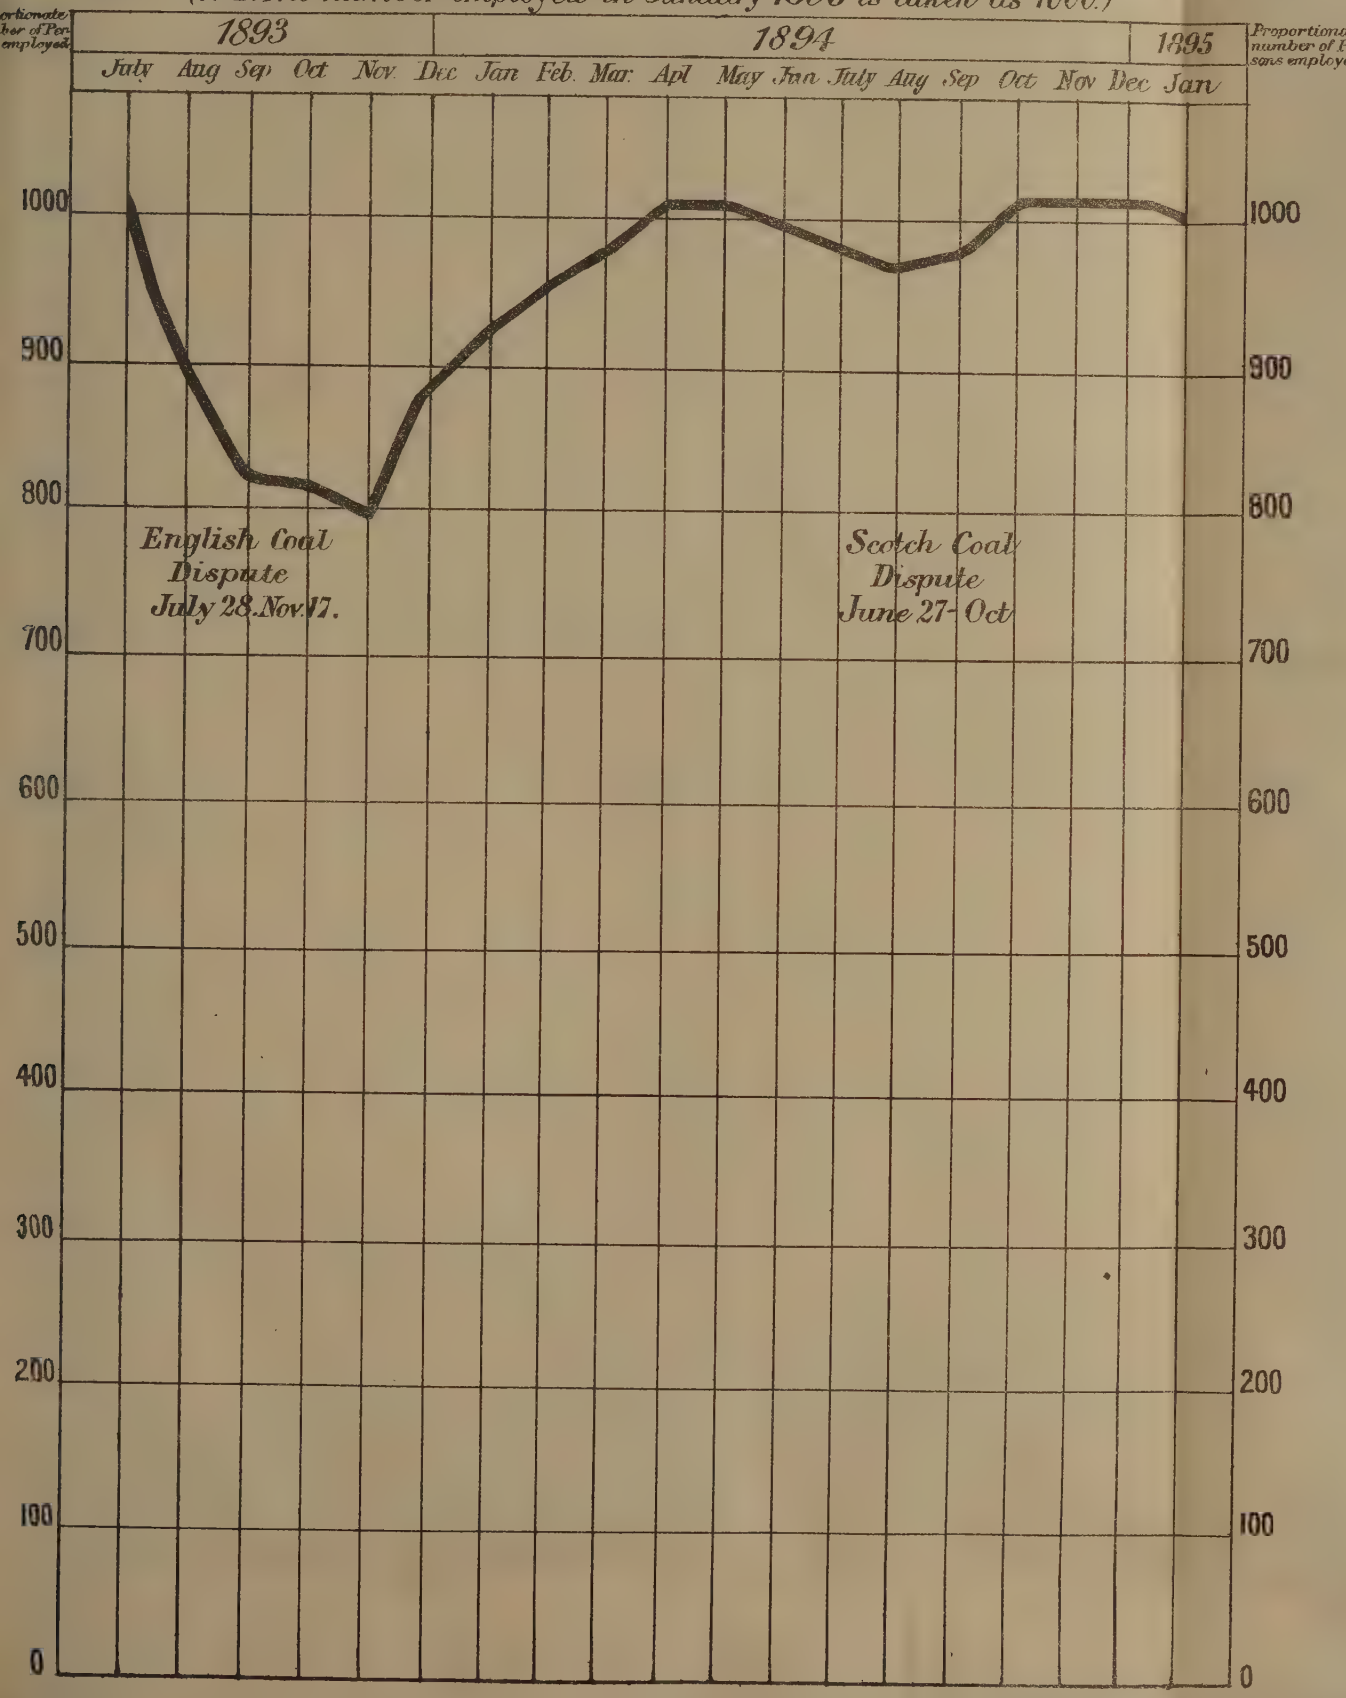
VII.-FLUCTUATIONS IN EMPLOYMENT OF BLASTFURNACEMEN.

Chart showing the Fluctuations in the Estimated Proportionate Number of Workpeople Employed in Pig Iron Manufacture, in the United Kingdom, during each Month, July 1893-Jan^{y}. 1895.

[Based on returns made by Iron-masters to the Labour Department of the Board of Trade.]

(N.B. The number employed in January 1895 is taken as 1000.)



Wyman & Sons, Ltd. Lith. 1142. 2. 95

Mr. *Wootton Isaacson.*

4634. Do you include steel smelters?—Yes, we include them.

Chairman.

4635. Could you give the Committee any information as to the distribution of loss of time among the members of these trades; how far it is spread over a large proportion, or how far it is concentrated on a comparatively small unemployed class?—That is a question on which the actual percentages which I have quoted throw no light; they simply show that a certain percentage are unemployed on an average from time to time, but they give no indication as to the extent to which that percentage always consists of the same people or is continually changing. This question is one of great difficulty, and it is one on which we are now trying to make a special inquiry. Any results that I give now, therefore, will be very provisional and partial. We have been allowed to analyse the Vacant Books of the Engineers which have been kindly placed at our disposal to ascertain exactly over how many individuals the unemployed benefit is spread, and for what period of time during each year those individuals drew the benefit, but the results of the analysis are very incomplete, and I could only give figures that would probably have to be greatly modified.

4636. You used a technical phrase just now, "Vacant Book"?—I mean the book on which each member of the Amalgamated Society of Engineers has to sign his name in order to qualify for unemployed benefit. The list of names is the record.

Mr. *John Burns.*

4637. He signs that every day, does he not?—Yes, as a rule; so far as our figures go (I want to qualify this as being very partial, because they only apply to a particular district and to a particular year) they showed that 78 per cent. of the members obtained quite regular work and did not come on the books at all during the year.

Mr. *Jackson.*

4638. For what period is this?—This is a period which is 1888, 1889, and 1890; it is not really a representative period to take, and I do not suggest that the actual percentages are of very great value, but I give them for what they are worth. On the other hand, 3 per cent. lost over three months in the year, and about 1½ per cent. lost over half the year. So that it shows a certain small percentage which is practically continuously on the funds, a percentage of 3 per cent. who are more than one-fourth of their time on the funds. Then there is a considerable percentage, 19 per cent., which were on the funds for some time less than three months, and the remaining 78 per cent. were not on the funds at all, and did not sign the Vacant Book during the year.

Mr. *Wootton Isaacson.*

4639. That includes the two fat years of 1889 and 1890?—In this particular district for which we analysed these Vacant Books 1890 was not a fat year. It was Leeds, and there 1890 was a year of comparative depression in the engineering trade. While the actual figures I give are not very conclusive, I may state that it appears clear that on the whole most steps which are taken towards a more elaborate organisation of industry, or perhaps I should say towards a better organisation of industry, tend to discriminate more sharply between the employed and the unemployed; that is to say, to concentrate the unemployment, if I may use the phrase, on a smaller margin of persons, who, however, may be unemployed over longer periods.

Mr. *Wootton Isaacson*—continued.

Chairman.

4640. To concentrate it on a smaller margin?—That is to say, to increase the percentage which do not lose any time at all, but there might be a corresponding increase in the average period of time lost by those who do lose time.

4641. You mean an increase of men who were partially employed?—No, a decrease.

4642. And it rather throws the non-employment on to a smaller number of individuals?—I think that is the tendency.

Mr. *Jackson.*

4643. Is the fact of this number being more constantly out of employment different to their being less skilful workmen?—The fact that they and not others are unemployed will be because they are less skilful workmen, no doubt, that is, less skilful, or less trustworthy, or less efficient in some way, but that would not account for the fact of there being some out of work. It would rather make the difference whether it should be one man or another.

Chairman.

4644. I think what Mr. Jackson's question leads to is the idea that the non-employment is, as it were, precipitated on those who are the less skilful workmen?—That is so; I think that would exactly describe it.

Mr. *Jackson.*

4645. At the first pinch the men are thrown out who are the least efficient?—Yes.

Mr. *Wootton Isaacson.*

4646. Does your return include men who are working overtime?—There would be no record of overtime in these books. It only shows those who are unemployed who signed the Vacant Books.

4647. Without assigning any cause?—Without assigning any cause, except that it must have been such a cause as would qualify for the unemployed benefit. It would not be sickness, and it would not be strike.

Chairman.

4648. Have you anything to tell us by way of illustration taken from an individual trade with regard to this?—I think that we might take the example which I have already taken of dock labour in London. I think the recent re-organisation of work at the docks, that is to say, the considerable increase in the permanent staff, and the classification of men in divisions A., B., C., all of those in A. having the preference for employment over those in B., tends to increase the tendency which has been described to precipitate the

Chairman—continued.

the evils of unemployment on the less efficient or skilful. There is a tendency for a greater number of people to get practically permanent work; and, perhaps, at the same time, at all events in the transition stage, there are a greater number of people who get very little work.

Mr. *Wootton Isaacson.*

4649. You told us that some of the dock companies employ their own men and had a different system?—They have for a long time employed their own men, but the change has rather been that in some of the docks, such as the Albert and Victoria Docks, a large proportion of the labour is not employed now by the Dock Company.

4650. Can you tell us why that change took place?—No, I do not know why the arrangements were made. They were made in the course of 1891, most of them.

Mr. *Jackson.*

4651. Is it known whether the total number employed since the re-organisation of which you speak is less than it was before?—The figures which I have given for 1893 and 1894 tend to show that last year the numbers were greater than in 1893.

4652. But 1893 is since the re-organisation?—That is so. The numbers in 1893 are on the whole less than in 1892. I have not got the exact figures with me, but I think there is no doubt they were less than in 1892, and further back than 1892 I cannot go, because the books were not kept in such a form as to show the total figures. I can go back to about April 1891, but I cannot complete the year 1891.

4653. Probably the effect of the re-organisation to which you refer has been to give full employment to a less number and partial employment to a less number also?—I should like very much, and I hope to be able, to test that when we get out the figures in a more complete form, but the difficulty is to discriminate between the effects of the change in system and the effects of the depression in trade which has been going on alongside of it in diminishing the export and import work of the port.

4654. Have you any suggestion, or can you give us any information on that, because it is rather important; does the Port of London, let us say, compare with the other ports, or is there any special cause, or does the Port of London show a falling off in trade?—I should like to note that, and see if I can get you the figures. (*See* Appendix.)

Chairman.

4655. I think it would be better to go on with Mr. Llewellyn Smith's direct evidence, and any question can be put afterwards by any Member if necessary. (To the *Witness.*) Have you any information to give the Committee as regards the state of employment in agriculture?—I should like, speaking with regard to agriculture, to deal separately with the state of employment in agriculture before the exceptional conditions

Chairman—continued.

due to the late frost began, and during those conditions. The first comparison that I have to make relates to the state of employment in agriculture up to the middle of January.

Mr. *Jackson.*

4656. From when?—From the beginning of the autumn.

4657. But does it cover a period of months, or a period of years?—It covers a period of months merely. This information is not statistical. We cannot get the percentage in agriculture in the same way as we get it for the organised trades; but it must be remembered, of course, that the districts in which any considerable amount of irregular employment in agriculture exists are comparatively restricted. In Scotland, where the long period of hiring prevails, work or employment is generally regular, and also in districts which are purely pastoral, such work as tending animals is by the very nature of the case fairly regular. The chief centres of irregular employment in agriculture are therefore the arable districts, or such of the arable districts where short engagements prevail. I should say the chief centres of irregular employment in agriculture are the eastern counties, and the east midland counties. Now there is evidence that the prophecies which were made at the beginning of the autumn that employment in these districts would be more irregular during the winter of 1894–5 than it had been in 1893–4, those expectations were not up to the time of the frost realised. Up to the middle of January labourers in the eastern counties, and elsewhere, generally speaking, had more continuous work this autumn than in the previous autumn. The reason for that is twofold. In the first place the scarcity of work for agricultural labourers in some parts of the eastern counties during the winter and 1893–4, which was generally attributed to the agricultural depression, and, of course, was partly due to the agricultural depression, was also largely influenced by special circumstances; for example, the exceptional weather in the previous summer, which had the effect of getting farm work forward. During the recent autumn, and early winter, these special causes were not present. And the second reason is the fact that there has been a considerable fall of wages in the eastern counties. The farmers who were prepared to discharge men in order to economise owing to their inability to pay for labour, have, to some extent, retained them at a lower rate; and the men have accepted that position. There has been unquestionably a fall of agricultural wages in the eastern counties this winter, and that has had the effect of making employment for the time more continuous.

Mr. *Wootton Isaacson.*

4658. And lower prices of produce?—No doubt. We have no information about that, but, no doubt, that is so. That is a general summary of our information up to the beginning of the frost. Of course I need hardly say that the frost and the snow rapidly stopped field work, and that

Mr. *Wootton Isaacson*—continued.

that where the short period engagements prevailed it caused a great deal of want of employment. I do not know whether the Committee would care to have the districts specified.

Chairman.

4659. Yes, I think so?—The reports that we have received seem to show that the rural districts where want of work has been acutest during the severe weather are parts of Cambridgeshire, Huntingdonshire, West Norfolk, West and North-East Suffolk, Wiltshire, and Essex. I do not mean to say that that is an absolutely correct statement; there may be some other districts, parts of which would be as bad as parts of those, but we had information to the effect that there was a considerable scarcity of work in the districts I have named.

Mr. *Stuart-Wortley.*

4660. That information rests upon your local correspondent's reports, does it not?—No, not as regards agriculture; we have a special agricultural correspondent.

4661. Does he go round the whole country?—He goes round, and is in touch with a great many correspondents, but not the local correspondents who report on urban trades for us. They have nothing to do with agriculture.

4662. Your comparison of one district with another as regards agriculture does not depend on the comparison of one local correspondent's report with that of another?—To some extent no doubt it does; that is to say, different people take a slightly different view of the same facts; some are more pessimistic than others. I am to a great extent dependent for this information I have given to the Committee on Mr. Wilson Fox's view of the information that he has received from these correspondents and his knowledge of the circumstances. I rather give it on his authority.

4663. Has he visited the district as well?—Yes, he visited the eastern counties, and he reported on many of these districts for the Royal Commission on Labour, and also for the Royal Commission on Agriculture, and in that way he is in touch with a great number of persons qualified to give information in the different districts.

Chairman.

4664. You refer to Mr. Wilson Fox?—Mr. Wilson Fox. He is now our agricultural correspondent.

Mr. *Wootton Isaacson.*

4665. Can you tell us how many acres of land are in cultivation in those districts?—No, I am afraid I have no information about that. I think it would be given in the Special Reports to the Agricultural Commission.

Chairman.

4666. You have been speaking of the condition of things antecedent to the late frost?—I was, at first. Then, with regard to many of these districts, I was referring to the state of things during the frost; and, finally, we have reports since the thaw commenced.

4667. What can you tell us as to that?—Those reports show that after the end of the frost, which was about the 20th of February, men began gradually to return to work in a number of districts; but the thaw was very gradual, and, there being usually frosts at night up to the end of the first week in March, work was not resumed so soon as it had been anticipated. Most districts now report that work is in a very backward state owing to the frost, and that, if the weather is favourable, the prospects of agricultural employment for some time to come are good. With regard to agriculture I am speaking solely of continuity of work; I am not speaking of wages in the least.

Chairman—continued.

Mr. *Heywood Johnstone.*

4668. The fall of wages was antecedent to the frost?—Yes.

Chairman.

4669. Now let us come to a further part of the question. Will you tell the Committee how employment in various trades compares with its condition a year ago?—For our purposes I think it would be best to draw a distinction between the temporary and abnormal state of the labour market during the recent frost and its condition before and since the frost, which may, of course, be taken as a better indication of the general state of the labour market. The charts which I have handed in give a general indication of the state of employment in 1894 as a whole, as compared with 1893 as a whole, and perhaps on that subject I need say no more; but I have some figures showing for certain trades a comparison between the end of December 1894 and the end of December 1893; the end of January 1895 with the end of January 1894, and the end of February 1895 with the end of February 1894. Perhaps I had better take the trades in order. With regard to coal-mining I am afraid I cannot give a comparison with 1893, because the figures were not calculated then, but during December 1894 the average number of days worked by the collieries per week was 4·97; in January it had fallen to 4·7; and in February it had risen again to 5.

Mr. *Stuart-Wortley.*

4670. Is that all England and Scotland, or the 1,100 pits?—Yes.

Mr. *John Burns.*

4671. In the United Kingdom?—In the United Kingdom. As regards the blast-furnace men, if we take (as I have taken before) those employed in the beginning of this year as 1,000, there were employed at the end of December 1894, 1,010 compared with 891 in the previous year, when, of course, this trade was largely affected by the coal strike. At the end of last January it was 1,000, compared with 932 in 1894, and at the end of February (that is the last month for which we have returns) it was 992, compared with 956 in 1894. Then, turning to the trades for which we have percentages out-of-work, if we take shipbuilding, we find that at the end of 1894 (*i.e.*, before the frost began) the percentage out of work was 18, a very high percentage, but not much greater than at the end of December 1893,

Mr. *John Burns*—continued.

when it was 17·1. At the end of January last it was 17·3, which was considerably worse than at the end of January 1894, when it was only 13·8. At the end of last February the percentage out of work sank to 16·3, but that also was considerably more than in 1894, when it was only 12·5. So that on the whole you may say that, judged by the percentage out of work, the shipbuilding has fallen off. Then, taking the engineering and steel trades, I do not know whether I need read all the figures, but I may state the general conclusion from them, and then I can answer any question put upon them. The percentage out of work at the end of last February was slightly less than for the previous month, or than for the corresponding period of the previous year. Things were rather better. Building, on the contrary, was considerably worse, both than in the previous month and than in the corresponding period of the previous year, showing the great effect of the frost.

Chairman.

4672. Was it worse independently of the frost, do you think, before the frost began?—Before the frost began, that is to say at the beginning of January or the end of December, it was a little better; hardly so much better that you could found any inference on it; the percentage unemployed was 5·7 compared with 5·8; therefore, it was very much the same. Then by the end of January it had risen to 8·2 compared with 6·7, and at the end of February it had risen to 10·1 compared with 5. It was practically double what it was in the previous year. That was the full effect of the frost.

4673. So that the effect of so severe a frost as we have had on the building trades is, after all, only one-tenth?—Yes, but there the reservation comes in which I made with regard to seasonal changes. I do not think our figures give the full force of seasonal changes; because many of the outdoor building trades do not give unemployed benefit, and those are the more severely affected. The figures show some change, but they do not show it to quite the full extent. Then I have the figures for furnishing and woodwork, and printing and bookbinding trades; and I can give the details if necessary. The furnishing trade follows much the same lines as the building trade, it was a little better than in the previous year before the frost, but the percentage was up to 7 at the end of February, as compared with 5·8 the year before.

Mr. *Wootton Isaacson.*

4674. Have you any particulars of the tinplate trade?—That is included, so far as we have any returns, in the engineering and metal group. There is one union, not a very big one, that makes a return of the proportion of the unemployed, but it has only just begun to make it. I could not give a comparison, therefore. I can give the figures for dock labour. With regard to the number of seamen shipped during the month we get complete returns from a number of the chief ports, and they show that the number shipped during February was nearly 17 per cent. less than in the corresponding month of last year. In January it was about 11 per cent. less than in the corresponding month of last year, and in December it was 1·2 per cent. less. It was throughout a little less, but considerably less in February. No doubt that would be attributable to the bad weather.

Mr. *Stuart-Wortley.*

4675. There remains the printing and bookbinding trade?—The printing and bookbinding trade was better than the previous year. At the end of December the percentage unemployed was 4½ compared with 6·1; at the end of January it was 5·3 compared with 6·1, and at the end of February 4·8 compared with 5·8. In all three cases it shows an improvement.

Mr. *Wootton Isaacson.*

4676. Have you the figures for the boot trade?—The boot trade unions do not give unemployed benefits, and we cannot judge of it in this way, but we have information of a general kind by which we can compare the state of employment in the boot trade, but it is not an accurate statistical comparison. For example, in the boot trade during February the reports say that there has been full employment in most of the centres, but partly owing to the anticipation of a stoppage. I am speaking now of the wholesale and the machine branch of the trade. In the previous month, that is, during January, employment in the machine boot and shoe trade was reported to have improved in most important centres, but short time was still worked in some districts and the bespoke trade was slack, and so on. I can give it to you for any month if I am asked.

Chairman.

4677. The comparison you have been giving to us relates to the want of employment; can you go further, and have you any information which would enable a comparison to be made between the state of distress connected with want of employment during the present and previous winters?—I know of no method directly of measuring the distress, because, as far as I know, there is no unit to measure it with. The only method we can use is to apply certain tests, of which the state of employment is one, the proportion of pauperism is another, and perhaps, with certain qualifications, the numbers applying to local authorities for relief work would be a third. Neither of those tests is a perfect one, for it is impossible to get a perfect test, but each of them is a useful indication so far as it goes. As regards the proportion of unemployed, I have given you some information. As regards the proportion of pauperism I have nothing to add to Sir Hugh Owen's evidence. I can, if required, bring the facts a little more up to date, but probably it would be better to get those facts from him. I only derive them from him. I should like to say a word as to the relation between distress and want of employment. The two are, of course, related, but they are not by any means in strict proportion. It does not always follow that you can estimate the distress from the unemployed, or the unemployed from the distress, because distress

is

Chairman—continued.

is the result of complex causes to which scarcity of work and other causes contribute. For example, it is largely influenced by the prevalence of sickness, quite also by the severity of the weather, quite apart from an increase in the number of the unemployed. Another point which is sometimes not sufficiently borne in mind is that the distress, which may be said to be due to a given amount of scarcity of work, will be more acute towards the end of a cycle of depressed trade than at the beginning, owing to the gradual exhaustion, during that interval, of savings and resources. The pinch will come more quickly because there is less resisting power; therefore, I should like to guard myself by saying that any comparison of distress in 1893–94 and 1894–95 is only of a very general kind. With that reservation, I should say that, during the whole of the recent autumn, that is to say before the frosty weather, the distress associated with want of work appears, so far as can be judged, to have been less acutely felt than in the previous year. Throughout the autumn of 1893, beginning even as early as September, there was very considerable pressure on local authorities to provide relief work. No doubt the distress arising out of the prolonged coal dispute to some extent contributed to that; but I find, at all events, going through the reports that we received for the purpose of the "Labour Gazette" in that year, that during October considerable distress is reported in several London districts, and in November we were informed of several local authorities in London providing work for the unemployed, and a considerable number of others were maintaining a temporary register of the unemployed. During the latter part of January (I am still speaking not of this winter, but of last) the weather became mild, and employment showed a marked improvement in London, there being an extraordinary demand for dock labour, and in February and March any sign of distress rapidly appeared to diminish. There was mild weather, and the effects of the coal dispute had worn off. Now, the present winter has shown a marked contrast to this state of things; the autumn was mild, and with slight exception there was very little pressure on local authorities to provide work during the autumn, at least so far as was shown in the reports that we received. I have no doubt at all that on the whole the state of employment was better in the latter part of 1894 than in 1893; but this state of things was immediately changed by the severe weather which began at the end of January, and the absence of resisting power, which I have called attention to, at the end of a long period of depressed trade was shown by a rapid increase both of pauperism and of applicants for relief work, and for other forms of relief, which occurred during the frost. As to those applications, you have more complete information by the queries sent out by this Committee than anything I could give.

Mr. *Stuart-Wortley.*

4678. I suppose you cannot bring equally up to date any information that is available as regards the quantity of dutiable articles consumed per head of the population?—I do not think that can be done more than annually, but I can go into it.

Mr. *Stuart-Wortley*—continued.

Chairman.

4679. Have you anything more to say to us with regard to this question of comparative origin of distress?—No, I think I have nothing more.

4680. Now with reference to the various schemes which have been tried for dealing in some way with the unemployed, what have you to say to the Committee?—It will probably be unnecessary to detain the Committee by going over again the kind of various agencies dealing with the unemployed which are described in the Board of Trade Report on the unemployed, which I think is in the hands of the Committee.

4681. Can you add to that information in any way?—Various parts of it I can bring up to date, or I can give additional information with regard to the various sections. For that purpose, perhaps, the schemes dealt with in the Report may be summarised as: first, schemes in the nature of insurance against want of employment, of which the unemployed benefit funds of trades unions afford the most characteristic example; secondly, relief of destitution out of the rates under the Poor Law; thirdly, relief of distress due to want of employment by various voluntary charitable agencies; fourthly, the assisting of workpeople to obtain work of which the work of the labour bureaux is a good example; fifthly, the provision of work for the unemployed either in labour colonies or in the form of temporary relief work. With regard to the second of those five classes (the Poor Law) I have nothing to add; Sir Hugh Owen has given evidence on that. I have nothing to add with regard to the general work of charitable agencies.

4682. With regard to the first, is insurance against want of employment confined to the trade societies, or is it provided to any extent by friendly societies and other organisations?—By far the most extensive agency for insuring against want of employment is provided by trade societies. I find that, in 1893, 332 trade societies, with a membership of 743,133, paid an amount not far off half a million (to be exact, 461,575*l.*) in unemployed benefit. In 1892, 297 unions, with a membership of 745,648, paid 386,956*l.* in unemployed benefit. In 1891, 202 unions, with a membership of 682,025, paid 222,088*l.* in unemployed benefit. So that that is by far the most extensive agency, and it is described in detail in a section of this Report. All I have done now is to bring the figures two years further up to date. Friendly societies do not as a rule provide unemployed benefit, but a few societies make some provision for their unemployed members, either by remitting subscriptions or by giving travelling relief, or by separate distress funds. I have little to add to what has been said with regard to friendly societies in this Report (there is a chapter on them there), but I have some information with regard to a few experiments which have come under our notice since its publication in the way of local unemployed insurance. I do not know that the matter is of any very great importance, but it is a feature that I did not know of before; I allude to unemployed insurance funds not confined to special

Chairman—continued.

trades, but carried out in special localities. I do not think the system is at all common in this country, and I have only information as regards one such society in this country, and that a very small one.

Mr. *John Burns.*

4683. Where?—It is in a small town in Essex.

4684. What is it called?—I could give the exact particulars if the Committee desire.

Mr. *Stuart-Wortley.*

4685. Why should you not?—The society is at Loughton, near Epping Forest, a parish of about 4,000 inhabitants. It is called the Loughton Mutual Labour Aid Society. It is quite small. It only has between 30 and 40 members.

Mr. *John Burns.*

4686. There are many of those all through the country; they are called hard-up clubs in some neighbourhoods?—I have no statistics of them.

Chairman.

4687. Will you tell us what the nature of this one is?—They pay a small subscription per week; 2*d.* per week, and they draw 1*s.* a day when in distressed circumstances owing to being out of work. The members of this particular society are to a large extent connected with the building trades, but they are not entirely so. It is not a building trade club. The fund would not be financially sound as a pure unemployed benefit; it depends for its soundness on the fact that the members do not draw upon it until they are in distress through being out of work. The society is registered as an ordinary friendly society.

Mr. *John Burns.*

4688. May I ask on this point if you have not an official record of what are known as labour loan societies for meeting exceptional distress amongst members through lack of employment; could you not get that from the Registrar of Friendly Societies?—So far as they are registered. (*See* Appendix.)

4689. Have you got any information of those which are not registered?—We have not in the Department.

4690. Have you general knowledge as to their existence in and around London?—I have no statistics as to the unregistered labour loan societies, and no statistics as to the registered ones, except those that are published by the Registrar of Friendly Societies. Turning to other countries, particularly in Switzerland, there has been a movement in some of the Swiss cantons to establish local schemes of insurance against want of work, and the funds are partly raised by contributions from the workpeople and partly by municipal grants. The system has not been tried sufficiently to make any examination of its results possible; in fact, I only know of one such fund which is actually in operation, that is in Berne, but Acts authorising them have been passed or proposed in other cantons.

Chairman.

4691. You do not know how they are worked, or what the result has been?—I could give you the figures for Berne itself.

Mr. *John Burns.*

4692. May I suggest on this that if Mr. Smith has not information with regard to these labour loan societies to deal with exceptional distress arising from want of employment that he should consult with the Registrar, or perhaps the Registrar could hand in a statement direct?

Mr. *Stuart-Wortley.*

4693. I should be very glad to hear what you know about Switzerland?—In Berne a voluntary system of insurance exists. The control is vested in a committee of seven, three chosen by the Town Council and two each by the employers' and workmen's unions.

Mr. *John Burns.*

4694. That was only projected; it was not passed into law?—The system is in existence. The subscription is one hour's wages per month, and the employers also subscribe, and the deficit is made up by the Commune. Relief is given to all those who subscribe six months at the rate of 10*d.* per day for single men (I have translated the money into English so as to make it more easy to compare), and 1*s.* 3*d.* for married men. In 1893–94 there were 354 subscribers, of whom no fewer than 216 applied for relief during the year. Fifty of these obtained temporary work. Apparently it acts as an agency for getting work as well. The total expense was 313*l.*, of which all but 38*l.* went in relief. The men's subscriptions amounted to 45*l.*, the employers subscribed 38*l.*; 40*l.* was given in donations, and 190*l.* was made up by the Commune. The other districts in which these funds are contemplated are the cantons of St. Gall and the town of Basle. In St. Gall the law is passed, but financial difficulties apparently have been met with in starting the scheme. In Basle I have not heard that the Bill has been passed, but a Bill has been introduced.

Chairman.

4695. You were saying something when I rather called you back to the first head of insurance about voluntary charitable agencies, your third head?—I have nothing to add to what was said in the Report on that.

4696. Now take the fourth head, the labour bureaux?—With regard to labour bureaux, since the publication of the Report the Department has received and published statistics of the work of the more important permanent labour bureaux in this country. I am speaking of permanent labour bureaux, not the temporary registers of the unemployed which are started for the purpose of getting the names of people to admit to relief work, so that we have very full and comparative statistics of the work of labour bureaux which were not then in existence. For example, on page 90 of the March "Labour Gazette," which is in the hands of Members, these figures will be found for the month, and similar tables appear in all previous numbers. They state for the nine principal

Chairman—continued.

principal bureaux which make monthly returns the number on the register, the number of new applications from workmen and from employers during the month; the number engaged by private employers and by local authorities through the boroughs, and the occupation of the persons on the register. I have briefly summarised those figures for the year 1894, and perhaps I may hand that in. (*The Table was handed in, and is as follows*):—

LABOUR BUREAUX.

Work during 1894, and First Two Months of 1895.

Number of Bureaux.	Number on Register at end of Month.	Number of Fresh Applications during the Month		Number of Situations found during the Month.	Month.
		From Employers.	From Workpeople.		
					1894:
7	1,809	331	1,934	497	January.
8	2,402	347	2,378	471	February.
8	2,053	362	1,607	350	March.
9	2,364	434	1,921	503	April.
9	2,236	413	1,844	517	May.
8	2,080	372	1,663	501	June.
9	2,204	327	1,792	412	July.
9	2,270	373	1,777	409	August.
	2,262	468	1,905	534	September.
9	2,490	432	2,548	585	October.
9	2,704	508	2,373	664	November.
9	2,337	393	1,389	580	December.
					1895:
9	3,408	532	3,331	657	January.
9	3,395	629	3,020	*2,599	February.

* Includes 1,090 employed by Distress Committee at Plymouth.

The *Witness.*] In addition to those figures summaries of the work of the labour bureaux have been prepared and included in the Abstract of Labour Statistics which was published by our Department last year. The reference is to pages 64 and 65, and it gives an analysis of the occupation of persons using the bureaux during a period of six months. It appears from that that the workmen who used these bureaux most largely are either building operatives, general labourers, carmen, stablemen, porters and messengers. Among women, charwomen and domestic servants hold the first place.

4697. Are these labour bureaux managed by the local authorities, or by voluntary agencies, or how?—Some are managed by local authorities and some by voluntary agencies. Those in London that make returns to us are managed by

Chairman—continued.

local authorities, and also there are a few, like Salford and Plymouth in the provinces, which are managed by local authorities; others are managed by voluntary agencies. The power which the local authority has to expend money upon maintaining a labour bureau is a matter of some doubt, and many local authorities may have been deterred by doubt as to their power.

4698. Are they purely local, or do they play into each other's hands and communicate with each other?—At present their work is almost purely local. The Labour Commission which went into the question of labour bureaux recommended that the Labour Department of the Board of Trade should open up communications and act as a medium of communication among these bureaux so that by supplying information to each bureau of vacancies and demands elsewhere they might promote the circulation of labour. With that view a scheme was prepared and submitted to the managers of the various bureaux, to obtain daily returns from each bureau of the vacancies and the demands for work that they received but were unable to deal with. These would have been tabulated in the office and a printed list circulated the next day to all the other bureaux, showing to each the number of unsatisfied demands either for work or for workpeople at each centre. But no further action has as yet been taken in this matter because the answers received from the bureaux indicated that until a much larger number of bureaux were in existence in various parts of the country the advantage which such communication would be to them would hardly make it worth while to carry out the scheme. They were dealing with local labour, and they did not consider there would be much gained. Therefore at the present moment the matter is in abeyance, but should there be any considerable development of bureaux it might come up again.

4699. Can you add to anything that is said in your report as to the state of things in other countries with regard to labour bureaux?—Yes, there have been some rather interesting developments in the way of labour bureaux in various other countries since that report was published. In the first place, I might call attention to a system of labour registration which had been started a few months before that report was prepared, but which had not come before us at that time. That is a system of labour registration through the medium of the Post Office which is carried out in the Grand Duchy of Luxemburg. It appeared to us to be of sufficient interest to make it worth while to send an investigator to Luxemburg in order to study its work on the spot. We published an account of it in the "Labour Gazette" of August 1894, which I will put in. I might state briefly that the system came into operation in the end of 1892, and that the registers seemed to be used chiefly by domestic servants and by persons using minor handicrafts, and not very largely by the larger employers. Since then I find that up to the end of 1894 it has dealt with 1,904 applications from workpeople, of whom it was said that 1,701 have been provided with places. The total cost of the system is borne by the State, there is no charge

Chairman—continued.

made either to employers or on workpeople for registration. I have further particulars of that system of labour registration in case any Member should ask any questions about it.

Mr. *Stuart-Wortley.*

4700. The "Labour Register" of Brussels was a failure, was it not; I think I remember seeing a consular report to that effect?—The only report that I have seen of the Labour Registry did not appear to show very marked success; I was not able to say whether it had been a failure.

4701. It fell off after a time?—It fell off, I think.

Mr. *John Burns.*

4702. What have you to say about the Bourse du Travail of Paris?—The work in Paris is fully described in this report on the unemployed.

4703. Has it not been closed since then?—The only thing to be added is that it has been closed.

4704. That is a very important thing, surely?—The Bourse du Travail has been closed in Paris, but the official journal of the French Labour Department now contains statistics of the works of the labour bureaux in France up to date, something on the model of what we have here.

4705. Has there been a reason assigned for the closing of the Paris Bourse du Travail?—It was dissolved for non-compliance with certain provisions of the law of 1884 regulating trade associations. I have not the full particulars with me.

4706. Will you put that in?—Yes. (*See* Appendix.)

Chairman.

4707. If you are not able to give a positive answer to a question just now, on correcting your evidence you can put in the answer?—Yes; we published an account of the circumstances which led to the closing of the Bourse du Travail.

4708. You can put it right in your evidence. Is there any other country in which there has been any fresh development of labour registration during the past year to which you wish to call attention?—There has been a considerable movement in Germany for the revision of labour registries, arising largely out of dissatisfaction with the existing registries.

4709. North Germany?—Throughout Germany; the various classes of registries in existence are said to be open to different objections; there are those conducted by employers, or workmen's unions in particular trades. Often the workmen have not confidence in the employers' registries, and the employers have not confidence in the workmen's registries. There are also those connected with charity organisation, especially labour colonies or the relief stations connected with labour colonies. Those labour bureaux have very largely been a failure. Then there are those managed by societies, or groups of societies, formed for the sole purpose of bringing employers and workmen together; voluntary

Chairman—continued.

labour bureaux, which have no other object than to provide a registration office. These are described in an article on the labour registries in Germany which was published in the October number of the "Labour Gazette," at page 304, and it gives a number of figures about them. The new form of labour registry, which seems to be coming into existence in consequence of the dissatisfaction with existing agencies, is controlled by a committee composed of equal numbers of employers and workmen elected by the assessors of the local industrial court from their own number, the president of the court having the duties of chairman, and the whole expense is borne by the municipality. A number of towns have started within the last few months registries on that principle, and I could give the Committee a list.

4710. You, of course, do not yet know of the success they have had?—It is far too soon to say what success can be attributed to them. We have a good deal of information with regard to the preliminary steps of starting these bureaux; but they are too new to judge of results. The new idea is the utilisation of the members of the industrial court as managers of the labour registry.

4711. We have nothing corresponding to that industrial court in this country?—No. Then I have some information about the work in finding places for people of the Labour Department in New Zealand and in Ohio. We gave a description of the work of the New Zealand Department in the Unemployed Report, but since then we have later statistics. The Department acts as a labour bureau for the purpose of putting persons in situations with private employers, and, secondly, it provides work for them chiefly by the method of co-operative contracts which were described briefly in that report, but I have now a great deal more information with regard to it. I will not deal with that at this stage, because that does not come under the heads I have given, but in the Reports of the New Zealand Department I find the following figures: that, in 1892–93, the total number of persons employed in one way or another was 3,874; out of those the persons sent to private employment was 2,518, and the number sent to Government works was 1,356; that is to say, about two were sent to private work for every one that was sent to Government work. But if we take the figures of 1893–94 the number employed was 3,371, the number sent to private employment was 1,019, and the number sent to Government work was 2,352; that is to say, about one to private work for every two sent to Government employment. It shows that the function of providing work is rather swallowing up the function of getting work under private employers.

Mr. *John Burns.*

4712. What was the work?—The Government work is, very largely, making roads and making railways.

4713. Clearing the bush?—Yes. The report ascribes the falling off in the extent to which the bureau is used by private employers to the indisposition of the employers to make use of the machinery, and, secondly, to the slackness of work,

Mr. *John Burns*—continued.

work, and, thirdly, to the influx from Australia Of those 3,371 men assisted in some way, 2,565 are described as general labourers, 214 as bushmen, and 278 as various. Those three groups cover 90 per cent. of the whole number.

Mr. *Stuart-Wortley.*

4714. You mentioned Ohio?—Yes, Ohio has a public employment office which has attracted a good deal of attention. I should say in general that the effect of the statistics is to show that on the whole they are chiefly used by women or men occupied in domestic or personal service, rather than the ordinary manual trades.

Mr. *John Burns.*

4715. Will you give the towns?—There are five registers, Cincinnatti, Cleveland, Columbus, Toledo, and Dayton. I have not got the separate statistics out, but I have the materials for giving them if they are wanted for the separate registries. With regard to Columbus, I have some particulars. In a certain week in April 1894, 126 men applied for situations, of whom 15 were placed in situations; 87 women applied for situations, of whom 46 were placed in situations, which shows that the proportion of work done was very largely among women.

4716. They are mostly waiters or waitresses, or domestic servants?—I gather that from the report.

Chairman.

4717–18. Are there any other countries to which you would refer as regards labour registers?—The only other country that I would mention, and I do not propose to go in detail into it because the conditions are so different to the conditions in this country, is Italy, where there has been a development of so-called "chambers" of labour within the last year or two, but there is nothing which throws any great light on our problems.

Mr. *John Burns.*

4719–20. Have you any information with regard to the protests against the existence of labour bureaux, or labour registries; have you any information of bodies of workmen, particularly in the building trade, objecting either to registries or labour bureaux in this country or others?—I cannot call to mind any definite organised protests in the sense of resolutions passed by societies. I have heard incidentally apprehensions expressed by individuals that labour bureaux might not be an unqualified benefit, but I cannot for the moment recall anything more.

4721. Will you look that up?—I will.

Mr. *Stuart-Wortley.*

4722. What are they supposed to apprehend from them?—To some extent it is apprehended that they might simply be depôts at which workmen might be obtained at any moment to replace strikers, and so be used as weapons to break up disputes.

Chairman.

4723. Then the next of your headings was as to works instituted by public authorities with a view to relief in times of distress?—There is a very detailed account of the measures taken by local authorities in the winter of 1892–3, contained in the Report on the Unemployed, at page 185. That was further summarised in the Abstract of Labour Statistics, on page 67, which showed in that year a total of 96 local authorities in Great Britain making some kind of provision of work for the unemployed. The total number of separate individuals employed for a greater or shorter period by 77 of the principal of these authorities was 26,875. I have no such complete figures for any year since. It was not considered necessary to make an equally detailed inquiry in the following year, as there were no new features that we heard of. So all we did for the year 1893-4 was to collect information with regard to a few of the more important cases of relief work, and those were published in the "Labour Gazette" in March and May 1894. I could give some account of the measures taken in 11 important districts. The districts were Leeds, Leicester, Halifax, Sheffield, Coventry, and in the following districts of London and neighbourhood: Mile End, Shoreditch, Hackney, Bethnal Green, West Ham and Poplar; but I may say quite briefly, that there was no new feature in those that will throw any additional light on the question beyond what is contained in the Report on the Unemployed. With regard to the present winter the Circular which was sent out by this Committee has brought in such complete information, and has gone out so very widely, that although I was prepared to give such information as I could, I think it would be really wasting the time of the Committee, because it would be simply overlapping the information contained in papers which have been already handed in.

4724. Could you tell the Committee of any similar provision of temporary relief work of unemployed in other countries: whether you have heard anything of that, or whether the pressure on local authorities is peculiar to this country?—No, it is by no means peculiar to this country. We have information, and reports are published from time to time in the "Labour Gazette" which show that the municipal authorities in various parts of Germany, and in Holland, and elsewhere, are experiencing the same kind of pressure as those in this country to provide work. There are not any special features of interest in the kind of work provided: street-sweeping, road-making, and work of that kind; but the fact that this pressure is being felt in those countries, I think, is of some interest, because those are the countries, Germany and Holland, which have tried labour colonies on the largest scale, but that does not prevent the authorities from being subjected to the same pressure in the winter time. For example, in the January number of the "Labour Gazette" we published a report showing that the town of Hamburg had voted 10,000*l.*, Altona 5,000*l.*,

Chairman—continued.

Darmstadt 1,250*l.* Duisburg and Weisbaden 1,000*l.* each. They had voted these sums for the purpose of providing relief for persons out of work, in such occupations as road and sewer making, and earthworks. We have a number of other reports from other districts which are somewhat similar to the kind of reports we get from our own local authorities. In Holland an experiment has been reported to us in Amsterdam with the view of providing work by means of establishing workshops, and the municipality have established workshops for the manufacture of articles required by the poorest classes, manufacturing bedding and bedsteads of various kinds with the view of giving employment to the various workmen out of employment in the winter. The necessary capital was supplied by public subscription, and by the supporters of the scheme. The funds do not seem to have been provided from municipal sources. I understand from the report received from Sir Horace Rumbold, Her Majesty's Minister at the Hague, at the end of February, that this scheme has not, in the opinion of the Consul, at Amsterdam, proved a success.

Mr. *Stuart-Wortley.*

4725. I suppose the other bedstead makers did not subscribe? — The enterprise was feebly supported, and it was limited in its operation and several times threatened to collapse. I have no further information about it. There is a great deal of useful information as to relief work for the unemployed in the United States, especially in Massachusetts, in the recent report on the unemployed published by the Massachusetts Bureau of Labour Statistics, a most important report. They give a very detailed account especially of the work in Boston, where over 28,000*l.* was expended during the winter of 1893–94 by the Boston Relief Committee, and work of some kind was provided in that way for nearly 10,000 persons. The money was provided by public subscriptions and from other sources. Also there is a further account of schemes for relieving the unemployed in various States of America (this is an unofficial document I am quoting from) in the report published in the Journal of Social Science containing the Transactions of the American Association, 1894. The other schemes that I have to give any information about are not in foreign countries, but in two of our colonies, New Zealand and Victoria.

Chairman.

4726. Do you know what amount of success they have had?—The unemployed in New Zealand are employed on a system of co-operative contracts. An average number of about 2,000 people are at work according to the latest reports on that system, chiefly in making railways and roads. The railways are divided into short sections, and each section is entrusted to one set of men on a system of piece-work, and the piece-rates are fixed in such a way as to be slightly in excess of the average wage that will be paid by

Chairman—continued.

a contractor for an eight hours' day. That is the system on which the rates are supposed to be calculated. The work is measured monthly, and payments are made to the head man of each set. It is let out to gangs in that way. The men are selected by the Government Labour Bureau, and various classes (*e.g.*, married men, men that have not previously been employed on Government work, men in the neighbourhood of the works, and men who have been longest not employed by Government) have priority for employment, and if there are more men than can be taken on of those classes they are selected by ballot. The sets of men to whom the work is let average about six, and rarely exceed 10 or 12. There is a mass of official information published by the New Zealand Government with regard to that system. I have a number of documents on the subject which are at the service of the Committee.

Mr. *Stuart-Wortley.*

4727. Do I understand the men receive a wage above the regular rate of wage in these New Zealand Co-operative works? — They do the work at a piece-rate slightly in excess, but as the men employed are no doubt a good deal below the average, probably the time wage earned on that piece-rate would be below the current rate. Then I have a report prepared, at the request of the Agent General for Victoria, by the Railway Commissioners of that colony, with regard to a somewhat similar system carried out there.

Chairman.

4728. What you have given us refers only to New Zealand?—That refers only to New Zealand. I may now give what refers to Victoria. There, again, the work provided is the construction of railways on what is known as the Butty-gang system. It was commenced in February 1892, and it was adopted to provide work without delay for the destitute of Melbourne, and the detailed arrangements were such as gave inexperienced men an opportunity of joining in the work along with those who were accustomed to it. In giving employment, all destitute deserving men who were not on account of physical weakness or infirmity quite unfitted for the work, were to have an equal opportunity, but men supporting families were given the preference. The work is paid for by measurement at prices fixed by the engineer at such rates as to allow efficient industrious men to make the market rate of wages in eight hours' work. The amount earned is equally divided among all the men in the gang, except when any are reported as having been absent during working hours, when a *pro ratâ* reduction is made from them for the time lost. There is also a certain system of sub-contracting in it. Some of these men are paid piece-work, and a few, but this is the exception, are paid by time rates. This is only when it is not possible to fix a price beforehand which can be depended upon, but whenever it becomes possible to revert to payment

Chairman—continued.

payment by measurement at fixed prices this is always done. The hours worked average a little over eight per day. The earnings vary from 50 per cent. over, to 50 per cent. under the rate of wages fixed by the department. The rate of wages as fixed by the department was at first 6*s.*, and afterwards 5*s.* a day. That is simply as a standard from which they estimate the piece rates. The earnings actually made by the unemployed varied from 50 per cent. over, to 50 per cent. under this rate of wages; the average being about 10 per cent. below that rate. There are some more details which I can give if necessary.

Tuesday, 26th March 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. Bartley.
Mr. Billson.
Mr. John Burns.
Mr. Campbell-Bannerman.
Mr. Heywood Johnstone.
Mr. Mather.
Mr. Pickersgill.
Mr. David Randell.
Mr. Renshaw.
Mr. Round.
Mr. Whiteley.
Mr. John Wilson (Durham).
Mr. John Wilson (Govan).
Mr. Stuart-Wortley.

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN, IN THE CHAIR.

Mr. H. LLEWELLYN SMITH, re-called; and further Examined.

Chairman.

4729. Is there anything you would like to add to the evidence you gave the other day; is there any point you think ought to be referred to which was omitted?—There were three or four questions asked by various Members of the Committee on Friday which I was not able to answer at the moment, and I said I would look into the details. Perhaps it would be the most convenient course that I should go through them; it will only take a few minutes.

4730. Will you please do so?—The first question was as to the source of our information as regards the fluctuations in shipbuilding, in the tonnage turned out year by year; Mr. Stuart-Wortley asked whether shipowners were compelled to make a return to the Board of Trade. I find that the figures which are given are supplied by the officials of the Board of Trade who have to do the actual measurements of the vessels; therefore they come to the Board of Trade in that way. The second question Mr. Stuart-Wortley asked was, whether we could bring up the statistics with regard to the consumption of dutiable articles per head of the population up to date. I find they are brought up to the end of 1893 and can be seen in the Statistical Abstract. There is a monthly statement in the monthly Trade Accounts of the total amount of various dutiable articles retained for consumption; but I do not think that monthly statement would be of any value for this purpose, because one cannot assume that what is retained during a month for consumption is actually consumed during the month; the error would be too great. The third question was a question asked, I think, by Mr. Jackson, whether there were any facts which would show whether the import trade of the Port of London had fallen off or not during the past few years, as compared with the rest of the United Kingdom. I have the figures from 1889 to 1893, showing the values (of course not the volumes) of the imports both for London and for

Chairman—continued.

other ports. I will hand this Table in (*handing in the same. See* Appendix). I may say that in order to make the conclusions to be drawn from the figures clearer, I have reduced them to a standard of 1,000; that is, I have assumed the amount imported in 1889 to be 1,000*l.*, and the other figures are in terms of thousands. That being so, the figure for both London and other ports being, in 1889, 1,000, in 1890 the imports into London would represent 999, and for other ports 976; in 1891, for London the figure would be 1,033, and for other ports 1,011; in 1892, for London it was 997, and for other ports 988; in 1893, for London it was 978, and for other ports, 930; which shows that the falling off in London in value on the whole has been less in proportion than other ports.

4731. There is not a very great falling off in any of them?—There is not a very great falling off in any of them. The next question I was asked was whether I had figures showing the range of unemployed benefit given by mining unions. I have those statistics for the Northumberland and Durham miners only. The amounts per head vary in Northumberland from 1¾*d.* per head in 1890, up to 19*s.* 0½*d.* in 1886; and in Durham they vary from 10½*d.* per head in 1892, to 17*s.* 11¾*d.* in 1893. But I should say that, after examining these figures and the rules of these unions under which benefit is given, I do not think these figures are of much value for comparison with those I gave on Friday for other societies, because the greater part of the contraction and expansion of employment in coal mining due to changes in trade does not take place in that way at all, but by decreasing and increasing the number of days worked per week. Consequently it is only in times of great depression, when people are discharged in considerable numbers, that you get anything like an appreciable amount of "unemployed benefit" paid; so that those figures should not be compared with the others I gave last week. The next question was a question asked

Chairman—continued.

asked by Mr. Burns, as to whether I had any information with regard to the closing of the Paris Labour Exchange, the Bourse du Travail. I have an account of that here. I may say it is mostly reprinted and extracted from the "Labour Gazette" of July 1893, August 1893, and September 1893, with a short paragraph bringing it up to date. I will just hand that in (*handing in the same. See* Appendix). Mr. Burns also asked me if I had any statistics with regard to labour loan societies; I find we have no statistics, and that the Chief Registrar of Friendly Societies only has statistics of registered loan societies; but the figures he publishes do not separate labour loan societies from the others. I have extracted the tables, and I will hand them in (*see* Appendix); but any further information with regard to that special class of societies referred to will have to be got from the Chief Registrar of Friendly Societies. We have no further knowledge on the subject. I think those are all the points raised in my evidence of Friday last which I have to refer to.

Mr. *Acland.*

4732. In telling us about the fluctuating trades you mentioned to us that in some cases like the dockers, the fluctuation was less of late years; and I think in one other trade, the boot and shoe trade, you said you thought the fluctuation was rather more; is that correct?—I think the fluctuation in the number of people employed at any given time, from time to time, in the boot and shoe trade is greater than it used to be; but I do not think the fluctuation in the amount of work obtained is greater. Before the introduction of machinery there was very little discharging of hands in the boot and shoe trade, but less work was given out if trade was bad. Now in centres where there are great factories and machinery, it is carried on more on the factory system; the machinery must be kept at work and the fluctuation would take the form of throwing out people.

4733. What I wanted to ask was, whether you have been able to make any observations upon the fluctuating trades as a whole, because I understand they are not constant in fluctuation, but that reasons arise which make separate trades fluctuate less or more?—We have had such a short period to observe the fluctuations, that it is difficult to draw any definite conclusion as to what the tendency is. I think the nearest approach to a generalisation which I could make would be this, that on the whole the more elaborate organisation of industry tends to concentrate the effect of the fluctuation on a smaller margin of the members of the trade; but, of course, to make it more intense for them.

4734. Then from the point of view of our inquiry, the tendency appears rather to be to increase the distress, if I may so put it, on the part of a certain small margin in various trades?—Yes, I am afraid that is so.

4735. Is that because a certain number of the less skilful workers sink to the bottom and get less employment?—There will always be a certain number of less skilful or less steady workers

Mr. *Acland*—continued.

in any industry, and I think modern changes tend to throw more completely on to their shoulders the weight of the fluctuation of trade which used to be spread over a larger number. If you take the dock employment, which is the industry to which you have referred, before the increase of the permanent staff at the docks in the Port of London, what work there was was shared among a larger number of people, and therefore a larger number of people had casual and intermittent employment. Now, of course, a considerable part of the work is done by men who have practically permanent employment, and during the transition stage, at all events, there is a certain margin of men who used to get casual and intermittent employment, but now find it very difficult to get any employment at all.

4736. The larger number, of course, are distinctly better off in many ways?—That must be so.

4737. You said that during the transition stage there is a minority who find it more difficult to get employment; is that minority gradually becoming fewer, taking the docks for instance?—I should hope so. I think any large industry which gives a chance of casual employment to a larger number of people will act as a magnet, and that the docks did act as a magnet to casual labour in old times; and when it becomes thoroughly known that there is much less chance of getting that kind of casual and intermittent employment owing to the increase of the permanent element, there will in the end be less casual labour attracted.

4738. In the meantime in this particular trade there must be a very large amount of distress, and a considerable number of men will continue to hang about the docks?—A considerable number of men.

4739. That kind of tendency may arise, I suppose, in other trades if a stricter organisation is established?—I think so. I think that the older men, and men less able to turn out a full day's work, usually suffer when the conditions of an industry are rendered more stringent by its being more highly organised.

4740. Do you think it would be a reasonable generalization to make, that the tendency to a more definite organisation, both of masters and men, is a tendency which to some extent increases the want of employment among the minority of workers in any particular trade?—Yes, I think it tends to make employment more full and regular for people who are in the prime of life, and up to the average of efficiency, while it has a corresponding tendency to bear hardly upon people who are outside those limits.

4741. With regard to what you were telling us on Friday about the out-of-work benefic given by trade unions, and those who are on the funds, would there be any on the funds, or any considerable proportion of those who were on the funds, not merely because they cannot get work, but because they are old and getting unfit for work?—Yes, there would be on the funds of unions certain members who are getting what is not very clearly distinguishable from superannuation, under the name of "out-of-work benefit," before they qualify for superannuation.

Mr. *Acland*—continued.

4742. Of course, if the out-of-work benefit were strictly administered in the sense which the words really convey, as soon as a man got a little too old for work he would no longer get that benefit, I suppose?—No doubt the strictness of administering it differs in different organizations.

4743. There is a certain amount of benevolent feeling among the members of the union that the line must not be drawn too hard-and-fast, is there not?—I think that is undoubtedly so.

4744. How does it result ultimately if a man continues to live a good many years and is really not fit for work, he will ultimately lose his benefit, I suppose, in some unions?—Of course, a good many unions have superannuation benefit.

4745. Where there is superannuation benefit he would pass definitely from the out-of-work benefit to the superannuation benefit?—Yes.

4746. Or he might pass even from full-work to superannuation benefit?—Yes, I suppose that would be possible.

4747. Where there is no superannuation benefit there is a tendency, is there not, for the out-of-work benefit to some extent to cover a kind of superannuation allowance?—I should think that is likely, but I could not go into detail upon that.

4748. In regard to the cyclical fluctuations you spoke of, do you consider that in the main that kind of cyclical fluctuation will recur during a certain number of years?—Yes, I think we have sufficient experience of these cycles to make it very likely (it can never be certain) that what has happened before will happen again, and that it is probable that to three, or four, or even five years' bad trade will succeed a period of good trade, and again be succeeded by a period of bad trade. I do not think we have at present sufficient data to be able to fix the length of the cycle.

4749. You think already there is sufficient historical knowledge on the subject to show there are definite cycles, although you cannot name the exact number of year?—Yes, I think so.

4750. Could you tell us how far some of the other causes you spoke of, such as the effect of fashion or the introduction of machinery, affect these cyclical curves. I suppose they must affect them to some extent?—They must to some extent. If there was a very sudden and important development of machinery, or change of fashion, in any given year, it must displace the curve; but these changes usually come gradually; they spread themselves over a period of years; I do not suppose it would very largely affect the curve.

4751. It would not affect the whole curve of depression, but it might affect, I suppose, the curve of a particular trade to some extent?—Yes; it might do that.

4752. That was what I was rather alluding to. In the case of the printing trade, for instance, at the present time, do you suppose the introduction of machinery lately has had any effect which would alter the curve at all?—There is an extensive introduction of machinery now going on in the printing trade which has already had a considerable effect in displacing labour in America, and is bound, of course, to have important effects upon the future of the printing trade in this country.

Mr. *Acland*—continued.

4753. You showed us in your third chart that there had been a considerable fluctuation in a given year in the printing and book trade?—Yes.

4754. Have you ever watched a trade like the printing trade enough to see whether special bodies who have large printing work to do, like the Government for instance, in any way affect a curve like that by the time at which they have their printing work done?—I should say the printing trades, especially in a big centre like London, are considerably influenced by a matter of that kind. For example, you can distinctly trace changes in the percentage of unemployed at the period when the registers for elections have to be prepared, not, of course, that that is Government work.

4755. That is an illustration of exactly what I meant. You say that when a great mass of registers have to be printed at a given time, you see its effects on your figures?—Yes; the effect is clearly seen.

4756. Then that would show that, not only in this trade but in other trades, I suppose, it might be to some extent possible for the authorities or for firms who have a great deal of business, so to distribute their work as to somewhat lessen the fluctuation of these curves?—I think that is a matter that requires a good deal of inquiry. I think it would be worth while to inquire into the distribution of the work of some typical public bodies, as to how far there is a possibility of that. I am not prepared to speak to that at present.

4757. There are some trades, like the building trades, where winter work is difficult in any case, I presume?—Yes, during frost.

4758. You think it would be an inquiry worth making, for instance, in connection with Government contracts and employment, to see how far they did affect the fluctuations of which you have told us?—I think it would be interesting certainly to find out more about that. There would be difficulties that I need not go into in such an inquiry. You would have to fix the time at which the work was done as well as the contract given out.

4759. At present I understand you have not followed up such an inquiry, and could not give us any definite information?—No; I have thought about how such an inquiry could be made, but I have never made it.

4760. In speaking of labour colonies, did you give any illustration from England itself?—I did not in my evidence on Friday go into the question of labour colonies. I did not say anything in addition to what was in the Board of Trade Report on the Unemployed. There there are some references to three experiments in labour colonies in this country. The first is the farm colony of the Salvation Army, at Hadleigh, in Essex; the second is a small colony up in Westmoreland; and the third is a small training farm at Langley. The only one of those as to which I have any later information is the Salvation Army Colony.

Mr. *Acland*—continued.

4761. Could you briefly add anything you think would be interesting with regard to your later knowledge of that colony?—Mr. Wilson Fox, our agricultural correspondent, visited the farm a few days ago to see if there had been any material change which would make it necessary and desirable to bring our figures up to date, and his general report was that there had not; that the figures, of course, had slightly changed, but that you might regard the figures given in the Board of Trade Report as fairly representing the present time. The numbers there are slightly larger, viz., about 350 as compared with about 310 when I was there. Of this 350 about 100 appear to be the regular staff, who are paid, as distinct from the colonists themselves. They have about 300 acres of market garden, and they have been employed in making roads, in the brickfield, in enlarging ponds, and so forth. I think the general effect of the report I had made to me was that I can tell the Committee that on the whole the account given in the Board of Trade report fairly represents the present state of things.

4762. In answer to Question 4669 you gave the Committee certain figures with regard to coal mining, as to the average number of days worked per week; you said that at the end of February the average number was five days per week; that is rather a high average, is it not?—It is a high average. No doubt employment has improved during the month.

4763. The average in December, which was very nearly five days per week, is also high?—Yes. I ought to explain, perhaps, what we explain in all the reports in which these figures are given, that the figures we give are the number of days on which coal was hewn and wound in the colliery; that is to say, the number of days on which the colliery employing people was at work; it is not necessarily implied that all the miners worked actually all the days.

4764. Probably the figure, if you gave it for the men, would be a very different figure?—No doubt there would be a difference.

4765. Because it is a fact, is it not, that in many coal mines the men hardly ever work more than five days a week?—Yes, I have heard that said.

4766. And that in slack times four days a week or, perhaps, three days a week are very common?—That is so.

4767. I ask that question because I thought your point was rather to indicate something wider in the way of difference than what we have got here, namely, that in times of bad trade it is arranged that the individual men shall work fewer days, considerably fewer than, for instance, 4·7, the lowest figure mentioned in your answer. Your figures, I understand, indicate the number of days on which the pits are opened; I thought that in speaking of this method of lessening work when there was not much work for the men, if the days when individual men were working were taken, it would indicate a lower range; that is to say, bring it lower than an average of four days?—No doubt if it was possible to collect the figures showing for each individual man how many days, as a matter of fact, he had been down the pit for each week, the figures would come out less than those I gave on Friday; but I am afraid that that is not possible. The figures I gave give a test of the change in the trade.

Mr. *Acland*—continued.

4768. From one point of view the figure of the actual employment of the workers (assuming we could get it) would be an important figure, would it not?—Yes, if you could qualify it by excluding all those who had an opportunity to go to work but, as a matter of fact, did not avail themselves of it, because it is not fair to count those men as out of work.

4769. You described this method of meeting the want of employment by lessening the number of days worked; have you considered at all how far that method is applicable to some other trades which do not now adopt it, but dismiss a certain number of workers altogether?—No, that is not a matter that I could say I had gone into at all. In general terms I said on Friday, in answer to a question put to me, that I thought that those trades in which employment was lessened or expanded by decreasing or increasing the amount of work altogether rather than by discharging men, were very largely piece-work trades, and of course there is an obvious reason why that should be so. When a man is employed at time rates it may be more profitable to meet a contracted demand by dismissing the least competent men; whereas, if they are employed at piece-work rates, all the men are more or less at the same standard of competency; if they do less they get less. I think there is that point to be considered.

4770. And the fact that a given trade is based upon piece work and another given trade is based on time work is no doubt due to considerable experience as to what is considered by those who organise the trade to be the best method?—Yes; and that opens up a very big question, of course.

4771. I do not know whether you have considered whether what seems the easier method, so far as employment is concerned, might be extended; but I suppose that is a very difficult question?—It is a very difficult question, and I could not, I am afraid, give you any official information upon it.

Mr. *John Wilson* (Govan).

4772. You stated in your evidence at the last sitting of the Committee, that a good deal of distress arose in places where particular trades had changed, or the fashion of the trade changed; for instance take the town of Nottingham, which I suppose at one time was very much engaged in textile fabrics, a good many of those fabrics have gone down; in other words, machinery has supplanted manual labour; has there been great difficulty in finding employment for the hands thrown out there?—I am afraid our method of collecting these statistics and observing the fluctuations is so new that we could hardly go back over a sufficient period to illustrate the change in Nottingham.

4773. Is it the case that in Nottingham a good many of the hands who formerly were employed in textile fabrics have now found employment in the manufacture of ironworkers' tools, such as lathes and fittings for iron and brass work?—

Mr. *John Wilson* (Govan)—continued.

Certainly, the industries have become more diversified; whether individuals have passed from one to another, I do not know.

4774. You do not know how long it takes them to go from working in what is called a soft trade to working on hard materials in the shape of brass and iron?—No, I do not know.

4775. But it is a fact, is it not, that in course of time they are able to adapt themselves to the altered circumstances of trade?—There is a great power of adaptation, but the degree to which that is possible differs very much with the character of the trade, and also, of course, the age of the men.

4776. You stated in your evidence that the mean average of unemployed during 1894 was 6·9; can you tell us the aggregate of the unemployed during last year?—No; the figure 6·9 represents the proportion of the members of trades unions making returns to us who were unemployed.

4777. It is not the unemployed all over the country?—No.

4778. Further, you stated with regard to the shipbuilding work of 1894, that 18 per cent of the whole trade had fallen off, and on looking at Chart No. 3, as regards engineering and shipbuilding, I find in January and February it is very much down; is not that so?—According to that chart the proportion of unemployed in January and February is lower, not greater, than in the autumn months.

4779. Is that caused by the severity of the weather, because they were not able to work out of doors?—It is the proportion of unemployed that is lower; not of the employed.

4780. If the weather had been good there would have been a great deal less unemployed, I suppose, than there were?—No doubt; of course the outside work of shipbuilding is clearly affected by the severity of the weather.

4781. It was so very bad in the month of February that it was quite impossible to handle shipbuilding materials, was it not?—During last February that was so; but the month of February as shown on the chart is the mean of the seven years 1888-94; it does not refer to last February at all.

4782. I think you stated that in 1894, on the whole, 18 per cent. of the trade had fallen off?—Eighteen per cent. of the members of the unions connected with this trade were unemployed, at the end of that year.

4783. Then would you say that at the present time the shipbuilding trade is in a very good state?—No, I should not say that; but the information we have with regard to the prospects, so far as it is of any value, indicates that there is more work in hand than there has been for some little time.

Mr. *Renshaw.*

4784. Over the whole of the United Kingdom?—Yes. The tonnage under construction at the end of last year, as shown in Lloyd's returns, was higher than at the end of the previous year.

Mr. *Mather.*

4785. Do you happen to know roughly the number of persons of adult age of both sexes of the so-called working classes throughout the United Kingdom?—No; I am sorry to say there is no return in the census which enables that question to be answered.

Mr. *Mather*—continued.

4786. You cannot even state it approximately from your own observations and investigations?—No, I could not state the figures. I can give you the total number of persons of all ages returned as "occupied," or I could give the total number of persons above the age of 20, that is, the total number of adults returned as "occupied"; but that would include both producers and dealers, employers and employed.

4787. That would not answer my question, which was put with a view to ascertaining whether the Labour Department has any information as to what really constitutes the number of the so-called working classes of the country, that is, those employed at weekly wages or at work as wage-earners?—No, the Labour Department has never made an industrial census, which is what the answer to that question involves. This census is entirely made in connection with the general decennial census, and that does not afford the means of answering your question. I should add, however, that a distinction has been drawn in the last census of England and Wales between employers and employed, but there are obviously very great difficulties in making a distinction of that kind statistically correct, and the Registrar General, in his General Report, reports that he did not consider that the returns of the number of employers and employed were trustworthy, and as a matter of fact, they are not summarised in the report.

4788. Then, as a matter of fact, you are not able to state what number of persons of both sexes are employed in the various industries of the country, except, perhaps, in the agricultural industry?—The industries in the country are analysed in great detail in the census, and under each of those heads I could state the number returned as occupied. That would include dealers, and it would include employers; but from the knowledge of particular trades it is often possible to make suitable deductions for those, and arrive at an approximate number.

4789. You have not that information by you, I suppose?—I have not it with me.

4790. Have you any knowledge of the number of persons engaged in the skilled trades as distinct from what are called the labouring classes? The only information with regard generally to the distribution of people among the different occupations is that contained in these returns of occupations in the census. With regard to certain special trades there are other returns. For example, I can give you the number of people engaged in mining, because returns as to that are made to the Home Office, and there are certain trades of that kind which can be given with a certain degree of exactitude.

4791. You do know, in fact, the number of persons such as I have described organised in a trade union?—Yes.

4792. As regards those, you have these positive statistics based upon facts?—Yes.

4793. Are we to take it that the statistics you have presented to the Committee, together with the charts you have constructed from them, are chiefly

Mr. *Mather*—continued.

chiefly derived from the organised trades unions of the country?—Yes, they are chiefly derived from that source, with the exception of the chart as to dock labour, and the chart as to blast-furnace men, which are derived from returns showing the total number of employed in those industries.

4794. Have you any idea what proportion the number returned to you as belonging to trades unions throughout the country, both men and women, bears to the total number in the skilled trades of the country; let me give you a concrete case, take one of the most highly organised of the trades unions, that of engineering and machine making and its accessory industries; what proportion of that industry would be organised into trades unions?—I could give you the exact number of the members of trades unions belonging to that group, but I cannot give you an equally definite figure for the number of persons of all kinds engaged in the industry.

4795. You have no knowledge or means of knowing how many persons are skilled in that particular trade and who are not within the union?—No.

4796. With regard to non-union men, you have no statistics?—I have no statistics.

4797. Of course, not one-half of the persons engaged in the engineering trade are connected with the trade union at the present time; there are some of the accessory trades which are highly organised, but, taking the amalgamated engineers as a whole, not half the members of the trade would be members of the union; have you received from employers in any trade the number employed by them week by week through a given period, and compared it with the returns sent to you by the trades unions in that same district?—I am trying to get that now with regard to the same trade you mentioned, namely, the engineering trade, in connection with our inquiry about the irregularity of employment. We have had very full particulars about exact fluctuations from the point of view of members of trade unions by an analysis of their own books, and I hope to be able to compare that with the fluctuations of employment in the way you describe.

4798. You said in your original statement to the Committee that the engineering trade, the machinery making trade and such kindred occupations, were amongst the most fluctuating of all the industries of the kind?—The shipbuilding and engineering group appears to be so.

4799. In that you include machinery making?—Yes, and tool making especially.

4800. Have you from statistics derived any information as to what would be the average earnings in that trade of a skilled workman; that is to say, the yearly income, supposing that while at work they were receiving a higher rate than the minimum wage specified by the trades union itself?—I am sorry to say I have not come to-day prepared with any wages statistics.

4801. My point is this: if that is a fluctuating trade even at the best time (as I gather from the information you gave last Friday) although the wages are high during periods of trade prosperity, the average annual income of an engineer

Mr. *Mather*—continued.

receiving, say, 38*s.* a week would not be 52 times 38*s.*, would it?—Not in a year of depression.

4802. Taking good and bad years together, there would be, would there not, throughout that trade a very large allowance to be made from year to year, even off the amount which he would receive if he were in regular work throughout the year?—There would be a considerable allowance to be made in a year of depression. I should say in a year of prosperity it is probable the overtime he would make would counterbalance that; but I could not say definitely without going into the figures.

4803. You have no statistics referring to overtime in this engineering trade?—Not at present.

4804. You do not know whether the aggregate overtime worked in a given year would in the main equalise the amount of time lost?—Times of pressure of work, such as the years 1889 and 1890, would be the time when I should expect that to be the case, but certainly not in periods of depression.

4805. Have you any information showing the tendency of labourers in rural districts to migrate towards the manufacturing districts of the country?—That was a subject I made inquiries into some three or four years ago, when I was not connected with the Board of Trade, and the statistics I obtained are not official statistics.

4806. Have you any idea that there is a gradual stream, be it either quick or slow, moving from the rural districts to the manufacturing districts?—Yes; the census figures make it quite clear that the rate of growth of population in urban districts is far greater than the rate of growth of population in the rural districts, even where the rural districts are not actually going down in population.

4807. Is there any counter current at all discernible from the manufacturing districts to the rural districts?—Not an important industrial current. There is a certain small current of old people who go back to the places they came from, but it is not an important one to take into account.

4808. Would you say the statistics you have furnished to the Committee are almost entirely based upon the returns supplied to you from all the sources of organised labour, though they do not cover by any means the whole case as to the population of which you know nothing, that is, the population outside organised labour societies?—They are merely a sample ——

4809. They are a sample of the condition of things existing among those persons comprised in organised labour societies?—Yes, they are based upon that.

4810. Would you consider the colliers to be the highest organised labour of the country, so far as numbers are concerned?—Yes, it is the largest group of persons organised into unions in any one trade; it is not the highest proportion, I believe, of the members of a trade.

4811. You mean it is not a trade showing the smallest proportion of non-union men out of the total employed in the trade?—I should think the most highly organised industry in the country from that point of view would be the boiler-makers and iron shipbuilders. I state that with

 reservation,

Mr. *Mather*—continued.

reservation, because of the difficulty of knowing how many are employed in the trade.

4812. Taking colliers first of all, is provision made by the colliers throughout the country for the maintenance of their fellow members when out of work from any cause other than strikes sufficient to tide them over the bad times?—The provision varies very greatly in different districts. I could not make a general statement about it.

Mr. *John Wilson* (Durham).

4813. Could you give the districts where the miners do provide out-of-work benefit?—They provide for it in Northumberland and in Durham, and there are some local societies in other parts (I have not got the complete figures with me) which provide something of that kind; but the great unions in other districts do not as a whole provide out-of-work benefit, though in a time of great depression in Yorkshire they started what they called a contingency fund for the purpose of assisting members out of work.

Mr. *Mather.*

4814. In taking the highly organised trade you have named of shipbuilders and boiler makers, do you consider that they fairly well provide for all their fellow members out of work other than at times of strike or a lock-out?—I should be going a little out of my depth to go into that. You would get it better from an official of the society.

4815. From your observations at the Labour Department, have you any reason to think that the constant changes in the introduction of the machinery in the manufacturing industries to economise labour diminish in the aggregate the opportunities of employment for the working classes?—That is a very big problem to handle statistically, and I could not say that the statistics which we have had hitherto for the small number of years in which they have been collected would throw any considerable light upon that question. I could state my own personal view, but it would not be really based upon our statistics.

4816. You have no means of saying whether the introduction of machinery to economise labour, which is a constant tendency of the times we live in, and which one does not know how to check, even if it were desirable to do so, provides incidentally other employment of a different character to the men displaced from the industry that is disturbed?—It is quite clear that important introductions of machinery do open up subsidiary trades and widen demands for products in other ways, and there are a number of different compensations in that way. But the statistical problem I understand you to put is, whether in the aggregate the employment given in all these new branches balances, or more than balances, or less than balances the numbers displaced; and that problem I have not sufficient figures to go into.

4817. You are, of course, aware that in all industries the tendency to employ machinery is not only a gradual movement, but it is proceeding by leaps and bounds in all directions, competition

Mr. *Mather*—continued.

inciting men to use their brains more, and there is a continual application of machinery in all directions to save labour?—Yes.

4818. From experience in your Department, is there any intimation borne in upon your mind that that was gradually decreasing the aggregate volume of labour?—No, certainly there are no figures at all which tend to make me think that in the aggregate the opportunities of employment are diminished in that way.

4819. You have not, I presume, made a study from investigations systematically pursued as to what might be done in agricultural districts by farm colonies, or other such means of employment; you have only reported upon what exists in various countries, and the small experiments tried in England so far?—That is all we have done.

4820. All the information you have upon that subject is in the article contained in your report on "agencies and methods for dealing with the unemployed"?—Yes; I have really nothing to add to that.

4821. Have you any means of knowing, in connection with these fluctuations in trade, how far they are affected by the sudden demand or cessation of demand from foreign countries for our products?—I think that what I call the cyclical variations of employment are considerably connected with fluctuations in foreign demand for our products.

4822. Have you followed at all in your Department the demand from abroad for the various products of this country?—We do not collect, though of course we observe, the monthly statement of imports and exports for various foreign countries; and although these only give values, not volumes, they are an interesting indication of the variations in demand.

4823. Have you made no comparison between those periods of great demand from abroad and the times when trade at home has shown a high state of prosperity?—Yes. It will be clear in glancing at these charts that the years in which employment is at its best are, as a rule, the maximum years of imports and exports; they do not follow absolutely, but they are connected; the general tidal movements of trade affect both.

4824. You find a distinct connection between high states of prosperity in our trades and the exportation of our products to other countries?—Certainly.

4825. Have you any reason to believe from your statistics that these demands from foreign countries for our own products are decreasing?—You are carrying me into purely trade statistics, which we do not handle at the Labour Department; that would be dealt with by the Commercial Department of the Board of Trade, under whose direction the figures are collected.

4826. Do you consider the Committee would be justified in coming to the conclusion from your evidence that we are only to rely upon your information so far as organised labour is concerned, and that the large mass of unorganised labour throughout the country has scarcely been taken into consideration in your evidence?—No. I think the evidence goes beyond that. We have only

Mr. *Mather*—continued.

only included organized labour because, in order to work out the percentage, you must have two definite figures. You must have the definite figure of the number unemployed and the definite figure of the number of persons who are employed, and we can only get those from members of an organization, but I have no doubt at all that the figures may be taken more or less as a sample; that they represent changes in employment as a whole. Without saying that the figures are equivalent, I should say that if our percentage goes up or down it means almost unerringly that the employment goes up or down.

4827. But organized labour throughout the kingdom would be better off, as regards the unemployed, would it not, under all the circumstances, than unorganized labour?—It is better off in the sense that the members of the trade would be supported, but it would necessarily be better off in the sense of having a smaller percentage not in work.

4828. But the members of a trade are mutually helpful to each other, you have told us, when the trade is organized?—Yes.

Mr. *Renshaw.*

4829. With regard to Chart No. 1, which you have placed before the Committee, and in which you show the percentage of the unemployed members of trades unions making returns to the Board of Trade at the end of each month in the period from December 1886 to January 1895, I think that shows that the percentage out of work in 1887 was a little over 10 per cent., whilst during the year just passed, 1894, it has been from 6 to 7 per cent.?—Yes; there was a month in 1887 in which it was above 10 per cent., and the average for 1894 is what you say.

4830. The average percentage for 1887 of those out of work was greater than it was in the year 1894, is not that the case?—Yes, the diagram makes that clear, but I have not worked out the mean comparison.

4831. With regard to the evidence you have given as to the tendency to recurrence of these cyclical periods, as you call them, of depression, it is correct to say, is it not, that in 1887 it reached its maximum in the early months of that year, and that the next period was the winter months of 1892?—I cannot say that the maximum was in the early months of 1887, because 1887 was the year in which these figures were first collected; the figures for 1886 might be higher.

4832. The maximum was in the year 1887, was it not?—Or in 1886, or before; the maximum point might be higher before these statistics were collected.

4833. You told us you thought these cyclical periods, which were easily recognised, were likely to revive?—Yes.

4834. Can you, from any information you possess, go beyond the figures you have placed before us in this chart, and give us what you consider were the cyclical periods previous to 1887?—No, I am afraid I could not give any figures bearing on the cyclical periods of employment before, because the collection of these figures was non-existent. The first time the Board of Trade collected these figures was in 1887.

Mr. *Renshaw*—continued.

4835. You told us just now, in answer to a question put by Mr. Acland, that these periods of depression of trade had recurred, and were likely to recur?—Yes.

4836. Could you give us any information as to whether the period that has elapsed between periods of depression of this kind has, in recent times, been a shorter period, or a longer period, than it was 20 or 25 years ago?—Twenty or 25 years ago there seemed to be a general opinion that the period was something between 10 and 11 years, and I think of late years there has been experience of a shorter cycle of more like seven years, but this does not decide the question whether the more usual cycle will not still be 10 or 11 years.

4837. Was not that period of 10 years more in regard to the value of money than to the employment of labour?—I think it was not exclusively with regard to the value of money. The researches of Professor Jevons (whose name is chiefly connected with it) had special connection with commercial panics, and periods of depression, and inflation of trade, with regard to which the value of money (by which I understand you to mean the rate of interest on short loans) was only one factor. Of course the particular labour statistics similar to those in these charts were not then in existence, and could not be tested; but I was assuming in my answer to Mr. Acland that the two things went together then, as they have been shown to go together now. There are various tests, such as imports and exports, and the tonnage of shipping cleared, and various tests of commercial prosperity or depression.

4838. May we take it from you that you consider that when money is specially cheap it is generally accompanied with a period of depression with regard to the employment of labour, and that, on the contrary, when money is specially dear, there is a period of good employment?—I could not say, without going into the question, how far the variations in the value of money would fit with the general periods of inflation and depression.

4839. But the information you would desire to place before the Committee generally is that, in your opinion, the period that elapses between the recurrence of cyclical trade depressions is now shorter than it used to be?—Yes, we have lately had experience of one or two shorter cycles. I wish that answer to be accepted as extremely provisional, because I do not consider we have quite sufficient data yet to fix the period, and we may be thrown out of our calculation next time.

4840. Could you give the Committee any information as to whether you consider that the length of period of depression is now greater than it was at an earlier date, or that it is shorter?—Subject to the reservation in my last answer, I should say there have been shorter cycles lately.

4841. You would say that the actual period of depression now is shorter than it used to be?—Yes; such figures as we have got, I think, rather point to that conclusion, but I do not wish more reliance to be placed upon that answer than it is worthy of, because the data are very imperfect.

4842. Coming to another point, can you give us any information at all with regard to the em-

Mr. *Renshaw*—continued.

ployment of female labour in the country. The "Labour Gazette" gives an enormous amount of information with regard to the employment of male labour, but a comparatively small amount of information with respect to the employment of female labour; can you give the Committee any idea as to whether female labour is replacing, in any of the main industries of the country (especially textile industries), male labour to a large extent?—There is a great deal of information bearing upon that question to be extracted (some has been extracted) from a comparison of the Census Returns of 1891 with those of 1881, and in the "Labour Gazette" for February and October 1894 some information derived from these sources was published. Moreover, in the Abstract of Labour Statistics, on pages 136 to 141, we compare the proportion of persons employed in certain important occupations in 1891 and 1881, first for men and boys, and then for women and girls; and from those two tables a good deal of information can be gained as to the extent to which any replacement is going on.

4843. Would you be able, for the information of the Committee, to put in a Paper giving the best available statistics you have with regard to the replacement of male labour by female labour, in the textile industries, for instance?—Yes, I could put in a Paper; but I might just say perhaps that a report on the subject of the employment of women, and the bearing of the census figures thereon, is now in proof form, prepared by our Lady Labour Correspondent, and will be presented to Parliament within the next few weeks I hope; and that I think will give the whole particulars.

4844. Could you state to us whether, in your opinion, there has been any considerable replacement of male by female labour owing to the changes in machinery, which is much lighter work than it used to be in many cases?—I should like to refresh my memory as to the figures.

4845. Perhaps you will put in a general Paper about the matter?—Yes, certainly. (*See* Appendix, No. 16 (A.)

4846. The honourable Member for Battersea suggests that it would be well to add particulars as to the amount of women labour displaced by boys and girls; could you add that information also?—I will try to do so. (*See* Appendix, No. 16 (A.)

4847. There is one other point I wish to ask if you could give the Committee any information upon, and that is this: whilst you told us it was not the duty of your Department to watch the relative import and export trade of the country, have you any statistics available by which you could give the Committee any information as to the amount of labour, say, in the textile industries in foreign countries, spread over a period of recent years, taking the case of Germany, Italy, and Russia, or some other countries?—I think the examination of their Census Returns would give the particulars; I could look the matter up; (*See* Appendix, No. 16 (B.) I have not the figures with me. I think you said the textile industries?

4848. I only suggested that as being a limit; otherwise the inquiry would involve looking into so many figures?—The figures for mining are

Mr. *Renshaw*—continued.

contained in a Return presented to Parliament in 1894 [Parliamentary Paper, No. 317].

4849. Is it not the case that there is a general feeling in the country that there is a very considerable amount of labour now employed in manufacturing in certain countries abroad goods which used to be produced by labour in this country, and which, under the protective tariffs of certain countries in Europe, are now mainly produced within those countries themselves?—I think there has been a great advance in manufacturing industries certainly in many countries that are now making for themselves things which they used to import.

4850. Is it your view that there is a constantly increasing development in those foreign countries?—I think you will have to distinguish between the countries.

4851. I specially referred to those that have made great changes in their tariffs in recent times?—I am not prepared to trace the alteration in tariffs as connected with the amount of manufacture carried on in foreign countries. But a report on the question that would throw a great deal of light upon it was presented to Parliament within the last year or so by the Board of Trade, but not by the Labour Department of the Board of Trade. The reference number is [C.–7349, of 1894.]

Mr. *John Burns.*

4852. Is not the loss of commodities exported from England counterbalanced to a great extent by the machinery made for and bought by other countries for the manufacture of those articles; in fact, what Nottingham and Lancashire lose in lace and textile fabrics, do they not almost gain in making machinery for countries where goods alone were previously supplied?—There is no reason to believe that the total value of exports has permanently fallen off.

Mr. *Bartley.*

4853. As regards the cycles that you speak of, can you give us any information as to the general causes which lead to these cycles of want of employment?—I could only say they are connected with the general movement of trade depression and inflation, and the recurrence of commercial panics.

4854. All over the world?—Not quite simultaneously, perhaps, but they are often all over the world. They move very fast. But as to what the ultimate causes which lead to them are I am not now prepared to give an opinion.

4855. The information you have is not broad enough yet?—Quite so.

4856. I suppose in time it may be so?—I think it may be.

4857. I wish to ask you one other question with regard to labour bureaux and labour registries: did I understand from your evidence on Friday that you consider that the trades unions object to these registries?—No; I have not heard that the trade unions as a whole have made any objection to the introduction of labour registries. In fact, many resolutions have been passed by trades unions and trades councils in favour of such registries. But there has been, no doubt, an expression of apprehension by individual members of trade unions that labour registries

Mr. *Bartley*—continued.

registries might be used as a method of interfering with trade disputes.

4858. You do not share that view?—I think it may be a danger that will have to be watched, but I should say that it was quite easy to make regulations to prevent its being so.

4859. Do I understand you that, supposing that labour registries did have that effect, that would be a reason for not having registries?—It would undoubtedly make them unpopular, and the moment a registry becomes unpopular in the neighbourhood it loses much of its utility; people will not resort to it.

4860. Is not a registry the most obvious arrangement for collecting information concerning want of employment?—I do not think a registry is of much value for collecting information as to want of employment, except to the degree to which it becomes a regular thing for a man out of work to put his name on it. If for any reason it is passed by, and people do not as a fact use it, then it loses its value, because first the employer will not use it, and secondly, the statistics you get from it cease to be representative.

4861. Still, would you not think that that was one way in which a general knowledge of the unemployed could be obtained throughout the country?—Yes, I think it is certainly one way. We collected the figures for that reason.

4862. So far, you think it would be a useful thing if it could be established all over the country?—Yes, in so far as it enables people to get work. If it was proved in any district that the labour bureau was found not materially to assist people to get into work, it would cease at once to be a useful barometer of the state of the market, because there is no other inducement to people to put their names down, and that is a very important point.

4863. Would it not necessarily follow that the labour register must be less useful in times of depression than in times of inflation?—I think so.

4864. Is that one of the great difficulties of it?—That is one of the great difficulties; in other words, it does not increase the volume of work that is going.

4865. Of course it cannot do that?—It cannot.

Chairman.

4866. A series of labour bureaux might help depression in one district by drawing from the inflation of another district, might it not?—That is an idea that has been very frequently promulgated, and it was put a good deal before the Royal Commission on Labour by various witnesses. I do not think at present there are a sufficient number of labour bureaux to make collective action very valuable.

4867. It would have to be a pretty elaborate system, I suppose, to have that effect?—The most elaborate attempt of that sort that has been made is in the Grand Duchy of Luxemburg, where the Post Office has been used for the purpose.

Mr. *Bartley.*

4868. In times of general depression it would not help, because there would be no work to give anywhere?—No, unless the authorities undertake works and take the men on.

Mr. *John Wilson* (Durham).

4869. Taking the general depression we have now, how would the labour bureaux and registries help us in this present situation?—The extent to which they do help us is shown accurately, I think, in these statistics of the operation of the bureaux, to which I called attention in my evidence. It is not very great, but it is something. A certain proportion of those who put down their names at registries are enabled to get situations through them.

4870. My point is this: there is a general depression in every trade in the country; how would the labour bureaux or the registering of names help the employment of men at the present time?—It would only help it to a limited extent by increasing to some extent the chance which a man who is out of work has of meeting with a suitable place.

4871. But there is no demand anywhere for labour; there is in every district at the present time abundant labour, in fact more than is wanted. What I want to know is whether you have thought out the question of how a national system of labour bureaux and registries would help to relieve the depression that exists at such a time as the present?—It could not possibly counteract the effects of the depression.

4872. Would it be any use in easing off the pressure upon the unemployed at the present time?—I do not think it would be of very great service. It might be of certain service, because it is not the case that all trades are depressed in all places at the same time equally; for instance, there are local demands in the building trades owing to accidental causes, and there may be a brisk demand in one place and no demand in another, and to that extent it may be of some help to spread knowledge with regard to the labour market.

4873. This Committee has been brought into existence by special circumstances which I think, speaking of them broadly, are national in their application. Even a complete system of labour bureaux all over the country would not help us in the situation we find ourselves in at present, because I take it there is not a trade but what is affected by depression. Is there at the present time a trade where there is not a superabundance of men?—There is no great depression in the building trade except to the extent to which the frost stopped work. Of course, while the frost lasted the building trades were very badly off, but I do not think the building trade could be described as depressed otherwise.

4874. You would not recommend the system of labour bureaux as being a panacea for the present depression?—I am really not prepared to make recommendations.

4875. You were asked a question or two with regard to the effect of organisations on depressions in trade, and I think a question was put to you by Mr. Acland as to whether the organisation of trade did not increase the volume of unemployed; is it your experience that organisations have had the effect of discharging what is called, I think, the inferior men?—I think there is no doubt that a trades union with a standard time rate of wages has often a certain small margin of members on its unemployed books because they cannot earn the standard rate of wages, and

Mr. *John Wilson* (Durham)—continued.

the union prefer to pay them unemployed benefit rather than allow them to reduce the standard rate of wages by competition. It is a very small margin, but it is unquestionably an element. In other words, the unemployed fund of the union acts both as an insurance against out-of-work and an insurance against lowering the standard rate of wage. To that extent the answer to your question is, yes.

4876. Is the consequence of organisation that men are out of employment who otherwise would be employed?—The people I am referring to are in receipt of unemployed benefit; are supported by the unions.

4877. They would not be in those circumstances if the trade organisation had not existed; is that what we are to understand?—Yes.

4878. Then are we to understand that if the trade organisations had not existed the volume of unemployed would not have been so large as it is?—No, that would be a very unsafe generalisation; because the margin I speak of is a small proportion, and the general effect of trade organisation upon the volume of unemployed would not be largely affected by it. It is to be remembered that unions help their members to get employment in various ways.

4879. But I understand that where men work by time and not by piece the result of organisations amongst employers and employees is that the inferior men, as they are called, are discharged?—That is true.

4880. The further result is that if there had not been trade organisations these inferior men would not have been discharged?—They would have had their chance with the others; but I do not say that the volume of want of employment, including partial want of employment as well as total want of employment, would have been any less, but that the action of the higher organisation of industry does tend to precipitate (to use the Chairman's expression) the want of employment upon a small margin of men, the inferior workmen.

4881. You spoke of these people getting out-of-work benefit in times of depression; do you not think that these organisations are really useful in the country in the way of providing out-of-work benefit to such members of the union?—I think they are very useful.

4882. Supposing there had not been out-of-work benefit, and these men were out of employment, how would the men have existed?—I cannot say.

4883. If there had not been a trade organisation, and a time of depression had fallen upon them such as we have now, where would the men who are now being paid out-of-work benefit have got subsistence?—I do not know; I can only say their state would be very much less desirable than at present.

4884. Therefore the organisations are useful?—Very useful.

4885. As regards the influence of strikes on the unemployed, you said in your statement on Friday, "In the sixth place, I should like to notice the influence of trade disputes on employment in allied trades"; do you mean just immediately when the strike is taking place, or have you in mind the more remote application?—I meant when I used the illustration its influence when the strike is taking place, or immediately after; but no doubt there is a more remote application which I had not then in my mind.

4886. Would you think that the strike which took place in 1893 in the coal trade would have any influence upon the depression at the present time?—I could not give any exact information on that point; it had a very considerable influence at the time, and during the succeeding winter.

Mr. *Heywood Johnstone.*

4887. A trade organisation requires, does it not, a minimum wage to be paid to those that belong to it?—There is not always a standard of that sort. A certain number of unions have a minimum wage, but it is not an essential feature.

4888. I understand that you have no local agricultural correspondents?—We have one central agricultural correspondent, and he is in touch with a large number of local correspondents, but they are simply responsible to him.

4889. Do all the agricultural reports come to you through Mr. Wilson Fox?—That is so.

4890. Do you know at all the class of persons he is in communication with?—They are very various. When he visited the various districts for the two Commissions for which he inquired into the state of agricultural labour, he came into touch with a large number of people, and he noted those whom he considered in each district (independently of their status) to be the most trustworthy and the most useful in giving information. Those are his agricultural correspondents. Some of them are farmers, some are land agents, some are labourers, some are clergymen, some are relieving officers, and so forth.

4891. Some are actual labourers, you say?—Yes, and some are secretaries of labourers' unions.

4892. Do you take any steps to find out what various classes of informants he has in different parts of the country, or do you leave it entirely to him?—It is left largely to him; but before I came to give evidence I went into the matter with him in case the question should be gone into.

4893. Are you able to say from the result of his investigation that his correspondents embrace all classes in the agricultural world?—Yes, but of course not all classes in all the districts; that is to say, he has not a member of each class in every district.

4894. I understood you to say that there had been less lack of agricultural employment this winter than had been anticipated?—Yes, up to the frost.

4895. Before the frost employment in the agricultural districts had been fairly continuous?—It had been less discontinuous than had been expected. It was very generally anticipated at the beginning of the autumn that in a district such as the Eastern Counties, where work is liable to irregularity of this kind, farmers would very greatly curtail their labour bills by discharging men; but, as a matter of fact, in many cases they curtailed their labour bills by the reduction of wages instead.

4896. Do I understand that that applies solely to agricultural labourers, or would it also embrace the

Mr. *Heywood Johnstone*—continued.

the kindred employments of the men who go with engines and do the threshing work, and the thatchers?—Yes, it would include them.

4897. You think their work has been fairly continuous?—It varied a great deal from district to district, and I should rather make further enquiries with regard to those particular classes before answering the question definitely.

4898. And, also, will you enquire whether it has been as well paid as usual?—I will make enquiries as to those two points. (*See* Appendix, No. 16 (C.)

4899. You have spoken as to the migration of agricultural labour to towns?—Yes.

4900. A great number of those who have come to towns have come there engaged for particular purposes, such as policemen and railway men on the line?—Yes.

4901. Are there any great number of men, to your knowledge, who come from the country to the town simply because they cannot find employment in the country?—I have no doubt there is a certain element of that kind. I have no doubt the impulse that drives some to come is because they cannot get work in the country, but I think that those would be a small proportion of the whole; I mean those who come up without a definite prospect of work in the town.

4902. The bulk of those coming to London come with a definite prospect of something to do in London?—Yes, I think so.

4903. You said you judged the volume of migration from the country by the Census Returns?—That was one of the tests, the most useful on the whole.

4904. That would refer, would it not, not only to migrations from the country to London, but to migrations from the country to all urban districts?—Yes.

4905. Then suppose a labourer lived on the edge of a suburban district and the boundaries of that district were enlarged so that his dwelling house was taken in, he would count as one of those who had migrated from the country to the town, though he might still be working on the same farm as before?—That would be so; but then I should not use the Census Returns without further inquiry for the purpose of judging of the total number who had migrated, but simply to show the broad fact that certain urban districts have increased very largely, and were therefore presumably the centres to which there have been migration.

4906. You have no means of checking how far the apparent total increase was due to the alteration of boundaries or the alteration by migration?—Except by special inquiries with regard to the particular district. My own investigations were solely concerned with London, and in that case there had been no re-adjustment of boundary during the period in question.

4907. I understood you to say you had a recent report from Mr. Wilson Fox with regard to the Salvation Army colony at Hadleigh?—Yes. It was an informal report; he simply went down there to visit it.

4908. Do I gather that at present 350 men are engaged on 300 acres of land?—The market garden is 300 acres, but the total acreage is a good deal more.

Mr. *John Burns.*

4909. Is it not about 1,800 acres?—I think it is about 1,500 acres, excluding tidal waters. The colonists are very largely not employed in farming.

Mr. *Heywood Johnstone.*

4910. A number of those men were employed in road-making, were they not?—In making roads and in the brickfields, and they have been engaged, at least in past times, making a bridge and tramway.

4911. On work which we may describe as making land apart from the cultivation of land?—That is so.

4912. That experiment has not proceeded far enough for you to be able to say how many men can be permanently employed remuneratively upon those 1,800 acres in agricultural operations?—No, I could not say.

4913. Have you in your Department any information with regard to labour colonies in the colony of Victoria?—We have information with regard to the employment of the unemployed in Victoria in the construction of railroads; but I gather that is not quite what you refer to.

4914. No, that was not what I meant; I only got my information from newspapers which I read some months ago; I believe an Act of Parliament was passed in the colony of Victoria under which farm settlements have been attempted?—Yes, I know there has been an Act passed.

4915. Perhaps you would look into the matter and let us know how far those settlements have been successful?—I will do so. I have some information with regard to the same thing in New Zealand.

4916. I am referring especially to Victoria; would you kindly look up the information upon the point?—Yes, I will make a note of it. (*See* Appendix, No. 16 (D.)

4917. I think the information you have been putting before the Committee relates solely to employment in manual work; you could not tell us how many brain workers are out of employment?—No.

4918. Or whether any distress exists among the population of clerks of one kind or another?—I could give you no figures. Of course, clerks can usually register at labour bureaux.

4919. You have no figures to show how many are out of employment?—No.

Mr. *Pickersgill.*

4920. I should like to ask a question with regard to what you said about cyclical variations; would a depression or inflation caused by war be regarded as a cyclical variation, or would the war be regarded as a disturbing cause, the effect of which would have to be eliminated in determining your law of industrial cyclical variation?—It would have to be regarded as a disturbing cause, the effect of which would have to be eliminated.

4921. Now you have drawn a distinction between stable and fluctuating trades, and you have told us the two classes shade off one into the other; my question, then, is this: have you formed, or can you form, any rough estimate of the comparative number of persons employed in trades, which, according to your standard, would certainly be stable, and the number of persons employed in trades which, according to the same standard,

Mr. *Pickersgill*—continued.

standard, would certainly be fluctuating?—I tried to do that a month or two ago; I found it very difficult, and the results did not completely satisfy me. I have not brought them with me, but it is possible to make three columns, a column of those which are certainly stable, a column of those which are certainly fluctuating, and an intermediate column, and so get some rough idea. It would, however, involve a good deal of guesswork, and those approximate statistics are rather harmful than useful sometimes.

4922. You prefer not to give an opinion; it is too problematical?—It is too problematical in the present state of our statistics.

4923. Then I will not press it; you have told us, with regard to these percentages of unemployed, that we cannot, from the percentage that you have given, infer that the same percentages rule in the trade of the country generally?—That is so.

4924. But, confining your attention to any one of those trades of which you have given us statistics, my question is this: what is the relation between the percentage of unemployed among the unionists of that trade and the percentage of unemployed among the non-unionists of the same trade?—Before I answer that question, may I say this: you will understand, with regard to these charts, that the building trades curve, for example, represents the percentage of unemployed in such unions in the building trades as give unemployed benefit. I am not clear whether you mean to ask if this percentage shown by this curve is higher or less than the percentage of the persons unemployed in the total building trades or in those particular trades which have unions on which we based these returns.

4925. Perhaps I had better put the question in a leading form. What I really want to get at is this: is not the percentage of unemployed among the non-unionists, probably, at least, larger than the percentage of unemployed among the unionists in the same or cognate trades?—I could not say that, because they have opportunities, to some extent, of more continuous employment at lower wages.

4926. Who have?—The non-unionists. In trades where there is a standard rate the inefficient non-unionist might get more employment at a lower rate than the inefficient unionist. Against that is, of course, to be set the fact that many of these unions contain the cream of the trade, men whom the employers would wish to take on and keep on, and, also, that the unions help their members in various ways to get employment; but which of those considerations outbalances the other I am not prepared to say.

4927. You have told us that there is a growing tendency to dismiss, when the pinch comes, the less efficient workmen?—Yes, there is that tendency in some trades, and I think it is growing.

4928. Obviously you would agree with me, I think, that a union is interested in acquiring a certain standard of efficiency in those whom it admits to its membership?—That is so.

4929. So that the standard of efficiency would be higher inside the union than outside?—I should think so. You are rather referring, I presume, to unions that have a standard time rate.

Mr. *Pickersgill*—continued.

On the other hand, there is a certain element of people who do not belong to an organization, not because they are inefficient but because they do not care to belong to it.

Mr. *John Burns.*

4930. But there is a standard efficiency rate in nearly all unions, is there not?—Nominally perhaps, but I think it is much more enforced in some than in others.

Mr. *Pickersgill.*

4931. You have been asked about the change of the trade in Nottingham. There is another town I want to ask about, and that is Coventry; have you followed at all the changes in recent years in the trade of Coventry?—That is a very remarkable instance of a town in which the staple trades have changed; the watch-making trade has gone and the cycle trade has come in, and I think I have heard it stated that there has been a real transfer of people from one to the other.

4932. There has been a transference of the same persons from one trade to another?—Yes. I am speaking from information I have received, not from any statistics we have in the Board of Trade. I have heard it stated.

4933. Coventry used also to be famous for its ribbon manufacture, I believe?—Yes.

4934. Do you think there has been any transference of those who were employed in the ribbon manufacture to the cycle manufacture?—That I could not say.

Mr. *John Burns.*

4935. You have given us the necessary statistics with regard to the proportion of unemployed in those trades that have unions and are fairly well organised. Have you any means of ascertaining the proportion or the number of unemployed women, lads, and girls, in which no organisation exists?—No; there are no means that I know of of getting figures for the proportion in the absence of an organisation. We know there are fluctuations in the employment of women and girls and boys and lads.

4936. But with regard to the girls and lads and women, there are at present no reliable data on which to found even fairly accurate opinions as to the proportions of their unemployed?—There are no figures that I know of; I have seen none, and I do not see how to get them.

4937. Have you any reason to infer that the proportion of women who are unemployed without organisation is as great as unorganised male labour?—No; I should say that all the evidence there is would point to its being considerably less with women.

4938. That women have the adaptability and greater opportunities of getting odd jobs than unskilled unorganised labour?—At all events, from whatever cause it proceeds, though women may get low wages, there is not the same difficulty in getting work.

4939. Not the same difficulty in getting work for women as for unskilled male labour?—That is so.

Mr. *John Burns*—continued.

4940. Is that due in your opinion, or on your information, to the fact that women frequently have employment found them by individuals and by charitable agencies where male labour could not so be employed?—That may have some effect, but I do not think that that would have any appreciable effect on the great staple industries in which women are employed.

4941. But apart from staple industries like the textile trades, where a large proportion of women are employed, what do you say to these other industries?—No doubt there are miscellaneous women's industries in which what you say plays a part.

4942. Does the Labour Department contemplate taking steps to get something like a better census of unemployed women?—We do contemplate most certainly taking all the steps we can to improve the statistics with regard to the employment of women, and, of course, that incidentally throws light on the non-employment. We have not seen our way to suggest, or attempt anything like a census of unemployed, either of women or men.

4943. Do you know the census that was taken in March 1887 of the unemployed in four typical districts of London: St. George's-in-the-East, Hackney, Deptford, and Battersea?—Yes.

4944. At that census, covering a population of 125,313, there were roughly 30,000 men examined?—Yes.

4945. And 8,008 of those were out of work?—They stated themselves to be out of work.

Mr. *Bartley.*

4946. Who took the census?—It was taken under the superintendence of Dr. Ogle, the Superintendent of Statistics, who, however, in his report, threw considerable doubt on the value of the figures.

Mr. *John Burns.*

4947. Of that 30,000, 8,008 were out of work?—I should again qualify that by saying "stated to be out of work."

4948. And out of that 30,000, 5,964, or 74 per cent. of the 8,008 who declared themselves to be out of work, said that they had been out of work for 12 weeks, or more, is not that so?—Yes, that is so.

4949. Then out of the 30,000 there were 1,132 who derived assistance from parish clubs, or charity alone; is that true?—I think that is a proportion of the 8,008; not of the 30,000.

4950. Now I want you to go from those figures to the wages of those men as showing their incapacity to tide over bad times. The average earnings of the 30,000 skilled and unskilled was 24*s.* 7*d.* when in work?—Yes. I will take that figure from you.

4951. The average rent was 6*s.* 2*d.* when in work, was it not?—I have not the means of following your figures, but I have no doubt that it is so.

4952. While the out-of-work rent was 4*s.* 8*d.*?—Yes.

4953. That census, if reliable, would approximately represent what happened during the severe weather of 1894, would it not?—I am very much puzzled to know what it does represent when I read the report and compare the figures, because they do not seem to be consistent with themselves. I feel incapable of drawing inferences from them, except as to the difficulty of taking a census in this particular way.

4954. But even if we subtract 25 per cent., or even 50 per cent. of the gruesomeness that these figures indicate, it would indicate an incapacity on the part of the average workman, particularly the unskilled labourer, to have the means by which he could tide through a particularly depressed period?—The statistics of wages and of rent would bear that construction, but then on the other hand I find that the great majority of these people stated they had done no work for 12 weeks or more, and, nevertheless, only 1,132 of them had received any kind of relief either from parish, club, or charity, and only 2,288 had derived any assistance from earnings of other members of their family. That leaves 4,588 who asserted they had been living, themselves and their families, most of them for three months or more, without any kind of assistance. That would indicate a very great power of tiding over, and that is the kind of inconsistency which I see in the figures, and which I cannot account for.

4955. And at the same time the figures did not give the number of men in trades unions, or does the term "club" comprise trades unions?—"Club" would include the benefit of trades unions.

4956. For the purpose of comparison the 1887 census is not fairly applicable to what was produced by the severe weather of 1894 and the beginning of 1895; would you take that view?—I think that the want of employment in the winter of 1886 which gave rise to this particular census was not produced by a state of prolonged frost, but was a general depression. What we have been experiencing during the last month or two is an exceptional paralysis of outdoor trades due to the prolonged frost, and not I think an exceptional depression. To that extent I think the cases would not be parallel.

4957. You differentiate between the conditions brought about by the sudden paralysis of trade and industry through the severe frost and that brought about by a depression spread over a longer number of months than the frost prevailed?—Yes, I should draw that distinction, and also point out that the frost would only paralyse particular groups of trades, and no doubt within those trades the effect would not be very distinguishable.

4958. You said the Amalgamated Society of Engineers spent in one year 1*l.* 17*s.* per member for unemployed benefit; I am taking the 1893 report. That was the unemployed donation alone. Would you not add to that a certain proportion of the money that that society spent out of sick benefits, and which could clearly be traceable to want of work or illness through want of work, a large or a small portion?—I suppose that in some of the branches there may have been people who received sick benefit who might equally well have been put on unemployed benefit, but I have no detailed knowledge on the subject. I should have imagined that that would

Mr. *John Burns* continued.

would be only true in individual cases, and that it would not be to any large extent true.

4959. Supposing, in 1893, the Engineers' Society spent 1*l.* 17*s.* on unemployed donation alone, that there ought to be added to that, due to unemployed, to be paid out of sick benefit superannuation increased owing to want of work, and benevolent grants and other funds, an amount that would add 8*s.* to the 1*l.* 17*s.*, or making the contribution for each engineer 2*l.* 5*s.* directly and indirectly due to unemployed benefit?—I could not say anything definite about the 8*s.* you suggest; I have no doubt there would be an element of that kind.

4960. But if an experienced official of the Engineers' Society were to say that 2*l.* 5*s.* was the amount that the Engineers' Society spent in 1893, you would take that as a fairly accurate amount?—Expended either directly or indirectly on the unemployed, you mean?

4961. Yes?—I see no reason to doubt that figure. If you made a similar calculation with regard to each benefit, and added to the sick benefit people whose sickness was partly due, as it might be, to want of work, and then add to the superannuation benefit a certain amount from the same cause, you would get a total amount of expenditure which would be in excess of what they actually spent. We are dealing with the question of over-lapping, and there is a give and take between the benefits.

4962. But overlapping operates less with the unemployed benefit than it does with any other?—Yes, I think that is likely.

4963. Is it not a fact that in 44 years the Engineers' Society (I mention them because I know most about them) spent two millions of money on unemployed benefit, or 52*l.* per member in that period of 44 years?—Yes, I have no doubt those figures are correct.

4964. And if it were possible for the average skilled and unskilled labourer to be able to spend that amount the question of lack of employment would be met to a very large extent?—Yes, in trades in which the chance of being unemployed was not greater than the engineers.

4965. And in the event of this provision not having been made in those 44 years by engineers do you think that the community in other ways would have to have spent a similar amount either in poor law relief, or in relief works, or in other agencies?—I have no doubt there would have been a considerably greater expenditure in poor law relief.

4966. Then trade unions, as apart from conferring trade union benefits on their members, are frequently rate-reducing associations?—I think all these provident societies and friendly societies are of that kind.

4967. We now come to the various remedies and agencies that have been suggested for the unemployed. Have you paid much attention to labour colonies?—No, not apart from the information which is embodied in the Board of Trade Report.

4968. Did you yourself visit the colonies, an abstract report of which appears in your volume?—No, that was done by Professor Mavor, who is now in Toronto, who visited the colonies on behalf of the Board of Trade.

Mr. *John Burns*—continued.

4969. Have you yourself personally inspected the labour colonies?—No, except the Salvation Army colony at Hadleigh.

4970. The colonies that you describe in your Unemployed report, where they are not penitentiary and reformatory, are positively penal in their character and constitution?—There are penal colonies in Belgium and there are some in Holland, but the German labour colonies are free colonies, as they are called. They are not of the penal kind at all, nor are the Dutch so-called free colonies of the penal kind.

4971. Is it not a fact that in these colonies that are called free labour colonies the percentage of chronic vagabonds, tramps, and discharged prisoners, is very large and is proportionately increasing?—It is very large in the German labour colonies certainly; in fact, the figures show that 76 per cent. of the inmates have been at one time or another in prison, chiefly on charges of begging, vagabondage, and drunkenness.

4972. Then, apart from the penitentiary and compulsory reformatory labour colonies, and the free labour colonies which you have mentioned, which have 75 per cent. of their population discharged prisoners, there are no labour colonies as we understand the term in England?—Not unless you include that little colony at Starnthwaite conducted by the Home Colonisation Society.

4973. Have you any evidence with regard to Starnthwaite?—There is a short account which we published in this Unemployed volume, but I have not made inquiries since.

4974. What is the number of people in the Starnthwaite colony?—My figures are not further up to date, but I believe the number is very small.

4975. There are less than 40, are there not?—There were 22 persons at the time we made the report.

4976. The evidence to be adduced from an experiment of 22 persons would hardly be applicable to a labour colony of 2,000 unemployed workmen, indiscriminately selected, would it?—I should think it would certainly not be applicable to an indiscriminate selection of 2,000 persons.

4977. How do you view labour colonies as a remedial agency for the unemployed?—That is rather asking a question of opinion on policy.

4978. I will put it in another way. Have labour colonies, where started as a remedial agency for the unemployed, met with any success?—I think you may certainly say that the German labour colonies have not practically touched the question of fluctuation of employment in Germany; they have a floating population which use them, and come into them and go out of them, and come back again; but as regards the ordinary efficient unemployed workman, he does not choose to be one of the 24 per cent. of persons who have not been in prison in the colony. The classes will not mix.

4979. Would you compare these labour colonies with the old English casual wards?—They keep them a considerably longer time.

4980. These colonies are not places to which the average respectable workmen would gravitate even

Mr. *John Burns*—continued.

even if they were out of work?—No; that is certainly so.

4981. Generally speaking, they are viewed with repugnance by the average workman and trades unionists on the Continent, are they not?—They do not seem to be regarded as places to which the efficient out of work workmen will go.

4982. Then beyond the 75 per cent. of discharged prisoners and the very poorest and unorganised of the unskilled labourers, labour colonies are not patronised?—I am speaking now of the German labour colonies; they are not. Of course, in Holland, it is quite a different system.

4983. Was it reported to you that the tendency of these labour colonies has been to reduce the relative high rate of wages in seasonal trades?—No; I cannot say that. The report we had tended to show that the influence of the colonies on the rates of wages in the ordinary market was practically insignificant, but that was due to the very fact that they did not embrace within them any large number of efficient workmen.

4984. I see that on page 287 of your own Report you say, "While this class of labourers would find it hard indeed to live were it not for the colonies, the apparent tendency is for the colony, in common with other forms of relief, to diminish the relatively high rates of wages in seasonal trades." Do you adhere to that paragraph in your report as applicable where it applies?—That paragraph refers, I think, to the effects which would be produced by colonies which embrace a considerable number of ordinary workmen. I have no doubt at all that any scheme which would find a subsidiary employment in the slack time for persons in seasonal trades would eventually tend to reduce the relatively high wages of persons engaged in the seasonal trades.

4985. Then a labour colony in your opinion, and in the state of your information, rehabilitates men, and where that is done by a non-competitive industry good is done to the men so rehabilitated, but where competition with other trades enters in then the proportion of the unemployed in the non-labour colony workmen is increased; is that so?—I hardly meant that. No doubt to the extent to which these agencies rehabilitate men they do an unmixed good. There is not much evidence that they rehabilitate men to any great extent in the German labour colonies, but if they do it I should regard it as an unmixed good without any counterbalancing danger that I can see, but, in speaking of reducing the relatively high wages in seasonal trades, I do not mean to say they would reduce the chance of employment in seasonal trades.

4986. They would lessen the prices?—What I mean is, supposing at present there is a trade which can only be carried on, let us say, nine months in the year; on the whole there will be a tendency for the rates of wages, while the men are employed, to be rather higher than they would with an equally skilled and eligible trade which went on for 12 months, and if some artificial means were found for supplying the three months' gap so that all the people employed in the nine months in the seasonal trades get another trade in three months, the forces which operate to keep up the wages in the nine months would no longer operate, and, in the end, the rates would fall.

4987. That assumes there is not already a trade existent for making over the 12 months what you anticipate will be made in the three?—No doubt.

4988. But is that so?—That is not so, but I thought you were still referring to this paragraph on page 287, and it was in connection with that, that my answer was given.

4989. I will take you to another paragraph on page 288 of this Report: "In the case of the colonies in the cities, it is said that brush makers, toy makers, and others whose industries are interfered with, look upon the colonies with no favourable eye;" is not that generally applicable to labour colonies all over Europe, whether they are free or reformatory?—It is applicable, more or less, to any efforts for finding work of any kind for people of a kind which is already carried on in the labour market. It is equally applicable to our casual wards, for example.

4990. But of course to a greater extent as machinery is used?—The more the volume of production the more the complaints are likely to be.

4991. Have you yourself visited the Hadleigh Colony?—Yes.

4992. Have you collected sufficient information or seen sufficient to enable you to give an opinion as to the wisdom of following that in other parts of the country?—The whole organisation of the social wing of the Salvation Army is so unique that it is difficult to contemplate its being multiplied all over the country. It is all part of one organisation, with its labour bureau, and its workshops and its farm colony.

4993. Do you think that the evidence furnished by Hadleigh Colony is sufficiently good for the municipalities to generally adopt such a system in connection with the recurrence of the unemployed question every year or two?—I do not think there is sufficient positive evidence at present, certainly.

4994. How long has it been in existence?—The social wing was first founded in 1891 and the farm colony was established in the course of the same year, but my personal knowledge of the colony is entirely based on a visit in the summer of 1893, when it had been going on for less than two years, I think.

4995. Are they all single men at that colony?—They are all either single, or living apart from their families.

4996. At Hadleigh, as in the Belgian, Dutch, and German colonies, the colonists are single men or married men living apart from their families?—Excepting the Dutch. The Dutch colonies are for men and their families.

4997. Do you think that a labour colony formed on the Hadleigh lines would be applicable to the married workmen?—No, I do not see how it is applicable to a man with a family.

4998. Do you think that, generally speaking, the workman, skilled or unskilled, in London or in any other big city, would voluntarily go to a labour colony for two or three months, or even for six months, rather than run the chance and risk of not finding employment for one or two months in a city of which he was a citizen. He would rather stay in the city, would he not?—

Mr. *John Burns*—continued.

There is always a great difficulty, certainly. The city man wants a strong inducement to go out into the country.

4999. The city man has a great personal repugnance to country life?—Yes, that is so.

5000. And where he has a family that repugnance is increased?—I should think so in many cases.

5001. And generally speaking relief works and agencies for the unemployed in cities must generally be found in the cities themselves rather than in the country?—That is just the point on which I would rather the Committee drew its conclusions on the question of policy.

5002. In collecting information have you not gathered sufficient to form that view?—Most of the relief works are in the cities.

5003. Is it in the direction of starting new workshops in the country or distributing work over a wider number that the cities can provide for their unemployed?—I have little official information on this subject. We have not been administering relief works. It is rather from a statistical point of view that we have collected information.

5004. You have not overwhelming testimony on the part of the unemployed themselves in the cities of a desire for labour colonies and for agricultural employment?—No; both those have been frequently mentioned as possible remedies, but no experiment that has been carried on in this country can be regarded as conclusive in this sense.

5005. Is it not a fact that as contact with the difficulty of running labour colonies on agricultural work takes place, labour colonies are less popular to-day than they were 10 years ago for the unemployed?—It seems to me there has been so little done in this country, that probably the ordinary unemployed man has no knowledge on the subject.

5006. But is not the fact that there has been so little done rather proof that the average man in the street does not attach much importance to labour colonies?—There may be a great deal in that; but, on the other hand, it is only in times of depression that you get much serious discussion of these questions at all.

5007. Have you heard anything of complaints made by wood choppers and others of the competition of philanthropic agencies for relieving distress arising from want of employment?—Yes, I have heard of complaints.

5008. It has been said against the Salvation Army and the Church Army, and many of these philanthropic agencies?—Yes, undoubtedly complaints have been made.

5009. Would not a series of labour colonies scattered all over the country do with agricultural labour precisely what the Salvation Army has done with regard to the wood choppers?—I think that the allegation (I do not say with what truth the allegation was made) was that they undersold or sold at less than the market prices.

5010. But even if they sold at the same prices would not the increased volume of goods at the same price tend to lower the prices?—No doubt.

5011. And consequently operate to the disadvantage of the *bonâ fide* wood chopper?—No doubt every experiment which increases the production without increasing the demand must tend to lower the prices; but I think the specific complaints that I have in my mind were with regard to the underselling.

5012. With regard to the labour bureaus, their number is slowly increasing, is it not?—Yes; I think you may say that.

5013. Generally speaking, they have been established at the request and on the initiative of the trades unions in the district which, knowing the advantage of registration and organisation for their own unemployed, want labour bureaus for the unskilled unorganised; is that not so. Trades unions have shown no special antipathy to them?—Trades unions have shown no special antipathy to them, but I do not know that I could say that I have any information which shows they have been largely established on their initiative. I do not say that it is not so, but I did not know it.

5014. Would you say that the balance of advantage lay in local authorities having the labour bureaus open than otherwise?—I think there are certain advantages in their being in the hands of local authorities, but at present they have no powers.

5015. Some local authorities allege they have no powers, while others actually have labour bureaus, and they are both operating under the same Act?—The case has not been tested in the Law Courts that I am aware of.

5016. Do the figures which you have in your possession lead you to the belief that overtime in certain trades is increasing as compared with 10 years ago?—I am sorry to say we have no statistics of overtime. They are some of the most difficult statistics to collect. I have not neglected the subject, but I know nothing that really would throw much light upon it.

Chairman.

5017. Do you think there is any reason to suppose that trades unions pursue a plan of endeavouring to obtain a higher wage for their members by keeping a number of men always on the out of work list?—I do not think the trade unions consciously or deliberately pursue a policy of that kind; but I think the fact of the existence of unemployed benefit and also of a standard of time wage enforced by the trades unions must, to some extent, which would vary in different trades, tend to keep a certain small margin of their members on unemployed benefit, who, if there was no such thing as a standard wage or unemployed benefit, might be in employment at lower rates, and to that extent the unemployed benefit promotes the policy of the trade union in maintaining the standard wage.

5018. I think one of the most salient points shown by your chart and by the information you have given us is, that there remains apparently under all circumstances a certain almost inevitable residuum of men constantly out of work?—There remains a certain residuum permanently of men out of work, but they are not necessarily individually permanently out of work.

5019. There is a certain margin as is disclosed by the trade union figures?—Yes.

Mr. JOHN THOMAS PILDITCH, called in; and Examined.

Chairman.

5020. YOU are surveyor to the Vestry of the Parish of St, Mary, Battersea?—Yes.

5021. Your vestry has from time to time made, I believe, elaborate and careful provision for meeting distress arising from want of employment?—We have endeavoured to do so for several years past.

5022. It would be perhaps convenient for you and for the Committee to take the years as they come in order; will you say what the vestry did in 1891?—In 1891, and I may say in 1892, the most we did in those years was in connection with snow cleansing. We spent in 1890 and 1891 between 600*l.* and 700*l.* in snow cleansing. In 1892 the weather was not so severe, and the amount was less, something under 300*l.*

5023. In those years the number of unemployed was not so great as subsequently?—No; we had not the difficulties then to contend with in those years that seem to have grown upon us lately.

5024. In 1892 there was not so much snow to clear, and therefore you did not spend so much in clearing it?—No, we did not feel the difficulties in those years so much. In 1892–93 it became somewhat difficult. In that year we endeavoured to put together all the work that we could possibly put our hand upon, which mainly consisted in the making-up of new roads, painting and repairs, and reinstating buildings, masonry, and paving works, and in fact everything that we could think of. During the winter time of that year, including the snow cleansing, which was not very heavy, we spent between 6,000*l.* and 7,000*l.* That was the total cost.

5025. What average number of men did you employ?—The total number of extra men was about 427, exclusive of the snow clearing. We put on 1,142 men in addition to that for snow clearing during that year. Passing then to 1893–94, that was an exceptionally severe year, and we endeavoured to find, and succeeded in finding a vast amount of work to do during the winter months, so much so that the amount we spent in round figures was nearly 14,000*l.*

5026. In what precise period?—It extended into the May of 1894, but it was from the autumn of 1893 to 1894. That was mainly new roads.

5027. Can you state how much you spent in painting, how much on snow clearing, how much on road making, and so on?—We spent about 1,400*l.* in sewer works; we spent in paving and masonry works 200*l.* to 300*l.* Then during the winter months we purposely built some chalet conveniences for the use of the public which took another 1,000*l.*, and we made up a number of new roads amounting probably to some 3,000*l.* We put up a new concrete wall by the river, and inclosed a portion of the river for the benefit of the public, making a garden there, and we spent over 2,000*l.* Then we had a large amount of painting to do; we painted all our buildings and public conveniences, and that sort of thing which otherwise might have been done during the summer; we availed ourselves of the unemployed men and painted them during the winter. We spent, I daresay, 1,000*l.* upon that. Altogether we spent from first to last on the painting, new roads, sewers, and other things, something like 13,000*l.* or 14,000*l.* altogether.

Chairman—continued.

5028. You reclaimed a small portion of the foreshore of the Thames?—We did, and built the river wall that I have mentioned. We have since converted that into a garden for the pleasure of the public.

5029. In other words, by looking ahead, you put aside certain works to be done in the winter in order to have something on which to employ men who were out of work?—Yes; as an illustration of that, I consider that we have practically got over the unemployed difficulty, now that we are getting out of March, because by the end of March it is practically all over. We have a quantity of work coming on now which we shall in all probability not touch till the end of the year. I have recently received instructions in fact to set aside some paving works that otherwise would have gone on this summer, till the end of the year, amounting to 10,000*l.*, and I have two other matters coming on, and probably in the course of another month I may be able to say I have something like 12,000*l.* to spend during the winter even if nothing else is placed in my hands.

5030. Is that the kind of work that can be done during frost?—I am sorry to say frost puts a stop to most things, but, as long as you get anything like open weather it can go on. For instance, it was open weather until the turn of Christmas, because we did not experience any frost until January set in. Right up to Christmas we had a free hand, and we could work as fast as we liked.

5031. You have given us the figures for 1893–94. Can you say anything of this winter which is now ending?—For 1894–95 I have not got exactly what our expenditure is up to this last week, but we have already spent very nearly 5,500*l.* in works we have been carrying on during the winter. I should not be surprised to find that next year we shall have 15,000*l.* to deal with at least.

Mr. *Bartley.*

5032. Very much less than you had last?—Yes, we did not have so much work to put our hands on. Of course we do not make the work, but if we can reasonably create work for the benefit of the parish we do so. We found during the winter months a great many of our sewers were out of order, and we found we might as well put those sewers in order as keep them to the summer.

Chairman.

5033. The winter being open, you could do it?—We worked right through the winter; in fact, it was an exceptionally fine season for work of that nature.

Chairman—continued.

5034. Who are these unemployed which you employ on these works, and how do you select them?—We take them on through the labour bureau. I used not to, but I do now. The labour bureau has been started for that purpose as the centre through which labour can be obtained, and therefore we take them through the labour bureau. I do not take the men through the labour bureau indiscriminately; I endeavour to get such men as I feel will do justice to the work on which I am employing them; and, in addition to that, if there is a preference to be given, I prefer to give it to the married man with five or six children to the unmarried man with no encumbrance.

5035. Do you confine it to men resident in the parish?—We have done so.

5036. Is the labour bureau maintained by the public authority?—It is maintained by the vestry; in fact, it is attached to our public buildings.

5037. Do you find that successful?—I find no difficulty with it whatever.

5038. Does it attract the men; do they come and register themselves?—I find more in the winter months than in the summer months. There is not that application to the bureau of what I should term the better class of artizans, and so forth, that there is in the winter months, when men are actually out of employment.

5039. Do you know of any circumstances connected with your parish which would imply that it is different from its neighbours at all; do you think the same course could be followed by other vestries that has been followed by you?—Most decidedly, I think so. We have experienced no difficulty. We give employment at the time of year when distress is in existence.

5040. The difference appears to be that you look ahead and prepare beforehand subjects for work during the coming winter?—That is so, we endeavour to create as much work during the winter months as we can; that is what we do.

Mr. *John Burns.*

5041. In your parish you have transferred nearly all your local parish work, have you not, from contract labour to direct employment?—Yes.

5042. You have now practically a regular staff, have you not, employed on your roads, in dusting, scavenging, and so forth?—Yes.

5043. Your men work eight hours, do they not?—Yes.

5044. Have you reduced overtime, if not absolutely abolished it?—We do not admit overtime, except very rarely.

5045. Why have you abolished overtime?—To give as much employment to the greatest number of men as possible.

5046. In the event of a local improvement being contemplated, do you adapt the carrying-out of that improvement (provided there is no sanitary disadvantage) to the condition of the labour market?—Yes.

5047. From 1890 to 1895 your parish has spent under those conditions the sum of 42,000*l.*, has it not?—I should think it would represent something like that sum.

Mr. *John Burns*—continued.

5048. You contend that in spending the bulk of that money between the months of October, or, say, November, and the end of February, you really prevent a lot of distress, and give the *bonâ fide* genuine unemployed men an opportunity for tiding through the winter more easily than they would have done if that amount of money had been spent without any regard to lack of employment?—I think so.

5049. May I put it in this way: that if that 42,000*l.* worth of work had been afforded in the spring and summer and autumn probably, with a great deal of overtime, instead of in the winter, probably your local poor rates or your private charity would have had a greater demand upon them than they had under your conditions of employment?—Yes, I think the distress would have been greater.

5050. You think that more men would have gone to the stone-yard?—Yes.

5051. That is to say, the men who by your present method of arrangement of your work now have done the repairs of the roads and sewer work, snow-sweeping, and so forth?—No doubt our system is the means of preventing many men from applying to the union for relief.

5052. You have simply, in Battersea, re-apportioned and re-organised the local work to be done to climatic and industrial contingencies?—That is all.

5053. Generally speaking, you think the parish receives no harm from it, whilst the *bonâ fide* unemployed receive some measure of good?—I think so.

5054. Did I understand you to say you have put aside, if this frost had not come in the way, something like 10,000*l.* to be spent in the winter for new roads, and the making up of old roads and channelling?—No, I said we had 10,000*l.* provided for works, which, in ordinary circumstances, but for this question of employment, we should go on and spend now, but rather than do that we have postponed it, and propose to spend the 10,000*l.* next winter.

5055. In deferring that amount of work to be done you inflict no injury upon your district, do you?—None whatever; the work can keep, and I rather fancy it is a benefit, because it gives us a little more time to organise the work.

5056. On this work, whenever it is carried out, you exact a full day's work, the same as you would if it were carried out in May, June, or July under ordinary conditions?—Just the same.

5057. Your supervision is no less strict with what I might term the unemployed workmen in regard to the money that is earmarked for that purpose than it would be if you had not this unemployed contingency at all?—No, because in the winter time, to which this money is devoted, we can get better men than at any other time.

5058. You get a better class of men?—A better class of men apply in the winter than apply at this time of the year.

5059. Am I to gather that you have a greater variety of higher grade of skill between October and February to select from than you would have in May, June, and July?—Undoubtedly.

5060. Consequently, you get a better class of workmen?—Yes.

5061. Do

Mr. *John Burns*—continued.

5061. Do you consider your district suffers in any way any disadvantage from this system of ear-marking and allocating the work?—I cannot see any disadvantage. I know of none.

5062. Generally speaking, you believe it does a great deal of good to the genuine unemployed workmen in your district?—Undoubtedly they get the benefit at a time of the year when they most want it.

5063. As regards such work as painting water carts, painting lavatories, and painting of street name plates, and many other pieces of work ordinarily done in spring and summer, do you find any difficulty or waste in doing that kind of work in the winter?—No. Of course we are subject to changes of weather that affect it.

5064. But I mean apart from very severe frost?—Apart from very severe frost and continuous heavy rain, there is none.

5065. A normal winter generally enables you to carry on all the class of work you as a surveyor want to do in your parish?—Yes, an ordinary normal winter would.

5066. Have you gathered anything from the unemployed men themselves about what I may call (to put it frankly) the loafer, do you find the genuine unemployed men as a rule resent the taking on of a loafer?—Yes, they do.

5067. And generally speaking in your district do they talk very plainly to him?—Yes, they do.

5068. And rather straightly about him?—Yes; in fact, I am never troubled with that class of man except when the genuine workman is out of employment.

5069. When the genuine workman comes to you for work the loafer expects to get on for two or three days so as to get sufficient money for two or three days' drink, and then he tries to get on again?—He swells the number.

5070. Do you find generally the average workman is down on him?—Yes, they do not care for working with him either.

5071. As a rule, do you find that the workmen co-operate with you and eliminate him?—Yes.

5072. Have you formed any opinion as to the moral effect upon the men of recurring relief works?—We do not call ours relief works.

5073. Yours is unemployed work, regular work?—Yes, then there is nothing to reflect upon the men. They take our work the same as they take any work.

5074. Supposing that 4,000*l.* were spent on the employment of able-bodied men by the guardians in your district in stone-yard work and picking oakum, and so forth; and supposing that instead of spending the 4,000*l.* in that way it was given to you, do you not think you could spend the money on your roads and streets with greater advantage morally and physically to the men and to the parish than results from the authority spending it in the stone-yard?—I think so.

5075. You think there would be less demoralising effects, and the parish would get more value for their money?—Yes; but probably we should not be able to dispense the money over the same number of persons, because I presume they would dispense it at a lower rate.

5076. I am speaking of able-bodied men?—I do not suppose that an able-bodied man would get with them the 6*d.* or 7*d.* that we should pay.

Mr. *John Burns*—continued.

5077. Supposing the 4,000*l.* was spent upon the able-bodied men in the stone-yard by the Poor Law authorities, would you not, as a surveyor employing men at current rates of wages, under your discipline and *régime*, even if you employed the same men as are now working in the stone-yard, get better results both from the point of view of the men themselves and of the parish by the expenditure of that money yourself?—Yes; I have taken men from the stone-yard and employed them upon our roads.

5078. Have you been doing that?—They asked me to take for two or three years some 200 men, and I took them. They sent me down a list of able-bodied deserving men, and I took them and employed them on various works on the roads.

5079. Is it not a general impression that if a man in the stone-yard earns, say 3*d.* an hour under the stone-yard superintendent, under your clerk of the works he does earn his 6*d.*?—Yes; we should not employ him a second time if he did not.

5080. You get a better quality of work out of the man at 6*d.* an hour than they get in the stone-yard at 3*d.*?—Yes.

Mr. *Heywood Johnstone.*

5081. Do you pay the same rate of wages in winter as in summer?—Yes, just the same.

5082. And you get a better class of men in winter, you say?—We get a better class of workmen in winter than in summer.

5083. So that you get better value for your money?—Yes.

5084. So that it is really an economical advantage to do the work in winter instead of doing it in summer?—Yes.

5085. Do you know if that system is adopted elsewhere?—I believe not; I believe we were almost the first parish to take the question up in the spirit we have.

5086. Have you taken any steps to make known its advantages to mankind in general?—No, I have not.

Mr. *Bartley.*

5087. You have told us, I understand, that this amount of work increases from year to year?—I think I said that it increases or diminishes according to circumstances.

5088. Is it not the fact that in 1892-3 it amounted to 6,700*l.*, and in 1893-4 it amounted to 14,000*l.*; then it fell, but you are providing for 1895-6 a large sum for this purpose?—Yes.

5089. That is correct is it?—That is so.

5090. Do you think that people in the district rely upon this work instead of looking out for work for themselves?—Now that they find that we are adopting the system they begin to look for it towards the winter months.

5091. It is becoming looked upon as a natural thing, and they expect to get this work?—They do.

5092. Do you think that is an advantage?—It is an advantage only from one point of view, namely, that it finds work for men in the winter months who otherwise would not be employed; that I take it is an advantage.

Mr. *Bartley*—continued.

5093. You think it is an advantage for a continually increasing number of men to depend upon work which you provide for them in the winter in this way?—I think if every parish were to adopt the same system, it would give a vast amount of gratification among the labouring class to know that there was a certain amount of work which they could reasonably look forward to during the winter months.

5094. You think that is an advantage, do you?—I do.

5095. Why is it that ordinary people do not do this sort of work in winter time?—I believe contractors think that they can do their work to greater advantage in the summer time than in the winter time; there may be a little in that; but I do not think there is very much.

5096. Do you not think that building work, such as you have referred to of various kinds, is better done at the time of year when there is no chance of frost?—I have no doubt that is so to a certain extent, but when you look at the benefit that is obtained by the masses, any little loss that you may sustain in that direction is, I think, counteracted.

5097. You think it is a good thing in every parish to make the mass of the people feel that that they can depend upon you for work in the winter months?—No; I do not think that they should depend or make sure that they are going to have work, but I think they should have an idea that the local authority in the parish in which they reside are doing the best they can to provide employment for those who are out of work.

5098. Is it not perfectly well known that you are putting by this money which you speak of for next winter?—Certainly; but if I had three times that amount to spend I do not suppose I could employ a tenth of the men who will apply to us for work; but the mere fact that we are doing something to alleviate the distress, and find employment during the winter months, give satisfaction. The people who get employment are satisfied, and those who do not get employment express a certain amount of gratification that you that you have done what you have done.

5099. You think that is an advantage?—I do.

5100. You think that overcomes the disadvantage of a large number of actual persons in the district depending upon you, although you can only find work for a comparatively small number of them?—It gives the amount of satisfaction I have stated. I am certain that both last year and the year before, having regard to the immense number that were out of work, if the local authorities had not done something to endeavour to alleviate the distress, there would have been a vast amount of disturbance. As it was, they took the efforts of the local authority in the spirit in which they were intended and appreciated them.

5101. Do you wish Battersea to be known as the place where this is done?—We have no objection.

Chairman.

5102. But you confine the work to your own people, I understand?—We have done so hitherto, but I am not quite sure that that will always be so.

Mr. *Bartley.*

5103. You do not wish to confine it to your own people then?—We have confined it to our people for this reason; that probably we are the only parish in London that has done it to any extent, and we do not wish it to be known all over London that Battersea is the only place where men could get work in the winter time. We are pretty well flooded as it is, and I do not know what the result would be if that idea got about.

5104. You say you are pretty well flooded as it is in Battersea?—It is essentially a working-class neighbourhood.

5105. I gather then that a great number of people are disappointed?—We cannot employ everybody who applies.

5106. Then yours is not a cure for the unemployed?—Not an absolute cure.

5107. What do you mean by "not an absolute cure"?—An absolute cure would be one which would enable us to employ everybody that applied; but, unfortunately, we cannot do that. If every parish was to give this work to the extent that we have done, no doubt the number of applicants who come to us might be diminished.

Mr. *John Burns.*

5108. Chelsea, for instance?—Yes, Chelsea, which is an adjoining parish to ours.

Mr. *Bartley.*

5109. Do you think it is possible to find work in your parish for everybody who wants work in the winter months?—No.

5110. If you cannot do it in your parish, have you any reason to think that it could be done in other parishes?—I say that if every parish in London were to do the same thing, probably the number of applications in our parish would be reduced. As things are at present we have to bear our own burden, and the burden of the adjoining parishes also.

5111. Then you think that at the present men come to your parish from outside?—I know that during last winter in the snowy season I found men who came from as far as Roehampton to Battersea.

5112. What did you do with them?—I detected two men and put them off.

5113. Do you take the trouble to investigate the case of every man whom you employ?—I cannot do so in extreme cases, such as in heavy snow storms, because you have to put these men on at six or seven o'clock in the morning, quite early, and probably before nine o'clock in the morning you have put 400 or 500 men on to work (I have done so before now), and it is impossible to check them all. I have a system by which their names and addresses are put in a book; but if a man gives a false name or a false address you have no means of testing it for the time being.

5114. That only applies to special cases of snow storms?—I am speaking more particularly of cases of that kind.

5115. Of course all parishes put on people to work on occasions of that sort?—Yes.

5116. I am referring to your regular work which

Mr. *Bartley*—continued.

which you have told us about?—I have not had men from other parishes working at our regular work.

5117. You confine that to men of your own parish?—Yes.

5118. You think it is a good thing to encourage the unemployed of every parish to look forward to parish employment in the winter months?—Yes, I do, because I think the local authorities themselves would be doing a great amount of benefit by causing as much work as they possibly can to be done when work generally is at a standstill.

5119. You think that is likely to decrease the measure of the unemployed?—It must do so to a very large extent if it were universally adopted.

Mr. *Renshaw.*

5120. Can you give us any idea in regard to the rates in Battersea?—I have not the rates with me. I would have looked at them before I came if I had thought it likely I should be asked about them. Our rates, I know, are lower this year than they were last year.

5121. Is that the result of the equalisation of rates?—I think so.

Mr. *John Burns.*

5122. Perhaps I may refresh your memory; the rates in 1894 were 6*s.* 5*d.* in the pound, and the Equalisation of Rates Act reduced them down to 6*s.* 1*d.*, and they are now 5*s.* 11½*d.* this quarter?—Yes, I know they are very low.

Mr. *Renshaw.*

5123. The tendency, I suppose, has been for the rates to rise since you commenced this system which you have been describing?—No, I do not think our system has in any way tended to raise the rates.

5124. Do you not think that the expense of carrying out the works which you have carried out in winter instead of in summer tends to make the work more costly?—What I said was that the probable percentage on the cost would be a little more.

5125. Can you give us any idea what the increased cost of doing this work in the winter months would be?—That very much depends upon the season.

5126. Take an ordinary winter?—In an ordinary winter I should think the increase of the percentage is very small; but if you have a lot of inclement weather when the men are obliged to be continually standing off, and the works get saturated, the percentage of loss might increase. Everything depends upon the weather. I should say that last winter up to Christmas, before the snow set in, there would be no difference.

5127. I think you told us that the labourers you employ come mostly through the labour bureau; can you give us any information as to the numbers that have placed their names on the books of the labour bureau from year to year, for the last five years we will say; have the numbers increased?—The numbers have increased steadily year by year; but I have not got the figures here for each year. I see that in 1894, taking the

Mr. *Renshaw*—continued.

males, the total registered number of names was 2,361, and, taking the females, the number was 297. I have not got the last returns with me.

5128. Can you give us the figures for the year previous to that?—In the year previous to that the numbers were greater. In 1893 the total registered number of males was 3,751 and of females 678.

5129. You do not make any attempt to employ females, do you?—Yes; we occasionally go to the labour bureau for women cleaners or any work of that kind.

5130. But not to any large extent, I presume?—Not to any large extent.

Mr. *Stuart-Wortley.*

5131. Are your vestry unanimous in adopting this policy; can you speak for the whole vestry?—I can only speak for it as a vestry. The majority, of course, rules. I cannot say that every member of the vestry is agreeable to the system.

5132. Is there a large minority against it?—No, I cannot say that.

5133. There is not a large minority against it?—No.

5134. You say you have a certain number of applicants for employment whom you cannot satisfy; has the number of applicants who have to be refused risen greatly since 1891?—No; I should not think so.

5135. You do require a test of residency in the case of your regular works, I understand?—Yes.

5136. Do you find it easy to enforce the condition of residency?—The men know that we adopt a system of inquiry. After we have put a number of men on, I pick them out here and there, and have inquiries made as to the truth of the statements they have made.

5137. Speaking, generally, do you find it practically easy to limit yourselves to residence in the parish in the case of works other than emergency works?—Yes.

Mr. *Mather.*

5138. Does Battersea enjoy any peculiar privilege at the present time in being able to enter upon public works; I mean any privilege greater than that which other parts of London enjoy?—None that I am aware of.

5139. Is not Battersea an outlying district, having reclaimed a small portion of the suburbs of the district into part of its township, and therefore requiring a large amount of public works to be done?—I do not think that is more so now with us than with any other parish. You might have said so 20 or 30 years ago, but you cannot say so now.

5140. Do you look forward to being able in perpetuity to find work in the winter months to the extent of 12,000*l.* or 15,000*l.* a year for your population in Battersea?—No, I should say not.

5141. What would they have to depend on; what amount would you have to spend?—All we should have to spend in the winter months if we adopted the system in the future would be any amount of money which we could set aside for

Mr. *Mather*—continued.

work during the winter months; it might be large or small.

5142. You would not, of course, create work; it would be spent upon work that was necessary for the benefit of the community?—We have always studiously avoided creating work.

5143. Of course there is no peculiarity in allocating work during the winter months; the same thing is done for in many towns of Lancashire; it is not peculiar to Battersea, is it?—It is peculiar to Battersea so far as London is concerned.

5144. Can you give us any idea of the number of the proportionate unemployed in Battersea that you are able to accommodate with work of the character you have described?—No, I have no idea of the total number of unemployed in Battersea, which it would be necessary to know before I could answer that question.

5145. Would it be a fourth, or half, or a third of the people you know to be out of employment, judging from the numbers that apply at your Labour Bureau?—At an extreme measure it might be, perhaps, a fifth.

5146. You employ a fifth of the total number requiring employment?—I should think we did during last winter.

5147. If that system was adopted throughout London, no doubt a fraction, a considerable fraction, of the unemployed would be dealt with in that way, if the other parishes had public works to undertake such as you have?—Yes.

5148. In undertaking this work, which is seasonable work, as a rule in a season not generally adapted to it, that is, in doing this work in the winter, do you find that in summer you are debarring others from employment who otherwise would have taken it then?—No, because if we were to seek for these men in the summer months we should have a difficulty in obtaining them; they are already employed in other directions.

5149. During last winter, when the frost was so severe, you could do nothing to help this class of persons, except in employing them in removing snow in the streets?—When the frost was on.

5150. That, of course, was an abnormal state of things?—Yes.

5151. As regards the four-fifths whom you were not able to employ, would you consider that on the whole they were pretty much of the same character as the men whom you did employ?—No.

5152. Do you mean that they were graded and you took the *crême de la crême*, so to speak, of the applicants, and that all those whom you did not employ were of a less efficient class?—I think we had the best of them.

5153. But you would not say that the four-fifths whom you did not take were all unworthy of employment?—I would not say that for a moment.

5154. Nor that they were all persons who would be regarded as paupers, or would be willing to be treated as paupers by boards of guardians?—No.

Friday, 29th March 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. Bartley.
Mr. Billson.
Mr. John Burns.
Mr. Campbell-Bannerman.
Mr. Heywood Johnstone.
Mr. Lawrence.
Mr. Logan.
Mr. Pickersgill.
Mr. David Randell.
Mr. Whiteley.
Mr. John Wilson (Govan).
Mr. Stuart-Wortley.

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN, IN THE CHAIR.

Mr. ALFRED NICOL HENDERSON, called in; and Examined.

Chairman.

5155. YOU are Clerk to the Guardians of the Wandsworth and Clapham Union?—I am.

5156. What area does that union comprise?—Eleven thousand four hundred and fifty-four acres. It is the largest union in the Metropolis.

5157. In point of population how does it stand?—The population, according to the last census in 1891, was 307,389. According to the estimated population by the County Council in April 1894, estimated for the purposes of the equalisation of rates, it is 332,542. It is the largest union in population in the Metropolis.

Mr. *Bartley.*

5158. Is that correct; what do you say as to Islington?—According to the latest published estimate, our population is 9,000, or a considerable figure, higher than Islington.

Chairman.

5159. Can you give any account of the general nature of the population; is it a working class population or a better class population?—It is comprised in six parishes, namely, Battersea, Clapham, Putney, Streatham, Tooting Graveney, and Wandsworth. Battersea would contain a large number of the working class, and Wandsworth also.

5160. The rest of the parishes are more residential, are they not?—Yes, Clapham, Streatham and Tooting would be more residential.

5161. What is the rateable value of the union?—The rateable value is 1,962,355*l.* It has about doubled in the last 20 years. It comprises an outlying district of London that has been built upon very much. For instance, in 1875 the number of houses assessed was 24,701, and at the last quinquennial revision in 1890 it was 49,110. So that in 15 years it has practically doubled; and the same applies to the population.

5162. As to the amount of the rate, can you state what it has been for some years back and what it is at present?—As guardians we do not

Chairman—continued.

have anything to do with the rate; we merely tell the overseers and the people who make the rate what we want, and the rate is made out upon what the School Board and everybody else wants. But I anticipated the question would be asked, and I have here the latest return published by the County Council; from which it appears that the total rate in Battersea parish is 6*s.* 3*d.*, and 5*s.* 11*d.* as altered by the Equalisation of Rates Fund.

5163. Those are the rates for all purposes?—Yes; I am speaking of the total. Of course the rates vary in each parish. In the parish of Clapham it was 6*s.* 7*d.*, and as altered by the Equalisation of Rates Fund it is 6*s.* 6·19*d.* In the parish of Putney it was 6*s.* 6*d.*, and as altered by the Equalisation of Rates Fund it is 6*s.* 5.45*d.* In the parish of Streatham it was 6*s.* 2*d.*, and as altered by the Equalisation of Rates Fund it is 6*s.* 1·35*d.* In Tooting Graveney it was 7*s.*, and as altered by the Equalisation of Rates Fund it is 6*s.* 10·95*d.* In Wandsworth it was 6*s.* 3*d.*, and as altered by the Equalisation of Rates Fund it is 6*s.* 2·16*d.*

5164. Can you give us how much of that is poor rate?—In the parish of Battersea, for the year 1893–94, the poor rate was 3*s.* 6½*d.*

5165. And in Clapham?—The poor rate in Clapham was 3*s.* 6*d.* In Putney it was 3*s.* 6*d.*; in Streatham, 3*s.* 6*d.*; in Tooting, 3*s.* 6*d.*; and in Wandsworth, 3*s.* 4*d.*

5166. What is included in the poor rate?—The poor rate in London is, of course, very different from the poor rate outside London. The poor rate in London includes all the County Council calls. This 3*s.* 6*d.* would include about 1*s.* 1*d.* or 1*s.* 2*d.* which we pay to the London County Council; it would include all payments to the Metropolitan Common Poor Fund; it includes the police rate, and it includes some of the overseers' expenses of registration, vaccination, and so on. I saw that the poor rate at West Ham, the other day, was stated to be very much

Chairman—continued.

lower than ours. The explanation is that the poor rate is quite differently constituted in the metropolis from what it is outside the metropolis.

5167. Could you say how much of this poor rate deals with the poor pure and simple?—I could hardly give a definite figure at the moment.

Mr. *John Burns.*

5168. Is it not 1*s.* 9*d.*?—Speaking from memory I should say that what the guardians themselves spend is not more than one-third of the whole poor rate. I know it is very small as compared with the total.

Chairman.

5169. Has it been increasing of late years?—Yes, it has been increasing.

5170. I do not mean as including all the County Council purposes, but have the expenses of the maintenance of the poor been increasing?—Yes; the number of poor have increased considerably during the last few years.

5171. Has it increased in proportion to the increased valuation?—We have no separate poor rate; it is all included in one. For instance, the Metropolitan Asylums Board, if there is a severe epidemic over London, may want 20,000*l.* one year; whereas for two or three years previously they had only asked for 7,000*l.* It is large items of that sort that affect the poor rate.

5172. Do you think that the actual money required for the maintenance of the poor in your union has increased at a greater ratio than your valuation?—I will give the figures for the in-maintenance and out-relief for the last 10 years if that would assist the Committee.

5173. Will you do so?—The in-maintenance for 1885 was 16,899*l.*, and the out-relief 6,456*l.*; in 1886 the in-maintenance was 19,034, and the out-relief 7,509; in 1887 the in-maintenance was 24,342, and the out-relief 7,578; in 1888 the in-maintenance was 23,994*l.* and the out-relief 7,940*l.*; in 1889 the in-maintenance was 27,751*l.* and the out-relief 7,707*l.*; in 1890 the in-maintenance was 27,412*l.* and the out-relief 7,284*l.*; in 1891 the in-maintenance was 28,935*l.* and the out-relief 7,530*l.*; in 1892 the in-maintenance was 32,289*l.* and the out-relief 8,129*l.*; in 1893 the in-maintenance was 31,013*l.* and the out-relief 9,441*l.*; and in 1894 the in-maintenance was 34,686*l.* and the out-relief 12,185*l.*

5174. Can you give any account of the reasons for the increases in certain of those years. For instance, the in-door relief, while the out-door relief remained almost steady, went up in 1889 from 23,000*l.* to 27,000*l.*; and again, in 1892 from 28,935*l.* to 32,289*l.*; was there any particular reason for that?—There is no particular reason for that.

5175. Was it due to bad trade?—In 1889 and 1890, or about that time, we built a new workhouse, which was more expensive to administer than the other. That would account for the increase in the in-maintenance to some extent.

5176. It gave you more accommodation, I presume?—Yes, we had more accommodation and more officers, and it is a very large place, whereas before it was all under one building. No doubt

Chairman—continued.

that would explain the difference as to the year 1889–90.

5177. You got better accommodation then?—Yes.

Mr. *Stuart-Wortley.*

5178. Would it account for the fall in the out-relief in the same periods?—The out-relief depends somewhat upon the composition of the board; the board changes, and sometimes it favours out-relief and sometimes it takes rather the opposite policy.

Mr. *David Randell.*

5179. How was the population during these years; had there been a steady growth upwards?—It has been growing very fast indeed. At the last census this district showed an increase of over 100,000; so that it contributed about a quarter of the whole increase of the Metropolis.

Chairman.

5180. In 1894 there is an increase of 3,500*l.* in in-door relief and of about 3,000*l.* in out-relief?—Yes, the numbers did go up considerably that year. I do not think the out-relief has gone up in the same proportion in the year that has just ended. We had a little bother with our out-relief; we had a committee of inquiry and sifted the thing, and I think we have stopped the increase considerably.

Mr. *John Burns.*

5181. For the last year, where a great increase is noted, you had some trouble with your relieving officers, did you not; you dismissed some of them for malversation?—That was so; but there is really another year since the date represented by the figure I have given, which is for the year ending March 1894.

Chairman.

5182. Of course you have not the figures for the following year yet; it is not completed?—No; but I could give you the figures for a few months.

Mr. *John Burns.*

5183. Am I to gather that the 34,686*l.* for in-door relief and 12,135*l.* for out-relief was money spent in the same year that you had your committee of inquiry, and in which, in consequence of the committee of inquiry's investigations, certain relieving officers were dismissed and the whole district reconstituted?—I cannot say that accounts for the whole difference.

5184. It happened in the same year, did it?—The committee formed new rules and thoroughly sifted and reorganised the thing.

Chairman.

5185. They tightened the whole administration?—They tried to do so, and I do not think there has been a corresponding increase during the next year.

5186. In order to test that, can you compare the months of December and January of this winter with December and January of last winter?—Yes; I can give you every week for January 1894 as compared with January 1895, or

Chairman—continued.

or if you wish I can give the first 13 weeks of 1894 and 1895.

5187. Will you do so?—In the first week of January this year the out-relief was 257*l.*, as against 302*l.* in 1894; in the second week of January it was 269*l.* as against 281*l.* in 1894; in the third week 285*l.* as against 316*l.* in 1894; in the fourth week 291*l.* as against 314*l.* in 1894; in the fifth week 300*l.* as against 296*l.* in 1894 (you will observe this is where the severe weather set in and the number in the stoneyard increased very much); in the sixth week it was 302*l.* as against 296*l.* in 1894; in the seventh week 343*l.* as against 278*l.* in 1894; in the eighth week 375*l.* as against 286*l.* in 1894; in the ninth week 362*l.* as against 273*l.* in 1894; in the tenth week 334*l.* as against 228*l.* in 1894; in the eleventh week 317*l.* as against 224*l.* in 1894; and in the twelfth week 297*l.* as against 226*l.* in 1894. You will observe from those figures that the relief was less this year till the very severe frost set in, and then it would be more.

Mr. *Lawrence.*

5188. Can you give us the thirteenth week?—No.

5189. What was the date of the last week you gave us?—The week ending the 20th of March.

Mr. *John Burns.*

5190. Can you say whether this week was more or less than last week?—I could not say. The books are not made up. I can give you the total amount expended in out-relief for the months of January and February for three years. In 1895 the total for January and February was 2,783*l.*; in 1894 it was 2,643*l.*; and, in 1893 it was 2,125*l.*

Chairman.

5191. Until the frost set in this year, you appear to have been better off than you were the year before?—I can give the numbers in the stoneyard which will show that.

Mr. *Whiteley.*

5192. Those figures will not tally, will they, with the eight weeks of detailed figures which you have given?—I think so. In the one year the figures are at the beginning of the period, and in the other they are more at the end. March is not included in the total I have just given.

Chairman.

5193. You were going to give us the numbers in the stoneyard?—Yes. The stoneyard was opened in 1894 on the 12th of December, and it is ordered to be closed next Wednesday, that is, the 3rd of April. In 1893 it was opened in November, and was closed on the 27th of February. Comparing the numbers in the stoneyard in 1894, it was opened on the 12th of December, and on the first day there were 18, whereas on the corresponding day in 1893 there were 174 there.

5194. But in the previous year it had been in operation for some time at that date, and was better known perhaps; would that affect it?—I do not think that would affect it at all. It had been opened about five years. It is usual to open it in the winter.

Mr. *Lawrence.*

5195. If you would read out the weeks consecutively, we could take them more easily?—I have the figures for every day, if the Committee would like to have them.

Chairman.

5196. You could put in the full details to be printed in the Appendix, but we should be glad if you could quote to us just now one day which was a good typical day in the week?—I will give you four days in each month. On the 12th of December this winter there were 18 and 174 last winter; on the 19th of December this winter there were 25 and 197 last winter; on the 29th of December there were 75 this winter and 172 last winter; on the 4th of January there were 95 this winter and 86 last winter; on the 10th of January there were 114 this winter and 169 last winter; on the 17th of January there were 129 this winter and 188 last winter; on the 24th of January there were 136 this winter and 159 last winter; on the 31st of January there were 165 this winter and 141 last winter; on the 7th of February there were 177 this winter and 125 last winter; on the 16th of February there were 266 this winter and 134 last winter. That is during the very severe weather; 266 is the highest number we had this year.

5197. Was there severe weather earlier in the winter last year on the days you have quoted when the numbers were so much larger last year than they are this year; was that owing to frost at that time?—I do not remember. On the 22nd of February there were 239 this winter and 139 last winter; on the 27th of February there were 173 this winter and 66 last winter. Those numbers are considerably affected by this fact, that since about January in last year they only allowed them four days' work, whereas this year they have allowed them since January to work six days a week; so that the numbers are not quite comparable.

5198. Will you say what steps the guardians took this year to meet the distress; will you tell us how you instituted your stoneyard, and what conditions you imposed, and so forth?—The guardians received a deputation on the 6th of December to open the stoneyard.

Mr. *John Burns*

5199. From whom was that deputation?—From the unemployed. The matter was referred to a special committee to consider the arrangement to be made for the opening of the stoneyard, and their report was as follows: "That your committee carefully considered the question referred to them, and in pursuance of the power vested in them, gave directions for the following instructions, which were in force last winter, to be again carried out, viz. (*a*) For men applying for work in the stoneyard to be permitted to work only four days per week, and to only receive relief according to the scale, in respect of such four days." That was rescinded after about a month, and the men were allowed to work six days a week.

5200. Why was that altered?—I think the unemployed came up and said it was very hard they could not work six days instead of four days, and the board rescinded that resolution. The

Mr. *John Burns*—continued.

guardians also decided that no orders to work in the stoneyard should be given to single men or widowers, and married men under 50 years of age without children dependent on them.

Mr. *Logan.*

5201. Does that mean that only married men over 50 with children were to be allowed to work in the stoneyard?—No; all married men with children were allowed to work there.

5202. But no single men were allowed?—No single men, nor married men under 50 without children dependent on them. The daily scale was as follows: for a man and wife, the man being over 50 years of age, 5*d.* in money, 6*d.* in grocery, and 4 lbs. of bread; for a man with a wife and one child, 6*d.* in money, 6*d.* in grocery, and 4 lbs. of bread.

Chairman.

5203. An extra penny was allowed for the child; that was the difference?—Yes, it is worked out on that principle. Then, with two children it was 6*d.* in money, 6*d.* in grocery, and 6 lbs. of bread.

5204. One child gets an extra penny, but a second child gets 2 lbs. of bread?—Yes.

Mr. *Whiteley.*

5205. Does that only apply to a man over 50?—If he has got more than one child it does not matter whether he is under 50 or over.

Chairman.

5206. Did you make inquiries to see whether the applicants were genuine residents in the union?—Yes; in the case of persons applying for out-door work in the labour yard the relieving officer has to fill up a form of application, and that form has to be laid before the relief committee; and one question asked on the form was, how long they had been resident within the union.

5207. Was close inquiry made into the genuineness of the circumstances alleged by the applicants?—We had so many at the busiest time that I doubt whether it was possible to make the closest inquiry, but, so far as the officers could, inquiry was made.

5208. Did you make any increase in your staff at all for the purposes of inquiry?—We did not this winter, though we did the previous winter. We increased the number of relieving officers from three to five.

5209. You thought that increased staff could undertake it?—The guardians thought so.

5210. Do you think you succeeded in enforcing the test of residence?—I think so. We drew up a special form for the stoneyard cases that the relieving officer was to fill up, and one question was, where they had lived and where they had worked. We asked for a lot of particulars. Those forms were laid before the relief committee, and every possible precaution was taken.

5211. How was the information they gave checked?—The officers visited them.

Mr. *Lawrence.*

5212. Are you prepared to say they were all visited?—I believe so. I have not got the books here.

Mr. *Lawrence*—continued.

5213. You seemed in a previous statement to doubt whether there was thorough inquiry?—I merely said we had such a large number of applications at certain times that it might have been impossible for the officers to visit every case.

Chairman.

5214. Of course, the fact of a man living in a certain place is the easiest to discover about him; it is the first fact that could be got hold of?—Yes; I should think they were all visited. The scale of relief in the stoneyard goes up to a maximum of 15*s.* 2*d.* a week for a man with a wife and over six children. On the Saturday they are allowed a double allowance of bread.

5215. Is that to see them through the Sunday?—That was the idea. According to the number of hours work, I think, that 15*s.* 2*d.* works out at about 4½*d.* an hour.

5216. Have you reason to believe that the men did the requisite amount of work in the stoneyard, as a rule?—I think the task was 8 cwt. I have a return here showing what was broken, and it is between 2 and 3 cwt.

Mr. *Lawrence.*

5217. Have you got a return for the previous year as to the amount of stone broken?—No; I have only got it for this year.

Mr. *Bartley.*

5218. Do I rightly understand that what they got through was 2 to 3 cwt. a day, and that 8 cwt. was the supposed minimum?—That was the task; but, of course, the understanding is that they work according to the best of their physical ability.

5219. And they did between 2 and 3 cwt.?—Yes.

5220. Is that the average per man?—Yes.

Chairman.

5221. What class of men were they generally; can you say anything as to their previous occupations?—Yes; I have got a statement here of the 15th of February. On that day there were 263 men in the yard; out of those there were 183 labourers and 32 painters. The next highest figure is carpenters; there were nine carpenters. Then there were nine plasterers; and the next highest figure is bricklayers, of whom there were four; there were four stonemasons. The others consisted of one clerk of the works, three paperhangers, two engine drivers, two shoemakers, two ironmoulders, three gardeners, a salesman, a zincworker, a stoker, two fitters, a lather, and two wood choppers. More than half were labourers.

Mr. *Lawrence.*

5222. Can you briefly tell us how many of the building trades' people appear in that list?—Four bricklayers, nine carpenters, four stonemasons, six plasterers, 32 painters, three paperhangers, one zincworker and one grainer; and then there are 183 labourers.

Chairman.

5223. Some of those labourers may be connected with the building trades?—Most of them, I should think.

5224. You

Mr. *John Burns.*

5224. You have not an analysis of the trades for 1893–94, have you?—No, I have not. The number of children dependent upon those 263 men was 745.

Mr. *John Wilson* (Govan).

5225. At the date you have given the frost was very severe; was there any shelter over the men working in the stoneyard?—There are bunks to work in.

Mr. *John Burns.*

5226. The places are covered over where they break the stone, are they not?—The yard only accommodates a little over 100, but we did not refuse anybody, and we had as many as 226 on some days.

Chairman.

5227. How far did the guardians think they were able to cope with the distress prevailing?—Not in a single case was a person refused relief. Every one who applied to the relieving officer for work in the stoneyard, provided he came within the rules, was set to work, or he was relieved in the workhouse, and I am able to say that no one was refused. In addition to the stoneyard, the guardians have done a little painting; they have done the work without the intervention of contractors; they have done some painting at the infirmary; they painted a lot of cupboards and things, and employed a few men there. They have at present a number of painters employed in painting the relief station, without the intervention of the contractor. Of course I can only give evidence respecting the persons who have actually applied to the guardians, but I believe myself that a certain number of persons who live in the district did not apply to the guardians.

5228. Did your relieving officers give you any information in their several districts as to the distress existing; have you any report from them?—Yes, they were all laid before you by Sir Hugh Owen.

5229. Could you summarise them and give the general drift of them; did they show that there was a great amount of distress beside what you relieved by your stoneyard and so on?—I am afraid I could not summarise them; they are merely long written reports; there are no figures that I could particularly refer to.

5230. Have you reason to know there were a great many people in distress who for one reason or another did not apply to you for assistance?—Yes, I fully believe so. In fact, the members of the board have over and over again stated at their meetings that a great number of poor had not applied to them.

5231. Were they reluctant to apply?—I have not heard that. I can only speak of my own knowledge of those who have applied to the guardians, and there the increase has been only when the severe weather set in; but I believe in Battersea and Wandsworth there have been a great number out of work that have not applied to the guardians. The members of the board have at different times stated so.

5232. Have you any voluntary agencies; soup agencies, or institutions of that sort in your district?—I believe there were some. I know there was one at Clapham. I do not know very much about them.

Chairman—continued.

5233. They are, I presume, beyond the limits of your operations?—Yes. I have heard there were some.

Mr. *Stuart-Wortley.*

5234. Have you heard of any in Battersea and Wandsworth?—Yes, I heard of one in Wandsworth.

Mr. *John Burns.*

5235. I see that both your out-door and in-door cases began to disproportionately increase in 1892–93; is that increase due to reasons extraneous to the actual increase of in and out poor as judged by the standard of 1889 or 1890, or is it due to laxity of administration; is it due to the fact that your district has found it necessary to reorganise the system of relief?—I could not say what was the reason. The board for the last few years, I think, have been rather more in favour of giving out-relief than they were some seven or eight or 10 years ago.

5236. Would not the reason that induced you in your district to increase your relieving officers from three to five account for the rapid increase in out-relief as apart from the increase of the population?—There is no doubt in 1892–93 we were under-staffed considerably in relieving officers. We only had three to the parish of Battersea, which has a population of something like 160,000, where we have now five. The result was that I do not think the officers could have had time to investigate and sift the cases, the relief went up in consequence.

5237. And some of the officers you did have were so faulty in their investigations that they had to resign?—There was a committee of inquiry and two officers were called upon to resign.

5238. Beyond that there was certain maladministration by one or two guardians, one guardian at least, was there not?—There was an inquiry, and one guardian was mentioned.

5339. When were the two additional relieving officers appointed?—They were appointed in 1894, about last May or June.

5240. When were these charges made against the guardian?—It would be about six months previously.

5241. I see you had altogether 263 men in the stoneyard this year, and roughly, 250 of those were men connected directly with the building trade; do you think that large proportion out of the 263 was due to the exceptionally severe weather?—It rather appears from these figures that our numbers in the stoneyard were less until the severe weather came.

5242. That heavy proportion of men from the building trade out of the total of 263 would indicate, would it not, that the severe weather had a great deal to do with it?—It appears so to me from these figures.

5243. Have the guardians ever expressed any opinion or come to any resolution with regard to the stoneyard work generally?—Yes, they passed a resolution in January last, "That the board is of opinion that the Government should at once

Mr. *John Burns*—continued.

take into consideration the question of starting some scheme which will meet the difficulty of men being out of employment otherwise than by necessitating boards of guardians to open stoneyards, which are generally recognised as being calculated to pauperise and demoralise the poor."

5244. What were the reasons adduced on that occasion for that resolution?—I think the resolution first arose when the guardians received a deputation from the unemployed to open a stoneyard. There was a feeling that the men did not want a stoneyard, that they were demoralising and pauperising.

5245. Did the men express that view?—Not on that occasion, I think.

5246. But the guardians conveyed that view to them; is that so?—No, I do not think they conveyed that view to them; they passed this resolution, and sent it round to other boards.

Mr. *Stuart-Wortley.*

5247. Was it passed unanimously?—I could not say.

5248. Surely the minutes of the board will show that?—I could not remember whether it was passed unanimously.

5249. Do you know whether there was much difference of opinion amongst the guardians?—I have some minutes here; I will see if I can find it. I see it was not passed unanimously; there were 12 votes for the resolution and 10 against it.

Mr. *John Burns.*

5250. Those were the numbers for and against the resolution that the Government should take the question into consideration. Neither of those figures deal with anything, but an opinion for or against the resolution being sent to the Government, they do not express an opinion about the stoneyard?—I do not think there was any difference of opinion upon the pauperising or demoralising point; it was more a question of whether the Government should take up the matter.

5251. On that, I gather from you, the guardians of Wandsworth have expressed their opinion, either by a large or small majority, or in other ways, that stoneyard working is demoralising to the men who go there, and not particularly profitable to the ratepayer who provides the employment; is that so?—They say that it is calculated to pauperise and demoralise the poor.

Mr. *Billson.*

5252. Do you think that the opinion of the guardians was unanimous on the last part of the resolution?—So far as I remember I think the board generally were of opinion that the stoneyard did pauperise and demoralise the people, but there was a difference of opinion as to whether they should press the Government to take the question up.

Mr. *John Burns.*

5253. We will go through the resolution as it was passed. The board of guardians, in their resolution, called upon the Government to adopt some scheme by means of which stoneyard work would be obviated; is that so?—Yes.

5254. Did they indicate any such scheme?—No.

Mr. *John Burns*—continued.

5255. Did they discuss any scheme when that resolution was arrived at?—No.

5256. Did they discuss labour colonies?—No.

5257. Did they discuss home colonisation?—No.

5258. Or emigration?—No.

5259. They did not suggest, or indicate, what the scheme should be that the Government should take up?—No.

5260. We will come now to the stoneyard; the guardians were emphatic in the condemnation of stoneyard work, both in the interests of the men and the ratepayers?—As expressed in that resolution.

5261. What evidence had the guardians before them of the demoralising tendency in the character of the stoneyard work when they passed that resolution?—I cannot say, beyond general impressions.

5262. Do you mean impressions formed on the spot by the guardians themselves in visiting the stoneyard?—I suppose so. It involves the principle that the persons are treated through the Poor Law, and have to go to the relieving officer.

5263. I gather that generally speaking, for reasons known to the guardians, they are opposed to stoneyard work?—Yes.

5264. Have you ever had communicated to the board of guardians from the superintendent a complaint as to the smallness of the amount of work done by the men in the stoneyard?—I do not think the superintendent has complained; I am not aware of it.

5265. Have you ever had complaint made to you by the men employed in the stoneyard about disfranchisement in consequence of their working there?—I do not remember anything very definite; it may have been mentioned at deputations of them to the board. I do not remember any distinct application.

5266. Have the board passed any resolutions connected with disfranchisement?—I do not remember one.

5267. Beyond the figures and official statements that you have handed in, you have nothing to add on the question of stoneyard work and the point of disfranchisement, and I gather from you that the guardians have sent no suggestions to the Local Government Board as to what the remedial work for the unemployed should be?—No.

Mr. *Billson.*

5268. Do you consider you successfully coped with the distress in Wandsworth?—I can only say that no one who has applied to the board has refused relief.

5269. But you have told us that a great number did not apply to the board; was any money raised in the shape of a charitable fund?—Not to my knowledge. I have heard casually that there have been soup kitchens, and such things.

5270. Was there any discussion amongst the guardians, or did you consider, how you could get people to apply who were in distress and were reluctant to apply, how you could make inquiries into the circumstances of people who did not

Mr. *Billson*—continued.

not apply?—No; I have not heard anything of that kind.

5271. Does it occur to you that if you had a permanent official whose duty it would be to look after cases of that kind it might be beneficial?—It has not occurred to me.

Mr. *Lawrence.*

5272. As to the residential test, did you confine it to people who had lived a certain period, say six months, in the area?—No, we did not limit it in that way; we required them to be resident. On the forms we asked how long they had been resident and where they had lived before. We asked them to give a lot of particulars on the form they filled up.

5273. Can you tell us how many men worked the six days a week which apparently this winter they were frequently allowed to work in the stoneyard?—I am afraid I could not tell you that.

5274. I want to know whether they really worked regularly there, or on and off?—A great number worked regularly, and some worked on and off.

5275. You cannot say how many?—I cannot give that information.

5276. The honourable Member for Battersea (Mr. Burns) seemed to assume that the 183 mentioned by you as labourers, are practically in the building trades; did you observe the workers in the stoneyard yourself?—No.

5277. So that you cannot tell whether the 183 were not a lot of the ordinary loafing out-of-work people who are to be found in every district?—I do not know what they were, beyond the descriptions given. I had a return prepared and they were described as labourers.

5278. It seems to me of great importance to find out whether the 183 are men belonging to the common lodging-house class, or whether they are genuine labourers?—I am afraid it is impossible to ascertain that now, because they have left the yard.

5279. You say the fluctuations in the general administration of outdoor and indoor relief have been, in some measure, owing to the fluctuations of opinion. Has the administration of relief been made an election cry, during the last few years, in the election of guardians?—I do not think it has particularly; not to my knowledge.

5280. Could you give us a definite answer?—I am unable to give you information upon that point.

Mr. *Logan.*

5281. From your answers I should gather that your guardians do not consider it their duty to make any special inquiries as to whether the people are starving or not; is that so?—Everybody who applied was relieved.

5282. But did the guardians take any steps whatever to ascertain whether the people for whom they are supposed to be guardians were in distress; did they consider it their duty to make any inquiries, or did they make any inquiries?—If any of the guardians in their individual capacity knew of any particular case of suffering, I have no doubt they would have called the relieving officers' attention to it, and probably in many cases they did so.

Mr. *Logan*—continued.

5283. You say "in their individual capacity" they did so; am I to understand that in their corporate capacity they are not legally bound to make any such inquiries?—They deal with all applications to them.

5284. It must come in the form of an application?—I have no doubt the relieving officer, if he heard of a case of distress, would visit it without application being made, and I have no doubt, in some cases, that was done; but there was no particular officer appointed to go round and ascertain the persons in distress who had not applied.

5285. Your board of guardians do not consider it to be part of their duty, as I gather, to institute inquiries?—The question has not been raised at the board at all.

5286. I should like to know whether your board do consider it their duty or not; you are their legal adviser, I take it?—The guardians frequently hear of cases of distress in their districts, and it is the practice to call attention to such cases. They are very careful with every application that is made to them.

5287. I take it your board of guardians, and it may apply to all boards of guardians in England, do not consider it as part of their duty to make inquiries?—Some individuals may consider it their duty and some not.

5288. Would you consider it their duty to do so?—It may be morally their duty to do so.

5289. Am I to take it that you have not advised your board that they should do anything outside, simply relieving distress when applied to?—The question has not arisen at any meeting. It has not occurred to me.

5290. To the best of your opinion, do you think the practice of the board of guardians has been in accordance with their legal duties?—I think the board of guardians recognise their duties: that they have to deal with all applications made to them. I do not think they consider it is their duty to go and visit and find out destitution. But I am sure many members of the board when such a case does come to their knowledge (as it often does) communicate with the relieving officer and have the case visited and attended to.

5291. I think I understood you to say that, if not the majority, at all events a very large number of those who were to your knowledge out of employment did not make application?—I said that I was unable to give evidence except respecting persons who have actually applied to the guardians; but I have heard it stated in the board room that there was a very large number out of employment who had not applied to the guardians.

Mr. *Pickersgill.*

5292. In the course of the present winter was any action proposed in your board which you advised them they could not legally take?—I do not remember anything.

Mr. *David Randell.*

5293. I understood you to say that your board refused relief to single men, widowers, and married men of 50?—They did not refuse relief; they refused stoneyard work. They would give them an order for the workhouse if they were destitute.

5294. They refused them out-relief?—Yes.

5295. Have you reason to think that amongst that class there was acute distress as well as with other people?—I have not heard of any; they used to work in the stoneyard, but I believe the reason why the guardians shut them out was because the yard was limited in extent, and if they admitted everybody, they would have had to send away the more deserving; and so in order to make the best possible use of the stoneyard for men with families, they passed an order that single men and married men without children should not have orders for work.

5296. So far as out-relief was concerned you did nothing to relieve destitution among the unmarried men?—Not if they were able-bodied. If they were sick, of course, they had relief.

5297. If they were able-bodied they were turned away when they applied?—They would always be offered indoor relief.

5298. But they had no out-relief?—Not in the stoneyard.

5299. So far as out-relief is concerned to able-bodied men, when they applied to your board of guardians, the guardians refused to give them relief?—The object of that was that the stoneyard was small and limited, and it was in order that others with large families who were more deserving should not be crowded out. That was the origin of not allowing single men to work in the stoneyard.

5300. I only wish to have the fact: your board refused to grant out-relief to those men?—Yes. This is the order, "For no orders to work in the yard to be given to single men or widowers and married under 50 years of age without children dependent on them."

5301. Assuming these men were in a starving condition, and accepted the alternative of going into the house, I take it you would have no means of accommodation for these people?—We have a workhouse.

5302. But you could not find accommodation for all these people, could you?—No one was refused, no one would be refused. If we had not accommodation we should have taken temporary premises; we should not refuse anybody.

5303. As to the question put to you by Mr. Burns, do you of your own knowledge know of any case where, men having accepted relief, have in any way lost their sense of self-respect?—I do not.

Mr. *Heywood Johnstone.*

5304. Have you any means of forming an opinion whether the same men come back year after year for out-door relief?—Do you mean for the stoneyard work?

5305. For out-door relief in whatever form?—I believe there are a number that always work in the stoneyard every year.

Mr. *Heywood Johnstone*—continued.

5306. Do you think there are an appreciable number of men who regularly receive out-relief every winter?—I have not got the figures here, but there are a number, I have heard the relieving officer say, who come every year to the stoneyard.

5307. Would that be the larger or the smaller number of them?—I should think the smaller number of them certainly.

5308. Can you form any idea of whether it is the fact or not that a man having once received out-relief is more inclined to come back for it?—I certainly think that that is one of the defects of placing this labour question under the management of the guardians; that it introduces people to the relieving officer, and destroys that independence which ought to exist.

5309. You think it destroys their independence?—I think sending them to the relieving officer and dealing with them in that way certainly does.

5310. Do you think that their sense of independence would be destroyed if the guardians or some official were to seek them out in times of distress and go to them, as has been suggested, instead of obliging them to come to the relieving officer: perhaps you have not formed any opinion as to that?—I think that is a very big question, and one that requires a great deal of consideration.

Mr. *Whiteley.*

5311. I want to know whether you consider the distress in Battersea and Wandsworth was general, and exceptional, and very acute?—I think it was very exceptional during the severe weather, and very acute in Battersea and Wandsworth.

5312. You think it was very acute and exceptional, and largely prevailed?—I think so in Battersea and Wandsworth during the very severe weather; but figures I have given show that we are getting on better this winter than we were the previous winter until the severe weather came.

5313. Your distress this year, as I understand, has not been as bad as in past years?—It has been more acute when the severe weather was on than it has ever been.

5314. Do not you think, if the distress had been very acute, that voluntary agencies to meet it would have been at work, and that you would have heard about them?—I stated I have heard of soup kitchens, and that kind of thing.

5315. I understood you to say you thought you had heard of one in Wandsworth?—I heard of one in Clapham, and one in Wandsworth.

5316. Did the disfranchisement of the men deter them from applying for relief at all, in your opinion?—I really do not know; it is difficult to say. I see it has been stated before your Committee by some witnesses that it has, and by others that it has not. I do not know.

5317. You say if the demand upon your workhouse accommodation had been too great you would have increased it; would you not have increased your stoneyard in the same way?—I can only explain that perhaps that did not occur to the Board. I remember that when they did not admit

Mr. *Whiteley*—continued.

admit single men they were anxious not to have to turn people away from the stoneyard, and they thought it would meet the case if they did not admit single men.

5318. At any rate, it would have been a much easier matter, would it not, to increase the stoneyard accommodation than to switch people off on to the workhouse with a view to the possibility of increasing the workhouse accommodation?—But there was no necessity to increase the workhouse accommodation.

Mr. *Stuart-Wortley.*

5319. Did you hear the evidence of Mr. Pilditch, the clerk to the Battersea Vestry, at the last meeting of the Committee?—I did not.

5320. Did you read it?—No.

5321. Are you aware that he said that in the winter of 1891–92 his vestry started the policy of reserving for the winter all the works that could be put off till then?—I was not aware of that distinctly, but I think the Battersea Vestry and Wandsworth Board of Works have continually assisted the guardians in this respect, and that we should have had a great many more applications had it not been for the work provided by the sanitary authorities.

5322. In the figures you have given I observe in the year ending March 1892, the money expended on indoor relief jumped from 29,000*l.* to 32,000*l.*, and the expenditure on out-relief jumped from 7,500*l.* to 8,100*l.*; so that in the same year in which this policy on the part of the vestry was initiated, the number of applications for relief very largely increased; have you formed any opinion as to the connection between those two facts?—I have not formed any opinion, but I may say the figures I have given include everything, the cost of buildings and so on; and there might have been heavy expense in connection with that.

Mr. *John Wilson* (Govan).

5323. You have given us the statistics for the last 10 years for out-relief; I suppose the bulk of the payments for out-relief would be to individuals who could not find employment?—No, I do not think so; the bulk of it would be to old people.

5324. I suppose it is chronic in your district that you have people out of employment who cannot get work?—I think it is so everywhere.

5325. I understand you to say that your board of guardians do not see that they can do anything more than they are doing in order to meet the distress in the district, and they wish Parliament to do something in the way of meeting the distress?—They passed a resolution to that effect.

Mr. THOMAS MACKAY, called in; and Examined.

Chairman.

5326. YOU have been for many years one of the Honorary Secretaries of the Charity Organisation Society in St. George's in-the-East?—Yes.

5327. And you can describe the steps taken by that society in co-operation with the Poor Law for the relief of the unemployed?—Yes. I should like to explain to the Committee that it is entirely from the voluntary charity point of view that I am able to speak. I am not a guardian, but in St. George's the Charity Organisation Society has been working in strict co-operation with the guardians for many years, and we have adopted a certain plan with regard to the unemployed, which, I believe, is more or less unique.

5328. It is because of what we understand to be the exceptional system pursued in St. George's that we have asked you to be good enough to give us evidence?—It has been alleged that in unions where no labour yard is opened, a difficulty arises, because the guardians legally can offer nothing but the workhouse to men out of employment.

Mr. *Stuart-Wortley.*

5329. Is St. George's-in-the-East a non-labour yard union?—Yes; there has not been any labour yard for many years. I do not believe that the objection is as large as it looks, because as a matter of fact the breaking up of homes very seldom does take place. There are always friends, or someone, who will take charge of the furniture and very often friends who will take charge of the families too, so that the difficulty that there is on that account is, I believe, very much exaggerated, but it is a difficulty at all events on paper, and to meet it, the voluntary charities, under the leadership of the Charity Organisation Society, have taken the following steps. We are ready at the Charity Organisation Society to relieve, without any condition at all, a man who is out of work if he can show us that he has done something to provide for himself in the time of sickness, either by belonging to a good friendly society, or by making some serious effort in the way of saving. We relieve him without any condition for a week or two, and then he generally gets into work again. On the other hand, if the man has done none of these things, if he has not belonged to any benefit club, or if he cannot show that he has looked ahead at all, we say that we are not able to charge ourselves with the responsibility of keeping him entirely, and we say that he need not break up his home, and we make this offer to him: If you, the head of the family, find it necessary to take your relief in the workhouse, we will make an allowance to your wife and children for a week; or sometimes we only ask

Mr. *Stuart-Wortley*—continued.

the man to go in for three days. We make the allowance to the wife and children during that time. When he comes out we give him a further allowance for a week or a fortnight in order to enable him to look round for work. Then I may say I am led to think that if the normal administration of the Poor Law is carried out on what I venture to call sound lines, the pressure upon guardians in times when there is want of employment will not be very great, and I would justify that statement by giving you the following figures. During the last three months, January, February, March (I was down there yesterday and the figures were supplied to me up to yesterday) we had only 20 applications at the Charity Organisation Society for those terms. Only three of these 20 men were members of a friendly society, or had done anything that we could recognise (and we are always anxious to give the benefit of any doubt) for themselves. Of the 20, three were relieved without any condition, and of the 17, eight accepted our conditions, and the other nine went away and presumably found relief or work, or were not, at all events, so hard they had to accept the conditions.

Chairman.

5330. That was the total number for January, February, and March this year?—That applied to the Charity Organisation Society for the terms that we are willing to give them.

Mr. *Logan.*

5331. One of the conditions was that the men should go into the workhouse; I should like to know out of these eight that did accept how many went in?—Out of the 17, eight went in, and nine did not.

Mr. *John Burns.*

5332. What were the conditions for the nine who did not?—I presume they thought they could do better.

Mr. *Logan.*

5333. Than go to the workhouse?—And get relief for their wives and families at home.

Chairman.

5334. These were all genuine residents in the district of St. George's-in-the-East?—Certainly; we should not have received their applications unless they were residents.

Mr. *Logan.*

5335. Men out of work through no fault of their own?—We cannot get to know that.

5336. That is the whole essence of the thing, is it not? A man who is out of work through no fault of his own will not go in the workhouse?—He will not, except in the last resort. We have there adopted this system, which is a supplement from voluntary sources of the ordinary legal powers of the guardians, but we have done that in order to meet the objection above stated.

Chairman.

5337. Was any relief given to the nine?—No, not to the nine.

Mr. *John Burns.*

5338. Then eight went to the workhouse and nine went away?—Yes.

Mr. *Stuart-Wortley.*

5339. And three were relieved without any condition at all?—Yes.

Mr. *John Burns.*

5340. What was the relief?—We generally give 3*s.* 6*d.* for each adult member of the family, and 1*s.* 6*d.* or 2*s.*, or something of that sort for the children, and then it would vary, of course, if there were earnings coming in from the children, or the wife might be earning something, and we should give a little less.

Chairman.

5341. Do you give it all in money?—We give the relief in money. We give it on a fairly liberal scale, sometimes 10*s.*, 11*s.*, or 12*s.* a week; a great deal more than would, as a rule, be given by a board of guardians in an out relief-union.

5342. Those are the main outlines of the plan you pursue?—Yes.

5343. You consider that there is a close connection between the normal administration of the Poor Law and the difficulty of dealing with the special form of distress which arises from want of employment?—I venture to think that that really is the whole crux of the matter. In a union that I would call a lax union, that is a union where out-relief is freely given, the first resource of a poor person is, in any crisis, the rates. This, of course, is accentuated in times of want of employment. In a union like St. George's, where no out-relief is given, this attitude is resisted, and the responsibility in the first instance, at all events, of finding employment, or of a man's maintaining himself during a period of want of employment, lies on the man and not upon the public authority, and for that reason, during a time of crisis, there is comparatively little pressure upon any public authority, and I think the figures that I have given you to a certain extent bear that out.

5344. The fact that you had only 20 applications in those three months?—Yes, and because very few, if any, able-bodied men were obliged to go into the workhouse. I do not mean to say there were not many poor people; there are plenty of very poor people, goodness knows, in St. George's, but the point is they were not driven to come upon the public authority. They had other means of getting on. Perhaps I may be allowed to develop what I have said a little further. In a union like St. George's, if a man is out of employment because his trade is seasonal, that is to say because he is a builder, or a painter, and in times of winter he cannot pursue his occupation, instead of going to the public authority and saying they must find work for him, he comes by experience to learn that he must save some money to carry him over that period which comes every winter, or some of the men might (I do not know that it is done

Chairman—continued.

so much in this country, but they certainly do so in foreign countries) learn a supplemental trade. Then again, there are a great many people (I am afraid we must face it) who are not only unemployed, but they are actually unemployable. They fail from some defect of character or want of application, and so on. I do not want to say anything hard of them, but it is very difficult for them to keep steadily at work, and I maintain that in the union where the law is strictly administered, the first step in the reform of this class of man is taken. He is obliged to face his own responsibilities. Then a third cause of want of employment, and possibly the most important, is that a trade becomes decayed. There have been several instances in St. George's-in-the-East. The sugar trade has entirely left the neighbourhood, and, I suppose, the shipbuilding trade has also, but that is a very old story. With regard to the class whose industry is decayed, the remedy for them is to migrate into some other district or to find some other occupation. If I might give a historical reference, I might remind the Committee that this is exactly the problem that had to be met under the old Poor Law, before the reform in 1834. It was mainly the able-bodied difficulty that troubled the country then, and everybody who knows anything of the history of the subject, knows the different devices that were used to give employment. A Commission was appointed, and the Commission at once said, Stop all this relief; make it absolutely illegal to give relief to the able-bodied, except under the workhouse test. There is a further parallel between this period and the period of 1834. Then, if the guardians refused relief, it was the practice of the applicant to go to the justices, and the justices then might order that relief should be given, and relief was given. Apparently, now, very much the same plan is being carried out, as I understand. When the guardians will not go beyond the discretion allowed them by the law, they go to the vestry, and on, as I venture to think, some pressure from the Local Government Board, the vestries have very largely entered into the work of relief. I know that the Local Government Board Circular is said not to recommend relief work, but it is perfectly certain that that was the impression conveyed to nine men out of 10 reading that circular.

5345. Your main principle is that the primary duty of finding employment rests upon the individual and not upon any public authority?—Yes. May I read a passage from what Sir George Nicholls, the historian of the Poor Law, who was himself one of the Commissioners, said when he was commenting on Gilbert's Act, but it really applies to all these schemes of employment, "The scheme assumes that there never can be a lack of profitable employment, and the guardians must find it near the labourer's own cottage, when, if it existed, he might have found it for himself. The labourer is thus deprived of all motive to bargain for his wages, for the guardians must make up the deficiency to him; he is certain of employment and is not called on to exercise forethought. Could a more certain way

Chairman—continued.

be devised for lowering character, destroying self-reliance and discouraging improvement." That was a comment upon the system which prevailed before 1834 when the stringent step was taken of making relief to the able-bodied illegal. I should like to mention one or two figures with regard to the administration of the law in three strict unions in London, and three unions where out-relief is freely given, to bear out my contention that where in normal times the law is loosely administered, you will get a far greater pressure upon the public authority in any exceptional times. I will give the normal rate of indoor relief out of every 100 persons relieved in Whitechapel, St. George's, and Stepney.

5346. Those are what you call the strict unions?—Those are the three strict unions. At the end of the fourth week of December 1894, that I would call the normal winter administration, that is, before the frost came on, out of every 100, 2·1 in Whitechapel, ·4 in St. George's, and 1·5 in Stepney.

5347. Of the persons relieved, those were relieved out-door?—Yes; the rest, the 98 and 99 were relieved in-door.

Mr. *John Burns.*

5348. Were these able-bodied, or the total?—That is the total. In St. Olave's the proportion at the end of December is 52 outdoor relief out of the 100; in Greenwich, 30, and in Camberwell, 56. At the end of the second week in February, that was in the height of the frost, I take it, the Whitechapel rate was 2·5; it had varied hardly at all, you may say. St. George's was 1·9, and Stepney 4·2, whereas in St. Olave's it had risen to 80·6, in Greenwich to 66·7, and Camberwell to 76·2.

Chairman.

5349. In fact, in those what we may call the lax unions, a habit of depending upon Poor Law relief had been intensified to that extent?—Quite so. Now, I should like to give the percentage of the increase of pauperism contemporaneous with this change of administration. These two columns show the variation in administration in respect of outdoor and indoor relief, and I have a third column giving the actual increase of paupers, and a fourth column which, for comparative purposes, is more valuable, showing the percentage of increase of pauperism in those six unions. Whitechapel, 13 per cent.; St. George's, 7 per cent.; Stepney, 13 per cent. That, I venture to say, is what one might expect during a time of very severe weather.

5350. That is the percentage of increase between the end of December and the second week of February?—Yes. The percentage of increase in St. Olave's is 154·8; in Greenwich, 117·6; and Camberwell, 93·9. That is showing the variation of administration and the rise of pauperism contemporaneous with it within six weeks.

[*The Witness handed in the Table, which is as follows:*—]

Chairman—continued.

TABLE I., illustrating the Variation of Pauperism in Strict and Lax Unions between the end of Fourth Week December 1894, and the end of Second Week February 1895 (*i.e.*, before and during the frost).

	Ratio per Cent. of Out-door to Total Paupers, end of 4th Week December 1894. I.	Ratio per Cent. of Out-door to Total Paupers, end of 2nd Week February 1895. II.	Increase of Paupers. III.	Percentage of Increase of Pauperism. IV.
Whitechapel	2·1	2·5	219	13·7
St. George's	·4	1·9	87	7·7
Stepney	1·5	4·2	184	13·9
St. Olave's	52·7	80·6	7,699	154·8
Greenwich	30·6	66·7	5,058	117·6
Camberwell	56·3	76·2	6,046	93·9

Columns I. and II. represent the nature of the administration in respect of outdoor relief in the several unions. Column I. is the normal winter administration. Column II. represents the variation of administration during the severe weather. Columns III. and IV. show the increase of pauperism contemporaneous with this variation of administration.

Witness.] I have got another table here which shows the variation of administration over 20 years. In Stepney, in 1868, that is before they began what from my point of view I call the reformed administration, there was 112 per 1,000 of population paupers, and the outdoor relief was 83 in the 100. They have reduced it, and on January 1st 1894 it was 24 per 1,000 of population, and 12 per cent. of outdoor paupers to total paupers. I take the year 1868 because it was the year before the reform. In Whitechapel the pauperism rate was 65 per 1,000 of population on the 1st of January 1870, and 74 per cent. is the percentage of outdoor paupers to total paupers. On the 1st of January 1894 the percentage of pauperism was 20 per 1,000 of population, and the percentage of outdoor to total paupers was 4. In St. George's-in-the-East, on the 1st January 1874, the pauperism per 1,000 of population was 59, and 61 was the percentage of outdoor to total paupers. On the 1st of January 1894, the pauperism per 1,000 was 28, and the outdoor relief ratio to total paupers was 12. The other three I have got here are St. Olave's, Lewisham, and Camberwell.

5351. You have not got Greenwich?—No. St. Olave's, Lewisham, and Camberwell are unions which, I say, were much less poor than those three East-end unions. They contain some portion of what I may call villa residences.

5352. St. Olave's contains a lot of riverside population, and then there are the leather trades and other trades which are depressed?—Part of it is, but I say they are less poor than the others, and in proof of that I may say the South London unions have never had a very high rate of pauperism until a date subsequent to the time covered by this table; I mean during the late frost. They begin with a much lower rate of pauperism than the East-end unions. In St. Olave's, on the 1st of January 1874, the pauperism per 1,000 of population was 33; the

Chairman—continued.

percentage of outdoor to total pauperism was 69, and in 1894 the pauperism per 1,000 had risen to 36, and the percentage of outdoor to total pauperism was 57. In Lewisham, on 1st January 1874, the pauperism was 20 per 1,000; on 1st January 1894 it had increased to 34, and the outdoor relief ratio in the earlier period was 79, and in the later period 71, practically a stationary rate. In Camberwell, on the 1st January 1874 the ratio was 26 per 1,000 of population; in 1894 it is still 26, exactly the same figure. The percentage of outdoor to total paupers was 70 at the earlier period and 57 at the later period.

Mr. *John Burns.*

5353. The outdoor relief decreased?—Decreased, but not largely.

[*The Witness handed in the Table, which is as follows:*—]

TABLE II., showing the Variation of Pauperism under a Strict and a Lax System during a long course of Years.

Reformed Administration.	Pauperism per 1,000 of population.	Percentage of Out-door to total Paupers.	Unreformed Administration.	Pauperism per 1,000 of population.	Percentage of Out-door to total Paupers.
STEPNEY—			ST. OLAVE'S—		
Jan. 1st, 1868 (*Before the reform*)	112	83	Jan. 1st, 1874	33	69
Jan. 1st, 1894	24	12	„ 1894	36	57
WHITECHAPEL—			LEWISHAM—		
Jan. 1st, 1870 (*Before the reform*)	65	74	Jan. 1st, 1874	20	79
Jan. 1st, 1894	20	4	„ 1894	34	71
ST. GEORGE'S, EAST—			CAMBERWELL—		
Jan. 1st, 1874 (*Before the reform*)	59	61	Jan. 1st, 1874	26	70
Jan. 1st, 1894	28	12	„ 1894	26	57

The above Table illustrates the reduction of pauperism brought about by the system pursued in the Tower Hamlets Unions, and the stationary condition of pauperism under the old system. The three unions are much less poor than the East-end unions, as is shown by the fact that they have never had a very high rate of pauperism. Such as it is, however, notwithstanding the improved economic conditions of the past 20 years, the rate of pauperism shows no reduction, owing, as it is here contended, to the way in which the Poor Law is administered.

Witness.] If I may go back to what I said was the third cause of want of employment, which probably is most serious, that is the changes of trade, one trade decaying and another coming up, I venture to say that the natural and constructive principle which is able to carry people over this evil is beyond the power of legislation. If you want people to go into a new trade you must allow them to follow the market. If a trade is decaying the fact becomes evident at once by a fall of wages, and the crux of the situation is to discover what the new trade is that is wanted, and how you are to get these people taken over into such new trade, or into an established trade which is capable of expansion. I submit you cannot do that by starting relief works, but if you start relief works you will only congest the people in the place where they are, where, *ex hypothesi*, they are not wanted.

5354. Of

Chairman.

5354. Of course when they are first reduced to want by the changes in the industry, the Poor Law and charity will have to maintain them?—Quite so; you must maintain them, but you must maintain them, I think, under safeguards that will prevent them being congested and kept stationary, looking out for a job in the same place and on the same lines as previously.

5355. Where it cannot be found?—Where it cannot be found; quite so.

5356. You would give relief under adequate safeguards?—Under adequate safeguards. I am prepared to defend what we do at St. George's. I do not know how you can do any better. The people are not deluded into thinking that their difficulty has been solved, and that they are made wage-earning members of an industrial society. It is a misfortune, and it is recognised as a misfortune. They are relieved, and you must do it in a humane and proper manner, but you must not delude them into thinking that your action has put them back and made them economic members of an industrial society.

5357. In your opinion relief works for wages in such a case would only tend to aggravate the congestion?—Certainly; that is my opinion most strongly. I should like to point out that what I was saying about labour following the market is really the history of the last 50 years of the fluctuations of employment. As we all know, there has been an enormous fall of prices since 1873, and Mr. Shaw Lefevre, speaking at Bradford, at some Chamber of Commerce, pointed out that there had been a large fall of prices in such things as bread and coal, clothing, boots, oil, and a number of things that are extensively used by poor people, and he also pointed out that the nominal rate of wages had not fallen, and that not only had the nominal rate of wages not fallen, but the real rate had probably risen, and he said that the ordinary labourers' wages had risen 30 or 40 per cent. and the artizans from 20 to 25 per cent. during the last 25 years. Now, as I understand it, the objection to free trade in labour and to allowing labour to follow the market is that they say if you allow free trade in labour, you will have labour falling down in price, just as wheat has fallen down. I maintain that these figures pointed out by Mr. Shaw Lefevre show that labour is able to avoid a falling market, and does to a large extent avoid a falling market; that it has gone away from agriculture to a large extent, and that it redistributes itself in a great variety of employments. That I believe to be the history of labour during the last 50 years, and what anyone who wants to help this difficulty of unemployment has to do is to increase, if possible, the mobility of labour, and not to congest it by means of relief works. If I might follow that argument a little further, because it seems to me extremely important, Mr. Giffen, I believe, puts the agricultural population of the United Kingdom 50 years ago at half the labouring population. This is taken from one of his books, published some time ago, but I think he repeated it to the Labour Commission in substantially the same form. Now the proportion of agricultural

Chairman—continued.

labour is only about one-fourth, and the last returns of the Census show that the decrease still continues. Against that decrease, if you consult the Census returns you find that there is a large increase in the making of machines, in the electrical industries, for instance, an enormous new trade in bicycle-making has sprung up, and these are new industries, one may say. Then there is also a large expansion of old industries to meet the increased purchasing power among the community generally. There is a curious instance with regard to the boot trade, that in the decade ending 1881 there was a decrease in the number of people employed in the boot trade as compared with an earlier period. That, the authorities who are responsible for the Census attribute to the introduction of machinery during the decade ending 1881. During the last decade, ending 1891, the numbers had begun to increase again. The change had taken place, and you had an increase of people making boots for people who were able to buy boots.

5358. The effect of the introduction of machinery, although at first it displaced a certain amount of labour, ultimately had the effect, probably by cheapening the commodity or in other ways, of increasing the number of people employed in the trade?—Quite so; and they were people earning money I presume in other trades which were following the same course and their wages enabled them to exchange their labour against the bootmaker's labour.

Mr. *John Burns.*

5359. Your remarks are not restricted to national work, but are applicable to the world's work, and would apply to the exported boots on which those figures are also based?—I should suppose they would, certainly; may I instance one little point which came to some extent under my own observation, the number of sempstresses. In the Census of 1881 there is a return of 83,000 sempstresses and 7,000 odd females machinists. In 1891 the proportion between these two trades had entirely changed. There were only 55,000 needlewomen and there were 21,000 machinists, and a decrease of the two classes put together of something like 15 per cent. I mention that because within my own experience, when I first went down to St. George's, 15 years ago, one of the most deplorable and difficult parts of our duty was to know what to do with these poor women earning practically you may say starvation wages, plying the needle with the hand in competition with the machine. We had to do the best we could. We helped some of them, and some perhaps had to go to the Poor Law. Before I saw these figures in the Census, I remarked it to some of my colleagues; I said, "How strange it is that we now have so few of these needlewomen." The point arose in the particular case of an old woman whom I recently found still working at this needlework; but she told me that practically the work was given her by an old employer out of charity, as the whole of her branch of trade had gone to machinery. If we had, as is advised now, started relief work for these needlewomen, we should have had these poor creatures there still. All we could

Mr. *John Burns*—continued.

could do was to relieve them. We did relieve them and in the course of events the young women gave up the trade, no children went into it, and gradually matters were adjusted, and, although I do not say the machinist's is a very highly remunerated employment, still the people who ply that trade make a living by it.

5360. It means some of them drifted into rope-making and paper-bag making and so on?—Yes. I should think it is quite likely.

Chairman.

5361. At all events, whether they drifted into other trades or adapted themselves to a new development of their own trade, they in a natural and healthy way found employment to take the place of that which was dying out?—Quite so.

5362. Your great contention is that if you step in and artificially divert their employment from its natural course by furnishing some form of relief work you really do more harm than good?—That is my contention.

5363. Now with regard to the general question that we have to deal with, can you give us any line to which you are led by your experience and observation; do you think that anything can be done with advantage by what may be called heroic measures?—The argument which I have laid before you would lead me to think that there is not any necessity for heroic measures and that really the remedy lies in the natural course of trade being allowed to run. I might submit that there are a good many things done in the way of restricting employment and preventing employment following the market, but I do not know that legislation can deal with that. It is more that one wants people to understand the subject better. I am treading on rather controversial ground, but I should like to say, with all respect, that one sees a Bill brought into Parliament by some great corporation, a railway company, or a tramway, or a water-works company, or gas company, or telephone company, or whatever it may be. There are certain people who take the line that that ought to be stopped, that all sorts of impossible conditions, or what the companies call impossible conditions, should be put upon the granting them leave to increase their enterprise. They do it, as I understand (their motives are above suspicion), because they think that ultimately, at some time or other, the municipalities will be able to do these things. As a matter of fact, the municipalities are not doing them, and you have the enterprise of the country strangled between these two sets of people, and it is not allowed to expand. I submit that is one cause. I am credibly informed by people who know about railway expansion that it has been very much curtailed by the very difficult conditions which have been put upon railway companies, and the same remark applies to the other industries mentioned. Also, I am bound to say (if I may say so without offence) I do think that the policy followed by the trades unions tends very much to the same course. They are anxious to keep up wages; it is a perfectly proper object for them, but I do not think they realise sufficiently that

Chairman—continued.

their object can only be attained by taking people over from industries that are falling, and helping them into industries that are paying; and I maintain that, where you have two sets of unemployed people, if labour and capital were allowed to organise themselves freely (I quite admit there are some natural impediments that cannot be got over, but one ought to remove artificial impediments), there ought to be no difficulty in the exchange of their services between them. The bootmakers have been allowed to go from other trades into bootmaking, and clothiers and tailors in the same way exchange their products one against the other, and what you want is a freer organisation and a fair passage of both labour and capital from one trade to another.

5364. One solution of the difficulty, or one means of solving this problem that has been suggested, is the establishment of farm colonies. Have you formed any opinion on that subject?—I observe that for the last 50 years labour has been steadily going away from that enterprise. I know from all my friends who are interested in land, who are skilled farmers, and who understand the business, who have skilled labour to work it, that they cannot always make ends meet; unless therefore you wish to face a very large and very continuous financial loss, the employment of pauper or semi-pauper labour will not answer. With regard to the relief it offers, I submit that you are taking people where you cannot permanently leave them, unless you are going to re-introduce some protective tariff or some other expedient that will make agriculture, handicapped by these conditions, pay. It is no good taking them back to the land. You are taking them back to an industry that they have abandoned, and it appears to me that you will do far more harm than good. There are farm labour colonies in Holland and in Belgium. I believe there, colonies have been going on for a long time. I have jotted down certain figures that I had by me. On 31st December 1885, in the Dutch colonies of Veenhuizen and Ommershans, there were 3,253 inmates, of whom only 425 were for the first time, that is to say, that out of 3,000 odd 2,800 were old stagers, going the round. Precisely the same thing is the case with regard to the "agricultural beneficent" colonies in Belgium. On 2nd December 1890, there were 2,928 inmates and of these 2,507 had been there before, and 174 of the remainder were bad characters. I have paid a good deal of attention to the general question of Poor Law administration, and I have read in a cursory way what happens abroad, but as far as I can make out, whatever system of Poor Law you have, you will have your own class of paupers; we will not benefit this country by adopting the German system or the Dutch system. We have what we call "ins and outs" here, that is, persons going from one workhouse to another, and backwards and forwards to the same workhouse; and abroad this class goes the round of the farm colonies. It is the difficulty of creating a feeling of personal responsibility in these people, especially once it has been interfered with and broken.

5365. You

Chairman—continued.

5365. You have named two objections to farm colonies, firstly, that it is an attempt to revivify and develop what is, practically, for the moment a somewhat decaying, or at any rate diminishing occupation; and, in the second place, that it would encourage these more or less loafing men to go about from one to the other to seek employment. Do you attach any importance to this objection, that men would be separated from their families, and be totally left by themselves in those places?—Of course, mainly this difficulty is a difficulty of large towns, and it is a great difficulty. You will have to send these people down to the country. You cannot make a farm in London; and you must separate them from their families.

5366. You cannot send the whole family down?—It is a large order if you do, especially as you have no guarantee that they will stay. I am told with regard to these private voluntary farms that have been started, one of the great difficulties is that a man goes there during the summer weather but discharges himself the moment he thinks he can do better in the town, and he comes back again, and goes the round of the shelters in the town. I do not wish to say anything against these poor people; they are very much what their circumstances have made them; but what I say is you have got them now as "ins and outs" in the workhouse. I would much rather keep our own system, and send private people to them, and try and deal with them by personal influence and private charity, and try and remake their manhood again if you can; but I am perfectly certain that when you start a farm colony for their relief you will get exactly what I understand they have in these Dutch and Belgian colonies; you get them coming backwards and forwards, and they will be much more difficult to deal with. You will only multiply the evil by adopting this new scheme.

5367. Then, as to relief works generally, have you anything to say on that point?—There is the practical difficulty of administering. I have already stated what I may call the theoretical objections to it. You want the people to go away into other employments; you do not want them to hang about public works.

5368. It perpetuates congestion?—Quite so. There are a large number of what I may call practical difficulties of administration. Especially in the part of London I know you have got an intermittently employed population. Every man in St. George's, East, is unemployed, so to speak; that is, he has no regular employer; they are all employed by the hour or the day, and if you meet a man off his job he is practically unemployed. If you open relief works there is nothing to prevent that man walking in any day he is unemployed or if he does not like the job he is on. One knows the conditions of the lower class of labour are not always very pleasant, but you do not want him to throw up his job, at least I cannot see there is any remedy in his throwing up the job he does not like and coming on the public authority, where he is under an official who is to a certain

Chairman—continued.

extent his own servant, and whom he thinks he can bully. My own opinion is that at such works the superintendence is of a very illusory nature. In addition you have got all the people who are unemployed in the winter. I do not know that you can contemplate with equanimity a proposal that you shall find work for all the painters and the builders every year during the frost. Next as a matter of fact relief works are no test of distress. In Nottingham some time ago they had relief works, and they had 1,396 men engaged upon those relief works. The authorities determined that they would stop the relief works. They did stop them and told the men if they could not get on they must go to the guardians. Of these 1,396 men, only 155 went to the guardians. Of these 56 were dismissed, either because they failed to attend, or because they were judged not to be in need of relief; 55 were offered the house; they all refused, and of the rest only 27 accepted the offer of out-door relief subject to a labour test, so that you had a large population (I do not say they were not poor people; they were poor people) working away at these relief works who were able as the event proved to get on in another way, and they were gradually, one by one, absorbed in the industrial population. In the mass, on relief works, they cannot be absorbed.

Mr. *John Burns.*

5369. Do you know whether they starved?—I should think not.

Mr. *Stuart-Wortley.*

5370. Has there been any evidence that they starved?—Certainly not.

Mr. *Logan.*

5371. You say a large number of men in Nottingham would not go into the workhouse, and would not accept the labour test. Does that prove that these men, when the relief works were stopped, got to work?—It proved that they got on, and I think if any of them had starved it would certainly have been heard of. I do not think it is possible that, with a large population like that, you can follow each man to his own home and superintend the meals that he has, and then tell people he did not starve. If he goes off, and you hear no more of him, I presume you may conclude he does not starve.

Chairman.

5372. As you say, he gets along somehow?—Yes.

Mr. *Heywood Johnstone.*

5373. There a certain number never asked for any alternative?—Only 155 asked for any alternative. That is a further answer.

Chairman.

5374. You said it was an old story; can you give the date?—I think it is in one of the early reports of the Poor Law Commissioners, and I daresay it is 50 years ago.

Tuesday, 2nd April 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. Bartley.
Mr. Benn.
Mr. Billson.
Mr. Thomas Henry Bolton.
Mr. John Burns.
Mr. Campbell-Bannerman.
Mr. Crean.
Mr. Wootton Isaacson.
Mr. Heywood Johnstone.
Mr. Lawrence.
Mr. Logan.
Mr. Mather.
Mr. Pickersgill.
Mr. Renshaw.
Mr. Whiteley.
Mr. John Wilson (Durham).
Mr. John Wilson (Govan).
Mr. Stuart-Wortley.

THE RIGHT HONOURABLE A. H. DYKE ACLAND, IN THE CHAIR.

Mr. THOMAS MACKAY, re-called, and further Examined.

Chairman.

5375. I THINK there was one question in your examination in chief which you wanted to extend or to say a word about before your examination was continued?—Yes.

5376. You said that very few unemployed applied to your charity organization society in St. George's during the recent frost; you want, I understand, to say something further with regard to that answer?—I want to supplement that answer by the statement that, to my knowledge, there was a very great deal of charitable relief being given away throughout the parish. All the established agencies had a great deal of extra money given to them, and there were also one or two new agencies which started into life temporarily to meet the extreme frost of this year. I should like to add that I believe that is an event that can be confidently calculated upon in times of any extraordinary pressure.

5377. You cannot rely, I presume, upon that charity being administered in the way you would administer it if you had charge of it?—To some extent not. Some of it was given away perhaps rather more indiscriminately than we should, as a charity organisation society, like to do; but the fact remains, and it ought to be stated to qualify my former statement that very few unemployed came to our society, that more undoubtedly would have come if there had not been that stream of private charity.

5378. Your point is that where there is extra depression there will be extra charity?—Quite so.

Mr. *John Wilson* (Govan).

5379. You stated that you had no faith in the colonisation process, or putting the unemployed among the working poor back upon the land?—I have not.

5380. Are you aware of any precedent in this country where land has been reclaimed that was lying waste and derelict?—I cannot say that I am. I am aware, of course, that land sometimes goes out of cultivation and is brought back again into cultivation; but I am not aware of its having been done on a large scale.

Mr. *John Wilson* (Govan)—continued.

5381. Have you ever gone down the River Clyde from Glasgow?—No; I do not know that part of the country.

5382. Are you aware that on the banks of the Clyde land which was lying waste was filled up by dredging from the river and made good land?—I am not aware of that; but I should doubt whether it was done by pauper labour or relief work labour.

5383. Are you aware that between Greenock and Glasgow there is a very large piece of bog land and that bog land was uncultivable until such time as it was covered over with the refuse from the City of Glasgow and converted into smiling fields?—I am aware that the whole of Scotland something like 150 years ago was in a very backward state of agriculture, and it has been developed since, I think, I may state, on the authority of Mr. M'Leod, very largely, by the banking system of Scotland; but that has been done, by professional farmers and not, so far as my information goes, by relief works or pauper labour.

5384. Do you not think there is a considerable amount of land in the neighbourhood of London, on the low parts by the River Thames, on which the labour of the unemployed could be used to great advantage for distributing the refuse of the City of London upon it?—I do not doubt that there is land, but I question whether you could advantageously employ the unemployed there.

5385. I take it, generally speaking, you are against the idea of putting the unemployed upon the land for the purpose of giving them employment?—Yes, for the reasons I stated at the last sitting of the Committee.

5386. Because it would not be a financial success?—And further, because it would tend to increase the evil by congesting population at places where, for economical and industrial reasons, it has gone away.

5387. Do you not think there is a great quantity of material which comes from the continent of Europe into the port of London that might be

Mr. *John Wilson* (Govan)—continued.

be grown at our own doors, if this land were brought into cultivation?—I suspect the answer to that question is that there is a great quantity of manufactured goods that goes out from this country to pay for the imports that come in. It is a system of exchange. If we are to start doing things in this country that can be done better elsewhere, we should be the losers.

5388. Is it not rather a question of the payment of money?—Money goes to adjust the balances; the exchanges are affected by goods, and it is only the balance that is settled in money.

Mr. *Mather.*

5389. I should like to ask whether you have made a study of this question of occupying, not the pauper class, but the well-conducted unemployed of the working class, upon any agricultural occupation, and whether, in making the statements you made on the last occasion about Holland and Belgium, you are familiar with the conditions under which those colonisation schemes are carried on?—I have had no practical experience of conducting a colony in Holland; but I have relied upon evidence which is the best I can get, I think, namely, the most careful account which has been given of these colonies by Mr. Willink who went over both to the Belgian and the Dutch colonies, and whose report, I may say, was submitted to the authorities there, who have accepted (more or less) the accuracy of his statement. They defend the system in some points; but, as I understand, neither the Belgian nor the Dutch authorities dispute the fact that a large number of the people they have to deal with are people who come back time after time, some as many as 15 or 20 times. This *récidivisme*, as it is called, is admitted.

5390. They belong to the pauper class, that is to say, the same class as are dealt with by our board of guardians in this country by sending them to the workhouse; they do not come by any means under the designation of the unemployed working classes, that is to say, those persons who are suspended from their ordinary occupations through depression of trade, but who have some definite occupation, and who expect after a while to get back to their ordinary occupation?—I understand that the colony system is very largely a system of poor law relief as adopted in those two countries.

5391. So that there is nothing at all amongst the colonies you have referred to which deals with the question of any class of the community except the pauper class?—No. But the difficulty is that, if you start relief works for people who have to give up the industrial struggle, and say, 'You have failed to get on; you must come on this work, not as a matter of ordinary employment, but because you cannot get anything else to do," you are practically creating another pauper class.

5392. Assuming that that was not at all the condition under which any persons were employed under such a scheme, assuming there was a properly conducted colonisation scheme which secured their employment upon industrial work, such a scheme as enabled them successfully to tide over to the time when their own occupations in the towns may probably revive, that is dealing with a totally different system from anything

Mr. *Mather*—continued.

you have heard of on the continent?—If I may say so, the question is a little hypothetical, I think. You say, assuming that the scheme were made successful from the industrial point of view.

5393. What I mean is that the things are different in this respect; the class you have referred to is not by any means the class that might be dealt with by such a scheme; it is not the class that constitutes at the present time the greatest difficulty in England; that is to say, the well-conducted unemployed working man?—When you say, "the class that might be dealt with by such a scheme;" my objection is that I do not think you could deal with those men in this way.

5394. You would not put it higher than this, I presume: that from what you have seen of late concerning certain societies on the continent, you do not think that the same scheme applied in England would give better results?—Quite so.

5395. You are not prepared to go beyond that?—I have considerable acquaintance with the literature of this subject generally, and I never have come across any, what I may call, "fictitious" employment scheme which resulted in any good, whether upon the land or anywhere else.

5396. Are we to take your words in their general sense when you say that in England the labourers have left the land simply because there is no occupation for them?—I mean they can find better occupation elsewhere.

5397. They find occupation for the time being in the towns, and therefore they leave the land?—No doubt.

5398. Are you aware whether in this country at the present time anything has been tried in farming or agriculture beyond the usual old-fashioned method of small farms, and large farms and farm labourers being employed thereon; there has been no other method of farming adopted in this country but that adopted from time immemorial, has there?—I cannot at present think of any other method of farming.

5399. You have no acquaintance with any schemes which have shown that co-operative farming would be of any value?—I have read with very great interest Mr. Woolf's book about the assistance given by co-operative banking to small farmers in Germany and elsewhere, and I think there is a great deal to be said for it certainly, but the farming, assisted by this co-operative system of cheap credit, is not itself co-operative.

5400. Do you happen to have read quite recently the report of Mr. Wilson Fox, who was one of the Assistant Commissioners for the Royal Commission on Agriculture now sitting, in which he states that so much land has gone out of occupation, that villages are empty, cottages are unoccupied, that men have gone from the land, and the land is going altogether out of cultivation, and men have run to the towns in order to find occupation, and on his asking for remedies from the farmers of the district, one suggestion was that if there was a co-operative system amongst the small farmers, and if there were a means of disposing of their produce by co-operation also, this condition of things need not have come about?—It is a very large question.

5401. You have not met with that statement?—I have glanced at the Report, but my own

Mr. *Mather*—continued.

doubt always about these things is this: when you have got competent farmers, men who were brought up to it, and skilled labour, finding it very difficult to succeed I do not think you can expect that by simply putting the management of a farm into commission (which is what is done practically by co-operation) you are really in any stronger position to cope with the financial difficulties which have baffled private adventurers. I wish I could think it was otherwise, but the facts are too strong for me.

5402. You said just now that a large amount of produce came from abroad to this country, such things as we ourselves are producing a very large quantity of, but not so much as we require, the prices of which from abroad are no lower than can be obtained in England for the same article produced in England; do I understand you to think it is nevertheless an advantage to get it from abroad?—If we cannot grow it as cheaply.

5403. No; I say, assuming the possibility of selling at the same price to be the same in England as abroad, in regard to articles already produced in England, but not in sufficient quantities?—I would submit that that again is rather a hypothetical question. If one can do it as cheaply in England, I take it it will be done in England. The reason it is not done is because it cannot be done. I should be very glad if the conditions would alter and would lead it to be done.

5404. Are you aware that the conditions under which these things are produced abroad are totally different from those under which they are produced in England, and that the difficulty in England arises because we do not adopt the same plan; our land being equal, and all the conditions here being equal, it is simply a question of method?—I should be very glad to hear that the rearing of poultry or the growing of vegetables, or whatever it may be, was more largely carried on in England.

5405. May I take it that your mind is open to this extent: that although you have stated in your evidence in chief that you have seen as yet no schemes capable of affording the possibility of a much larger population being employed upon the land than is at present employed, still you, holding the position you do as a high and very responsible leader in regard to charity organisation, consider that there may be some other methods adopted than those you have hitherto heard of, and that you still have an open mind on the subject?—With this qualification: that I think it would be a fatal step for the State to make any speculation of that sort. If private individuals are prepared to do it, it is a proof that they think the thing will pay, and that capital and labour can advantageously be applied in that way, if they are wrong, that is their affair, and no great harm is done; but I should be strongly against the State speculating in land, as at the present time, at all events, I gather it is a losing concern in this country.

5406. Supposing there is no speculation about it, but that in the estimation of business men it is financially sound, is there any inherent objection to the assistance coming from any source that will establish the population upon the land?—If business men are of opinion that it will be a good employment of their capital to take labourers back from the back streets of towns to work upon a farm, I should say certainly they were at liberty to do so; but what I should very much object to would be that the Government should undertake it.

5407. I am not speaking of private individuals speculating in land or seeking to make a profit out of the land, because, of course, the land cannot bear many profits beyond that of sustaining those who work upon the land; but if there is no risk whatever in the employment of State funds to a limited amount in order to set free the land from its present conditions, may I take it there is no inherent objection to that so far as the financial means are concerned?—I am afraid I cannot agree to that. I question the possibility of the conditions you suggest. I think it is practically introducing protection again to try and bolster up a failing industry. Personally, I am a convinced Free Trader, and I cannot modify the opposition which I feel to what you suggest.

5408. If provision were made in the way I have described, or in any other, in regard to agriculture and the cultivation of land in this country, which is the first source of the wealth of the country, by which means could be legitimately employed for sending back the people to do work upon the land which Nature has destined men to do, assuming that it could be done on a system which was perfectly sound financially, would you call that bolstering up the industry?—I call it bolstering up an industry if that industry cannot get on without a State subvention.

5409. The industry that we are speaking of has reference, not to taking possession of the entire land of the country, but simply to dealing with the difficulty in the social condition of the people in regard to the unemployed well-conducted working classes, who cannot find employment at all unless they are assisted either by private enterprise pretty much on patriotic grounds or by the State on patriotic grounds?—I do not think I can modify my previous answer very much.

5410. You have not seen any scheme that recommends itself to you as overcoming your objection?—No.

5411. But you are prepared to examine any such scheme that anyone can suggest as affording a solution for this difficulty?—Yes, I should be prepared to examine any scheme.

5412. Are we to understand that you regard outdoor relief as altogether an evil in itself?—Out-relief from the rates I consider unwise.

5413. I understand that you would incline to all relief being administered through work?—No, I did not say that.

5414. I thought you inclined to the workhouse system?—Yes, but that is not work.

5415. There is always, of course, some work connected with workhouse relief?—Of course people are put to work in the workhouse; but work is a different thing from the workhouse.

5416. Are we to understand that you do not think it wise for the poor law authorities to administer relief to any persons who will not go into

Mr. *Mather*—continued.

into the workhouse?—Yes, I should say so as a general principle. I might state that of course I am prepared to defend the line which has been taken in the three East-end unions to which I referred, which, you may say, have practically stopped out-door relief altogether; but I am aware that there may be some difficulty in bringing that into operation, and I should hold that the plan pursued by boards of guardians like those of Birmingham, Manchester, and Paddington, is based upon the same principle, and is very nearly as good. It consists in administering out-relief very strictly, insisting on adequate investigation, and adequate relief, and in accepting the co-operation of voluntary agencies, with the view, as far as possible, of leaving "out-relief" in their hands.

5417. Supposing at my works, owing to bad trade during six months of the year, I were to discharge 200 or 300 men, some of whom would be boiler-makers, mechanics, and workers in various departments of mechanical work, and if by reason of their large families or of sickness at home or other causes the savings of those men had been exhausted, would you say the only chance for them should be to go to the workhouse, or to depend upon a charity organisation society such as yours in the district?—That is my opinion; accepting the hypothesis, which I submit is an improbable one, that a number of men are dismissed, that they find no other employment, that the depression lasts a long time, that their resources are exhausted, that their friends cease to help, that no special voluntary effort to meet the crisis is made, then, failing all these alternatives, they must come on the normal charities of the district, or, in the last resort, on the Poor Law, and this last must, in my opinion, maintain the workhouse test; and I should like to add that this was the opinion, after a most elaborate inquiry of the Poor Law Commission in 1834, and it is the deliberate opinion, I believe, of every single writer of repute upon the subject. It is the deliberate opinion, I take it, of all the inspectors and people who have got to do with the Local Government Board and the administration of the law. It was the opinion of Mr. Fawcett in 1871 that out-door relief, not only to able-bodied, but generally, ought to be made illegal.

5418. That is, from the poor law authorities?—Yes.

5419. What part would the charities organisation societies play in the social condition of the country if it were the absolute law that no out-door relief could be given; would you then rely upon the multiplication of charity organisation societies throughout the country to meet such cases as I have just described?—On the last occasion, when I gave evidence here, I mentioned the case of Nottingham, where they had had certain relief works. I should like to correct the date I then gave. At the moment I had stupidly mislaid the reference to that case, and I said that it occurred 50 years ago. I was quite mistaken; it was a modern instance which occurred in the winter of 1885. In that case, very much the same state of things as you have described in your question arose; and if you will allow me, I will read one

Mr. *Mather*—continued.

or two passages from a paper written by Sir Samuel Johnson, who is the Town Clerk of Nottingham, as to the experience there of starting relief works when there was a temporary suspension of one of the staple trades of Nottingham. He says that there were 1,400 or 1,500 men who were thrown upon the resources of the town and demanded work, and that some of the best trained officials of the corporation were told off to superintend the men, and put them to levelling land for building purposes. A sum of 10,000*l.* was spent in labour and plant. "The result was disappointing to those who were most anxious to try the experiment. There were certainly some good honest workmen who greatly needed help, and who took kindly to such work, and wished to do their duty. They were, however, restrained by the rougher element, who enforced idleness on those who were willing to work. Remonstrances by the overseers were met with volleys of oaths and violent threats." "Police were kept in reserve, as the men began to insult passers by;" and finally there was a riot, and they had to shut up the establishment. The figures I gave on the last occasion were the figures that applied to that experiment. Ultimately they stopped the works, and told the men that if they could not get on they must apply to the relieving officers. As a fact very few applied, and of those that did apply, a certain number were offered the workhouse. None of them accepted it. Only 27 out of the 1,300 accepted the offer of going to work under the out-relief regulation order in the labour yard.

5420. Were those men of the pauper class?—No, not of the pauper class; they were the people, as I understand, who were thrown out of work by the temporary suspension of one of the staple trades of Nottingham.

5421. Have you seen the work going on at Wanstead Flats?—No, I have not seen it.

5422. That is of a similar character to the work you have been describing at Nottingham, is it not?—I cannot express an opinion.

5423. I think it would be well worth your while to see it, as showing that there are two sides to the question?—Will you allow me to point out that they have not got to the end of those works yet. It is easy enough to start works, but the problem is how to get the people away again.

5424. I put the question to you because it is important to get from you, as being a capable authority, what the result of your experience has been; are we to understand that, knowing as you do the industrial and social conditions under which we live, and the difficulties arising from fluctuations of trade and so on, you think there is no possible relief other than that which could be given by the more perfect administration of the poor law, as you have now pointed out, and the extension throughout the country of such charity organisation societies as that over which you preside; are those the only two means, in your opinion, of coping with any difficulties that may turn up?—I think so.

5425. You have nothing further to offer beyond continuing the work that you are familiar with through such societies as that which you represent, and getting the administration of the poor

Mr. *Mather*—continued.

law into a more perfect condition than it is at present; that is your final solution of the present condition of things, is it?—I think the only solution of this question is to make it perfectly clear that the responsibility for finding work rests on the people themselves, and not upon the public authority. The only way of enforcing that, so far as I know, is by the administration of the Poor Law on the principles laid down by the Poor Law Commissioners.

Mr. *Bartley.*

5426. As regards these works at West Ham, which have been referred to, I gather you think there is very little difficulty in starting these works, but the real test of their success is getting men away from them and turning them into useful citizens afterwards?—Precisely. You can have exactly as many relief works and as many paupers as you choose to pay for, but the crux is, having got these paupers and these men on relief works, to get them back into the ranks of industry again.

5427. You think that the more these works are extended the larger the danger will be of people depending upon these works?—Certainly. I do not think I can give you any stronger instance of that than the increase which I told you had taken place in five weeks in St. Olave's, where the increase of pauperism was 154 per cent., mainly through their having a labour yard administered upon very easy conditions.

5428. With regard to the question which the honourable Member for the Gorton Division put to you with reference to the old-fashioned system of farming, do you think the chances are that if farming is not made to answer by private enterprise it is not likely to answer by a system of relief works managed by a sort of co-operative body or a body of managers?—I should say not only would it be likely, but it would be certain not to answer.

5429. You see no chance of its being more successful than under the present system?—It would be much worse, of course. You would have unskilled labour from the towns and town boards of guardians managing industrial enterprises about which they do not understand anything.

5430. You think that such a process would not help you in getting people *bonâ fide* back to the land by a fictitious system of dependence upon outside assistance?—I think it would be practically a return to the old Poor Law; and I might remind you that the business of what were called the Assistant Commissioners (Local Government Board inspectors as we now call them) in the first year of the Poor Law Commission was to go round the country suppressing everywhere these little sporadic relief works.

5431. That was in 1834, was it not?—I had specially in my mind 1835, the first year of the new Poor Law. The Report for 1835 is full of these cases.

5432. Have you heard of a plan such as they have at Battersea, of the local authority setting aside a sum of money for work which they do in winter in order to meet this difficulty?—I have heard of it; but I understand the difficulty is that so very few works can be carried on at times when other trade is suspended. I heard it stated that one vestry had done great damage to their roads by the inordinate sweeping which they had started during the frost in order to give employment.

Mr. *Bartley*—continued.

5433. Do you think that if every authority in London were to make it known that they had set aside a certain sum to spend in winter upon these works many people would depend upon the prospect of that work?—I think so.

5434. Would that be an evil, in your opinion?—Yes.

5435. Do you think it would aggravate the conditions of distress?—I am sure of it.

5436. I understand your way of conducting your relief is that you make it an absolute rule to investigate each case and only relieve those who have given some evidence of past thrift or care?—Yes, except that, as explained, we step in to save the homes and to give relief to the families of unthrifty men who have been obliged to go into the workhouse.

5437. Do you consider that could be carried out in an extensive system of relief works?—I do not think so; you have to deal with so very large a number when you give inviting conditions of relief.

5438. You think that the danger of any system of general relief, by relief works so called, would be that they would tend to do away with that condition of employment or relief?—I think so.

5439. You said in another part of your evidence that with a lax administration of relief "the first resource of a poor person is in any crisis the rates"; do you consider your way of administering relief tends to make people more reliant upon themselves?—That is our main object, of course. Speaking for my own committee of the Charity Organisation Society, we have got to distrust a good deal evidence of character, because it is a very indefinite thing. Thrift is a thing that is more or less tangible, and one is not liable to do such gross injustice in judging by that as one is liable to when one attempts to judge from evidence of character. That is one reason why I would support that test. Further, I believe it has made a difference even in our very poor district of St. George's. Our committee the other day remarked upon the very different tone towards the public authority taken by a woman who had come from Bethnal Green, which is a very lavishly administered union, different, I mean, from what we are now accustomed to remark among the poor people of St. George's. This system has been going on in St. George's for 20 years, and the people have become accustomed not to look to the rates; they look to themselves, and I do not think they would have expected so much from the public authority as we thought this woman did.

5440. Has that tended to increase or decrease the sufferings of the poor, in your opinion?—It has certainly tended to decrease the sufferings of the poor, because I am perfectly certain that no system of relief can ever supply the place of the independence of the poor, which is really the object we are all struggling for.

5441. You consider that system, though it may appear harsh, ultimately, and perhaps rapidly, lessens the sufferings of the poor?—I should not have devoted all the time and trouble I have to this work did I not think so.

Mr. *Bartley*—continued.

5442. As regards the seasonal trades, do you consider that you have taught the people in your district to recognise that where men are engaged in trades that cannot be carried on in winter, some provision must be made when they can be carried on to enable them to tide over the winter?—It is a little difficult to answer that question in the affirmative.

5443. That must be the tendency?—That must be the tendency, undoubtedly. But where you have the contiguous unions administering in a different way and teaching people when they are out of work to go to the authorities, it is difficult in view of the migratory habits of the population to lay your finger upon a man and show that he has learnt such-and-such a lesson from residence in such-and-such a union; but I think that would be the tendency.

5444. If it were known that men in seasonal trades would be relieved, would that tend to increase or decrease the wages in those trades?—I should imagine it would decrease the wages.

5445. Was not that result come to in the Report of 1834?—Certainly. The regular system was that the wages were supplemented out of the rates, and in the most open manner, of course, at that time,

5446. Do you think the danger as regards this discussion upon relief works is that we may tend to go back to that condition of affairs?—As you have asked the question, I may say I think things are very critical just now.

5447. Do you think any return to that system would really inflict immense hardship and suffering upon the poor themselves?—Certainly. I never heard it doubted. I should have thought that was one of the axioms of this controversy.

5448. You think that really the kindest and most humane treatment is to continue as rigidly as may be the system laid down in the 1834 Report?—Certainly.

Mr. *Bolton.*

5449. With regard to the 1834 Report, are you of opinion that the circumstances there are such that the Committee may derive instruction and warning from that Report?—I should say so certainly.

5450. You are of opinion that the dangers and evils which were made manifest by that report are equally dangers and evils now?—I should say that by this Circular from the Local Government Board, which has induced the vestries to become, as it were, competing relief authorities, you have in some places very nearly introduced the same state of things again.

5451. You think that the facts in that report and the opinions expressed by the distinguished gentlemen who constituted the Commission are applicable, by way of warning advice and instruction, to the present time?—I should say so certainly. I know it has been put forward that the condition of the working classes having considerably improved, you might therefore relax the law; but I maintain that that is a most dangerous fallacy. I should like to state in the most positive manner, as the result of my experience, that the difficulty of this question is not a question of whether people get more or less wages, but it is that, unfortunately, in the lower stratum of society, you get a certain number of people who have no sense of personal responsibility. Higher wages in such cases do not raise men above the hand-to-mouth life, but only make it somewhat more lavish while they last. I am inclined to argue that to a great extent that is the result of the bad administration of the Poor Law.

Mr. *Bolton*—continued.

5452. You think in fact that a departure from the principles enunciated in that report has had this effect?—It has kept a certain section of those people below the general rise in the condition of the rest of the working classes.

5453. In fact the principles of the Poor Law as established after that report, have not sustained any impeachment down to the present time?—I should say they have been confirmed.

5454. Is it not a fact that a great many of the experiments that are so frequently suggested at the present time in various quarters by people affecting to sympathise with the condition of the unemployed, were all tried and are reported upon practically in that report of 1834?—I think so.

5455. Are you of opinion that the evils which were conclusively shown to be produced by those experiments would, under somewhat altered conditions at the present time, follow in the same way if those experiments were repeated?—I think so.

5456. You have had, have you not, a good deal of experience, not only of the pauper class but of the class just above them, who are on the verge of pauperism, the struggling poor who are just on the brink of pauperism?—Yes.

5457. And also of the unemployed generally?—Yes.

5458. Are you of opinion that any large or appreciable number of unemployed would be fit physically to go and work upon the land in farming and market-garden operations?—The habitually unemployed are, I am afraid, people whom, from some defect of character or otherwise, it is very difficult to employ; they have lost the habit of industry, and I do not think you would employ them successfully upon the land.

5459. Among the trades and occupations which are depressed, in which a great many people are out of employment, are there not a very large number of persons who are physically unfit to go out and work in the open air on farms and on market gardens?—Yes, a large number of the people who have fallen out of work are old people who, I think, by the conditions laid down by the trades unions, are unable to get in ordinary times full pay from employers, and the result has been that a great number of those people are left out in the cold.

5460. Taking, for instance, persons engaged in light trades such as the trades pursued in the east-end factories, watch makers, and people of that kind, or persons engaged in light mechanical occupations, people who have been in shops, lower class clerks, and all that class of persons who are in the habit of working indoors; are there not a large number of those persons out of employment who would be physically unfit to to go through the laborious work of a farm or a market garden?—That is the great difficulty; you cannot make a relief-work of such a nature that it would suit everyone.

5461. Therefore, even if works of relief such as are suggested (the cultivation of land under the orders of the municipality or guardians, or the establishment of market gardens all round

Mr. *Bolton*—continued.

London growing potatoes, as one gentlemen suggested), is it not the fact that that work would only afford employment for a portion, and a limited portion of the unemployed?—I should imagine so.

5462. With regard to ordinary relief works, it would be very difficult, would it not, to embark upon any ordinary relief works, except such as the laying out of grounds for public gardens, and levelling land and forming land for recreation grounds and work of that kind?—I should think so.

5463. Both farming and market gardening are highly skilled occupations, are they not?—Yes, I should say so; certainly market gardening is.

5464. And it would require, I presume, training for the people to usefully work on them?—I should say so.

5465. From your knowledge of the unemployed in the East End of London, do you not think that there are a very large number of persons who are physically unfit and utterly incapable of doing that sort of work?—Yes, I think there are some, certainly.

5466. We have heard that your opinion is that the Poor Law is sufficient supplemented by organised charity, to deal with the present situation?—I think so.

5467. The organisation of charity in an efficient way involves a good deal of time, experience and judgment, does it not?—I think so.

5468. Do not you think it would be a little difficult to organise in every local area throughout England an efficient committee or body of men on lines such as your committee is established on?—It would be difficult; but perhaps you would let me supplement that answer. In advocating a certain strictness of administration, I do not rely entirely upon the introduction of charity; because my contention is that if you somewhat restrict legal relief, the independence of the poor will grow of itself. I think independence is the natural condition of people; I do not believe it is natural either to apply to charity or to the Poor Law unless you tempt them very strongly. My contention is that you tempt them at present by the poor law very much. While it is very desirable that you should have the Poor Law backed up by charity, it is not absolutely necessary. In the country it is very seldom done. The difficulty is met by the fact that the poor develop more rapidly their natural aptitudes for independence.

5469. If you were to proceed upon the policy of directly reducing out-relief so that it should ultimately arrive at the vanishing point, and pursued the policy of refusing out-relief, I will not say in all cases, but in nearly all cases, you would have to deal in some way with a considerable number of cases that were not relieved by the poor law; and you have dealt with them by means of your committee by organising charity and using charity for the purpose of supplementing the work of the Poor Law?—We have tried to do so, and to a certain extent I think we have succeeded.

5470. The efficient carrying out of the policy depends on your getting in each district a number of public spirited and judicious people who are able to get the confidence of the charitable and who are able to organize, aid, and supplement the Poor Law, does it not?—Yes.

Mr. *Bolton*—continued.

5471. Now I think you will agree with me that it would be a little too much to expect that in every district in England there would be a number of people of the judgment and experience such as there are in St. George's-in-the-East in connection with the Charity Organisation Society, and in other districts in London, where the Charity Organisation Society is strong?—Yes; but you do not want a great deal of organisation. There are well-to-do people who are their neighbours in the country, and neighbourliness is a natural form of organisation, and you do not want to improve upon it very much.

5472. But what is everybody's business is nobody's business?—I do not admit that people who are neighbours are justified in neglecting their poorer neighbours, and I do not think as a rule they do.

5473. I have made a suggestion to this Committee, and I should like to have your opinion upon it. I have been a guardian of the poor in everal parishes and have had some experience, and I make this suggestion from my experience. My suggestion is that in every locality there should be an official, not a poor law official, but to a certain extent a municipal official, whose business it should be to organize, if possible, the charities of the district, to place himself at the disposal of the public spirited and charitable people of the district to get information as to the distress and the condition of the people. I suggest that he should have the right to sit with the board of guardians to be consulted by the board of guardians; that he should be able to deal with cases that come before the board of guardians which they think are cases that should be dealt with by charity, by personal interest and personal effort, rather than by the poor law; that he should act as clerk to any charity organization committee such as your committee, for instance; that he should place his clerical services at their disposal, and should be a person to whom reference can be made if necessary. Funds could be entrusted to him; he would know the charities of the district and the whole condition of the district and the condition of labour in the district, and would place his services at the disposal alike of the guardians and the municipal authority. Do you think that if such an official as that were established, whom we will call an almoner of charitable relief, it would enable the organisation of charities to be effected throughout the country and enable the harshness of the Poor Law to be modified, so that cases not dealt with by the Poor Law should be dealt with?—I should be strongly against that.

5474. Will you explain why?—Because as I maintain the bad effect of out-relief is that it is an official source of income to these people; it is a public fund, a fund that they get from the public authority to which they all have equally a right. The advantage of transferring the responsibility of relieving people at their own homes (which is, of course, the essence of out-relief) to a private and voluntary source, is that you very much diminish the effect that this source of maintenance has upon the imagination and conduct of the poor. The objection to out-relief is that you get people qualifying for out-relief throughout

Mr. *Bolton*—continued.

out the whole of their lives. I say if you make private charity official, you run very much into the same danger. The Charity Organisation Society say "In the administration of our funds we rely very largely upon investigation." That is perfectly true; we rely to some extent upon investigation, but I am bound to say I think our success is very much more due to the greater moderation with which the poor will put forward their claims upon a private charity as distinguished from a public fund to which they all think they have an equal right.

5475. Do you not think the existence of an official of that kind would be valuable to organise such committees, to bring the people together, to place at their disposal his experience, and to keep a record, and assist and co-operate?—I think that there might be some advantage in it, but that the disadvantages would be far greater in having the result that you are really officialising a new endowment, and creating what I may call a new incentive to pauperism.

5476. But no public funds would be entrusted to this man, he would simply have his salary paid by the municipal official of the district, and necessary expenses, office expenses, would be allowed him; where would there be any encouragement to pauperism in that?—I regard very jealously the independence of the voluntary charity agencies of the district; it would make it very difficult for them to conduct their business if you link them in an official manner to the poor law of the district, and personally I should be against it.

5477. But where need the charities be under any restraint in availing themselves of the information and assistance if they liked of these officials?—But we can get the assistance now; we do not require the official to get that sort of assistance.

5478. Do you think it is likely you would get private individuals to associate themselves together to do the clerical work, pay the expenses, attend the board of guardians and do all this throughout England?—It has been done for some quarter of a century throughout London, and it has been very much extended over the country.

5479. You say throughout London it has been done in three or four parishes where they are public-spirited and capable, but it is not done in the majority of parishes, is it?—Excuse me; there is a committee which is perfectly ready to co-operate with the guardians if the guardians will agree in every Poor Law union in London.

5480. Is there in Islington?—Certainly.

5481. How many do the committee consist of in Islington?—I cannot tell you off-hand, but they generally consist of from 15 to 20.

5482. Fifteen to 20 in Islington?—Yes.

5483. And in St. Pancras?—Yes, there are two committees in St. Pancras.

5484. Would you be surprised to hear that I have sat for some years on both those boards for various periods, and I have never heard of these committees taking any action in conjunction with the guardians?—If the guardians do not fall largely into the scheme you very possibly would not.

5485. But nobody ever made any suggestion that they should co-operate?—Excuse me, I think they have.

Mr. *Bolton*—continued.

5486. Do not you think the reason why they have not co-operated has been that what is everybody's business is nobody's business?—No. For very many years there has been a very efficient committee of the society in both those districts. The reason there has been no co-operation is that, rightly or wrongly, a great many guardians do not like parting with the patronage involved in out-door relief. I do not know really what they do in St. Pancras and Islington. There is probably a certain amount of co-operation, but not so close as in the East End.

5487. Do you not think that difficulty would be got rid of if you had an officer such as I am suggesting, to come and sit with the board of guardians, and also to attend the committees and endeavour to bring about this co-operation?—I do not believe in the inspiration of officials, and I do not think they would succeed any better than the people who are there now.

5488. Do you think it could in any way affect the independence of the charities to have an officer to whom they could resort for advice or information, or assistance?—I do not quite understand your argument. I understood that this officer was to be the clerk and a sort of managing man for the charity.

5489. Not necessarily?—If you like to have an extra official at the guardians' meetings, well and good.

5490. Not at the guardians' meetings?—You said sitting at the board of guardians.

5491. He should have a right to go to the board of guardians, listen to their proceedings, and place his services at their disposal, and to deal with any case which they might think would be dealt better with by him?—I am against your official.

5492. Take this case: A poor fellow who is coming before the board of guardians, who has had no relief in his life, is one of the deserving unemployed, and who wants a little help; do you not think such a case as that might properly be dealt with by such an officer as I have suggested, who would look into the man's case carefully and get him employment?—I submit that one of the guardians by means of a halfpenny postcard could direct the attention of the federated charities of the district to the matter.

5493. Do you not think such an official as I have suggested, who is recognised in such a case as I have mentioned, would be more likely to get that man employment than a guardian sending a halfpenny postcard, or the man himself going alone about and canvassing for employment?—I do not think so; I am bound to say if a man canvassed for employment in company with the official, I think it would militate very much against his chance of getting employment.

5494. I do not suggest he should canvass in company with the official; but do you not think that such an official as I have suggested would know persons who would listen to him when they would not listen to a poor broken-down man coming and asking for employment?—Might I answer that by quoting what the vestry clerk of Kensington said to his board. They opened a bureau for employment; he wrote to a lot of employers; he got a good many civil answers, but not a single offer of employment.

 5495. That

Mr. *Bolton*—continued.

5495. That is the postcard system. I suggest that in a deserving case the official I am proposing would be able to go to the employer personally who would be likely to have employment to give away, to set forth the man's claims and enlist the employer's sympathy, and might have the opportunity of getting the man work, where a postcard would be disregarded, and where the man himself perhaps, coming and standing, and begging at the door for work, might also be disregarded and misunderstood?—I have talked of the matter to employers with a view of getting employment for some particular case. I always find there exists a prejudice in their minds against a man who has been in contact with relief agencies, and it would be against him if it were known he were such a man.

5496. Is it not because there is a prejudice against him, and that the work of such an official as I have suggested would be very valuable?—I read it the other way; I cannot help it, but I am afraid I cannot give you a better answer.

5497. Where would there be any cause for jealousy on the part of, or any interference with, the charity if such an official exist as I propose?—It would be very difficult, for instance, for charities to maintain an independence of decision. There would be a great pressure on the charities to make themselves mere registrars of the decisions of the guardians, and, if they resisted, considerable friction would result.

5498. But that strikes at the root of co-operation, does it not, if there is a jealousy on the part of the charities at the recommendations of the guardians?—No. I may say that in St. George's and in the other East-end Unions where the co-operation has been extremely close, the absolute independence of the two bodies has been maintained: the guardians have never attempted to override our decisions.

5499. Where would the independence be affected by such an official as I am suggesting being an intermediary between the guardians and these associations?—If he were merely an intermediary it would be only what at present exists.

5500. Where does it exist?—In our committee we have six members of the board of guardians, five of them regular attendants, and it is so in a great many other places.

5501. That involves your having four men who are willing to give up their time to this detailed work, and to continuous labour of the kind, does it not?—I quite see what your point is, but I confess I do not agree that you would effect the improvement which you wish to make by the means you suggest. I think you must take my answer.

5502. I desire altogether to see that your guardians co-operate with the charities, but my difficulty is, and I put it to you, how to bring about that co-operation and to keep up a continuous knowledge between the two organisations, the Poor Law and the charitable organisations?—In my humble judgment the means you suggest would not effect the object you have in view. That is the only answer I can give you.

5503. If your Charity Organisation Society is so good, as I admit it is, in its working in St. George's-in-the-East, how is it it has not sprung up in other districts of London where it would be equally valuable?—My answer is that it does exist in every union in London, and if the guardians elsewhere took the view which the guardians do in St. George's-in-the-East, it would be equally satisfactory. The committees in Kensington, St. George's, Hanover square, and many other districts, are all working hand-and-glove with the guardians, but perhaps not quite on the same lines as in St. George's-in-the-East.

5504. There is not that continuous co-operation in other parishes as there is in St. George's-in-the-East, is there?—I assure you that the other committees would not at all accept what you put to me, that they do not co-operate with the guardians; they do, very largely, and probably prefer their system to ours.

5505. But this co-operation to be effective must be continuous, persistent, instructive co-operation, must it not?—My answer is, if it is not so it is not for want of the official you describe. The whole machinery is there if the guardians would agree to do it.

5506. Can you give the Committee any explanation why so excellent an idea has not been followed in other parishes throughout London, except the three or four who have adopted it?—It is followed in many unions, and your question should be put to the guardians of the several parishes which refuse to co-operate.

5507. Is it not because what is everybody's business is nobody's business, and while you have men in the district you speak of who have taken it in hand, you have not got them in other parts of London?—I assure you there are people who have devoted their lives to the work. There is my friend Mr. Edgecombe, in Kensington, who is the chairman of the board of guardians, and also secretary of the Charity Organisation Society, he has been the centre of this close co-operation for, I should think, more than 20 years.

5508. Then, as I understand, you are not in favour of such an official as I have sketched out, are you?—No, not a municipal officer.

5509. Then you do not see any objection to the idea, provided that he is not a municipal officer?—I maintain all you wish is being actively carried out by the societies at present, and it would hinder their work if you appoint this municipal officer.

5510. If he were not a municipal officer but an officer of the board of guardians, he would virtually be only another relieving officer?—I say at present there is no difficulty in keeping up very close and constant communication with the boards of guardians; no difficulty in the world.

5511. You do not see my point. You have suggested that you would object to this officer if he were a municipal officer?—I should object to our society, or any officer of our society, for instance, being made a municipal officer, or I should object to our society being given any official position in this respect.

5512. Or being interfered with in any way whatever?—We are quite open to any suggestions that may be made to us, but we should not like to be made part of the State machinery, for the reasons I gave in my first anwer to you on this point.

Mr. *Wootton Isaacson.*

5513. Is it not the fact, from your long experience in London, that the various boards of guardians

Mr. *Wootton Isaacson*—continued.

guardians voluntarily do that very work which we have been speaking about in order to control, as much as possible, the way in which they should administer relief to the unemployed?—Quite so.

5514. Is it not a fact that in St. George's-in-the-East you have gentlemen who do that work?—They do that work.

5515. Voluntarily?—Voluntarily; certainly.

5516. During your great experience, have you found that the poverty in the East End of London is more than normal this year?—Of course, the terrible frost we have gone through is bound to increase the sufferings of the poor.

5517. Solely the frost?—Yes.

5518. You have stated that the greater number of people who applied to you for relief in St. George's were not of the unemployed class?—We had some unemployed, but a very small number, certainly.

5519. Do you know the staple trades in St. George's-in-the-East?—Except the dock trade, there is hardly any staple trade; there are many miscellaneous trades.

5520. Is not sugar a staple trade?—No, that has gone.

5521. Do you find the staple trades have really gone?—The sugar trade has been gone, I should think, for 20 years; Mr. Martineau's house was the last there, and they moved down the river about five years ago, I think.

5522. Do you find this poverty which has been increased so much in the East End of London, has been caused by the union rate of wage being higher in the East End of London than it is in any other portion of the metropolis?—I do not quite understand what you mean by the union rate of wage being higher.

5523. I mean the union rate of wage which a union man would be compelled to accept, being higher than any other rate of wage in any other portion of the country?—I cannot speak to that.

5524. Are you aware that a vast number of men were thrown out of employment in Mr. Hill's shipbuilding yard?—That is not in St. George's.

5525. It is in the East End of London, is it not?—I have no knowledge of the facts.

5526. And you do not know of any of the unemployed in St. George's and their want of work being caused by an increase of the rate of union wages?—This has happened, of course; that the great dock strike brought about an increase of wages; it also brought about an attempt to make employment regular by the dock authorities, and they now give, what they call, preference tickets, so that people who have not got those tickets find it much harder to get work than before.

5527. Does that increase the number of unemployed?—I do not think so; that was the origin, I believe, of a scheme for giving some employment, which was got up in connection with the conference at the Mansion House; but they found they got very few employable men from St. George's. Several of the people connected with this experiment remarked to me how very few suitable people they could get from St. George's, capable, that is, of giving proof of their willingness to work at test spade work with a view of ultimately being sent to the Colonies.

5528. I am speaking now of the cabinet-

Mr. *Wootton Isaacson*—continued.

making, and trades other than agricultural or digging work; the trades which have suffered owing to the union rate of wages being much higher in the East End of London than in any other portion of the metropolis?—No, we have no cabinet-making in St. George's.

5529. You have a very large coster population, have you not?—Yes; not I think very large.

5530. Have you found much poverty among them?—No, I cannot say we have.

5531. Have they any friendly society?—I do not know that it is any society specially for costermongers. There is in the neighbourhood of Columbia Market a little loan society for costers, about which I happen to know accidentally.

5532. Do you find there has been any great distress amongst the coster population of St. George's?—I have no evidence they have suffered especially.

5533. There are a lot of local charities in St. George's, are there not?—I should not say a great number; I should say astonishingly few, considering those in other parts of London.

5534. Do you work harmoniously with those charities?—Of course the principal charities are connected with the churches, and our committee consists, I may say, almost entirely of the clergy of the district and their staff of visitors, &c.

5535. Have you any relief societies in St. George's like there are in other portions of the East End of London, established solely for the purpose of relieving the poor quietly by redeeming their tools from pawn, paying a little back rent to pay brokers out of the house, and giving them a chance of returning to work with a little money in their pockets?—There has been a great deal of money spent this winter. There is one largish society started a little time back which has been going on during the winter. A great many people started societies. Certainly one publican if not two publicans started a relief fund. You may take it that all the charitable societies are established for the purpose you name.

5536. Are there a large number of dockers out of employment at the present time?—The work at the docks varies very much from day to day, but very recently I was told they were extremely busy at the docks; it varies as the ships come up.

5537. And you do not think there are a large number of dockers out of employment just now, do you?—I do not think so. Except for the frost, I repeat I do not think there was anything exceptional this year.

5538. If you had an extraordinary number of unemployed in St. George's-in-the-East in what way would you propose to give them employment?—That is rather a hypothetical question, because the whole of my argument goes to show that if during normal times you administer the law on what I call sound principles, the poor people in times of want do not come in those large numbers; the public authority is not the place they go to get employment; and secondly, I should say, if they come in very large numbers, I mean came in a body as is sometimes suggested, one would be justified in saying that the object of such application was not only for relief, but to embarrass the Poor Law authorities, and in that case it would, of course, be embarrasing, but the relieving officers I do not think

Mr. *Wootton Isaacson*—continued.

would have any option, or the guardians would have any option but to do what the law directs. Of course, if they had a stoneyard they might offer work there, but if they had not, I presume what the guardians would say would be that they must relieve the men in the house. If there were any men who were in clubs, and who chose to come to our society, we would relieve them without any condition, and, as already explained, we would, where necessary, keep up the homes of those who had homes worth keeping up.

5539. What work to your knowledge could be usefully done in which these men could be employed?—I do not think there is any work. The vestries have their ordinary staff, and they cannot increase it in order to give employment in that way.

5540. Do you know whether the friendly societies have done anything in St. George's this winter in helping the unemployed?—I do not think that any part of the insurance given by friendly societies covers want of employment.

5541. They have not administered any out-door relief, have they?—The trade societies have certain out-of-work funds, but I have no knowledge of what they are.

Mr. *John Wilson* (Durham).

5542. You have been asked questions in relation to the comparative wage in St. George's-in-the-East where the union exists, and other parts of the country where it does not exist. Have you any idea as to how the wages compare in your district and other parts of London?—There is no more union in St. George's than anywhere else.

5543. And therefore it could not affect the wage, nor the volume of the unemployed, would it?—I do not see that it could.

5544. In reference to the men being able to work on the land, you were asked the question by Mr. Bolton whether there were a number of men who could not work on the land if work was afforded them. Would there be a number of men in your district who could work on the land if they could get it?—I would say it is extremely easy to start relief works, and I have no doubt you could get some men to handle a spade.

5545. But there would be men in St. George's-in-the-East who have come from the land originally, would there not?—I should say comparatively few.

5546. You think not many?—I do not think so.

5547. Does it take much training to make a man an agricultural labourer?—An agricultural labourer has not only to do digging; he has to look after beasts, horses, and all sorts of things, and plough.

5548. Therefore you think he would need some training before he could be an agricultural labourer, do you?—I should think so, but I am not an authority.

5549. In your evidence on Friday and this morning you have charged the trades unions with preventing the transmission of labour from one trade to another?—To a certain extent I think they do. What I really said was that they did not realise sufficiently the importance of that aspect of the question.

5550. Do you mean that they prevent it?—So far as I know they do not do much to help it.

Mr. *John Wilson* (Durham)—continued.

5551. I think you put it more strongly than that, that they prevented it?—Possibly.

5552. Now if it takes some time for a dock labourer who is used to rough work to train himself for an agricultural labourer, which is as near cognate as possible——?—I do not admit that at all.

5553. I mean as to the muscular part of it, not in the handling of a spade; how would you provide for a man who has been a dock labourer in St. George's-in-the-East, or a sugar refiner, turning his attention to boot-making, for instance?—I confess if a dock labourer asked me, I should not recommend him to be a bootmaker.

5554. That is not my point. You say trades unions prevent or hinder it. I want to follow out the idea as to qualifying for a trade a man has not been in before. I think you made it quite clear that with rare exceptions the labourers in St. George's-in-the-East could not transfer themselves to agricultural labourers. I want to take that a little further. Taking the man who has been a sugar refiner, how could any trade union rule of the engineers prevent that man becoming an engineer. If it takes some time for a dock labourer to qualify himself for an agricultural labourer, how long would it take for a sugar refiner to become qualified for an engineer?—My argument only was that I think that by trying to set up a monopoly of employment for people belonging to the union that trade unions did not always see their own interests. Perhaps it is impertinent in me to presume to see their interests better than they do, but I think they would be better advised if they allowed labour to flow more easily. The difficulty is that an inexperienced man must probably accept less than the highest union wages. The compensation, if I might put it so, of a man whose trade is invaded by an inferior class is that there are going on constantly fresh distributions of labour, all following the market towards better remunerated employment, people moving from one trade to another, and I think that is the line to which trade unions ought to pay a little more attention.

5555. I am a trade union secretary, and I want to get at the root of this point. Now take any workmen you have in St. George's-in-the-East, and suppose that the trades union regulation which you spoke of, and which you have not specified as yet, was removed, is there an employer in this country in an engineering works or in a boot manufactory who would employ those men?—You are taking rather an extreme case.

5556. I should like to have it explained?—Here is a case in point: There is a great dispute going on between two large unions, the ship engineers and ship carpenters; these are men who, I understand, are equally fitted to do certain work in the opinion of their employers; and yet, by the regulation of the trades union, labour is not allowed to pass between these two trades. The dispute, I understand, occasionally brings trade to a standstill.

5557. That would not ease off the volume of unemployed, because if the ship carpenters do not do the work, of course the engineers would do, and *vice versâ*; therefore, it would not affect the question; may I ask you if you can name a trades

Mr. *John Wilson* (Durham)—continued.

trades union which, by the stringency of its rules, prevents a qualified man going into a certain trade?—I know that a poor woman came to me some little time ago (I did not verify her statement, but I will repeat it to you for what it is worth) to ask for relief because her husband was ill. After a time her husband became better, and we said, "Well, we suppose you are all right now?" "No," she said, "it was not all right until her husband's union charges were paid up; his fellow unionists would not work with him unless the charges were paid up"; and I think we paid them up.

5558. That opens out another aspect; that is not the aspect which you stated; could you explain to the Committee what power it is that prevents the extension of labour on the railways to the unemployed?—I do not profess to be a railway authority.

5559. Is it the large monopolies the railways have which prevents the formation of another?—Regulations which are laid down, which are extremely proper for crowded thoroughfares, when applied to railways in Caithness and Sutherland, and places of that sort, have prevented people making railways. There are all sorts of restrictions about "mixed" trains, level crossings, and things of that kind.

5560. You say that the primary condition as to people to whom you give relief is that a man must have belonged to some club; do you mean a sick club?—A sick club or a friendly society.

5561. You mean, if he were sick he would get 10*s.* a week, do you?—Yes.

5562. Would you, in that case, supposing a man was sick and not unemployed, augment his income from the friendly society?—If he required it, certainly.

5563. Only if he required it?—If he required it, certainly.

5564. Suppose a man was receiving out-of-work relief, and that was the only thing he provided for, would you give him some assistance?—I do not think we have ever had a man in receipt of out-of-work pay from his union. These out-of-work benefits are, I believe, confined to unions of the more skilled artisan, of whom we have very few in St. George's. Generally, I may say, it is not the people who belong to clubs and trade societies that come either on the charity or Poor Law.

Chairman.

5565. If they do not come to you how does your test work?—I say, if they do not come to us it means that they have an allowance from their trades union or elsewhere, and they do not require it.

Mr. *John Wilson* (Durham).

5566. I thought one of your tests was that they did belong to a friendly society?—Quite so; what I mean is this: we feel that we cannot take the whole population that might call itself unemployed on our shoulders, so we say, "If you have shown that in any way you are seriously trying to prevent yourself becoming a burden to society in time of sickness, it is a reasonable thing for you to come to us, and we esteem it a privilege to help you now another calamity has come on you, namely, want of work."

Mr. *John Wilson* (Durham)—continued.

5567. But the proof of trying is their belonging to some society which provides for them in cases of sickness, is it not?—But this is out of work.

5568. Then, when you say that these people do not come to you, a good many people who belong to friendly societies and other such bodies do come to you, do they not?—I am afraid I do not understand the point. My contention is that a man who belongs to a friendly society is a man who knows his own business, and is able to meet the conditions of life, and does not require to come either on Poor Law or charity; I mean he is far too independent, and able to provide for himself.

5569. Yet I understand it is such a man who, when he comes to you, you help?—Quite so; but happily very few require to come.

5570. Then they are mostly provided for, and this test does not work very much?—It is not required.

Mr. *Bartley.*

5571. That accounts for your having so few applications, does it not?—Quite so.

5572. Do you have cases where benefits have run out?—Yes; I can give you instances where we have kept a man for years after his benefits have run out.

5573. Therefore, do you take the fact of his belonging to a society as evidence of his character, as being a thrifty man?—Quite so.

Mr. *Heywood Johnstone.*

5574. Do you consider that there are many men who are profitably employed on the land, will be so employed by private enterprise?—Yes.

5575. And I think you very fairly said that the agricultural labourer does require a certain training?—I should say so. There is this to be taken into consideration, that a great many of the farming colonies take a man for a few months. It is obvious, if a man is to be trained as an agricultural labourer, he must see the whole course of the seasons, and it means keeping him a very long time.

5576. Coming to that point, the great bulk of the unemployed would be in towns, would they not?—Certainly.

5577. And the time at which they are mostly unemployed would be, would it not, in the winter?—Yes.

5578. That would be the very time when there would be the least demand for men upon farms?—I should imagine so.

5579. Coming back to the question of training, do you imagine that there is any substantial number of men in London who can be trusted with ordinary agricultural work, such as tying hay, or weeding corn, and so on; would it be possible to trust that class of work to the unemployed, such as you find in large towns?—I should say, certainly not. May I add that I am informed that in General Booth's colony, practically all the responsible work of the farm is done by Essex agricultural labourers.

5580. And if anything in the nature of a farming colony was established in the country, men drawn from the towns without previous knowledge of agricultural work would have to

Mr. *Heywood Johnstone*—continued.

be instructed in the most elementary duties, would they not?—I imagine so.

5581. And would probably receive a lower wage than the most unskilled labourers in towns?—I think so.

5582. I think I understood you to say that one of the features to which you attribute the success of your society is that every case is personally investigated?—Yes.

5583. And it is, I presume, the duty of every relieving officer of the Board of Guardians himself to investigate every case?—Yes.

5584. And to report upon it?—And to report upon it.

5585. Do you think that one of the tests for outdoor relief should be the thrift or character of the applicant shown by his having made some provision for sickness?—That is our practice.

5586. Would you take into consideration the possibility or impossibility of his having made such a provision owing to his having a large family or having had previous sickness; may I put it in this way: would you refuse outdoor relief to a man of good character who had been several years in the same employment but who had not made any provision for illness having perhaps low wages and a large family; is your test an exclusive one?—I am speaking of our charitable society; I have no authority to speak on behalf of the guardians; I am not a guardian of St. George's; I am only concerned in the administration of the charitable society, and our rules are that we are bound to give relief to a man if he is thrifty, but it is not an absolute rule. If a man had a good character we might relieve him, even if he had been improvident, and we should certainly expect that such a man would find someone to help him, a society must have some rules, but personal neighbourly charity need have no rules, but I am against all out relief on the part of the guardians.

5587. But, at the same time, you recognise the hardship of breaking up a man's home by refusing him out-door relief, do you not?—Yes.

5588. Your society bridges over that period?—Yes.

5589. But in the country or in poor places, where there is no society doing such work as yours does, do you see any objection on principle to the guardians bridging over the same period?—The objection is that there, I think, you at once substitute a public authority as the proper source from which a man out of work is to draw his maintenance instead of his own resources, and it is an extremely dangerous position to take up.

5590. But you grant the hardship, do you not, of breaking up a man's home?—I grant the hardship of breaking up a man's home.

5591. Taking a case which you would unhesitatingly relieve, will you point out to me why the guardians should not do the work which the Charity Organisation Society would do?—I think that it is the kindest course in the end to face the difficulty; if you make the public authority the body to which every man's mind turns when he is in difficulties, you place a terrific responsibility on the public authority, and you do more to undermine the character and independence of the poor than you do by the other course.

Mr. *Heywood Johnstone*—continued.

5592. Do you think that is so in a union where the guardians give personal attention to the work?—I cannot do more than say this. In such a union I should strongly urge the guardians, and I should say it is the duty of the well-to-do people in that union to try and find a means of meeting that objection, and do it out of their own pockets and out of neighbouring charities.

5593. Then your view is that all administration of out-door relief should be in private hands?—That is my view.

5594. And that if either local or central authorities at the present time possessed the power to give out-door relief that power should be taken away from them; that is the logical inference?—That is the logical inference, and that is what I may say Mr. Fawcett deliberately asked for in his book on "Pauperism," which was published in 1871.

5595. Then the result of that would be, would it not, that in such a neighbourhood as I have suggested to you there would be no out-door relief; whereas in the happy adjoining union where the well-to-do people had banded themselves together, and formed a charity organisation, there would be out-door relief?—I do not know of any district where there is no person able to help his neighbours. Observe, I have not adopted Professor Fawcett's demands for legislation. All I think is that that discretion being in the hands of guardians, if they use that discretion wisely, they would take the course I suggest.

5596. At the present time they have a discretion, have they not?—Yes.

5597. And you say that it should be always exercised against out-door relief?—Yes.

5598. Although the applicant may present a case of so meritorious a nature that the Charity Organisation Society, which only helps when it sees its way to do permanent good, would help that applicant?—Yes; but may I add that in a union where you get guardians who have made a study of the subject, and who go in deliberately for the reduction of out-door relief, you will find, I think invariably, and I can name a great many instances, that those same men are men of public spirit, and they make it their business to organise private benevolence to a certain extent, in order to render the dispauperising policy which they advocate more acceptable, and the fact that they are taking that line as to out-door relief guarantees that they will deal liberally and judiciously with the resources from voluntary assistance.

5599. And they supplement those resources from funds collected by themselves?—Yes.

5600. You are not a guardian yourself, are you?—No.

5601. But you have been constantly in contact with guardians, have you not?—Yes.

5602. Do you know how guardians learn their business, if I may put it in that way?—I am afraid a good many do not learn their business.

5603. An overseer is given a precept when he is made an overseer, is he not?—Yes.

5604. Which gives him a long account of all his powers and duties?—Yes.

5605. But the guardian has to pick that knowledge up for himself?—I suppose so.

5606. Do

Mr. *Benn.*

5606. Do you think it would be an advantage that guardians should have some short form of learning their duties in the same way as the overseer does?—If you can give them a precept and make them read it, it might be a good thing.

5607. If they only had it to refer to without being obliged to read it, you think it would be a very good thing?—I should think it might, if they would read it.

5608. I think you have told us that you consider the Poor Law without out-relief rather hard in the case of a man who is temporarily out of work through no fault of his own?—I said that objections were raised to the difficulty of relieving that man without breaking up his home, and that we had endeavoured to meet that difficulty.

5609. Is it not in recognition of that harshness that your society has built what you have described as a bridge?—It is.

5610. Now, I notice from your evidence, you have told the Committee that during the months of January, February, and March of this year, your society had dealt, in regard to three parishes you mentioned in the East-end, with 20 cases?—That was in one union only.

5611. What union would that be?—St. George's.

5612. Do you mean the union or the parish of St. George's?—It is almost the same thing, I think.

5613. You are not including Whitechapel and Stepney?—Certainly not.

5614. As regards those 20 cases, I understand you relieved three without the workhouse test, and eight submitted to the workhouse test, making 11 in all assisted?—Yes.

5615. And nine went away?—Yes.

5616. I want to ask you whether, seeing that these figures apply to three months and to a population of 45,000 persons, do not you think that is a very poor bridge?—I do not know whether you were present this morning when I supplemented that answer by saying I was aware there was a very great deal of money being given away in St. George's from all the agencies which had anything to do with relief.

5617. That is the point I am coming to; do not you think, from your experience, and I am quite sure your experience of this district is unrivalled, that this system of no out-relief and the workhouse test tends to make a district like St. George's-in-the-East the dumping-ground for miscellaneous charity?—Oh, dear me, no; I am sure there is no more charity there than in every other district in London.

5618. But please to direct your memory to the months you have mentioned; has not the place been deluged, if I may use such an expression, with soup kitchens, and all sorts of organisations through the public-houses, places of worship, and other means?—I certainly think not in excess of anything done elsewhere.

5619. I thought you told us, a few minutes ago, that there had been a great increase?—I say there was a great increase owing to the frost; but I should maintain that there was a great increase everywhere; indeed, I am sure of it.

5620. You do not think St. George's-in-the-East possesses more of what you have called

Mr. *Benn*—continued.

sporadic relief works than other districts of London?—I do not think so. There have been no relief works, there are very few endowed charities, and generally I should say there were fewer charities of all kinds in St. George's than elsewhere.

5621. I see in your evidence on Friday last you said, in answer to Question 5344, "There are plenty of very poor people, goodness knows, in St. George's, but the point is, they were not driven to come upon the public authority"; what do you mean by saying they were not driven to come upon the public authority?—I mean that although they were extremely poor they were able to maintain what I should call their independence, and were not obliged to come either to the vestry or to the Poor Law, or, in any large numbers, to the permanent public charities as federated in our society.

5622. That is to say they had not the opportunity of coming to the public authority?—They had the opportunity of coming to the Poor Law, certainly.

5623. You said also they had other means of getting on?—Yes.

5624. Could you describe those means?—The difficulty is you cannot very well go into a neighbourhood like St. George's and deal with a population of 45,000 and tell exactly how they are all doing; but the assumption is that if they are not maintained by the Poor Law they are maintained by their own resources.

5625. Does it occur to you that they have other means of getting off?—I do not quite follow your question.

5626. When I say "getting off," the expression is suggested by your phrase "getting on"; have you studied the death-rate in this district?—I should expect it to be a very high death-rate, because it is the very poorest district in London.

5627. You say this system of yours, which has been in operation some years, has this effect, that it drives the residuum from the district and leaves you with self-supporting, self-dependent people, who would probably be likely to live longer than the riff-raff which you have shunted off to other places?—I do not admit that at all. You suggest, as I understand, that owing to the stricter administration of the Poor Law there has been an exodus of the population?

5628. You told us that if legitimate ordinary work cannot be found in the district, the tendency of your plan is to drive people to other districts where they can get work?—I do not say that entirely. I do not say that it is necessary to go outside the district; they find employment either in the district or outside; some may go out of the district, but others do not.

5629. Under your system if a man in a district has no work, and belongs to the unemployed class we are considering, and he cannot get any out-relief, and goes to your bridge and finds it is a difficult thing to cross, do not you think that the natural result is that you get rid of that unsatisfactory person, and he goes to another district?—I do not admit that he is an unsatisfactory person. I admit he is a poor man whose trade, in a certain sense, is decayed; and I maintain that the kindest thing you can do for him is to

make

Mr. *Benn*—continued.

make it perfectly plain to him that it is not wise for him to live a pauper ever afterwards, but that he should make efforts to find work elsewhere, or on the spot if he can find it.

5630. The result is that you maintain a population of people that are able to face the responsibility of getting a living?—I am perfectly sure there is no poorer class in any part of London than there is in St. George's.

5631. I will not press the point any further; I want to ask you this question; in your evidence on Friday you took two districts which you put in contrast, and you gave us, for the East End, Whitechapel, St. George's-in-the-East, and Stepney; you gave for the other side St. Olave's, which is a river-side district of a very nondescript kind?—Yes.

5632. And you gave us Greenwich and Camberwell; I think those three districts in the east on the north side of the Thames may be fairly compared (and you produced them with that object) with the districts on the other side of the Thames as to the class of the population?—Yes, to a certain extent.

5633. Do you know that in your three model East End districts the death rate is over 28 in the 1,000, and in your three model Surrey side districts the death rate is only 22?—I do not really see that that has got much to do with the question; I expressly stated that in my belief the three unions on the south side of the river were very much richer unions than the other unions, and I attempted to support that by showing that there had never been a high rate of pauperism in those unions, but that such rate as there was there had remained stationary, whereas in the East End unions the originally very high rate had gone down.

5634. Does not it occur to you that the system in St. George's amounts to this: that when a starving man goes to the relieving officer, and the relieving officer is told to give no out-relief, it is no use going to the guardians, and he has only the provision which your society provides; does not it occur to you that many of the poor people in that district die through want of food, and that the death rate has increased in that way?—No, I do not think so; I have some figures here about starvation in St. George's, a strict union as compared with Bethnal Green, a lax union, and I should like to give them if you think it worth while.

5635. I would ask you what is the man to do; you only deal in your district with residents in the parish; the same rule (an excellent rule) applies to other portions of London; in your district there is no out-relief, there is nothing but the workhouse, and, upon these figures which you have given, your society seems to measure its success by the fewness of the persons assisted; that seems to be the standard?—I do not say we do entirely.

5636. Your words seem to indicate that you say, "I think that if the normal administration of the Poor Law is carried out on what I venture to call sound lines the pressure upon guardians in times when there is want of employment will not be very great, and I would justify that statement by giving you the following figures," and then you gave the figures I have referred to?—Yes.

Mr. *Benn*—continued.

5637. What is the man to do to get over his temporary difficulty?—If the worst comes to the worst, of course he must accept relief in the house.

5638. Can you give the Committee any figure as to those who have submitted to your workhouse test being restored through that method to their social position?—It is a little hard to do so off-hand; I do remember one instance of this sort, that a man came to us who was not in a club, and had done nothing for himself; he was determined, or at all events quite reconciled, to go upon the rates for sickness; therefore we said to him, for himself, he might go upon the rates for his want of employment, and we would look after his wife and family in the meantime. He said he would not accept it, and he went away, and I was credibly informed that within 10 minutes of the time he left us he met a friend who got him a job, and he got on.

5639. You believe that this workhouse test is a test of sincerity and willingness to submit to you; have you not any figures showing how it works after you have done with the case; do not you ever trace the case after the man has come out of the workhouse?—I think we know that a good many men have joined clubs because our regulation has shown them the necessity. Our committee consists of persons, many of whom live in the district, and all are in daily, I may say hourly, contact with the poor, and we know pretty well what becomes of all our applicants, but I could not give you the results off-hand.

5640. You were good enough, I believe, to tender your evidence to this Committee?—I was asked by the Chairman to come and give evidence.

5641. We are very much indebted to you; but I wanted to know how far we are assisted in solving this problem by the case you put before us; the workhouse on one side and your bridge on the other?—I would only answer that our practice is in conformity with the advice given by the Poor Law Commissioners, and with advice given by every reputed authority upon Poor Law work. I do not think it is fair to say that the people (I will not mention names) who have taken part in this matter are actuated by any other motive than that of wishing to do their very best for the poor. I am ready to make any admission you like as to the hardness of the lives of the poor; but I do maintain that you must administer the law so that these men are induced to face their own responsibility. I cannot see any other way out of it.

5642. Do not you think it would be kinder, with a population of 45,000, if, instead of pretending (if I may use the expression) to meet this distress by dealing with 11 cases in the three months, January, February, and March, the hardest months we had in London for some years, you were to publish a notice to say that nothing at all can be done?—The people know perfectly well what the practice of the guardians is in the district.

5643. They do, indeed?—When you use the word "pretence," might I say that I supplemented what I said on Friday last by telling the Committee that there had been a great deal of

Mr. *Benn*—continued.

of private charity given in St. George's, and I was firmly convinced that on any critical occasion, such as a severe frost like this year, you would have a similar increase of private charity, and I think that is a better way of dealing with the question.

5644. You said, just now, in answer to an honourable Member, that a district at such times relies upon the wealthy persons of the district to meet the emergency; would you tell the Committee that St. George's is rich in those wealthy neighbours which you spoke of?—Certainly not, but London is. I have had to do with the financial arrangements of the St. George's-in-the-East Committee for some years, and I do not mean to say that it is easy to get money, but we have always got the money we wanted. We never refused a case for want of means.

5645. If you had only so few cases they would not be difficult to meet, I presume?—I do not know about having so few cases. We have a great many cases of other sorts.

5646. If the wealthy portion of London could be made to administer by properly organised means to the needs of the poor in St. George's-in-the-East, would it not be better than leaving it to the sort of amateur philanthropy which prevails in that district?—I do not know what you mean by proper means; I rather maintain that the means are proper now.

5647. I will come to that in a moment. As to such means, I am sure you know the parish of St. George's very well; would you regard it as a parish which is properly seen to with respect to its sanitary arrangements, and the paving of its streets?—The vestry have been very active of late years; they have been doing a good deal, and doing what they can in getting insanitary areas closed; I may say the population has gone down a good deal in the last 10 years, because there have been large areas cleared under various schemes.

5648. The population remain about the same, does it not?—I think not; it is about 47,000 now I think.

5649. My figure of 45,000 was the figure for 1893; if it is 47,000 now it has gone up?—You are quite right, it is 45,000. But it has been going down mainly because there is not so much overcrowding. For instance, a large area in a street called Tench-street has been cleared.

5650. That is in Wapping, is it not?—Yes, but it is in the Union of St. George's.

5651. Have you noticed the condition of some of the streets with regard to paving and cleanliness?—They are very much what they are in other poor parts of London, I think.

5652. Let me remind you of a few streets, Spencer-street, Sheridan-street, and Anthony-street?—They are not bad streets, I think.

5653. Would you think the paving of those streets such as it should be in any well-organised community?—If you were choosing the worst streets, those are not the streets I should have chosen.

5654. Then there are worse streets, are there?—There are certain streets more insanitary than those. There is one area that has been shuttle-

Mr. *Benn*—continued.

cocked, as it were, between the vestry and the London County Council for a long time; and I am sure the vestry are very desirous to deal with it under one Act or another.

5655. Do you know sufficient of the local affairs there to say whether it is not the fact that the surveyor has from time to time declared that those streets should be re-paved and those insanitary defects remedied if the parish had only the money to deal with them?—I do not know what the surveyor has said. I spoke generally as to the general sanitary condition of these streets, as to this there is, I think, no ground for complaint; with regard to the paving, I confess I have not attached much importance to it.* (**I have since learnt that the vestry actually has the re-paving of these streets in hand.*)

5656. As taking an interest in the general welfare of the district, do you know that frequent complaints have been made about the general condition of the roads and the insanitary condition generally?—I am bound to say that my experience is not so. I once served on a little voluntary sanitary committee which we formed down there, and I used to visit the poor people and point out defects in their drainage and so on, and what surprised me was the extreme apathy with which they regarded the matter. I do not think there is any general complaint unless it is among persons who visit them in the way I was doing.

5657. Do you not think that the apathy may have resulted from their inability to pay higher rates?—No, I do not think these particular people care about the rates one brass farthing.

5658. You do not think that people care about the rates?—I do not say that. I think people generally have an interest in the rates; but these people do not, as a rule, pay any rates direct.

5659. Instead of the worthy unemployed in this district who might require just a little assistance for a week or two to tide over a difficult time—heads of families it may be—being forced into the workhouse under your system, do not you think it would be a desirable thing if the local authority were able to pave those streets I have named and do other rough work, which such men could do, thus affording them some relief without the taint of pauperism?—I have the strongest objection, on principle, to mixing up the question of the proper duties of the vestry with the question of Poor Law relief. You may be quite right that the vestry ought to do a great deal more in the direction of re-paving streets and so on; but I do not think they ought to be influenced in what they do by any idea of usurping or taking over the work of the Poor Law authority. If the streets ought to be re-paved, they ought to be re-paved, and at the season of the year when it can be done most efficiently. But I do not think they ought to consider whether they can employ unemployed labour or not.

5660. You know sufficient of London government, I presume, to understand that there are many things in a poor district that ought to be done, but which there is no money to do?—I do not know that I do.

5661. Probably one glance at the rates would assist you in arriving at a conclusion on that.

Mr. *Benn*—continued.

But I want to ask you this: whether your idea of the wealthy helping the poor would not be a very effectual means of solving that difficulty. If through the guardians a certain amount of money could be placed at the disposal of the local authority to be administered in the way I have indicated, do not you think that would be another very useful bridge to help?—No; I object altogether when you have want of employment to try to conceal the fact. If you have want of economical employment I maintain it is the interest of everyone, more especially the people who are unemployed, that it should be made perfectly clear, and I should not have any fictitious form of work set up in order to keep the people there engaged in that particular kind of employment.

5662. But your society endeavour, do they not, to get over a period of difficulty by giving money for relief?—Yes; but that does not disguise the fact that these people are suffering from misfortune, and the sooner they recognise it the better, and I am bound to say for my part I think they do. I do not think there is any great anxiety on the part of these people to impose upon us too much, they know they are receiving charity, and as soon as possible they resume their independent course of life, whereas if you start this relief work under the vestry, you congest the labour there, and I think the last state of that parish would be worse than the first.

5663. Have you any experience as to the objection of the poor people in the district to losing their vote?—I never heard the question raised.

5664. Of course you would not hear of it in a large number of cases, because, apparently the applications to your society are so remarkably few?—I think I should have heard of it in the talk of the place, but I never did hear the question raised.

5665. Do you think it is advisable that that disqualification should be removed?—If I rightly understand you to suggest that the stringency of this regulation is such as to prevent people applying for relief, the answer I should give would be this: that if in St. Olave's, by simply introducing a rather easy system of labour yard you can increase pauperism 154 per cent. in a few weeks, I do not think it is possible to say that this very stringent condition prevented people from applying for relief; with regard to what I suppose is the second part of the question, namely, whether it is a good thing, rather than give my own opinion I would like to give the opinion of Mr. Radley, who was the High Chief Ranger of the Foresters, who, I venture to say, in the virtue of that position, was as well entitled to speak on behalf of the working classes as anyone; he said "the law has long, and, with good policy deprived, paupers, as persons compelled to subsist by the exertions of others, of the exercise of political right."

Chairman.

5666. Where did he say that?—He said it in a paper he wrote for, the cheap edition of a book called "A Plea for Liberty." It is not in the earlier editions.

Mr. *Benn.*

5667. For instance, there was a man at St. George's the other day who fell in a fit, and was carried by his neighbours to the infirmary for a few hours, and he was taken off the register; would you consider that a hard case?—It is rather a question you should ask him, I think.

Mr. *Lawrence.*

5668. Would not that be medical relief, which would not disfranchise him?—It certainly would be medical relief, but it would be of a nature to disfranchise him; a hard case no doubt, but hard cases make bad law.

Mr. *Pickersgill.*

5669. You have given us some particulars about Whitechapel; you are probably aware that side by side with the Poor Law guardians in Whitechapel there is the Jewish board of guardians, which gives relief to the Jews who form a large part of the population of Whitechapel?—Yes.

5670. Are you aware that the last report of the Jewish board of guardians shows an enormous increase, both in the number of applicants to the fund and in their expenditure from the fund?—I should think that is quite likely. Unfortunately the difficulty with the Jewish board of guardians is that they have no means of applying any sort of test, and I think it is extremely likely the applications and the relief given would increase.

5671. At all events, you would not get a fair view of the pauperism of Whitechapel without paying regard, to some extent, to the Jewish population relieved by the Jewish board of guardians?—I do not think there is any change in that respect. If you made a comparison of a series of years in Whitechapel, I do not think that would affect it.

5672. But the Jews form part of the population of Whitechapel, and you have compared Whitechapel with other districts; my point is that Whitechapel could hardly be compared with other districts unless you allow for the work done by the Jewish board of guardians?—I submit what I did compare was the increase of pauperism in Whitechapel with the increase of pauperism in those other unions. The comparison I made was strictly between Whitechapel at one date and Whitechapel at another; and that is not affected, I think, by the point you put.

5673. Are you aware that the report of the Jewish board of guardians shows a large increase?—I am not aware of it; but if you say so I have no doubt it is so.

5674. With regard to St. George's-in-the-East, you only had 20 applications to your Society, I understand?—Yes.

5675. Are you aware that, rightly or wrongly, the working classes in the East-end of London regard the Charity Organization Society with great repugnance?—I am bound to say I do not know that they do; but I think we should not be doing our duty unless we were to a certain extent unpopular. I think it is our business to stand in the way of ill-considered extensions of the facilities for relief, because I think people are too keen to think you can cure poverty and all its attendant evils by a lavish system of relief.

5676. Your

Mr. *Pickersgill*—continued.

5676. Your "unpopularity," to take your own word, would probably account for the small number of applications?—I do not know that. If people are very hard put to it, they may come to a society that they do not altogether like for relief if it is their last resort. My point is that there are so many ways of getting on that they do not require to go to the Poor Law, and they do not require very much to come to us; they have large resources of their own which are not always quite apparent. And I supplemented my statement this morning by saying that there are a large number of voluntary charities which step in to help people on such occasions as this past winter's frost.

5677. You told us just now that these people have large resources of their own; surely you will admit that St. George's is a very poor district?—Certainly.

5678. Are you familiar with the figures which Mr. Charles Booth has given us respecting the comparative poverty of St. George's?—In a general way, I may say I am.

5679. Mr. Charles Booth, I think, states that 49 per cent. of the population of St. George's are what he calls "in poverty," that is, belong to families in which the family income is 21*s.* a week or under, 21*s.* being the maximum?—Yes.

5680. That being so, would you not admit that a very large part of the population of St. George's does not receive more than is barely sufficient to enable them to live, to say nothing of putting anything by against a special time of pressure?—I should say the fact of St. George's, which is such a very poor district, being able to get on without any greater suffering than there is in other unions, strengthens my case enormously; if you can do this in St. George's I say you can do it with ease anywhere else.

5681. With regard to your plan of dealing with these 20 applications, I understand you refused relief unless the man had, in your own words, made some serious efforts in the direction of saving?—Yes.

5682. And in other of the cases where there had been no tangible evidence of saving, you said: "we will relieve you if you, the bread-winner, will go into the workhouse"?—For a short period.

5683. Was that by way of encouraging thrift in the man?—I think it was with a view of marking our sense of the difference between him and men who join benefit clubs, because that matter is always very fully explained. We have been at pains to get a list of all the best benefit clubs in the neighbourhood, and we talk the matter over with these poor people, and generally give them a list of these good benefit societies, and not a few, I think, have been grateful to us for it, and some of them to our knowledge afterwards have joined those societies. It is a sort of object lesson in that way.

5684. By way of promoting thrift in a man?—Quite so.

5685. Those men to whom you have made this offer must have, by your rule, a decent home, is not that so; you would not make the offer unless there was a decent home to keep up?—Not unless there was a home. The word decent is only used to exclude and altogether filthy and insanitary habitation.

5686. Do you not think that the very fact of a man having a decent home shows the possession by him of those elements of character which are the basis of the thrift?—I do not take such a low view of the possibilities of working class life as to say the only thing a man can do is to have a clean room and a few sticks of furniture in it.

5687. I think you are treating me rather unfairly; I said nothing about its being the only thing?—Then I would modify my answer to that extent.

5688. Is not the fact of a man having a decent home so much to his credit?—Certainly.

5689. Then I would press the question I put originally; does not it indicate the possession by a man of those elements of character which generally produce thrift?—I am bound to say that our condition is somewhat elastic. If the home was of such a character, or if there were any exceptional circumstances, or if, for instance, the man had been at pains to start his children well and to help them on, we should regard that as thrift; but, as a rule, we stick to the friendly society or savings bank proof.

5690. Though a man had a decent home you would insist upon his going into the workhouse for a time?—For a week or three days, if he was otherwise improvident.

5691. You would insist upon his going into the workhouse at any rate, which I should regard as a fatal step?—Yes.

5692. Have you ever considered the demoralizing effect of compelling the man to go into the workhouse?—I have; but I have also considered the demoralizing effect of giving him relief, and making it extremely easy for him to become a pauper outside the workhouse. That is the difficulty.

5693. You are not a guardian yourself, I believe?—No.

5694. Have you paid a visit to an East-end workhouse this winter?—Not this winter, but I have frequently been in St. George's Workhouse.

5695. I am not familiar with the St. George's Workhouse, but are you aware that the workhouses in London, I think I may say generally, or at all events largely, have been extremely overcrowded this winter?—I am able to tell you that the St. George's Workhouse has not; the figures on the 16th of March were 457 inmates and 311 vacancies, which I do not think shows overcrowding. There has been plenty of room in it all through the winter.

5696. The Bethnal Green Workhouse is overcrowded, and so are others, and I may remind you that this is the system of which you advocate the application generally. Besides the overcrowding, are you aware that in some of the East-end workhouses at any rate, the men spend their time (they have nothing to do) in loafing, smoking, and even card-playing?—You will find in the Bethnal Green union, which is a union where they give everybody who wants it out-door relief, the people who go into the workhouse, with very

Mr. *Pickersgill*—continued.

very few exceptions, go in entirely on their own motion, very possibly to enjoy the recreation you mention; I can give you the figures if you like to have them.

5697. I will not trouble you with those figures, but I should like to quote to you what Mr. Ball, the chairman of the Wandsworth Board of Guardians, stated to the Committee of the House of Lords on Poor Law Relief. I do not know whether you are familiar with his evidence. He says, "It is a very inhuman thing to drive respectable people into the house to herd with all the disreputable people who have unfortunately got there." You do not agree with Mr. Ball, as I understand?—The point is that they do not go in; there is plenty of room in St. George's Workhouse as I have said. The fact is that when you are giving plenty of out-relief, you are baiting the ground for in-door paupers, you bring the people up on out-relief, and destroy their independence, and when a worse crisis comes they are obliged to go into the house.

5698. You say they do not go in, they either go in or go away without relief from you except in the eight cases you told us of?—They get on on their own resources.

5699. When you say they got on on their own resources, are you aware that there is an annual return presented to Parliament of cases in which a coroner's jury has returned a verdict in London of death from starvation or death accelerated by privation?—Yes.

5700. Are you aware that the average number of such cases is about thirty per annum?—It is possible.

5701. Are you aware that the last Return shows 31 such cases in London as a whole, and that three of them occurred in the district of the St. George's Union?—I am not aware of that.

5702. You may take it from me that it is so; that is to say, one-tenth of all the London cases occurred in a population which is only one-eightieth of the whole population of London?—That may be so. I have got a larger calculation here extending over a longer period, which I should like to call attention to, to answer that point.

5703. Let us keep to this Return for a moment, unless it is anything that bears on this Return?—No; I do not happen to have seen the last Return.

5704. Take the former Return of 1891, which showed 30 such verdicts; there were eight in the East of London, and seven of those were in two of the unions you have mentioned, in Whitechapel and Stepney; are you aware that the Return for 1890 showed 31 deaths, and that in two cases out-door relief had actually been applied for and refused in the Stepney Union, and the St. George's Union?—I never heard of more than one case in the St. George's Union. I know of one case in St. George's where out-relief was applied for and refused, and I should be very glad to give the circumstances in full, because I think they are very instructive.

5705. Is that the case of Mrs. Mills, do you know?—I do not know the name. It was a woman who was in the infirmary. She was extremely ill. Her husband came and said he wanted her to come out. The doctor protested

Mr. *Pickersgill*—continued.

against her going out, and, I believe, so strongly that the man was asked to sign a paper to say he did it on his own responsibility. The woman went out and very shortly afterwards the man came and asked for out-relief, and they said they would take the woman back into the Infirmary again. She was suffering from some complaint, I think acute bronchitis, and the home she was taken to was a most wretched place, there was hardly any furniture in it and no proper means of attending to a sick person, and the guardians or the relieving officer would not take the responsibility of sending relief into such a home, which was no proper place for a sick person, and offered to take the woman back. The woman did not go back, and in the course of events she died of the complaint she was suffering from, and it is very possible that her death was accelerated by the wretched conditions under which she lived. I have got the figures from 1871 to 1890, and that is the only case in St. George's in which relief had been applied for and refused in which there was a coroner's jury bringing in a verdict of death by starvation, or accelerated by starvation.

5706. Now you said you looked rather to the charity of the rich to help in cases where the aid given by the Poor Law is not accepted?—Certainly.

5707. Do you not think that when persons refuse either the assistance of the Poor Law or the conditions which you impose, they manage to "get along," to use your own phrase, more by the charity of their own poor neighbours than by the charity of the rich?—I think the poor are very good to one another, but there certainly is also a good deal of charity raised from those who are richer. I think mainly they get on by their own resources. I do not wish to suggest to you that by stopping out-relief you are going to take its place entirely by charity. I do not think that would be of any advantage. The advantage I hold out you will gain by following the plan which I suggest, is that you will get the poor maintaining themselves very much more largely by their own resources.

5708. May I put to you a statement made by Mr. Henley, a Local Government Board Inspector, before the Committee of the House of Lords, when he was pressed on this point, and asked how persons who refused the workhouse test managed to subsist; at Question 548, he said, "Those persons would get charity from their next door neighbours almost as poor as themselves." Do you agree with Mr. Henley?—I think they certainly help one another very much.

5709. Does not it come to this that the effect of refusing relief is to throw a very heavy burden on the very poorest part of the community?—I do not think so at all.

5710. Does not it follow from what you have already said?—I do not call (and I never heard any poor person suggest it) acting in a neighbourly way to your next door neighbour a heavy burden.

5711. Mr. Henley said these people were almost as poor as the applicants themselves?—They were not suffering from the immediate cause of distress that made their neighbours require relief, they were people at work.

5712. At

Mr. *Pickersgill*—continued.

5712. At all events the effect is to throw the burden of giving subsistance to those people, upon the very poorest part of the community, whereas if the Poor Law were availed of, the burden would be shared equally by rich as well as poor over the whole community?—I cannot regard with equanimity any sort of idea that everyone who is badly off is going to throw himself upon the Poor Law. It is far better they should exercise the virtue of neighbourly kindness to one another. It may be a burden, everyone has burdens of one sort or another, but I do not think it is any use whining about it.

Mr. *John Burns.*

5713. Would the rigidity in the administration of out-relief which you advocate, by throwing the people on their own or each other's resources tend, in your opinion, to demanding higher wages in depressed times?—Certainly, at all times.

5714. In that case it would encourage organisation in another direction?—I think certainly it would make the men more disposed to bargain shrewdly, if I may use the expression, with their employers.

5715. What you would encourage would be no Poor Law relief but higher wages through the trades unions?—Certainly, or in any way they can get them.

Mr. *Pickersgill.*

5716. You have objected to relief works on the ground that they keep labour where it is not wanted; that rather implies, does not it, that there are parts of the country where the labour is wanted, or, at all events, where the men could get work?—I do not know that you could lay your finger on a spot, but there are undoubtedly trades which probably could find profitable sale for their goods if there were people to buy them; and one rather hopes that by leaving the market to adjust itself you would get men going into one trade and earning wages and using those wages to employ people in other trades. It is a mutuality of exchange. Labour, I think, is, *ex hypothesi*, a valuable commodity, and if you could only get it organised in proper trades the problem is solved.

5717. Is not the greatest difficulty the time when all trades are depressed; may I put this question to you, based on some evidence that we have had with regard to the tinplate trade; a witness from Pontypool told us that there is great suffering there in consequence of the depression in the tinplate industry; he told us also that some of those who were out of employment went on tramp into Staffordshire, whence they had originally come, in the hope of finding work there. They did not find work there, however, in consequence of the tinplate trade being equally depressed there, and then they came back to Pontypool; is not that a case in which you would think that relief works might properly be given?—I do not at all say that there are not great crises in trade where you ought to have a public fund; but my advice with regard to the administration of public funds would be, do not have relief works, do not beguile people by relief

Mr. *Pickersgill*—continued.

works into supposing that the difficulty is solved, but feed them and impress upon them that they must find some other employment, or so adjust their mode of manufacture that they can recover the market which they are losing; that is to say, in the case you put, supposing that some reduction in the cost of manufacturing of these tinplates might recover the market. I do not know whether that is likely to be the case or not.

5718. Are you aware that there has been a very large increase in vagrancy during the last few years; are you familiar with the Report of the Local Government Board?—I am bound to say that I think vagrancy is one of the blots of the Poor Law; it is one of the most difficult things to deal with; the casual ward system is not satisfactory.

5719. I will not go into that at the moment; what I am asking is this: it appears that the Local Government Board Inspectors have sent complaints from all parts of the country during the last few years that vagrants have enormously increased in number, and that those vagrants come from the class of unemployed, who, adopting, apparently, your suggestion, when they can get no work in their own district where they have lived, start on tramp to find work, honestly seeking work at first, but when they do not find it they are demoralised by their associations and practically become tramps for life; is that the result of the recommendations you have made, of not having relief works, but compelling people to go to other parts of the country in order to find work; has that result ever occurred to your mind?—Certainly the tramp population I have come across are not people who are seriously looking for work, as a rule; I do not think that any one sufficiently realises the enormous endowment, both public and private, that there is for people to go upon tramp; a man can pass from one place to another and go to a shelter or a casual ward; very few questions are asked, and I think the technical phrase is he "tumbles to" that life far too easily; and I think that is because of the undue facilities that are given by the public authorities and also by these shelters.

5720. Would not that course of life be rather encouraged and promoted by your own recommendation?—No; I think it is when you make these people dependent, and teach them that there are plenty of people on whom they can depend, and they need not depend upon themselves, that you get this class. The frame of mind you get people into, when they are accustomed to go always to the Poor Law, is well exemplified by a letter which appeared in the "East London Observer" of Saturday's date. I may say that Poplar is one of the unions where they have adopted what is called a very sympathetic way of dealing with everybody, giving every one exactly what he likes, making the workhouse very comfortable for them, and giving them tobacco and all that kind of thing. (I am in favour, of course, of a humane and kindly administration of the workhouse, but not of putting paupers in a better position than the independent). The inmates of the workhouse sent a round-robin to the authorities, in which they passed resolutions saying that

Mr. *Pickersgill*—continued.

the question of the hours was largely before the public, and that they thought "the question of the usual number of hours devoted to the conducting of the daily operations of this establishment" ought to be considered; and, after proposing certain hours, they went on, "We suggest this proposition" (that is, the shortening of the hours) "would allow of all needful duties being just as effectually carried out, in every department of the firm." Then they say, "As the question of shortening the hours in all classes of industry is coming more and more to the front, we venture to hope that Poplar will lead the way by adopting this much-needed reform." I say, if you take that line, you get your poor people representing themselves, when they are in the workhouse and in receipt of relief, as if they were plying their usual industry.

5721. Does the Charity Organisation Society help people to migrate from one part of the country to another?—Certainly, if we saw any hope of their getting employment, we would do so.

Mr. *John Burns.*

5722. Do you really attach any importance to the waggish letter you have quoted from, written by a humorous inmate, expressing a physiological truth with regard to the old people not being called up so early in the morning; you do not attach importance to that, I presume?—No, I certainly do not attach importance to it; but I say it is typical of the frame of mind these people get into if you encourage them to come upon the rates.

5723. The proposition was only applied to very old people who had to get up at the same time as the younger men in the workhouse. I thought London laughed at the whole matter, as rather a good ebullition of wit on the part of a man in a far from witty place?—The letter says nothing about old people, and the application for all I know may be perfectly reasonable. My point is that they represent themselves as engaged in industry. They did laugh at it, but the letter was referred to the visiting committee.

5724. It was an anonymous letter, was it not?—It is signed "The Inmates."

MR. CAMPBELL-BANNERMAN TOOK THE CHAIR.

Mr. *Logan.*

5725. I SUPPOSE we may take it that we are indebted for your valuable assistance here to the fact that you think you can personally help us to solve this unemployed question?—You are indebted, as you put it, to the fact that the Chairman's secretary wrote and told me to come.

5726. You think the mode adopted by your society of dealing with these unemployed, if it were applied more generally, would, to a great extent, assist in solving the unemployed question?—My principal anxiety is lest you should go back to the old Poor Law.

5727. You suggest that your mode of doing business is one means of meeting it?—Yes, I do.

5728. You say that your society exists for the purpose of helping those who, when they are in distress, give you proof that they have, when in work, made some attempt to help themselves?—Yes.

5729. You also say that there are very few of those sort of people who apply to you?—Yes.

5730. You tell us you do not give any assistance unless the man will go into the workhouse. Will you tell the Committee who are the class of people you do help; for what purpose does your society exist?—We help a great many widows and a great many sick people; we are constantly getting special surgical assistance for children and sending people away to convalescent homes; we provide a great many pension. There is really no sort of distress that we are not prepared to consider and do our best for. I must add that I do not accept as correct the statement with which you preface your question.

5731. Have you, as a matter of fact, helped any unemployed during the past winter; you have given us instances of children and widows; have you helped the unemployed, by whom I mean men who were out of work during this winter through stress of weather or through

Mr. *Logan*—continued.

stoppage of works?—There were three men in clubs who came to us in that condition, and we helped them; there were 17 others who were not in clubs, and we said, "Do not break up your homes, but if you are obliged to go to the workhouse, go in by yourself, and we will look after your wife and children." We did that in eight cases; in nine cases out of the 17 they declined the offer; they did not find it necessary to accept the offer and got on.

Chairman.

5732. You are speaking of St. George's-in-the-East, I presume, not of the work of the society at large?—Quite so. Of course, I have no knowledge of the society at large.

Mr. *Logan.*

5733. Practically, in St. George's-in-the-East, which abounds in poor, and which, as you say, is as poor a district as any district in London, your society can give us very little experience of how to deal with the unemployed question at all, because you do not seriously contend, do you, that the eight men whom you have helped during the three months are to be taken as any assistance whatever to this Committee in solving this enormous problem?—My evidence, if it is of any use, will show you this, that if you administer in normal times your Poor Law in the way I suggest you will not have people looking to the public authority for assistance in times of want of employment, and if they are obliged to look to the public authority, the cases are not very numerous and could be dealt with in the way I suggest. That is the summary of all I have said.

5734. It is not an unfair assumption for me to make, is it, that your society exists, I might almost say, largely with the view of compelling those

Mr. *Logan*—continued.

those in necessity to rely upon private charity, in preference to going to the central authority?—No, to rely upon their own resources.

5735. Their own resources or private charity?—No, I say on their own resources, and neither on private charity nor on the Poor Law.

5736. I understood you to say you would like to see out-relief made illegal?—No, pardon me; I said Professor Fawcett said that, but I do not myself, at the present time, think that is a practicable suggestion. Professor Fawcett, in 1871, put that in his book on Pauperism, and I presume he meant it.

5737. I took it that, as you quoted it, you were in sympathy with it?—Yes, but I qualified it by saying that I thought at present it was not practicable, and that I wished public opinion would make it practicable.

5738. Do you say you would like to see out-relief made illegal?—No; I said I should like to see the guardians use their discretion in that way. This, in view of the ignorance of public opinion at present, is all I can hope for now.

Chairman.

5739. Do you speak of out-relief generally, or out-relief to able-bodied men?—Out-relief to the able-bodied is illegal now, except under the out-relief regulation order in the labour yard; but Professor Fawcett's statement was as to out-relief, *in toto*.

5740. Whether to the able-bodied or not?—Quite so.

Mr. *John Burns.*

5741. Even to widows and children?—Even to widows and children. That I understand to be Professor Fawcett's meaning; I have been looking at the passage within the last few days.

Mr. *Logan.*

5742. You have read to us sundry quotations; have you read Dr. Hunter's articles on out-relief?—Yes, I have.

5743. Do you agree with the conclusions at which he arrives?—No, they are based upon a perfect misapprehension of the statistics.

5744. Are you aware that he says the cost of out-relief is less than the cost of in-relief, and he gives some very extensive figures to prove it?—I am not very much concerned about the cost; I do not care what it costs; I want to get rid of the dependence of these people; but I believe his figures are not correct. I will not accept those figures, but I should say, personally, if they were true, they would not influence my judgment.

5745. Has any attempt been made to prove those figures to be wrong?—Yes, several papers have been published. Two. I may mention: Statistics of Metropolitan Pauperism, C. S. Loch, and an article of a more popular nature on the Abuse of Statistics, "Quarterly Review," October 1894; and several more, I believe, are actually in proof, and have been crowded out of the magazines.

5746. Dr. Hunter takes five divisions in England, and he proves that in four out of the five divisions the cost of the out-door unions (that is to say, the unions where out-relief is administered more fully than in other unions, per head of the population) is less than in any of the others?—I cannot go into that off hand, but the cost does not influence my judgment; I would rather pay 1,000*l.* to get rid of your paupers, than I would 100*l.* to relieve a good many.

5747. You do not agree with Dr. Hunter that the real problem for Poor Law reformers is not the abolition of out-relief, but the abolition of the workhouse?—No, I do not agree with that.

5748. Do not you think it is socially taking a rather unfair advantage of a man that when he is pinched by hunger he should for the sake of relieving himself and family be obliged to go into the workhouse, and so be branded, for many men consider it a brand?—I do not admit that at all.

5749. Are you not aware that there are many men in the country who, if you asked them, would say "I will die sooner than go into the workhouse"?—I do not know that there are.

5750. I can tell you that there are tens of thousands in the country who would rather die than go into the workhouse?—If they look at life in that spirit they will, I am sure, succeed in retaining their independence.

5751. You say in your opinion that the responsibility for maintaining a man depends upon himself, first of all—do you say that whether that man has ever had a fair chance or not—do you not discriminate between a man who has had a fair chance and a man who has never had a chance?—I should be slow to admit there was any man in this country who had not had a fair chance, or at all events that you could certainly recognise at sight such a man. I know of dozens of instances of two men starting together in some trade and one gets on and the other does not; they have both had the same chances; one has neglected his chances and the other has not; and, so far as my observation goes, the reason a man does not catch his chances is very much because he is too often taught to depend upon the public authority or somebody else for his maintenance.

5752. You appear to have a much lower idea of human nature than I have. Apparently you do not discriminate between men who have had a fair chance and the number of men who are born in the slums and have never had a chance of getting on. You say that when these men, through stress of employment, come and ask for relief it is not unfair to say, you must go into the workhouse or die?—I say it would be far more unkind for the whole class, and even for these men in particular, if you make it easy for them to come upon the rates. I say that the life of living upon the rates does tend to degradation, and the object of what we do in St. George's is to keep the Poor Law strict in order that these people may see what their responsibilities are; and, so far as we can by voluntary charity, we enable them to meet them; but we hope in the main they will meet their own responsibilities themselves.

5753. The basis of your argument is apparently the assumption that people rather prefer coming upon the rates than otherwise?—I do not say that; I quite admit that the lives of the poor are extremely hard. The point is that there is a tendency, especially where encouragement to that course is held out, unless the man

Mr. *Logan*—continued.

is of a very heroic nature, to rush to the rates when he finds life difficult, and I do not want to make it too easy for him to come upon the rates; that is all.

5754. You have succeeded admirably, I should say. You said in one portion of your evidence, that the decay of trade was a chief cause of the want of employment, and you said that to institute relief works would be to misguide the people by inducing them to remain where work cannot be permanently found for them, and that the proper solution of the difficulty was to migrate them or find work elsewhere. Have you, or your society, ever taken any trouble to ascertain what becomes of the men when they migrate away from your district, where they seem to have a difficulty in living, where do they go to, do they not perhaps go and congest other districts?—I do not think that of late years we have had much want of employment from permanent causes. The want of employment we have had is from hard frost stopping building, and also this year it undoubtedly stopped some of the traffic upon the river. That is a temporary thing. Our contention is that for these seasonal trades you cannot start relief works. The remedy is that these men shall hold some of their wages in reserve for time of want of employment.

5755. But supposing the wages are not sufficient to tide over so long a time; and to my knowledge I know this winter some thrifty and good men have been so long out of employment that they have exhausted their reserve fund of wages; what would you do with them, have you no alternative but the workhouse for them?—In the case of the thrifty man we give him relief without any conditions.

5756. For how long?—For three or four weeks sometimes. We had a man who was out of work and a little ill, or rather he professed to be ill, but his benefit society would not admit that he was ill, and there was a dispute with his club whether he was eligible; I do not know what the merits of the dispute were; we helped him for six weeks without any demur simply to mark our sense of his conduct and to show that we think a man who provides for the future is a man to be encouraged.

5757. If I were asked to describe your system should I be describing it harshly if I said that it was a system under which your ideal of society was that a man should either go into the workhouse or seek doles from the rich; do you think that would be a hard description?—I do not think it would be correct.

5758. You said that, in your judgment, it was no use attempting to take the men back on to the land; looking at the other side of the question, might I ask you as an expert whether you do not consider that a very great cause of the congestion in our towns, and the want of employment in our towns, is to be found in the fact that a large number of men are driven from the land to-day into the towns?—No, I really do not think it is; I know it is often said so, but I very much doubt it. The people who come to the towns from the country get work, the chronic unemployed is the man demoralised by the town life, and in this demoralisation a loosely administered Poor Law is a very active ingredient.

5759. You have quoted authorities to us; might I draw your attention to no less an authority than Mr. Chaplin; he said, "Among all the consequences which were due, or partly due, to the agricultural depression, there was not one among them, in his opinion, of graver or more serious import to the agricultural interests of this country than the constant migration of the rural population from the country to the towns; in his opinion, therefore, it was clearly a matter of the first importance, he would even say of national importance, that something should be done, if possible, to arrest it." Your statement that we have nothing to hope for by attempting to get back men on to the land was to me a most serious one, because I agree with Mr. Chaplin. I want to ask you, do you seriously contend that the land of this country could not find employment for a large number of our unemployed?—I say that I am perfectly sure that a public authority could not work land at a profit——

5760. There is no idea of the public authority working at a profit?—Unless you are prepared to face a constant and continuous loss I do not think you can carry on such work.

5761. Why do you say a constant and continuous loss; why could they grow these things better abroad than we could grow them in England?—That is beyond me; it is a question of climate upon which I can hardly give an answer.

5762. Do you consider that it is a very bad thing indeed for the community to force a man into the workhouse there to exist under the far from pleasant circumstances in which a man has to exist there; do you consider it is likely to improve the general well-being and status of people to force them into the workhouse?—I submit I never said a word in favour of forcing them into the workhouse. My evidence has all been to show that they will not be forced into the workhouse,—it is not necessary; but I say it is better you should employ the workhouse test than start the system of the old Poor Law again, which is the only alternative.

5763. You say you are not in favour of forcing them into the workhouse?—Certainly not.

5764. That is the test you offer, is it not?—I do not think that offering a test can be described as forcing. I am in favour of offering a test, but I submit it is not the same thing as forcing.

5765. So far as assisting to solve this unemployed question, all your society has done during the last three months, January, February and March, has been to provide for 11 men, is not that so?—You must put your own interpretation on it.

Friday, 5th April 1895.

MEMBERS PRESENT:

Mr. Acland.	Mr. Logan.
Mr. Bartley.	Mr. Mather.
Mr. Billson.	Mr. Pickersgill.
Mr. Campbell-Bannerman.	Mr. David Randell.
Mr. Keir Hardie.	Mr. Renshaw.
Mr. Wootton Isaacson.	Mr. Round.
Mr. Heywood Johnstone.	Mr. John Wilson (Govan).
Mr. Lawrence.	Mr. Stuart-Wortley.

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN IN THE CHAIR.

The Chairman handed in the following letter:

"Office of the Secretary for Scotland,
"SIR, "Whitehall, S.W. 4 April 1895.

"REFERRING to my letter of the 20th ultimo and previous correspondence, I am directed by the Secretary for Scotland to transmit herewith, for the information of the Select Committee on the Unemployed, the Returns received from the Local Government Board for Scotland from the various Inspectors of Poor and Town Clerks, together with abstracts of the Returns as prepared by the Board.

"I am, &c.
(signed) "*Wm. C. Dunbar.*

"Reginald Dickinson, Esq.,
"House of Commons."

(*The Returns were handed in.*)

Mr. THOMAS MACKAY, re-called; and further Examined.

Chairman.

5766. HAVE you any corrections or explanations to give in regard to your former evidence?—There are two very slight explanations I should like to make. The first is with regard to Question 5564 and the questions following it. I have not had time to read my evidence through carefully; but I knew there was some misunderstanding at that point, so I have looked it up. I think there was some misapprehension in Mr. Acland's mind as to my meaning, and I should like to put it right if I can. At Question 5564 I was asked by Mr. Wilson: "Suppose a man was receiving out-of-work relief, and that was the only thing he provided for, would you give him some assistance?" and my answer was: "I do not think we have ever had a man of that class come to us." That answer is perfectly correct; but it must be construed literally in answer to the question put to me by Mr. Wilson. I do not think there was any misunderstanding as between Mr. Wilson and myself. He was asking me with regard to trade societies; but following upon that question Mr. Acland (who was then in the chair) asked me some questions, and I felt at the time I had missed the point of his question. I think Mr. Acland inadvertently construed my answer to Mr. Wilson as covering not only trade societies but also friendly societies. That is the explanation I wanted to give.

5767. Do you object to the answer imputed to you here?—No; the answer is perfectly correct; but it must be construed, as I say,

Chairman—continued.

literally in answer to the question as put to me by Mr. Wilson. The explanation, I may say, is that the out-of-work trade societies' benefits are confined to a few of the large unions consisting for the most part of skilled workmen; and there are, I may say, practically none of this class residing in St. George's-in-the-East, so that it does not come within my experience.

5768. With that explanation, you are satisfied with the answer that is given here?—Yes. The other small point to which I wished to refer was at Question 5668, where I was asked about a certain hard case. The question put was: "Would not that be medical relief, which would not disfranchise him?" and my answer was: "It would certainly be medical relief." But I must not be understood as assenting to the last part of the question. I believe that such a case as was put to me would undoubtedly disfranchise the man.

5769. Then what answer would you wish to give?—I should like to give this answer: that it is one of those hard cases that make bad law.

Mr. *Lawrence.*

5770. You say it would disfranchise him?—Yes.

Mr. *Stuart-Wortley.*

5771. Why does not the case come within the Act of 1885?—Because the Act of 1885 covers only the doctor's attendance and, I think, medicine.

5772. What was this case?—I gathered that the man referred to in this case had been taken

Mr. *Stuart-Wortley*—continued.

into the infirmary, and staid there. If he staid there only for a few hours, there might be a point for the revising barrister, but as to that I am not competent to offer an opinion.

Chairman.

5773. Is that all you wish to refer to in your former evidence?—Yes.

Mr. *Lawrence.*

5774. Am I correct in saying that for 15 years you have been engaged in the administration of relief and in frequent personal communication with the poor as an honorary officer of your society?—Yes.

5775. In reply to Mr. Mather, at Question 5398, you said you could not remember at the moment any other method of farming except the ordinary system of large and small farms in the way we know them; but is it not the case that Mr. Albert Grey in the North, Mr. Bolton King in Warwickshire, and Lord Hampden in the South, have all tried co-operative or profit-sharing farming, and in each case, in spite of all their efforts, this other method has failed?—I am aware that there has been co-operative farming tried in various parts of the country, but it appeared to me to be not on a sufficiently large scale to warrant me in altering my answer. There has been co-operative farming, but it is rather an exotic, and has not been largely successful, and therefore has not extended very largely.

Chairman.

5776. I gather you are only speaking on that point from general knowledge such as may be possessed by all of us. You have no special knowledge on the subject?—No.

Mr. *Lawrence.*

5777. In Question 5404 Mr. Mather suggested that our land being equal to that of other European countries, and all the other conditions here being equal, it is only our method of land system which prevents the success of *la petite culture;* is it the case that in France there is a protective duty of 9*s.* per quarter on wheat, and that there are other large duties in Germany?—I understand there is a protective tariff there. I I do not know the details. I will take them from you as correct.

5778. Have you heard that the indebtedness of the small cultivators in France is very great?—I could hardly speak to that.

Chairman.

5779. I observe that in answering Mr. Mather's question, to which the honourable Member has just referred, you do not commit yourself to any opinion except the very philanthropic opinion that you would be "very glad to hear that the rearing of poultry or the growing of vegetables, or whatever it may be, was more largely carried on in England"?—Quite so.

Mr. *Lawrence.*

5780. Is it not the case that destitution is the only qualification under the Poor Law to entitle a man to relief?—That certainly was the doctrine laid down by the Poor Law Commissioners, and it has always been held so by persons best acquainted with the administration of the law.

5781. Destitution being the qualification for relief, what methods of inquiry have the guardians at disposal as to the accuracy of the statements on that point by the applicants?—They have to rely upon the relieving officer.

5782. Do you insist upon the need of inquiry before relief?—I should say it is necessary in order to do anything like justice to the application before you.

5783. Inquiry by the relieving officer being necessarily imperfect, the supplementary tests of need are either the stoneyard or the house?—That is actually the law as far as the able-bodied are concerned.

5784. Will you state your opinion as to the propriety, or otherwise, of relief after the stoneyard test?—In the stoneyard test the difficulty is that you get a great number of people going to the stoneyard, who stay there the whole winter, and do not go away to get work, and at the end of the winter it almost always happens that there are numbers of men in the stoneyard. When they close the stoneyard those men go away and very often the same men come back again the next winter. There is undoubtedly no reformatory action in the stoneyard. Mr. Longley, now Sir Henry Longley, mentioned in one of his reports that a relieving officer had told him there were 100 men in his union formerly employed in the stoneyard who were now earning their own living, but who would infallibly have been receiving relief in the stoneyard if it had remained open.

5785. When the St. George's Guardians offer the house to the man only under the modified workhouse test, I understand he is let out one day in each week to look for work, and then given out-relief?—That is the practice under the special order of the Local Government Board issued to Whitechapel (which order, I believe, they have not availed themselves of to any large extent), not to St. George's. St. George's has never applied it, because the relief to families has been given from a voluntary source.

5786. I think you have been asked questions as to the co-operation between charity and the Poor Law in your district, and you have been questioned as to the unpopularity of the Charity Organisation Society; am I not right in surmising that the principle and practice of inquiry before relief is the main cause of its lack of appreciation?—I suppose so. Perhaps I might qualify what I said about unpopularity by observing that this is, of course, a very inflammatory subject; and anyone having strong opinions as to the principles of Poor Law relief, and expressing those opinions, is bound to incur some unpopularity. But I should add, speaking from my experience, I have received a great deal of gratitude from poor people for anything we have been able to do for them, and I think there is a change of opinion among the better class of working-people, as I may call them; the Friendly Society men; they really do believe in our sincerity in wishing to throw the working-class into their arms, and to keep them off the rates.

5787. Is it not the case that your Society's inquiries are made by experienced officials whose

Mr. *Lawrence*—continued.

whose work is supervised and supplemented by honorary workers like yourself?—Yes; and I may say in the case of every application made to us in St. George's, the home is visited by one of the voltuntary members of the committee.

5788. I take it that you and other Poor Law reformers do not make the relief of the pecuniary burden to the ratepayer the chief aim, or even in any sense an aim, of your policy?—No; what I said was, I wanted a good instrument to remove pauperism, and I should be content to pay for it.

5789. Is it not the case that while the strict unions have restricted out-relief, they have initiated the policy of improved school and infirmaries?—That is undoubtedly so. A great deal of pains, I know, is bestowed upon the internal arrangements of St. George's Workhouse, and indeed I may say, of all the three East-end workhouses where the strict policy is followed. Special privileges are given to the blind, for instance, as to diet and leave of absence, and one of the guardians has for years been in the habit of inquiring into the cases of blind people who come into the workhouse, and if he finds that they have a home to which they could go, or any relations who are willing, with the grant of a little money, to keep them, he has made arrangements that those poor people should go out. We have lately had some ladies elected on the Board for the first time, and they are very busy in organizing what is known as the Brabazon scheme of employment, which is employment by way of amusement for old and infirm people in the infirm wards. With regard to the infirmary, I should like to say they have a hospital trained lady matron, and they also have in place of old pauper nurses (who still unfortunately exist in some unions), a hospital trained night superintendent and trained nurses; they obtain them through the co-operation of the Nursing Association, to which they are permitted, I understand, by law to pay a subscription. They also have very excellent schools—they are fortunate in having small schools; and they have a very good library there and take in suitable serials. They have a full supply of football and cricket things for the boys, and the children have gardens and so on. I think, indeed, they have done a great deal.

5790. An argument in support of your view would be that facilities for poor relief promote acceptance of it, just as temperance people say an excess of public-houses prompts to drunkenness?—I think greater facilities for relief do undoubtedly prompt more numerous applications, but I am not prepared to give evidence about the drunkenness question.

5791. You were asked at Question No. 5633, by Mr. Benn, as to starvation cases, as if he would imply that there was a connection existing between them and the stricter relief given under the unions with which you have some acquaintance; can you give us any detailed information about that?—The statistics suggested to me, both by Mr. Benn and Mr. Pickersgill, were hurled at my head without notice, and I was asked to assent to them, which, on the faith of the questioners, I did. But I have since made a short inquiry into the matter, so far as my time permitted, and I should like to say something as to their relevancy.

Mr. *Lawrence*—continued.

5792. Will you take the starvation cases first?—I had the figures ready the last time I was here, but I was not allowed an opportunity of stating them. In St. George's-in-the-East, since 1871, down to the date of a letter written by Mr. Loch, and published in the "Times," January 28th, 1892, as part of a correspondence which passed between him and Mr. Chamberlain, in December 1891, that is a period of about 20 years, there had been 13 starvation cases. Two of them belonged to the old out-relief era, which ended in 1875. Three out of the remaining 11 were infants, in which case I think the responsibility may be fairly attributed to the parents rather than to any neglect on the part of the public authorities. One case was refused out-relief under the circumstances I mentioned at the last sitting of the Committee. In Bethnal Green, which is under the same coroner (and that is a very important point, as I hope to show presently), there were 67 starvation cases in the same period. Nine of them were infants. And in nine cases (eight of which were adults), outdoor relief was actually being given 1*s.* 4*d.* and four loaves in one case, and 2*s.* or 2*s.* 6*d.* per week in other cases. In Bethnal Green, I may say out-door relief is rarely, if ever, refused, in spite of what Dr. Hunter has said on the subject. But I should like to say generally that for statistical purposes these starvation cases are absolutely of no value whatsoever; it entirely depends upon the individual coroner. In 1874 there was a new coroner appointed in a central district of London. In the year 1873 there were 76 starvation deaths reported in that district. After his appointment, in the two years 1874 and 1875, there were only seven cases reported in each year. It is therefore, I think, fair to assume that the returns are largely affected by the difference of interpretation put upon the term "starvation" by the coroner. I should like also to mention the sort of cases that are brought in in the starvation returns. One case, the facts of which were well known to me, was that of a blind man who, I think, was 80 years of age. He died and the jury brought in a verdict of death from starvation, and some strong remarks were made because it came out in evidence that a scripture reader from the parish church had been in the habit of visiting the man twice a week and, it was alleged, had given no relief. The facts were well known to the rector of the parish. The man was in receipt of pensions amounting to 36*l.* a-year, and from other sources he had certain incomings which altogether made his income up to about 1*l.* per week. At the time of his death he had over 50*l.* standing to his credit in the Savings Bank, and he had more than a ton of coals in his cellar, which, in that part, I may say, is a mark of affluence. This man was for those parts practically in easy circumstances. The family were well known. The wife attended a mothers' meeting, which is held by a lady I know very well, who lives in St. George's for benevolent purposes. She said to the woman, "Why did you go and say to the coroner that your husband was starved?" and the woman said, "Well, the fact is, the coroner would not take any other answer; he put the words into my mouth and insisted that it was so." *A propos* of

Mr. *Lawrence*—continued.

what I was saying of the kindness of the poor to one another, I may remark that the neighbours in this case were so angry with the woman for what they thought was an imputation upon them, that they should allow a poor old blind man to die, that they expressed themselves rather strongly, and this poor woman left the neighbourhood. I could give you other instances.

5793. You were asked by Mr. Benn at Question 5633 as to the mortality returns; he said that the death rate in the East-end districts was over 28 per thousand, whereas in the Surrey-side districts referred to it was only 22. Do you recognise that there is any connection whatever between the death rate and the administration of relief?—I have consulted the only authority that has been available to me, "Mulhall's Dictionary of Statistics," and I find the only law which he suggests as governing the death rate is density of population; which, I submit, with all respect to Mr. Benn, is a more probable hypothesis than that it follows in any way the administration of the poor law; so I think really the whole question of the death rate is irrelevant. A friend has given me the following quotation from Dr. W. Farr's "Vital Statistics," 1885, p. 172, a recognised authority: "It is well established that the mortality of the populations of cities is generally higher than the mortality of people in the country; and it has been shown in the annual reports (of the Registrar General) that there is a constant relation between the density of the population and the mortality."

5794. Practically, the density of the population of the East-end districts, your three Tower Hamlets (Stepney, St. George's, and Whitechapel) is something like three to one as compared with the districts on the Surrey side; 162½ in Tower Hamlets, as against 57 per acre in Camberwell and the other districts on the Surrey side?—Yes, 163 in the three strict East-end unions, and 57 in Camberwell, St. Olave's, and Greenwich.

5795. You said certain trades were depressed in your district; can you think of any other index or criteria by which doubt may be thrown on the propriety of the principles you advocate?—No; I have done the best I can to substantiate the justice and good policy of the views we take.

5796. It has been said elsewhere that the returns of London pauperism intimate that the poor have been largely forced into the workhouses; have you anything to say on this statement?—Yes. That refers to Dr. Hunter's figures which were put to me, and I should like to say one word about them. They were based mainly, I think, upon a Return, which is known as Mr. Ritchie's Return, against which in St. George's we have a special grievance, because it actually returned upon the yearly census of paupers a larger number of old people as paupers than there were old people in the union according to the census. The explanation is, that it is almost impossible in a yearly census to get rid of the duplicates. There are a large number of people who are like a stage army in any enumeration of that sort; they are going in and out, and it is almost impossible for those charged with the enumeration to eject the duplicates.

Chairman.

5797. Are the duplicates which you refer to only among the in-patients?—In St. George's it would be almost entirely so; because, except in urgent cases, there is practically no out-relief given.

5798. The same thing may happen elsewhere with regard to out-relief?—I should think it might, but I only happen to know of the inaccuracy in St. George's. I know it is so also in some other unions, but I do not desire to speak about them. Then in Bethnal Green, from January to May 1894, there were 1,767 recorded admissions into the workhouse and infirmary. Only 162 of those persons went in on the order of any committee of the board, that is to say, only 162 had applied for any other form of relief; all the rest, that is to say, 1,605 out of the total, went in of their own accord. I submit that when Dr. Hunter in his figures classifies Bethnal Green as a union that is forcing the poor into the workhouse you get at once at the misconception that underlies all his figures. For a fuller statement of this argument I would refer the Committee to an article on the "Abuse of Statistics," Quarterly Review, October 1894. The reason of the great increase of the in-door poor in London is the great improvement in the infirmaries and other establishments connected with the workhouse.

Mr. *Lawrence.*

5799. The Committee is asked to form an opinion as to the method of employing the unemployed. You know the Local Government Board's circular to the vestries, &c. Have you an opinion as to the propriety of having two relieving agencies within the same area?—I think it would be a great mistake to have two legal agencies; the vestry and the poor law guardians.

5800. Can you see any difference between relief by vestries given on account of destitution, and the relief now given by boards of guardians; would they not both be eleemosynary and equally qualify the recipient to be styled a pauper?—I should say so.

5801. Would you deem it essential for a right administration of the poor law, especially as to its power of influencing the people in the cultivation of thrift, that its rules for relief giving should be continuously applied, so as to become thoroughly well known in the locality?—I think uniformity and fairness of administration are very essential.

5802. Is that likely to be the case with two relief agencies, elected, moreover, at different times; would you desire a poor law authority holding office for longer periods, and so calculated to be less fluctuating in its administration?—I am in favour of only one poor law authority. I think it would be a mistake to have two poor law authorities. The unpopularity of the poor law is largely caused by the fact that guardians do not apply an automatic rule of decision, but rely on that very uncertain quantity, viz., their discrimination.

5803. Have you ever heard that in Australia the term "working on the corporation" is synonymous with out relief here?—I am afraid I only know generally that they have started a great many municipal works in Australia for the purpose of relief, and that great congestion in towns has been the result, in a country where the natural industry

Mr. *Lawrence*—continued.

industry is pastoral, and where population would more naturally flow into the country.

5804. You mentioned the case of Nottingham in 1885 as showing the imperfection of relief works as a test of distress; have you any other recent cases you could mention?—No. I think I confined myself to the general remark that I do not know of any successful relief works.

5805. Can you state shortly the difficulties in the State in any form, whether municipal or imperial, dealing with the unemployed?—My evidence has been to show that that policy tends to the congestion of unemployment, and really does not help in the solution of this difficulty.

5806. You have told us some reasons in your previous examination for thinking it is impossible for the State to aid those suffering from a declining trade; is not another difficulty this: that the State would neither know the psychological moment when to step in with its special aid nor when to stop it?—I think that is the difficulty. If you knew definitely that the trade that was then decayed was going to come back again next week, and was capable of employing all the men out of employment, there might be something to be said for such a policy. But that is a thing you cannot know, and which can never be decided in any other way than by the operation of what I may call the free market.

5807. As to the Submerged Tenth, is it not recognised that no workman with any self-respect will ever work with them?—That is certainly what I have always been told with regard to relief works and labour yards; that relief of that kind is monopolised very largely by a class of what are called loafers, more or less.

5808. Is it not the case that the Report on the Mansion House scheme for relief works shows that more than one-half of the whole number were not permanently helped?—The figures are given in some detail in Mr. Llewellyn Smith's Report. I have not got them in my mind at present.

5809. You do not speak with any intimate knowledge of the Report?—I have glanced at the Report. I cannot carry the figures in my head.

5810. I see that out of 224 cases only nine persons were found employment by this influential committee, with all the advantage of the awakened interest in its new methods. Have you any opinion with regard to labour bureaux?—I know that the vestry of St. George's recently considered the subject; and with the view of getting some information they wrote round to a number of vestries who had opened bureaux, to know whether they had been of any use, and the result upon the mind of the Vestry of St. George's was that they unanimously agreed they would not open a labour bureau. Bethnal Green, it was stated, had opened a bureau during three winters, and this winter they had 1,400 people upon it. It cost 7*l.* 2*s.* per week, and not a single person obtained employment through its agency. In Marylebone, during the winter of 1892–3, they had a bureau opened for some months; there 750 people put their names down, of whom two found employment.

5811. Have you any opinion to give about the Common Poor Fund and its operation?—A suggestion, I know, has been made that the Common Poor Fund should be extended so as to cover the whole system of relief. My own

Mr. *Lawrence*—continued.

personal opinion is that that would be an extremely dangerous experiment. I am not myself altogether reconciled to the present operations of the Common Poor Fund, as far as its effect on administration is concerned, although I admit it has to a certain extent operated in favour of the views I have put before the Committee, because I am informed (indeed, it seems to be human nature) that when a board of guardians is confronted with some proposal for expenditure they are much more ready to be lavish if they know that the cost will come upon the Common Poor Fund, and not upon their own local people. I am sure that in some instances it has tended to considerable extravagance, and I am afraid if it was extended to out-relief the results would be extremely dangerous.

5812. In Question 5665 you gave some interesting information as to the policy of disfranchising people who apply for relief; would you allege that whatever tends to place receipt of relief and non-receipt of relief on an equality in public estimation is calculated to encourage the idea that living on the charity of the State is not to be deprecated?—Of course, it was one of the maxims of the Poor Law Commissioners that the condition of paupers on the whole ought to be less eligible than that of the independent labourer; and it seems to me a self-evident proposition.

5813. As a matter of fact, can you say whether in the recent elections in the unions with which you are acquainted, this question of the Poor Law was in any way a burning question?—The recent Poor Law election in St. George's-in-the-East was conducted on what were called political lines: I do not know what the object was: it was suggested that they wanted to test the register, and they had a Conservative list and a Liberal list; but the administration of the Poor Law, I am glad to say, in St. George's has not been put into party political strife. The leaders and influential people on both sides determined that they would not, as I might term it, put this question up to auction; and both parties in their addresses studiously avoided saying anything at all about out-relief. Strange as it may appear, the subject was never mentioned; there is now really no demand for it. The only mention made of out-relief during the election was made by several Socialists, who stood for election, on a list of their own, and with a programme promising out-relief. But their candidature was not largely supported; I do not think any of them polled a total of three figures; I think about 80 was the highest any of them polled.

Chairman.

5814. We have been drawing contrasts between strict unions and lax unions, and attempting to found opinions upon the contrast; do you not think from your observation that there may be a little of this effect: that the strict union, although it saves its own position, drives people into the lax union, and that the comparison is thus vitiated to some extent?—The answer I should make to that question is, that unless a man has been resident a year he is not entitled to relief, and he would be passed back to his own union; and my observation is that unfortunately the pauper class do not look forward a year. Our difficulties would be much less if they would

Chairman—continued.

look forward a year, and would think even of migrating to easier unions. I have heard Mr. Vallance, the clerk of the Whitechapel Union, who I feel sure would make such a statement with great care, say publicly that he transfers to other unions more paupers than are sent back to him. I cannot say I have seen anything of the sort.

Mr. *Acland.*

5815. I understand that you think labour yards are, on the whole, a mistake as a policy?—I think so. If you want to hear about labour yards I might recommend the Committee to send for Mr. Allen.

5816. I only ask you your view?—I do not think they are successful.

5817. You think relief works are a mistake?—Yes.

5818. And you think the less outdoor relief is given in a union, on the whole, the better?—Yes, I do.

5819. You think two bodies giving relief, such as the Vestry and the Poor Law Guardians, would be a mistake?—I do.

5820. But you think that two relief agencies, such as the Poor Law and your own relief agency, are on the whole well-fitted to grapple with the subject?—We have done our best. I have given what I hope is a fair account, and I would like you to draw your own conclusions.

5821. I wanted to have your own opinion; you think the action of the two relief agencies you have described, together with the operation of the free market, as you call it, are the best way of grappling with the difficulty we have to deal with?—Yes, I think so. My meaning is that if we adhere to this policy there is no difficulty. Difficulty only arises when this policy is reversed.

5822. I understand that, as far as possible, your work is to try and keep those who come to you from the rates; at all events, you said that the fact that you endeavoured to do that was appreciated by the working classes?—Yes; we wish, if possible, to keep them from the rates, and to draw them, if we can, into the arms of friendly societies, whom we regard as our most efficient allies in this struggle against dependence and pauperism.

5823. On the other hand, if a man has not saved anything you put him on the rates for a day or two, because you send him to the workhouse?—Yes, for a day or two. It would be impossible for us to take, without a test, everyone who came and said he was out of work.

5824. But I suppose you would recognise there are a great many men who will not really come to you for relief at all, if they have got to go to the workhouse for two or three days at first?—I think they would come but for the fact that, as I say, when there is any sort of crisis going on, everyone's pocket is opened rather liberally, and they get on without our help.

5825. Do you think, on the whole, at these times of crisis, say, like the last frost, people's pockets being open, the charity flowing rather freely outside your stricter work of relief, is a better remedy than the opening of relief works for a time, or even providing such work as sweeping the streets?—I do; because these charitable funds come to an end in a natural way, whereas if you start relief works or get a large number of people employed by the vestry, it is

Mr. *Acland*—continued.

very difficult to get rid of them—the thing goes on growing, and becomes a permanent endowment of pauperism.

5826. In the case of charitable relief, the men are idle from week to week as long as the distress goes on, are they not?—I do not know about that; they are looking out for odd jobs, and so on. For instance, during the frost there was an immense amount of work in carrying water all over London which provided a great deal of employment; frost brings employment as well as stopping it.

5827. The work of sweeping the streets, and other such works which have been provided, have come to an end with the special time of distress?—Yes, but they are ready to begin again next year.

5828. My point is, that when they get charity alone, they are on the whole doing nothing; whereas if they get this relief work, which will come to an end, they at least are working day by day and keeping more or less in the habit of working?—Yes; but I think all that teaches them to rely upon the public authority; which is the result I wish to avoid. I think if you teach any poor population that they can in every crisis apply to the public authority, you are really applying a remedy that will create disease faster than you cure it.

5829. You think that relief by charity is much less dangerous?—Yes.

5830. Although that charity may be, at times of this sort, extremely unorganised?—Certainly. I should say that indiscriminate charity was not so bad as indiscriminate Poor Law relief.

5831. Or any form of relief by relief works from the public authority?—Yes, *quâ* relief works; that is to say, if the relief works are not got up for the genuine necessities of the parish.

5832. Do you think, on the whole, that in figures such as you have given us as to pauperism, the small amount of actual paupers in one union as compared with another is any fair indication of the amount of poverty in any district?—I think I see two questions there. I think it is extremely dangerous to compare one union with another. I always insist that one ought to compare one union with itself at a different time, under a different system of administration; and I think you will see that the figures I have given you are of that description.

5833. Do you think that in a union where pauperism has steadily declined poverty has probably declined also?—I should say so, certainly. Pauperism is the extreme fringe of poverty, and is probably proportionate to the mass of poverty behind.

5834. Do you think that there is less real poverty now in St. George's-in-the-East than there was when you knew it 15 years ago?—I think there is much more independence; and that is the first step towards getting out of poverty.

5835. That is not my question?—It is very difficult for anyone who knows St. George's-in-the-East to say it ever could be less poor; but I think there is more independence, and the people do not live so entirely from hand to mouth, and qualifying my answer in that way, I think there is less poverty.

5836. I wanted to know whether you thought that on the whole there was less poverty since this administration you spoke of has grown up?—If

Mr. *Acland*—continued.

—If you would transfer your question to a strict country union where the conditions of administratton are more isolated, I would answer your question readily in the affirmative.

5837. I prefer not to transfer my question; I want to ask you your personal experience in St. George's-in-the-Esst?—I should not like to represent that the only cause of poverty is bad Poor Law administration, but I say you aggravate it by bad Poor Law administration, and I think we have removed some of the aggravation.

5838. I only wanted to know your own experience in watching the district. Do you look upon modern legislation, such as you alluded to: you particularised certain legislation as to railways, I think: as likely to do harm?—I do not profess to be an expert in these things, but I thought there was one set of people who were extremely jealous of the extension of these large corporations, and who were not themselves strong enough to take the business entirely away from these large corporations, and between the two parties, that is the parties who were jealous of these corporations and the party who supported these corporations, and did not want to hand these things over to the municipality, an important part of the industry of the country was placed, so to speak, between the Devil and the deep sea, and there was some restriction of trade.

5839. I suppose you were not thinking so much of legislation with a view to the safety of the public or lessening the hours of workmen?—That is a very large question.

5840. Do you feel the same danger with trades unions, namely, that they may bring about restrictions which are undesirable?—I do not think that either trade unionists or the Legislature, with all respect, realise sufficiently the necessity of allowing a free market to distribute both labour and capital.

5841. Your great desire is to keep the operation of what you call the free market open?—It is.

5842. You think that is the best direction in which one can look for the cure of this evil?—Yes.

Mr. *Keir-Hardie.*

5843. I should like to ask whether your experience in connection with the Charity Organisation Society is confined to St. George's-in-the-East, or has spread over a wider area?—My personal experience is confined to St. George's-in-the-East.

5844. I presume one of the chief objects of the society is to systematise the giving of charity and prevent its being given indiscriminately?—That is one object, certainly.

5845. In this work you are brought more or less into contact with the better class of poor people, who have a disinclination to go upon the rates, but who would come to an organisation like your own in preference?—To some extent I think that is so. St. George's-in-the-East, of course, is a very poor district, in which there are not many skilled artisans or people of that sort living; they are mostly the humbler class of labour.

5846. I was thinking for the moment of the operation of the society as a whole, not as confined to St. George's-in-the-East. Do you find that this class are chiefly driven to ask your assistance through lack of employment, apart from accidents, illness, or similar causes over which they have no control?—I do not think want of employment is the largest source of distress among the poor, if that is the question you are putting.

5847. What would you say, as the result of your experience, was the largest cause?—I should say sickness, or the premature death of the bread-winner, where a man leaves a widow and children and unthrifty management; I should say that was a more frequent cause than want of employment, in the parts of London that I know at all events.

5848. Do you find, from the working of your society that irregularity of employment is a growing evil amongst the working classes?—I do not think so. The whole point of my evidence has been to show that when you set up a public authority as an institution that is to find work, you certainly get an ever-increasing pressure upon it; but if, as in St. George's-in-the-East, rightly or wrongly, you do not take up that position, there is, practically speaking, no problem at all.

5849. Then does not this follow from that: capitalists are led to invest their capital when public bodies do not provide work; I presume you will agree with me in saying that men with money invest it when they find a market for a product?—Yes.

5850. If there was a good investment, irrespective of any action the public bodies might take, men would invest their capital in such an investment, and thereby provide employment—that is to say, the workers themselves have no power to find work for themselves, and if the state of the labour market is not such as to find employment for them, unless the State or the municipality does provide work they necessarily are dependent upon charity; is not that so?—I do not quite admit the hypothesis that there has been any failure of investment; it is, I think, curtailed at present——

5851. I did not say there had been; but the point of your statement hitherto, as I understand, has been that the providing of relief works made it more difficult for persons out of work to find employment; and I want to ascertain why you make that statement?—Because I think if you start relief work you get a large number of people going there. They do not go about to look for work in what one may call the ordinary market, and the pressure goes on increasing till a catastrophe becomes unavoidable. Of course, the classical instance was the Paris workshops of 1848, which began with 8,000 men in the spring and went on to 115,000 in three months' time, and then they had to stop it, and they had riots, of course, and a revolution.

5852. Has it ever come to your knowledge that where relief works have been started any employer of labour has experienced any difficulty in finding a sufficient supply of labour in that locality?—I have frequently heard it stated so.

5853. Have you any personal knowledge to that effect?—No; but I have not the least doubt I could get you cases of that sort.

5854. It would be very interesting if you could

Mr. *Keir-Hardie*—continued.

could do so. Does not it occur to you that when relief works are stopped and the men are compelled to seek employment elsewhere, they are only adding to the irregularity of employment in the casual labour market?—No. All the evidence I have ever had before me rather tends to show that when relief works are stopped men do in some way or other go back into the ordinary channels of trade.

5855. You will admit, I presume, that merely closing relief works does not open work in other directions?—Not of itself, of course.

5856. Unless it can be shown that the free labour market was being starved in consequence of relief works being opened, it would almost follow, would it not, that if the men employed in the relief work obtained employment they would be displacing someone else?—I do not think so. There is no limitation to employment. We are all of us quite willing, if we can get employment for ouselves, to consume more of the goods made by other people's employment; I do not think there is any battening down of the market in the way you describe.

5857. Before the relief works were started, these men who found employment on the relief works were out of work?—I suppose so.

5858. The conditions would be the same then as they would be when the relief works came to be closed, on your theory?—I suppose so.

5859. Then why did they not find work before?—I am not at all denying that there are not occasions when there is no work for men; but, rightly or wrongly, I am of the opinion that it is better to relieve them in the way that the Poor Law directs rather than start relief works.

5860. That was not my point; I may come to that later. My present point is this: you led the Committee to suppose that in some way or another the starting of relief works prevented men from seeking employment which, if they sought, they could find. That was fairly the point of your contention, was it not?—Yes.

5861. I want to know your reasons for saying that?—I have given them, I am afraid, at great length. I do not know that I can add very much to what I have said.

5862. There is one question that has been raised which I should like to ask you about. These cases of starvation which you referred to were only cases which the coroner's jury had found that the person had died of starvation?—Yes.

5863. Does it coincide with your knowledge that a good many persons die practically of starvation on whose body there is no public inquiry?—No, I cannot say I should admit that. Of course it is unfortunately true that the death rate is higher in a poor district than it is in a well-to-do district. That is a very regretable fact, but I do not think that it really bears on this question very much.

Chairman.

5864. Their disease may be aggravated by insufficient food, though it is not what we call literal starvation?—It is patent to anyone that a man who is well-to-do can pay for medical attendance and change of climate, &c., more easily than poor people, and undoubtedly the death rate is higher among the poor than the rich. One is very sorry for it, but it is the fact. It is not, I think, a question of want of food.

Chairman—continued.

Mr. *Keir-Hardie.*

5865. You do not seem to have much faith in Labour Bureaux?—No.

5866. Neither have I; but you made one remarkable statement which I should like to refer to. When speaking of relief works you said the experience had been that they were practically monopolised by loafers?—That was the conclusion I drew from the case of Nottingham, and I quoted for it the authority of the town clerk, Sir Samuel Johnson.

5867. Then following upon that, let me ask does not that show that the reason why these men are loafers is because the opportunity of working is denied to them?—I confess I do not like using the term "loafer" myself, because it does imply (as I think your question suggests) some moral disapprobation.

5868. It implies laziness for one thing?—I do not wish you to imagine I take a hard view of these people's character; on the contrary I am extremely sorry for them; but my difficulty is that I think you will aggravate the evils by starting relief works and persuading them that society can go on employing them on those lines.

5869. You spoke of the operation of the free market, meaning, of couse, the ordinary relations between employer and employed?—Yes.

5870. Has it ever occurred to you that in the heat of our present competitive system a considerable proportion of our workers, through advancing years or through lack of strong physique or strong will power, are unfitted to take part in the competitive struggle for existence which is going on to-day; would it not be a humane thing (to put it on the lowest basis) to provide some method whereby those people might earn their own livelihood without the taint of pauperism, and without requiring to undergo the struggle which they are called upon to undergo to-day; that is to say, to add to the free-labour market a co-operative colony of some kind or another, into which those people would go as freely as they go to employers to-day, with this difference, that they could go and demand the right to be allowed to earn their own living?—You are raising, of course, a very large question. It is rather inviting me to discuss the whole constitution of Society. Perhaps I may say briefly I do not agree with the view put to me, for the reasons I have already given.

5871. I was very sorry I missed your evidence upon the previous occasion, but I could not help it. The object of this Committee is to advise what steps should be taken to relieve distress arising from lack of employment. If such a system could be devised wherein men, without loss of self-respect or the loss of the rights of citizenship, could earn their own living, would not that be preferable to either giving charity through your own organisation society or from the rates?—Yes; but my contention is that if you start it artificially, for the purpose of employing them, that is tantamount to an extension of the poor law and the taint of pauperism (as you used the expression) I should say was incurred

Mr. *Keir-Hardie*—continued.

curred by a man who was content to go on upon relief works which are not wanted generally by the community, and which would go on in my judgment increasing and increasing, until the burden becomes insufferable.

5872. To prevent misunderstanding, may I say I am not referring now to temporary relief works to meet a temporary emergency?—Quite so.

5873. I am assuming that a certain proportion of the working class is surplus when compared with the ordinary demands of the ordinary labour market. What I am driving at is the organisation permanently of a method whereby all who are unable to find employment in the free-labour market would try to go and create by their labour the wealth which they would consume in living. Would you object to that?—My difficulty is this: the surplus, the people who are out of employment, I think you may take it, are the less competent portion of the working population; and it seems to me it is an insuperable problem even for private employers, and much more for a public authority, which is not so competent to conduct industrial enterprises, to carry on business with men selected because they are incompetent. Your only chance of getting rid of your incompetent men is to mix them up with the more competent men. You can employ an incompetent man if he is mixed up with more competent labourers, and no harm comes of it; but if you are given an industrial army of men below the average of industrial workers you are creating a problem which is to my mind insoluble. May I add, that not only is your industrial army in such a case below the average, but the enterprises open to such experiments (*e.g.* taking people back to the land), are condemned as economically unprofitable. I can conceive no surer way of discrediting collectivism than by embarking on such a scheme. If you want to make an experiment, take over a successful industry with its complement of skilled labour. The solution of the unemployed problem, in my view, will not be brought about by taking masses of men back to industries which are unprofitable, but by allowing them to pass one or two at a time into the current industry of the day. The points at which this absorption of labour is possible, can, I believe, be indicated by the action of the free market and by that only. This I believe is a more beneficent organising influence than any artifice that man can devise.

5874. Do not you think the most incompetent of our labourers, under proper direction and supervision, would be able to produce sufficient to supply his own requirements?—It seems to me to be going back to barbarism when you get people shut in in the form of producing everything for themselves, and not producing for exchange. The principle of commerce and industry now is that you are producing for exchange. If you settle these people anywhere you cannot produce for exchange, because, *ex hypothesi*, it is not a competent industrial community.

Mr. *Keir Hardie*—continued.

5875. You are assuming it must produce for exchange?—I do.

5876. My point is that we need not produce for exchange, but that we ought to produce to supply the requirements of those engaged in producing. I take it that on the whole you are opposed to any form of work of any kind being provided to meet the "unemployed" difficulty?—I am opposed to any except work that arises in the natural development of the industry of the country.

Mr. *David Randell.*

5877. I understand from an answer you gave to Mr. Pickersgill, in answer to a question on the tinplate trade, that you are opposed to relief employment in districts suffering from trade depression, even although the depression in the trade may be temporary?—Temporary is a difficult word to define accurately in such a case. I think there are occasions when it is a very proper thing for the leading people in any district to consider whether they ought not to raise a fund for the relief of any great crisis that has arisen in trade; but my advice would be not to make it relief by way of relief works, but to do it on some other lines, *e.g.*, reasonable inquiry and investigation into the claims of applicants, with possibly some preferential condition for thrifty men.

5878. Has your attention been directed to the case of Oldham in 1862, the famine year, when the Oldham people set about making their park (of which they are proud) and set upon that work the men thrown out of the cotton trade?—That would be a case in point. If you have got an obviously temporary crisis like that, public-spirited people will find the money. It is a very proper exercise of philanthropy, and I see no objection.

5879. Do you know that it has been authoritatively stated the men were physically improved by being put on to the work, and that the enterprise was a great success?—I know nothing of the circumstances. I cannot speak to that.

5880. Do you think that that precedent might be safely adopted in the tinplate districts that are affected by depression?—I should be strongly of opinion that it ought to be done by private subscription, and not by taking money out of the rates, and I should think in all large towns there would be no difficulty about it.

5881. In a case of that kind you qualify your proposition and say you are not altogether opposed to relief employment if the local authority have the work?—I am against the local authority doing it *quâ* relief; but I think it would be a very public-spirited thing on the part of influential citizens to raise a fund and to make a park at such a crisis. If the crisis is temporary, as in the Lancashire cotton famine, this would be useful, but if it is permanent, there is obviously a limit to the number of parks to be laid out.

Mr. DUNCAN MILLIGAN, F.R.A.S., called in; and Examined.

Chairman.

5882. You are the Chairman of the Wandsworth and Clapham Union Board of Guardians?—Iam.

Chairman—continued.

5883. We do not wish to take you over ground that was covered by the clerk to the guardians when he gave evidence. I daresay you

Chairman—continued.

you are generally familiar with the evidence he gave?—That is so.

5884. One question arose which we thought you could better answer than he could; that was a question as to the policy of the Board. The question the clerk was asked was practically this: whether you restricted your operations to any poor people who came and applied for relief, or whether you considered it your duty to search for people in want of relief within your district. That is the main point that arose upon which we thought it very desirable to have your opinion?—With regard to the first question as to whether we restricted our operations with reference to granting relief to persons who do apply, I would answer, in a sense, no. There is an application made; but I should like to point out how that application comes before us. We are remarkably well constituted as a board in having guardians who are connected with other societies which give relief.

5885. Such as?—Such as the Charity Organization Society, for one. We have men who have wives who are district visitors among the poor. My wife is treasurer for two large local societies, and besides that we are acquainted with a large number of philanthropic ladies over the whole area of the union, who give us information, and who draw our attention to cases. Speaking for myself, I would say that there is never a week passes but what I have numerous letters calling my attention, as a guardian, to certain cases which the writers think should receive relief. I make it my duty, having become cognisant of the circumstances, to allocate those letters to the various relieving officers, and in some cases make personal inquiries, and not only secure relief for such cases from the board of which I am chairman, but from other societies with which I keep in touch. With respect to the latter part of the question, it is very important, and has within it a grave principle. I do not consider it my duty to go outside my board as a seeker-out of existing cases of poverty which have not come within the cognisance of the board in the manner I have named. Moreover, I do not find it is even an instruction to our relieving officers to do so. I think that is the answer I must give to that question.

5886. You think that by what I may call the indirect means which you speak of, your board is pretty well informed as to the existence of cases of distress?—Quite so.

5887. But you do not think it is a duty of the board of guardians to search independently, and of their own accord, or ferret out cases of distress?—I do not, and I would like to supplement that by stating, what has already been stated, that we are a large union; we have an aggregate of something over 6,000 indoor and outdoor cases, representing every condition of man, woman and child, either in an institution or receiving out-relief; and for myself the work would be really too great; I could not undertake the responsibility of a guardian if such a regulation were made. I hear myself, in my room, with my small committee, something like 6,000 cases per year.

5888. We heard of a particular resolution that was passed by your board, and some questions were asked as to the circumstances of it; can you tell us exactly what happened?—I understand you to refer to the resolution calling upon the Government to take into consideration the question of starting some means of employment or some scheme of employment. I think I could give you the reason for that resolution being passed. It was because it was thought that some of the guardians did object to stoneyards being opened on account of their being demoralising.

5889. If I remember rightly, there were two propositions contained in the resolution: first of all, that the State should interfere in some way to give employment, and secondly, the opinion was expressed that the stoneyard was a demoralising institution?—That is so.

5890. We did not know which of those two propositions was the more acceptable or the less acceptable to the guardians?—I may say in reply to your question that this resolution was one which I intended moving myself as chairman of the board. I naturally made certain inquiries within the limited time at my disposal, and read up what I could. I thought the former part of the resolution was in my opinion a dangerous one for me to move, and I dropped it. Some other member of the board immediately gave notice and took the matter up. But I did not alter my opinion as to the latter part of the resolution, which refers to the stoneyards being generally recognised as calculated to pauperise and demoralise the poor. I believe the resolution was passed by 12 to 10.

5891. Can you tell us what it was that the 10 objected to in the resolution; was it the first or the second?—I think (if you will permit me to put it in that way, because I am not quite certain) it was the first part. I think we all agreed about the other part. May I say further that I think we were right so in agreeing about stoneyards being demoralising, because the guardians have had this matter brought before them by the representatives of various bodies in Battersea, and I remember that on one occasion a fairly representative body of men sent a spokesman before us stating they did not wish the stoneyard opened; they begged us not to open it, and the reasons given were that it was demoralising, and so on. That was followed later by another deputation, and the guardians felt in no little difficulty; but the guardians gave way under the various stresses at the period, and did open the stoneyard.

5892. We do not want to go over the same ground again, but is there anything you would like to say to us in supplement of the very clear evidence given by the clerk of the guardians the other day?—I would like to say a word in regard to the stoneyard. I have paid attention to the stoneyard for some years, and every year my opinion grows stronger that it is a mistake to think of giving any permanent relief to the poor who come into our stoneyard under the various stresses of winter, or sickness, or death of relatives, or one thing or another, with an idea of doing them any good. We have all sorts and conditions of men coming into the stoneyard, but most of them are hard-handed men. We have some *bonâ fide* working men, but most of them are men who seem to have

Chairman—continued.

have most irregular periods of work. I do not call them by any name; I think it would be wrong of me to do that; but I do find from my experience that a stoneyard becomes a kind of college of demoralisation, and the men who go there with the idea of being tasked to break 8 cwt. of granite per day very soon find out they may do pretty nearly what they like, because the regulation is that these men must be kept at work according to their capacity and ability, which is a difficult thing to judge of for an unprofessional stonebreaker. Some of our professional stonebreakers I have known, not in the stoneyard but in the casual ward, to break their 8 cwt. before 12 o'clock at noon, and say they could do a ton in the day "upon their heads." I call such men professional stonebreakers, who know the how of the whole matter. But there are men come into the yard expecting that they will have to break 8 cwt., and they are very soon told they need not do anything of the kind. Once we found, on working out the figures (and we have returns submitted every week) that the average amount broken is 2 to 3 cwt. I do not think it is more. Altogether it is a costly thing; we make nothing out of it. But the worst feature about the case is this; that real honourable workmen, who do not wish their children to starve, and who will do any sort of work, find their way to the relieving officer's door, and get introduced to Poor Law relief in that way, and I believe it helps to destroy their self-dependence. They have been under something that is called relief when they are seeking work, and, taking the whole thing altogether, it does demoralise most of these men who are not already demoralised who get into the stoneyard.

5893. You have two objections, in fact, to the stoneyard, the first being that while your endeavours and instructions are to adapt the amount of work to the man's capacity, a man is very soon able to adapt his capacity to what he finds to be his convenience?—It appears so.

5894. And in the second place the whole process is one of demoralisation to the better class of men who are subjected to it?—I believe that is so. And there is another thing; the work is really so trifling that I cannot call it work at all, it seems more like a kind of play. I have considered whether it would not be possible to have a general stoneyard for the whole of the metropolis, having regard to the large amount of stone that is needed for mending the roads. I could not say how much would be needed for the whole metropolis, but I do know that in our own district there are something like 13,000 cubic yards of stone required for mending the roads. We are able to form a stoneyard to supply something under a thousand, you may say one thousand, and this is given as a kind of relief. I believe if it could be planned to have a central stoneyard to supply the whole of London and pay a fair day's wage for a fair day's work, and put on men who could do that work, it would take away what I think is the stigma of relief. I think it would be much better if those men who could work at breaking stone were put to work in that way. I could show you as regards our own district that the very large majority could do that, and the minority the local authority could deal with in the ordinary way, with such means as we have. If that were done, I believe work could be provided for the great multitudes that frequent our various stoneyards. Besides, it would be an advantage to the local authorities if, say, for instance a body like the London County Council had a large stoneyard purposely for those men who could work in the stoneyard. We have to pay the cost of the relief in the stoneyard out of the local rates; it is a kind of out-relief, and is charged to the local rates, while the County Council's operations extend over the whole of London, and their funds are derived from that. In regard to any difficulty such as we have experienced, which has caused us to divide the week's work, and give the work to married men over 50, that was done simply because we had not room enough. Any central authority might do just the same thing. As regards my own district, which I know thoroughly well, better than I know the whole of London, we could deal with the very small minimum of soft-handed men who might be left.

Chairman—continued.

5895. Do you find you have sufficient power given to you under the Local Government Board rules at present for dealing with ordinary distress, or are you hampered in the amount you give to destitute people?—No, I am not aware that there is any limit whatever to any amount of out-relief; in fact, I am sure there is not, though I believe if we gave an extravagant amount we should have the Local Government Board down upon us.

5896. There is an obligation as to a certain proportion being in kind, and another proportion in money; is there not a restriction of that sort?—Yes. I think it is a very wise restriction.

5897. That does not apply, I believe, to the total amount given?—It is included in the total amount. I believe the guardians got what information they could, and they agreed upon so much money, so much bread, and so much grocery. Speaking personally, and from experience, I am glad that it is so. I am very glad that there is some kind and some bread for the men to take home to their wives.

5898. That is the system prescribed by the Local Government Board, is it not?—I could not say. It is a system approved by the Local Government Board as regards ourselves.

5899. Supposing you had a certain rate of relief that you were giving and you wished to alter it or increase it, would you require to apply to the Local Government Board for leave, or can you do it on your own account?—I should say we should have to apply to the Local Government Board. But, perhaps, you would allow the clerk to answer that question. (Mr. *Henderson.*) I do not think we should require to apply to the Local Government Board if we wanted to alter the stoneyard scale of relief. I think we have power to do it without; there is no limit to it. We might report to them that we had done it, but we should not wait for their permission.

5900. You have not found any difficulty on that score?—No.

Mr. *Pickersgill.*

5901. (To Mr. *Milligan.*) You feel that there is a fear lest respectable working men, if they once come in relation with the Poor Law

Mr. *Pickersgill*—continued.

through the stoneyard, might be led to rely more or less permanently upon the machinery of the Poor Law?—I believe so.

5902. Then, I presume, you would sympathise with the proposal that if relief work is to be given it should be given rather by the vestry than by the guardians?—Yes.

5903. You have thrown out a suggestion that the London County Council might do something to supply work?—Yes, as an alternative.

5904. But do you not think it would be better that the relief works should be administered locally, by the local authority rather than by the central authority; when I say the local authority I mean the sanitary authority, whether the vestry or the district board?—I do not like the term "Relief Works." I am acquainted with the term as signifying rather Poor Law relief; but I take it that is not what you mean.

5905. I did not mean that. I meant employment specially adapted for the strain which we had, for instance, during the last winter?—Yes.

5906. My question is, whether it would not be better that such employment should be given locally; that is, by the vestry, rather than by a central authority like the London County Council?—I would not mind that.

5907. Would not the reasons be that the local authority would be better able to make inquiries as to the *bona fides* of the applicants for employment?—Yes, that would be so; but, speaking of our own local vestry, I believe the Battersea Vestry is doing all it can do.

5908. Was your suggestion with regard to the County Council based on the idea that the cost ought to be distributed over the whole of London rather than press upon particular localities with special severity?—I had the Metropolitan Common Poor Fund in view.

5909. You are rather in favour of drawing upon the Metropolitan Common Poor Fund to defray the cost of this employment in the winter?—Yes; simply upon the principle that I consider the rich localities ought to help the very poor localities.

Mr. *Logan.*

5910. Are you in sympathy with the notion that is embodied in two Bills now before the House, that the acceptance of relief during a period of exceptional distress like this last winter should not disfranchise men?—Which kind of relief do you mean?

5911. Either out-relief or relief given in exchange for work. Are you in sympathy with the notion that a man who is compelled to accept relief of any sort or description because he is out of work, through stress of weather or through stoppage of works through no fault of his own, should be disfranchised?—With regard to medical relief, a man is not disfranchised unless he goes to the infirmary.

Mr. *Logan*—continued.

5912. I do not mean medical relief only; I mean accepting of relief at a time when the man is out of work through no fault of his own?—Personally, but not as a Poor Law guardian, I say yes to the question. I have an idea that I cannot get rid of; that it does, to some extent, act as a deterrent, and from that point of view I must say I am opposed to the idea suggested by the question. But, personally, if I was not a Poor Law guardian, I should say I think it is hard lines for a man to be deprived of his vote. But I have had all the experience of a Poor Law guardian, and as a Poor Law guardian I feel I may not say Yes.

5913. You say it acts as a deterrent; are you of opinion that the fact that he would be disfranchised prevents a man from making applications for relief?—That is a big question, and it would take me some time to answer it. I believe there are many people who apply carelessly for relief.

5914. I have no sympathy with those people. I am asking with regard to an honest workingman who is out of work through no fault of his own?—I know there are many people who subscribe to clubs and to medical societies, and so on, and make provision. I believe such people have considered all the consequences of not making proper provision; but as a Poor Law guardian I must adhere to my answer.

Mr. *Wootton Isaacson.*

5915. Could you tell us what is the cost of the maintenance of pauper lunatics in Wandsworth?—I am quite unable to answer that question. I did not think I should be asked to give any evidence as regards pauper lunatics.

5916. Would you tell the Committee whether you have ever known an instance where a man has objected to apply for relief on account of losing his vote?—I have never known of such an instance. I have never heard of one.

Chairman.

5917. Is there any other point you wish to refer to?—I think the clerk to the guardians wishes to make an explanation with regard to his former evidence. (Mr. *Henderson.*) There is one point I should like to correct in my evidence last week. At Question 5266 I was asked, "Have the Board passed any resolutions connected with disfranchisement?" and I said, "I do not remember one." I find, however, that there was one passed in this way: another board sent to us a copy of a resolution which they had passed in favour of doing away with disfranchisement, and we passed a resolution agreeing with it.

Mr. *Stuart-Wortley.*

5918. Was that resolution passed unanimously?—I will ascertain whether it was unanimous.

Mr. AUGUSTUS SHAND, called in; and Examined.

Chairman.

5919. You are Chairman of the St. Olave's Board of Guardians, I believe?—Yes.

5920. The Committee have had the evidence of the clerk, and do not wish to take you over the same field, but the Committee would be glad to know something about the policy of the Board. How long have you occupied the position of Chairman?—For 18 months past.

Chairman—continued.

5921. Were

Chairman—continued.

5921. Were you long a member before that?—I have been a member of the Board between eight and nine years.

5922. So that you are well acquainted with its general policy, are you?—I am very well acquainted with its general policy.

5923. It has been stated to the Committee that a good many years ago there was, if not a change, at all events a new development of policy on the part of your Board, tending to a more extensive use of out-door relief?—Yes, that is so.

5924. Were you a member of the Board at that time?—Yes.

5925. Can you tell the Committee what the views of those that advocated that new development were?—Speaking from memory, I cannot.

5926. The Committee, I think, were told that your workhouse accommodation is not sufficient?—No; it is very much below the requirements.

5927. Have you been repeatedly pressed by the Local Government Board to increase your accommodation?—Yes.

5928. Can you say why you have not taken steps to increase it?—The late board put off the question of increasing the workhouse accommodation until they had seen the Report of the Royal Commission on Aged Poor. Many of the members thought that that report would tend to recommend old age pensions and more outdoor relief being given, and that, therefore, there would be no necessity for us to increase the accommodation.

5929. But that commission was only appointed two years ago, was it not?—That is so.

5930. And previous to that there had been found this deficiency in accommodation, had there not?—Not to a great extent. We increased our infirmary three years ago by doubling it.

5931. In the present winter you began very early, did you not, to take steps to give relief, and opened a stoneyard?—Yes.

5932. At first your conditions were somewhat comprehensive, were they not?—That was so.

5933. And you had to tighten them a little afterwards?—Yes.

5934. At first you admitted men who were not even resident within the parish, did you not?—I could not say that. It was only for two days; if it was so, the first two days. I think I ought to state that the opening of the stoneyard was agreed on somewhat hurriedly before there was any proper organisation as to the inquiries into the circumstances of these men, the *bona fides* of their residence, and so on, and there is no doubt that several did slip in by giving false addresses. But that only happened during the first two days. I think the first day the stoneyard was opened there were 156 applicants, and the next day there were 517, but on the third day the stoneyard was closed on account of the stone being used up, and there was nothing for them to do. Then inquiries took place, officers were put on specially, and the numbers were reduced to 103 on the following day. After that they gradually increased to an enormous number.

5935. Can you state to the Committee the amount of relief which was given to each man who did a certain amount of work in the stoneyard?—The relief that was ordered to be given was at the rate of trades unions wages; it was 0.45.

Chairman—continued.

to be given at the rate of 6*d.* per hour, 1*s.* 10*d.* in kind, and 1*s.* 8*d.* in money.

5936. Was the 3*s.* 6*d.* a day continued to a man all the days of the week?—No, there was a scale laid down which stated that a single man should have two days' work per week at that rate; a man and wife, two days; a man and wife and one child, three days; a man, wife, and two children, three days.

5937. Could a single man and a married man be employed two days?—Yes.

5938. A married man with one child three days?—Yes, a married man with two children, three days; a married man with three children, four days; a married man with four children, four days; a married man with five children, or more, five days.

5939. Was that scale of relief adopted after deliberation by the board?—It was.

5940. Since the clerk gave evidence before the Committee, what has been the history of the stoneyard; is it closed?—We closed it by resolution. A resolution was moved in February that the stoneyard remain open for six weeks, and then be closed, and it was closed therefore on the 28th of March, last Thursday.

5941. Did the numbers who attended continue to be considerable until the end?—Very.

5942. Notwithstanding that the frost had gone?—Yes; I should like to put in the Return which I have here, if you please.

ST. OLAVE'S UNION.

‡ Orders issued to men in Lodging-houses from this date.

5943. Can

Chairman—continued.

5943. Can you quote the figures for the last day or two it was open, from the Return?—The highest figures reached during the whole of the period from the 7th of January to the 28th of March was 1,759 in one day. That was on the 21st of February. Then taking the 21st of March, we come to 854; the 22nd of March, 788; 23rd of March, 773; 25th of March, 309; (that was on a Monday) 26th of March, 247; 27th of March, 1,085; and the 28th of March, 866.

5944. Can you account for those large figures at the end of a period?—I cannot account for it.

5945. The hard weather had gone long before that, of course?—Yes.

5946. Can you say what the reasons are which induce your board to leave so much towards out-door relief?—I think only humane reasons. I am in favour of it myself, and have been for many years. I have had 20 years' experience of parochial relief in all its phases. I have served on the Board of Works of St. Olave's. I am connected with several institutions in the neighbourhood, and I am in favour of out-door relief myself, but I think in giving out-door relief it should be given very judiciously and carefully, because as far as my experience as a guardian is concerned, a person once a pauper is always a pauper. We can find on looking at statistics that it goes through generations.

5947. Do you not think that a large system of out-door relief such as you speak of, rather tends to increase the number of paupers?—I think with regard to the stoneyard, it has been a great mistake to give the amount of pay we have given; I think that has been a great error.

5948. Do you think you have paid them too much?—I think we have paid them too much.

5949. Do you think it attracted men from other quarters, or was it merely confined to your own district?—Except for the first two days, I do not think so. After the supervision of so many of the officers, it was kept in check. Ours is a very poor neighbourhood, and during the hard frost we were practically starved out all along the waterside; there was very great distress indeed, then.

Mr. *Lawrence.*

5950. You say you are strongly in favour of judicious administration of relief. On consideration, after what has recently happened, do you think it was very judicious for your board to vote that the labour-yard should be open for six weeks without reference to the circumstance that at any time in any week of the six, there might have been a change in the weather, or that something might happen to make the board wish to alter its determination?—I do think so.

5951. You think it was not judicious, do you?—I do not think it was.

5952. Apparently you opened the labour-yard on the 3rd of January?—No, on the 7th of January.

5953. Did not a deputation come to you on the 3rd January?—Yes.

5954. My memory is that the weather only commenced to be chilly on the 29th December. Do you think it was wise on the part of your

Mr. *Lawrence*—continued.

board to open public relief works within two or three days of the cold commencing?—The guardians who brought the matter up, I believe, brought it up with very good reasons. They thought there was a great lack of employment and that there was very great distress. A deputation of 20 men attended on the board. One was appointed as spokesman, who stated that great distress prevailed in the district, and that there were 2,000 men in Bermondsey alone, out of work.

5955. But with a board of such a position of influence as yours is, are you bound to take the untested statement of 20 people, even though headed by Mr. Wilkes. Are you not justified, as business men, in forming your own opinion?—I do not think that is a question I can answer. Of course it was the policy of the majority of the Board.

Mr. *Stuart-Wortley.*

5956. Do you dissent from it?—I am the chairman of the board.

Mr. *Lawrence.*

5957. Apparently the deputation was there and then informed that a labour-yard should be opened. Did you, as the chairman, in any sense deprecate the wisdom of immediately opening this public work?—The labour-yard would have been opened the next day, and I deprecated it then, until we had the consent of the Local Government Board to open it, and until we had some sort of supervision for the yard, which was not then open, until the 7th.

5958. You are a business man in that neighbourhood, are you not?—Yes.

5959. And the board generally are business men, are they not?—Yes.

5960. Is it the case that except for the frost there has been any real extra distress during the last few years in that neighbourhood?—No, I could not say that on the 7th January there was any acute distress. Our officers state that, I think, in their replies to the Board of Trade.

5961. Then practically, with your official knowledge and experience, corrected and tabulated in your office, you, as the representative of the poor relief in your neighbourhood, did accept the statement of 20 people, headed by this Mr. Wilkes, as overriding the information which you had at your hands from authorised sources?—The question of the information at that board meeting was never gone into. It was the first meeting of the new board, and out of the 24 members of that new board, I find 13 had never been guardians before.

5962. Has it been the case that for the last 10 years the question of out-relief has been the subject of electoral cries in that neighbourhood?—I do not think so.

5963. Has it not been commonly mentioned at the vestry elections, or the elections of guardians, as an electoral cry?—Not until, I think, the last election. It was at the last election, I think.

5964. Did some of the members come pledged to give out-door relief as one of the inducements to get a vote?—Yes, they did.

5965. Were you one?—No; I am on no political side whatever; I never have been.

5966. But

Mr. *Lawrence*—continued.

5966. But this is entirely a social question. Did you enter the board pledged to give outdoor relief?—No; I entered the board pledged to nothing.

5967. As to the labour-yard; you said it was only started for two or three days until you could get sufficient supervision; is that your statement?—The yard would have been started on the 4th January if the majority of the guardians' wishes at that meeting had been complied with; but it was pointed out that we must have the consent of the Local Government Board before we opened it, therefore it was not opened until the 7th January.

5968. I thought you said you waited for supervision, but as a matter of fact the supervision for the first two days was utterly inadequate, was it not?—Quite so.

5969. Then you started the six months' residence as a test, did you not?—Yes.

5970. Did you really ascertain correctly whether the people had resided this six months in one place?—Yes, as accurately as our officers could get it. We employed a great number of officers for the purpose.

5971. What number of extra officers did you put on?—Eighty-seven.

Mr. *Wootton Isaacson.*

5972. Were they all paid?—Yes.

Mr. *Lawrence.*

5973. Were the statements ever taken down in black and white, recorded in the office, and checked?—Yes.

5974. Has there been a regular tabulation of the results of your inquiries in the matter of residents?—Yes.

5975. I understand that when the relief became so very large in amount, the board resolved that people living in common lodging-houses should not be allowed to apply. Was that the case?—That was so.

5976. Then the board nevertheless in a short time withdrew that resolution and said they might apply, did they not?—That was so.

5977. Was that in your opinion judicious?—No. I will tell you how that was done. In this particular union of ours we have several of these common lodging-houses, and by the law if a man sleeps in the union for one night, it makes him eligible for the labour-yard. We were given to understand that men were practically trooping into these common lodging-houses for the one night with the view to obtain employment the next day; I will not call it employment, but to obtain relief at our labour-yard. To put a check on that, common lodging-houses were omitted. The men applying from common lodging-houses were omitted, but that could only be done by resolution, which took a fortnight to get passed, as we only meet once a fortnight. Then a deputation attended one of the board's meetings from some of the trade societies in the neighbourhood, which pointed out that there were many men living in these common lodging-houses who had lost their wives and were widowers, and had no means of keeping up a home, but who had been actually resident

Mr. *Lawrence*—continued.

in the neighbourhood for ten years, that some of the cases were *bonâ fide*, and therefore we thought it was a hardship on those men, who had no other place to live in, that they should be kept out of work in consequence of their living in a lodging-house or in a room. Consequently these people living in lodging-houses were admitted with the provision that there should be a six months' residence.

5978. You have been for many years, you told the Committee, intimately connected with this district, and conversant with social life there?—Yes; I was born there.

5979. As a matter of fact, I have some knowledge of these subjects, too. Do you really believe many trade societies have members living in common lodging-houses, and do you really believe that many people live in common lodging-houses with their wives?—I said widowers.

5980. Have you ever taken the body of people who are to be found in a common lodging-house, and found out how many were married or unmarried, or how many belong to trade societies?—No, I have never done that.

5981. Do you think that the class of people which belongs to trade societies is to be found in a common lodging-house?—Not to any great extent; there may be a few.

5982. Do you not therefore think it rather lax on the part of your board to promptly withdraw the resolution, which apparently, according to your experience, you were justified in passing?—It was a wrong policy, no doubt, but I think it was done with a good intention. I think the majority of the board thought that six months' residence in these lodging-houses would stop any imposition.

Chairman.

5983. Are you elected as chairman by the board?—Yes.

5984. Then you presumably are in sympathy with the majority of the board?—I cannot say that. I think it right to tell you that I was only elected by the casting vote this year of the chairman, who a certain section of the board put into that chair.

5985. By the casting vote of a temporary chairman?—By the casting vote of a temporary chairman.

5986. Is the board much divided in opinion upon these subjects?—At that particular time the board was.

5987. With regard to their action on the subject of unemployed this winter, have they been pretty evenly divided in opinion?—At this particular time the majority, of course, was large, but I think if the question cropped up again tomorrow, there would be no stoneyard opened.

5988. Do you attribute that to the fact that there was so large a number who had been elected without any previous experience of this sort of work?—Yes, that is so.

Mr. *Logan.*

5989. You said just now that the men who were employed in the stoneyard, did not make application to you for employment, but for relief. What did you mean by that?—The stoneyard

Mr. *Logan*—continued.

was more in the nature of relief, not employment.

5990. But the people do work in the stoneyard, do they not?—I cannot say that. They are supposed to work.

5991. Can you give the Committee any idea of the amount of stone which was broken by each individual?—Yes, I can. I cannot give it to you individually, but I can give you what they did altogether.

5992. Can you give us the number of hours' or days' work, and the number of tons broken?—The amount of stone purchased was 4,000 tons; the amount broken was estimated at 2,500 tons. Taking into consideration the cost of supervision, the inquiries, and the money given to the men, and the rents, rates and taxes, I find that for every ton weight of stone broken it cost the union 7*l.*

Mr. *Wootton Isaacson.*

5993. Had they no task allotted them?—No, you cannot impose a task in cases of relief, because it would be grossly unfair. I visited this stoneyard myself twice a week, and one man I know, as a fact, was an ex-convict. If you had given him a task, he could have done his task and been off in an hour; but the next man was a grocer's assistant, who, I was going to say, did not know how to break a stone or, perhaps, a piece of wood, properly.

Mr. *Logan.*

5994. Can you give the Committee the market value of breaking a ton of the particular stone which you use?—We practically bought the stone and sold it for what we paid for it.

5995. Would 2*s.* a ton, under ordinary conditions, be a fair price for breaking stone?—No; I should think you might get a ton broken for 5*s.* The surveyor of the district board of which I am a member informed me that one of the men in their yard could easily break a ton of this stone in a day, so that putting his wages down at 4*s.*, it would practically cost 4*s.* to break a ton of stone, whereas it cost us 7*l.*

5996. You are not speaking now from actual experience, are you, because I think the value which you put on the work is very high indeed. The witness who was called before you, said that a man who was a practised hand could break a ton by an early hour in the day?—I do not think that is so. I do not think any practised man can break a ton of the Guernsey granite, which we use, in less than a day.

5997. The 2,500 tons which you had broken ought to have been broken in two such days as you had on the 21st February, when you paid close on 300*l.* a day, ought it not. I gather from the costly nature of the work done that you had no supervision over the men?—We had labour superintendents and the order was that those superintendents were to see that the men were at work, and keep them at work; but it has been a great failure.

5998. That is very evident, but do not you think that, as a man of business, it would be possible to get the men to do something: these men did absolutely nothing at all?—It was the class of men who were there. I know as a fact that some men would have honestly endeavoured to do as much as they could, but they were deterred by others.

Mr. *Logan*—continued.

5999. I am looking upon you now as the managing director of the whole concern; was it not your business to see that the foremen, who I suppose you paid to supervise this work, did see that those who were placed under them made some honest attempt to earn the money you were giving them?—Yes, we did; but a man would take a hammer and would not trouble to put enough force into his word to break the stone.

6000. Were those men discharged?—No, they were kept at work.

6001. Kept at what?—They were kept at play, if you like; kept employed.

6002. I presume you did not know this sort of thing was going on?—Yes, I did.

6003. And you continued to pay the ratepayers' money away at the rate of 3*s.* 6*d.* a-day each man?—I did not; it was the policy of my board.

6004. Did you protest against it?—I did; personally, to every member of the board, and I told them it was wrong from beginning to end.

6005. Can you say, to your knowledge, whether the same sort of thing goes on in other stoneyards in the metropolis?—I could not say; I have not been in any other stoneyard.

6006. Do you not think it would be possible so to supervise the work done in the stoneyards, as to compel the men to do a fair day's work for the fair day's wage that you give them?—I think it would be very difficult to draw the line for a fair day's work in breaking stone.

6007. But why is it difficult; I speak now as a man of practical experience; I see no difficulty. I could so arrange it that these men were supervised by gangers who would either discharge them or see that they did something like a fair day's work?—They were supposed to break, I think, a hundredweight. Suppose you gave that to one man, and said he was to break a certain quantity, one man could do it in a very short time, but to the next man who had never seen a stone broken in his life it would be utterly impossible for him to do it; therefore, who is going to judge whether he is doing a fair day's work or not?

6008. You think it impossible, do you, to do so?—I think so, so far as stonebreaking is concerned.

6009. Do you know that in the ordinary course of stonebreaking, it is usual to put a man to a heap of stones and measure what he does?—Yes.

6010. Do you see any difficulty in doing it in this case?—Yes.

6011. What difficulty?—Because you get all classes of men. As I say, you may get a man who has been a convict, or a man who has been working in the roads, and alongside him a grocer's assistant; therefore, I say those two men are not equally capable.

6012. I did not suggest that you should give them both the same amount of work to do. You might give the grocer's assistant a fourth or a fifth part of the work that an ordinary navvy would do?—Yes; but who would supervise that

Mr. *Logan*—continued.

that, and say who was only fit for it; would you have a medical officer to certify in each case?

6013. No; if you have a ganger accustomed to stone-breaking he would tell you directly whether the man was able to do any work or not, would he not?—True, but you cannot find these gangers in a short time. I doubt then whether a ganger would give that amount of supervision.

6014. Then you did not make any attempt to get a man of that sort?—Yes, we had several men, we got the best we could at the time.

6015. You say that the stone cost you 7*l.* a ton to break?—Yes.

Chairman.

6016. That is the cost, I suppose, throwing everything in?—Yes, we paid in salaries 1,280*l.*, and we paid to the men 10,782*l.* We spent altogether 17,000*l.*

6017. Then the actual breaking cost 4*l.* per ton, did it?—£4 6*s.*

Mr. *Bartley.*

6018. And superintendents 2*l.* 14*s.*?—Yes; relief, 4*l.* 6*s.*, and supervision, rents, rates, taxes, plant, and materials, brought it to 7*l.*

Mr. *Pickersgill.*

6019. Were any proposals made at your board for dealing with the distress besides the stone-yard?—Yes; the resolution was carried, first, that the stone-yard should be opened, and then a deputation of delegates waited on the local vestries asking them to undertake work, so as to take as much off our shoulders as they possibly could. I headed two of those deputations.

6020. As chairman of the guardians did you go?—Yes; as chairman of the guardians.

6021. Authorised by your board?—Authorised by my board. I went to the Bermondsey Vestry and to the Rotherhithe Vestry; both vestries, I may say, took the matter up very warmly, and did their share to a very great extent.

6022. Did they give work?—Yes.

6023. What was the nature of the work which they gave?—Picking up the roads, and sewer work principally.

6024. Do you think that they succeeded in getting a fair day's work for a fair day's wage?—I think better than we did, certainly. You see they gave it as work, not relief.

6025. And do you think that that makes a great difference in regard to the willingness of a man to do his best?—Most certainly.

6026. Then you would be in favour, would you, as far as possible, when work is given, of that work being given by the sanitary authority rather than by the board of guardians?—Yes, I may state also that the Board of St. Olave's, with only seven miles of streets and no macadam roads, put men on, giving them sixpence per hour, but we told them they must be there at six o'clock in the morning; every night they were paid and told to come the next morning, but they very soon thinned themselves down, and we were practically left without any of these men, because my conviction is that they went down to the stone-yard.

Mr. *Pickersgill*—continued.

6027. You think they preferred the stone-yard?—Yes, they preferred it to working under proper officers, who would see that they did their work.

6028. As a rule, do you break your stones by machinery or hand labour?—We do not break any stone at all. We have no macadam roads to use it on. We only break it up to sell to someone else, and then only a small quantity. We have no macadam roads in my particular district of St. Olave's.

6029. Have you any suggestions to make as to alterations in the law in view of dealing with exceptional distress?—No, as a guardian I have not. I think the guardians are well armed with powers, but I do not think myself the question of dealing with distress of this kind should be laid at the guardians' door.

6030. Would you be in favour of a proposal of this kind, that the guardians should be empowered to make a contribution to the sanitary authority of the district, on the condition that the sanitary authority provided a certain amount of employment in a time of exceptional distress?—I should, but I think it would be only taking it out of one pocket of the ratepayer and putting it into another. I think the sanitary authority of a district have power to do it themselves.

6031. What would you say if it were proposed that a part of that contribution should come out of a Metropolitan Common Poor Fund?—To be dealt with by the guardians?

6032. No; a contribution to be made by the vestry, but a portion of it to come out of a Metropolitan Common Poor Fund?—I think that would do good, because when the vestry give work they would naturally get labour for their money.

Mr. *Heywood Johnstone.*

6033. The guardians do not buy stone, I understand, but merely sell it?—That is all.

6034. What price do you sell it at?—12*s.* a yard, which is about a ton and a quarter.

6035. A ton and a quarter you sell for 12*s.* which cost you 7*l.* to break?—That is so.

6036. How much do you pay for it unbroken?—8*s.* 9*d.* the contract is; we have had to pay more, because we could not get it from the contractor, and had to buy it where we could.

6037. Then you pay 8*s.* 9*d.* for what you sell at something equivalent to 10*s.*?—That is so

6038. I think you said that the board which opened this labour yard was a new board?—Yes.

6039. And I rather gathered from your observations that you are not with the majority of that board with regard to policy?—With regard to this policy I am not.

6040. I also gathered that the board was composed of a large number of guardians with no experience of the administration of the Poor Law?—That is so.

6041. Are they in a majority?—They were at the first meeting in January.

6042. But if they all attended, would they still be in a majority?—I do not think so now; several of them have altered their opinion.

Mr. *Heywood Johnstone*—continued.

6043. But, as elected, several of them had no experience of poor law?—That was so.

6044. Can you tell me from what class of persons they were elected; have you any labour men or working-men representatives?—Yes, four or five.

6045. Did they take views in favour of the stone-yard?—Yes.

6046. Have they altered or mitigated their views at all, or are they still in favour of this policy of the stone-yard?—I am sure I should not like to answer that question. They voted against the stone-yard being kept open any longer.

6047. Are the bulk of your board ratepayers?—The majority, I should say, yes.

Mr. *Wootton Isaacson.*

6048. But not all?—But not all.

Mr. *Heywood Johnstone.*

6049. Is there a substantial minority who are not ratepayers?—No.

6050. The majority of them are ratepayers, are they?—Yes.

6051. I think you told the Committee that on one day 1,759 persons were employed in the stone-yard?—Yes, on the 21st February.

6052. Were they employed the whole day long?—Yes.

6053. There was no coming in for part of the day, was there?—No, it was employment during bank hours; I may say, ten to five.

6054. You gave figures showing some very remarkable increases and decreases with regard to the number of persons employed in the stone-yard; can you compare them at all with outdoor relief given at houses; did that show the same increase?—The outdoor relief had increased very considerably as well.

6055. Have you any figures showing to what extent?—During the life of the present board outdoor relief has increased from January to the extent of 40*l.* per week.

6056. Do you mean that each week shows an increase of 40*l.*?—No, the average increase.

6057. The average increase per week since the formation of the present board has been 40*l.*?—Yes.

6058. Independently of this large expenditure in the stone-yard?—Yes.

Chairman.

6059. Do you mean each week on an average was 40*l.* more than the week before?—No, on the previous year. We expend in outdoor relief about 14,000*l.* a year; we give something like 270*l.* per week.

Mr. *Heywood Johnstone.*

6060. Do you know a body called the County of London Poor Law Officers' Association?—No.

6061. Will you look at this form and tell me if you are acquainted with it? (*The form was handed to the Witness and is as follows*):—

Mr. *Heywood Johnstone*—continued.

LONDON PAUPERISM AND DISTRESS.

Poor Law Union_____

District_____

Month of_____ 189 .

QUESTIONS.	REPLIES.
(1.) Do you consider that at present there is any exceptional distress in your district? Mention any trades specially affected -	
(2.) If so, state any special causes which have contributed to such distress -	
(3.) Does the distress in your district appear to be increasing, declining, or stationary - - -	
(4.) Are any special steps being taken or in contemplation to deal with the distress by the guardians, vestry, or board of works, or voluntary organizations? If so, please specify -	

REMARKS.

*Signed*_____

*Date*_____

Yes, I have seen this form.

6062. Are such forms periodically filled up by any of the officials of your union?—Yes.

6063. What is done with them?—They are sent to the Board of Trade, I believe. I have seen that form, I think, in the possession of one of our masters, and I am not sure, but I believe it is sent in to the Board of Trade. It does not come before the board I may say.

6064. But individually you are acquainted with this form headed "London Pauperism and Distress," are you?—I have seen it.

6065. And you have reason to believe that it is periodically filled up?—Yes.

Chairman.

6066. By whom?—I fancy by the masters of the workhouses.

Mr. *Heywood Johnstone.*

6067. No doubt you could tell us of some one who could prove it in a more formal manner if thought desirable, but if you will look at the paper, I think you will find it rather an interesting one. You believe it is sent to the Board of Trade regularly, do you?—I am given to understand so.

Chairman.

6068. Is this a Return relating to the particular workhouse of which the master is the head?—I believe it is.

6069. What

Mr. *Wootton Isaacson.*

6069. What is the amount which you receive under the equalisation of rates?—Nothing. There are five parishes in the union, two parishes receive, and three contribute.

6070. Which are the two which receive?—Rotherhithe and Bermondsey.

6071. Do you not receive?—No, we unfortunately have to pay in St. Olave's very largely.

6072. Do you not receive at all?—No, we pay something like 1,000*l.* a year.

6073. Towards the equalisation of rates?—Yes, something like 6*d.* in the pound. The equalisation is taken on the night population, and in St. Olave's we have a very small night population.

6074. Do I understand you to say, as chairman of the board of guardians, you do not receive any money under the head of equalisation of rates?—No, the guardians do not receive any money from equalisation of rates at all, it is only the vestries who receive it.

6075. Then does the Vestry of St. Olave's receive anything?—No, they pay.

6076. Do they receive nothing?—No, they receive nothing, but pay very largely.

6077. With regard to the task work of men who applied for work during the late severe frost, you said just now that it was not possible to task any of these men, because one man was a grocer's assistant and the other a man who could break stones very quickly, owing to the peculiar nature of the employment he generally followed. Would it not be possible to give an allotted quantity to each man, and even if one man did break his portion a little quicker than the other, give him a fresh lot?—Then I do not think he would hurry up at all.

6078. But he would have to do it in the allotted time, supposing you made it a task?—You could not do it.

6079. Why?—Because it would be unfair to his next-door neighbour, who may have never broken a stone in his life.

6080. Take it that one man could do one hundredweight, or two hundredweight in an hour, as the case might be, which would give an allotted task to each man of half-a-ton a day, do you not think it would have been fairer to your ratepayers to have allotted a task of that kind to every man, instead of allowing them to idle away their time?—As the board of guardians, the first thing we have to study is the men.

6081. I thought it was the ratepayers' money you had to study?—I say the first thing we have to study is the man, and we have to deal with him with a humane mind; that being so, I say it would be grossly unfair to that man. He may be a *bonâ fide* man out of work through no fault of his own, and I say it would be dishonest and unfair to expect that man who came to us for the sake of getting money for his wife and children, to do what it was impossible for that man to do.

6082. But you told the Committee there were a number of men who played wtth the stones, and who would not hit the stones hard enough to break them?—Quite so.

6083. Then, where does your humanity come in towards the taxpayer if you allow men like that to remain?—I confess there has been no humanity to the taxpayer.

Mr. *Wootton Isaacson*—continued.

6084. What has been the additional amount of taxation in St. Olave's since this state of things has been going on?—Over the whole union, this will increase the rate by something like 7½*d.* in the pound.

6085. The poor-rate alone?—Yes.

6086. This stone-yard?—Yes.

6087. Simply because you feel it is the duty of the board of guardians to pay men 6*d.* an hour to break pieces of stone, knowing full well they are doing no work?—I will not say that. I think I ought to state, in fact, I have authority for stating, that one of the men who was most earnest and took the lead in opening this stone-yard, said had he known it was such a fraud, and that we should have had such a fraud perpetrated on us, he would never have voted for it at all.

6088. Was that Mr. Wilkes?—No.

6089. Who is Mr. Wilkes?—The leader of the deputation.

6090. Does Mr. Wilkes hold any official position in St. Olave's?—No.

6091. What is Mr. Wilkes?—I do not know.

6092. Do you know him?—No.

6093. And you gave ear to a man you knew nothing at all about, did you?—No, we did not. On the first night of this board meeting we had a crowd of something like 500 or 1,000 men in a body to wait upon us, and they sent in this man, Wilkes, to know whether we would receive a deputation of 20 of them. Our board-room is a small room, but we agreed to receive 20, and allowed this man Wilkes to speak as their leader. He laid the facts before us in a very temperate manner, more so than in a good many cases I have had experience of, and, I may say, he touched somewhat the hearts of the majority of the members of the Board, and the resolution the majority of the members came to was that we ought to give them what they thought was work.

6094. On the top of that, did you have a large number of people applying for work the next day who were not ratepayers at all?—Yes.

6095. And you gave them work?—No.

6096. But it is the fact, is it not, that a large number of men did receive out-door relief from St. Olave's Vestry who were not ratepayers?—No.

6097. We have it in evidence that it is so?—We do not acknowledge that.

6098. But you cannot say it was not so, can you?—It was not so after the second day. About 500 applied on the first day, but only 156 were put on. There were, I may say, only our staff of six relieving officers, who dealt with something like 500 applications on the first day, and gave work to 156 only. But the next day I suppose there were at least 1,500 men applied, and they gave work to 517. Then it was found practically impossible for these six men to go on, and *carte blanche* was given to our clerk to engage as many temporary relieving officers as he thought fit, and he engaged 28.

Mr. *Wootton Isaacson*—continued.

6099. You said just now that there were 87 men altogether taken on and paid, did you not?—Yes.

6100. How were those men paid?—The assistant relieving officers were paid 2*l.* 2*s.* a week, and the labour superintendents 1*l.* 10*s.* a week.

6101. How long were they kept on?—The whole time.

6102. To look after 500 men?—No, looking after 1,700 men sometimes.

6103. Looking after 1,700 men out of a pauper population of what?—Not looking after them. The assistant relieving officers were employed all day in making inquiries. The system was this: A man comes to the relieving officer and says, "I want an order for the stone-yard." He is asked, "Where do you live?" The reply is, "So-and-so." and he is told, "Very well, you come to-morrow morning and I will see whether it is all right." That application is then handed over to the assistant relieving officer for inquiries, and he has to go to the address given by the man applying, to verify it as to whether it is correct or not; he comes back then with his report, and if it is correct the man is given a ticket for the stone-yard the next day. Of course that entails an immense amount of work.

6104. Had the 87 men who were employed as overseers to give in a report of what they had done every day?—It was not 87 men employed as overseers; we had 28 such men.

6105. I should like to know what these 87 men were at two guineas a week?—The question was asked me as to the total number of officers engaged on account of the opening of the stone-yard, and I said 87 altogether. That included extra clerks, porters, gangers, for the stone-yards, and assistant relieving officers.

6106. How many gangers were there?—The clerk has corrected my figure, 35.

6107. Will you kindly tell the Committee whether those 35 gangers gave in a report every day or week of what they had done?—There was nothing to report; they merely had to walk about the yard.

6108. You told us that a ton of stone cost 7*l.* to break, and that it took 35 gangers to superintend the breaking?—Yes.

6109. I should like to know what these gangers did, whether they did superintend, and who engaged these gangers at two guineas a week?—They walked about the yard to see the men were at work.

6110. And were you satisfied that those 35 men were doing their duty?—Personally, I am not satisfied, I never have been, and I have stated so. I am greatly disappointed.

6111. Will you tell the Committee how many of these 87 men are still employed?—About 15.

6112. Do you still require the 15?—We require them for about a fortnight or three weeks, to clear up the books. The amount of work is enormous. I may tell you that some of these assistant relieving officers are working until 12 o'clock at night.

6113. Have you had any complaints from the ratepayers of this large excess of payment you have been making?—Privately, a great many; we have had nothing before the board.

Mr. *Wootton Isaacson*—continued.

6114. Have you found trade very bad in St. Olave's?—It has been very bad, certainly.

6115. And notwithstanding that you have increased the rates 7½*d.* in the £. owing to this indiscriminate mode of giving relief?—Yes.

6116. With regard to pauper lunatics, what is the amount charged in your rates for pauper lunatics?—The expenditure for lunatics for the Michaelmas 1894 half-year, we estimate at 5,590*l.*

6117. That is the expenditure for the half-year, is it?—Yes.

6118. Is it the opinion of your guardians that that is a charge which ought to have been placed under some other head, or do they consider it a fair charge to make to the ratepayers in a poor district like St. Olave's?—It has never been considered.

6119. Although you pay upwards of 5,000*l.* every half year for the purpose of supporting pauper lunatics?—Yes.

Mr. *Bartley.*

6120. Are the lunatics increasing there?—Yes, and I am not surprised.

Mr. *Wootton Isaacson.*

6121. The actual expenditure to Michaelmas 1894 was 5,375*l.*, and the estimated expenditure to Michaelmas 1895 is 5,590*l.*?—Yes.

6122. A very important increase?—Yes; lunacy is on the increase among the poorer classes; in fact, among all classes.

6123. What is your pauper population?—Outdoor relief was given 2,629 people for the fourteenth week.

6124. Yet you expend in the half-year upwards of 5,500*l.* on pauper lunatics?—Yes.

6125. You told the Committee just now that the maximum cost of breaking stone would be about 5*s.* a ton?—I am informed that is so.

6126. Would that include all costs?—I should think so, as a vestryman.

6127. You also told the Committee that you had no macadam roads in your parish?—Yes.

6128. Is it all wood pavement?—It is all stone pavement.

6129. And you never required the stone for your own use, but you sold it?—Yes.

6130. In my constituency there is a stone-yard, and for your information I can tell you that we sell stone for a very much higher price than you quoted?—Higher than 12*s.* a ton?

6131. Yes?—We have some thousand tons lying broken, and we should be very pleased to find a customer for it.

6132. Do you find there are many in your parish who are not only unemployed, but unemployable men it is impossible to give work to?—In what way impossible?

6133. Men who will not work if it is given them?—Yes, there are a great many of that class?

6134. Will you tell the Committee what you do in that case?—We do nothing.

6135. Do you pay them all the same?—No, we do not; we do not employ them.

6136. What do you do then?—You asked me if there were in my district a great many of the loafer class.

6137. I mean the men who apply for work and when

Mr. *Wootton Isaacson*—continued.

when you give them work they do nothing?—Our experience upon the unemployed question now with regard to the Board of Works is that when we did put men to work and insisted on getting a fair day's work for a fair day's pay, and they found out they had to do a fair day's work, they did not show up again.

6138. Did they leave the locality?—I cannot say that; I wish they had.

6139. If that is the case, how is it you did not eliminate from the number of men you took on to the stone-yard men of that character who came, not with the desire of doing any work, but with the desire of doing nothing at all?—But we had not the time to eliminate them in that way. You cannot eliminate them from the stone-yard. If a man applies for relief, according to the resolution of the guardians, he is entitled to it, and he is to go down to the stone-yard and receive that pay whatever his character may be.

6140. Yes; but he is supposed to do work, is he not?—He is supposed to do work, but you cannot enforce any particular work; that is the great blot.

6141. Then he can remain there, can he; do nothing at all, and yet you are bound to pay the money?—He can remain there and play, as I say, with the stone, and we are bound to give the money at the end of the day.

Mr. *Round.*

6142. Is the result of your experience, then, against the stone-yard policy in the future?—Yes, and it has always been so.

6143. Would you prefer that the sanitary authority, or local board, or whatever it may be, should find work, and that you should contribute towards the expenses of such work instead of performing the duty yourselves?—Yes, I think the local boards are far better able to cope with the difficulty than we are.

6144. Assuming that the local board only employ those who are competent to do the tasks assigned them, what steps would you take in regard to the other portion of these unemployed who were not competent to perform the work?—Of course, that brings the thing to the great point as to what legislation should take place in dealing with those who are not competent to work, and I have always held that it is a question for such a Committee as is sitting here to get evidence upon from all quarters. It is a most difficult thing to decide.

6145. You are not prepared with any special scheme, are you?—No.

6146. When you spoke of the pauper population did you refer to the out-door or in-door poor?—The out-door poor only.

Mr. *Bartley.*

6147. I take it then that your experiment this winter you consider has been a complete failure?—Yes, I do; a failure in this way, that the guardians have not got what they thought they would get.

6148. From the humanitarian point of view that you referred to, do you think it has done any good really to the people themselves?—I do, to a large class of those people, certainly.

6149. Do you think these loafers who would

Mr. *Bartley*—continued.

not work, have been done good to?—No, I should put them into the other class.

6150. Inasmuch as this stone cost 20 or 30, times as much as it should to break, do you think that that does not show that the number of people who are really benefited is very small?—No, I do not think it does show that.

6151. Can you explain why not?—For this reason: I think when these men come there they do not get the whole of the pay in money, they get it in kind as well, and I have every reason to believe, in fact, I know, that in a great many instances the food goes home to the wives and the children.

6152. But as regards those men ever becoming useful members of society, do you mean to say that your stone-yard experience is likely to encourage that object?—No, I think the stone-yard if it was kept on would be a very great deterrent to their getting honest work.

6153. Do you think it would be very demoralising?—Very.

6154. As regards the very large increase of out-door relief, you are still continuing that policy, are you not?—Yes.

6155. Do you think that the people are better for it in consequence. Do you think that in St. Olave's the district is becoming more prosperous by it?—No.

6156. Do you think there is less poverty in it by it?—No.

6157. Do you think it is tending to cure the disease?—No.

6158. Do you think it is tending to increase it?—I think it is.

6159. That is your opinion, is it?—Yes.

6160. That the result of this policy is increasing the disease of pauperism?—I should think so.

6161. And the consequent suffering to the poor?—I think so. My knowledge of the out-door relief system though, as I have said I am in favour of out-door relief being given, leads me to say that it ought to be very carefully administered, and in putting on a new case great deliberation ought to be exercised, because once a pauper always a pauper.

6162. Do you think, then, that the general result of this policy is to increase the suffering of the poor, rather than to relieve it?—To a great degree I think so.

Mr. *J. Wilson* (Govan).

6163. I think you stated that you are pretty generous in outdoor relief during the time of distress?—Yes.

6164. And you paid 3*s.* 6*d.* a day, or 6*d.* an hour?—Yes.

6165. Was there any outside pressure brought to bear upon you to pay the standard wages for charitable relief?—No, that was done by the members of the board.

6166. Is it your opinion that, so far as your board is concerned, it would be perfectly capable of coping with the distress of your district?—Yes; we are perfectly capable.

6167. Have you any idea of any better process whereby in times of distress the distress would be better dealt with than by any mode at present in existence?—No, we have not gone into that.

Chairman.

6168. Did I understand you to say when you opened the stone-yard you had to obtain the permission of the Local Government Board?—Yes.

6169. Is that the usual form you have to comply with?—Yes.

6170. In ordinary circumstances I should have been disposed to ask you whose evidence we could take amongst those who supported this system on your board, but from what you say, I gather that they have not stood by their guns, but have rather changed their opinions?—That is so.

Chairman—continued.

6171. Then we should not do ourselves any good by seeking any evidence from them, should we?—I do not think so; several of them I know have changed their minds.

6172. In the matter of the cost, the 7*l.*, or whatever it is; it is not to be forgotten, is it, that a stone-yard is never put forward as a means of obtaining the performance of work, but more as a system of relief?—Quite so.

6173. So that it is not fair quite, is it, to condemn it entirely because it is costly?—No.

Mr. E. PITTS FENTON, recalled; and Examined.

Mr. *Pickersgill.*

6174. ARE you under the Outdoor Relief Regulation Order?—Yes.

6175. Being under the Outdoor Relief Regulation Order, is it really necessary to get the express permission of the Local Government Board before you open a stone-yard?—You must get the sanction of the Local Government Board to the task of work to be performed, not to the scale of relief.

Mr. *Pickersgill*—continued.

Tuesday, 9th April 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. Bartley.
Mr. Billson.
Mr. John Burns.
Mr. Campbell-Bannerman.
Mr. Keir-Hardie.
Mr. Wootton Isaacson.
Mr. Jackson.
Mr. Heywood Johnstone.
Mr. Lawrence.
Mr. Logan.
Mr. Mather.
Mr. David Randell.
Mr. Renshaw.
Mr. Round.
Mr. Whiteley.
Mr. John Wilson (Durham).
Mr. John Wilson (Govan).
Mr. Stuart-Wortley.

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN, IN THE CHAIR.

Mr. GEORGE H. COX, called in; and Examined.

Chairman.

6176. YOU are, I believe, a citizen of Liverpool, taking an interest, as a private individual, in philanthropic enterprises?—That is so.

6177. Will you say what experience you have had with regard to this question of relief to the destitute unemployed?—The principal experience I gained was as honorary secretary, under the late Lord Mayor, Mr. Bowring, of a Commission of Inquiry which we held in Liverpool, which occupied a long time, something like six months, in which we went, as fully as we possibly could, into the various causes which led to want of employment in our own city; we confined it to our own city as much as possible.

6178. Was it the causes of want of employment that you inquired into, or the mode of dealing with the results of want of employment?—Both.

6179. That was a local inquiry, I understand, somewhat of the nature of our inquiry here?—Yes, so far as I understand the nature of your inquiry here. I have not followed it thoroughly.

6180. What did your Commission do in the way of defining the meaning of the word "unemployed"?—Perhaps I could not do better than quote the decision we came to on that point, in which I fully agree. We divided the unemployed into two classes: Class A., those steady and capable men and women who could and would really do work if they could find it; and Class B., those who from one cause and another are incapable of doing, or refuse to do, steady work up to the average standard in quality and quantity.

6181. Class B. would include the weak, the drunken, the unthrifty, the lazy, and so forth, as well as those who are the victims of some particular disability?—Yes.

6182. Now, taking Class A., what sort of men does that class comprise in Liverpool?—Class A. consists chiefly of a very large number of men who, though able and willing to work, cannot find employment. Owing to the fluctuating nature of the trade of the port, it is impossible to give anything like an accurate statement as to numbers; at one time it may be estimated at many thousands, while at another, when trade is brisk, the margin of unemployed is comparatively small. This applies to the great body of men engaged in the loading and unloading of vessels, and in the warehousing and dispatching of goods. There are also, undoubtedly, a large number of unemployed connected with the skilled trades.

6183. To what causes do you attribute the want of work on the part of this class of the unemployed?—Of course, the general depression of trade obtaining throughout the world is one cause; another is the seasonal and fluctuating character of much of the trade of the port which, together with the high rate of daily wages (say from 4*s.* 6*d.* for quay and warehouse porters, 5*s.* and 6*s.* for shipwork, while for timber and coal they range from 6*s.* and 8*s.* per day; and overtime at the rate of time and a-half), has had the effect of drawing into the city large numbers of men, many of whom are farm and other labourers, in the prime of life, and who, for a few years, are capable of working at very high pressure. These men are necessarily chosen by employers as being the best worth the high standard rate of wages, which consequently has the effect of driving the elderly men into the ranks of the unemployed. Our evidence went to show that men thus become disrated from the age of about 45 and upwards.

6184. Do you mean the work is so severe that it uses them up at the age of 45?—Yes. Then, lastly, strikes and lock-outs, both local and in other parts of the kingdom, largely conduce to the want of employment, by lessening the amount

Chairman—continued.

of work, and attracting strangers into the city who, frequently, permanently displace the residential workers.

6185. You mean that men displaced by a strike in another quarter, come to Liverpool thinking that there is a lot of this casual employment there?—Yes. Moreover, when a strike occurs in Liverpool, a number of outsiders come in and often permanently displace those men who went on strike in Liverpool.

6186. Now, as to the remedies; still confining ourselves to this class, who are, broadly speaking, out of work from no fault of their own, what remedies did your Commission take into consideration?—The most important remedy that suggested itself to us, was undoubtedly a better organisation of the labour on the part of both employers and employed, or, in other words, that, so far as possible, it should be "decasualised."

6187. By that term you mean made more permanent and continuous?—Yes.

6188. That, of course, cannot be done in what are called "seasonal" trades?—We thought we had hit upon a plan whereby it might possibly be done, and perhaps you would allow me to explain what it was.

6189. What is the remedy you would propose?—I think this object might be attained by adopting the suggestion of a labour clearing house, as recommended in the report of our Commission. By a labour clearing house, I mean an association based and worked on the following lines: a certain number of employers to bind themselves to take all the men they require from the association, and to be debited accordingly with the wages, day wages at the standard rate, of the men they employ. Some days, for instance, an employer would not require any men, and at other times one or it may be a hundred. The secretary or manager of the association or clearing house would engage a certain number of men, according to his judgment, the number that would be required on the average for the week by all the employers; to these men he would guarantee a weekly wage of something less than the daily rate, say, for example, 25*s.* per week, whereas the daily rate amounts to 27*s.* per week. The difference between the two would serve to cover the risk of having too many men compared with requirements and working expenses, &c. It might require a larger margin than 2*s.* per week, but much would depend upon the skill of the manager; experience alone can decide it. Any profit that might result could be divided among the men at the end of the year. The scheme could not be carried out unless the Dockers' and Warehouse Porters' Unions willingly co-operated with the employers. That is, roughly speaking, the idea we had.

6190. The real employer, then, would be this association?—Yes.

6191. He would keep men on hire, as it were, ready for those traders who required them?—Yes, guaranteeing them a weekly wage.

6192. A weekly wage which would be a little under the probable earnings of a fully employed man?—Yes; but it would be also a little under

Chairman—continued.

what the employers would actually pay; they would pay the standard daily rate.

6193. Do you think many men would accept a weekly wage even considerably below that nominally obtainable at the fair standard rate?—Yes, I do.

6194. In consideration of the more permanent nature of their emolument?—Yes, and I believe many employers would welcome this solution, as would also the men; but there is no disguising the fact that some of the employers prefer the existing system, which ensures them a surplus of labour and the pick of the best men, while a large number of the men, especially the young and active, prefer it, because it enables them to earn (particularly when overtime is added) large amounts of money, which they enjoy the spending of during slack periods of work or when they elect to "play." The elderly and weaker men suffer greatly in consequence, and many steady and fairly capable porters do not earn on an average more than 13*s.* per week, which, when the high cost of rent is taken into account, leaves a miserable pittance for living, while they are unable to save anything to provide for the many weeks when they earn little or nothing, and when they suffer severely.

6195. Would you make any difference between the old and the young?—I would. I should like to come to that point a little later on, if I may. I should just like to add that, I regret no effort has yet been made to carry out this suggestion of a labour clearing house, which we think would enable the bulk of the men to enjoy the certainty of a weekly wage, and would discourage the flow of outsiders, for whom there would then be little casual labour available.

6196. This proposal affects that particular sort of labour; with regard to the skilled trades, how would they be affected?—With regard to the skilled trades, most of which are well organized, the actual distress arising from want of employment is minimised by the out-of-work allowances provided by the trade unions. These unions are for the most part satisfactorily managed, and their members constitute what have been called the *élite* of the workmen; they are very valuable protectors of their interests, both as regards wages and conditions of labour, and are useful educators in thrift. I think that while they are entitled to demand a fair share of the profits of industry for their members, it would be desirable for them to adopt more elastic ways of dealing with capitalists than they do at present. Under existing conditions their action undoubtedly tends to swell the ranks of the unemployed.

6197. Will you explain how that is?—They do not recognise very often until it is too late the altering or altered conditions of a trade or industry, such conditions being frequently beyond the control of either capitalist or workman; and hence for want of a timely adjustment (which might be only temporary as affecting the rate of wages) a trade is wholly or entirely lost. Even if only partially lost the workman suffers by only being employed for broken periods, which though at the standard rate of wages, yields him a small sum for the year; and further, the trade of the country is restricted or diverted altogether

Chairman—continued.

altogether into other channels. Then if I may add this opinion, which I may say was not the expressed opinion of our commission, but for which I must be responsible myself, I think it would be well that the trades unions should, on behalf of their members, be empowered to enter into specific contracts with capitalists whereby they could sell their labour at so much per week, and for a given number of weeks or months, or allow their individual members to so contract. It would be a simple matter of calculation for the employer to say what he could afford to give in wages, and for a fixed period, in order to execute a certain work for which he had the offer of a contract; and it would be for the men to say whether they would accept such terms or not. An agreement so arrived at might be subject to compulsory arbitration, so that any dispute arising out of it would be settled in that way, and the award made a rule of the High Court, as customary with commercial contracts for produce. Such a system would benefit the men by giving them more regular work, and in the end better wages; and it would tend to retain much trade in the country which is now lost, and it would thus help to solve the unemployed problem.

6198. Your idea is very much on the lines of your Clearing House scheme, as applied to the other class of labour, is it not?—Not exactly; it would be a little different in its way of working; but my object is to point out to the workers that it would be very much better for them in the end if they would enter into contracts at a given rate of wages for so many weeks if they could, and make that subject to arbitration; I think it would tend to assist in the settlement of disputes afterwards if it was made subject to arbitration.

6199. Are you in favour of boards of conciliation and arbitration?—Yes, very strongly.

6200. Turning to Class B., what have you to say of the causes of want of employment among that class?—We considered that the chief causes of want of employment among that class were ill-health, intemperance, restlessness (often the result of irregular work), hereditary incapacity, imprudence, overwhelming misfortune, orphanage, &c. Amongst this class is included the large army of tramps. We considered that one of the most powerful contributory factors in this problem is the practice of injudicious and indiscriminate charity.

6201. How would you recommend that this class should be dealt with?—We first of all considered the children, and we thought that they, probably, afforded the most hopeful element with which to deal. We thought that the boys, for instance, might be trained as seamen, and might find occupation in manning our merchant service and the Royal Navy. The merchant service, as you are aware, is largely manned by foreigners at present. We also suggested that girls might be educated and trained for domestic service, there being at present a great need for a supply of capable servants, for whom high wages are willingly paid.

6202. When you say they could be educated and trained, do you mean that they should be maintained at the public expense for that purpose?—Either that, or by voluntary charity; I should prefer voluntary charity.

Chairman—continued.

6203. Do you mean that you would take them from their friends?—Very often it would be necessary to take them from their friends.

6204. To be trained for some useful purpose?—Yes, taken out of the existing deplorable conditions which obtain, to a large extent, in a big seaport like Liverpool.

6205. Are you speaking of cases not capable of being dealt with under the Industrial Schools Act?—There is a vast amount of child life which does not seem to come under that Act, or which, at all events, is running to waste; that is the class we want to get at.

6206. How would you deal with the adults?—We consider that for respectable men and women, who, through natural weakness, either of character or body, advancing in years, or other inevitable cause, are unable to do work of average quality, but who could do a limited amount if watched and guided, a labourers' colony or labour farm would seem to be the natural remedy, but such a colony could not be expected to be self-supporting. In Germany the annual deficit in such a colony appears to be about 5*l.* per head. Such a deficiency would have to be made good by the guardians, but I think the results, physical, moral, and financial, would probably be much better than those obtained by the present Poor Law system.

6207. Would you take the men away from their families, or would you transfer the whole family to the labour colony, or how would you deal with them?—If possible, I would transfer the whole family.

6208. Do you think the trades unions could help by a modification of their rules?—They do very wisely provide sick pay and old-age pensions in many cases, but it is a question whether it would not be better for all concerned if they permitted their elderly or more weakly members to earn what they could, which would necessarily be at a lower rate than the rate for those in full vigour. This, at all events, should undoubtedly be the case when a union does not provide out-of-work or superannuation allowances. A modification of the present rules of trades unions in this direction would enable the working men themselves to largely mitigate the suffering entailed by want of employment; I might illustrate that by our dock labourers, who, as I have said, get disrated from 45 years of age upwards, those men are quite worth 3*s.* or 3*s.* 6*d.* a day, and some of them perhaps 4*s.* a day, but they cannot work at less than the standard rate, therefore they are put on one side till there is a great pressure of work; all the younger and more active men are employed at a high rate, and it causes a great deal of suffering to fairly competent men, who practically cannot get a living.

6209. You mean among those men who, though they cannot do what is a full day's work for an able-bodied man, could do an amount of work corresponding to a lower wage?—Yes.

6210. What effect do you expect labour colonies would have?—We anticipated that probably by training the young and unskilled men, it would enable them, if opportunity provided,

Chairman—continued.

vided, to go back to the land, either in this country, or the colonies, and so tend to absorb the surplus labour that now exists.

6211. Those are the better members of your Class B.?—Yes.

6212. What would you do with the less hopeful members of that class, the idle, the dissolute and criminal?—We certainly recommend the sharp remedies of the Poor Law system, and the Statutes against vagabondage, the latter of which do not appear to be regularly enforced.

6213. You would leave them to the tender mercy of the law, whether the Poor Law or Criminal Law?—Yes; one cannot be too strict with them. I may say that I am quite sure from my experience that the working men themselves have absolutely no sympathy with that class of men; they would like to see them severely treated.

Mr. *John Wilson* (Govan).

6214. You mean that would be the opinion of the well-to-do working class?—Yes.

Chairman.

6215. What rôle would you assign to the Government in these proposals of yours?—I think the Government might encourage and direct the means whereby capital and labour may be better organised, whereby the disputes that arise between them might be settled, and many of the remedies I have alluded to established; but I am entirely opposed under ordinary circumstances to its granting pecuniary aid to any towns or localities, deeming, as I do, that the local authorities should have the raising and spending of money when it is required. There may, however, arise cases when the Government would be justified in aiding the local funds; for instance, when a large number of people are deprived of work through failure of crops, hostile tariffs, or wars. Such an instance happened during the cotton famine, caused by the civil war in the United States.

6216. I think, during the cotton famine there was facility given for loans, but there was no money grant?—I am quite aware of that; I merely mention it as an instance of a grave case where it possibly might be desirable for the Government in some form, by loans or otherwise, to come to the assistance of the locality.

6217. Can you suggest any plan for ascertaining the actual state of the deserving poor?—The plan that commended itself to me was that adopted, I think, in Germany, where the authorities divide the town into a large number of sections, and appoint committees to have charge of each section; and the members of those committees are obliged to serve although they get no remuneration, and they are made responsible for a knowledge of every person and family in that district as regards their circumstances, character, &c. Something of the kind has been attempted in Liverpool, but on a purely voluntary basis, by the Charity Organisation Society.

Mr. *Mather.*

6218. Are you alluding to the Elberfeld system in Germany?—No; the plan I refer to has been adopted in Berlin, I believe. Something of the same kind, as I say, was attempted in Liverpool through voluntary committees, and it resulted in good work being done for a time, but the committees gradually lapsed, from the difficulty experienced in interesting a sufficient number of volunteers to undertake the duties. I may mention that that plan was advocated and set going by Mr. William Rathbone. It is still in partial force in one or two districts, but it was found almost impossible to get sufficient volunteers.

Chairman.

6219. During the present winter, have the public authorities or the community at Liverpool been able to deal with the existing distress?—They dealt with it in what was not a very wise way in some respects, I am afraid. The Central Relief Society have just issued a memorandum giving full particulars of what was done, which I can let the Committee have if they wish; it is too long for me to read. One of the best things that was done was enlisting the services of the police, who found out as well as they could those who were worthy of relief, and assisted in the distribution of it. That work was very ably directed by our chief constable, Captain Nott Bower.

6220. Was there no objection to the interference of the police in the matter?—None whatever; they were treated in a most friendly way.

6221. In view of the disinclination shown by the better class of poor to applying to the guardians for relief, what do you suggest?—We suggest that a strong permanent committee should be formed, representing all classes of the community, whose duty it should be, first, in periods of exceptional distress to organise the distribution of pecuniary or other assistance, and generally to carry out what may be deemed best for the relief of such distress, with the aid of and in conjunction with existing charities, the Charity Organisation Society and the guardians; secondly, to prevent the present overlapping of and indiscriminate distribution of so-called charity; thirdly, to act as treasurer for an almoner of any funds that might be realised from time to time to meet exceptional demands for relief; and, lastly, to regulate and assist the emigration of surplus labour when practicable. I am sorry to say they have not appointed that committee either.

6222. When you say "they have not," whom do you mean by "they"?—This inquiry was gone into on a request signed by a number of the leading citizens, that the Town Council should take it up; it was taken up accordingly, a report was sent in, and the Town Council have done nothing further in the matter.

Mr. *Stuart-Wortley.*

6223. Have they debated it?—Yes.

6224. Have they decided in the negative?—They felt they could do nothing; they really had no power as a council to do anything.

6225. They did not decide it as a question of policy?—No, it was an entirely abortive debate.

6226. I think

Mr. *Mather.*

6226. I think in describing what you called Class B., in Liverpool, among the unskilled workmen, you said that the wages were very high, and consequently men over 45 years of age were not usually employed, that employers sought for younger and stronger men?—That is so, but it does not apply to Class B.; it applies to Class A., who are the steady and capable men.

6227. Class A. comprises not only the unemployed skilled workmen of the town, but also the unemployed, steady and willing and hard-working unskilled workmen?—Yes.

6228. Your statement in regard to wages, had reference, I think, not to skilled workmen, but to unskilled workmen?—Yes.

6229. I suppose you refer to the dock workmen and warehousemen?—Yes.

6230. Did you say their wages were from 25*s.* to 27*s.* a week?—The lowest wage is at the rate of 27*s.* a week, that is to say, at 4*s.* 6*d.* a day.

6231. Are those wages always paid by the day, or are they paid in any case by the piece?—If a man is taken on one day, and only works a day, he is sometimes paid then, and sometimes at the end of the week.

6232. Is this class of work let out at all by piece-work?—No.

6233. Is it always day labour, is it?—Always.

6234. You spoke of high wages; do you mean they are high in comparison with the quality of the work that is done?—No, I would not say that, but they are high as compared with the wages obtaining in other parts of the country.

6235. Are those wages kept at this high standard by some union among the unskilled workmen?—Yes.

6236. The effect of that, you say, is to give in good times ample employment to strong and healthy workmen under 45 years of age, but to eliminate men above 45 as a rule?—That is so.

6237. Is that owing to the fact that the quality of the work is very hard, that it is work only possible to be done with ease and comfort by physically strong men?—No, not necessarily so at all.

6238. I thought you said that the high wages were caused by the fact that the labour is so hard as to use up a man by the time he is 45 years of age?—No, I put it the other way, that the fact that high wages are paid necessitates the work being done at a high pressure so as to get it done quickly.

6239. Then it is not the result of piece-work, but the result of supervision?—Yes.

6240. It results from the fear of losing employment if they do not work as hard as possible?—Yes, that is it.

Chairman.

6241. They have to be worked unusually hard in order that they may earn enough to recoup the employers for the wages they pay?—That is so.

Mr. *Mather.*

6242. Are you of opinion that if wages were lower, say, by 5*s.* a week on the average, the result would be that a larger number of men would be employed even men over 45 years of age, but that each man would not do so much work, the pressure would be less?—I have no desire to lower wages *per se* at all, but at a weekly rate the employer would necessarily have to pay a little less because he would have to take the risk of having the men on his hands for a time without anything to do.

6243. You do not yourself disapprove of those wages being up to what is called a good living wage?—No, I think it is to the benefit of the community all round that men should have as much as they can legitimately earn.

6244. Is there, to your knowledge, any strong disapproval on the part of employers at Liverpool, to the rate of wages fixed by the unions of these unskilled men?—Of course, the advances were disputed at the time.

6245. The employers get their equivalent, you think, by the fact that the men work very hard?—I believe they do.

6246. And, therefore, yield the full compensation for the wages paid?—I believe they do. I think it is really against the interests of the men themselves that they should have to work at such high pressure.

6247. In speaking of the scheme of a labour clearing house which you suggested, are we to understand that the manager of such a clearing house would give one week's employment as the minimum?—Yes.

6248. Therefore he would have to make a very fine calculation as to the number of men he could employ one week; otherwise, having to pay them whether they worked or not, the society would be a great loser in the end?—Yes; experience only could tell what margin would be required between the standard rate of wages with which the employer was debited, and the amount guaranteed to the workers.

Chairman.

6249. I think there has been a system adopted in London of letting men know the night before how many of them would be wanted on the following day at a particular wharf?—Yes.

6250. Do you know if that has been done in Liverpool?—That plan has not been adopted in Liverpool.

Mr. *Mather.*

6251. I gather you would anticipate that if a labour clearing house be established, it would result in keeping the age standard somewhat low, and also it would eliminate from the persons on the books of the society those of bad character?—Yes.

6252. The total number of this class, in Liverpool would be reduced, I presume, if such regular work were given, week by week, to all the members of this society?—That is what we hope would be the end of it.

6253. You hope by that to keep back the stream of casual labour from the country, which is now flooding Liverpool?—Yes.

6254. When you speak of farm labour coming in, tempted by the high rate of wages, do you mean that the men, before they obtain these high wages become members of these unskilled trades unions?—I cannot say whether they become members right away. Of course there are a large

Mr. *Mather*—continued.

number of those men who are not members of unions; there are a great many outside the union altogether.

6255. Do they receive the same wages as the union men?—Yes, exactly.

6256. There is no dispute in Liverpool between the union men and the non-union men?—No; there is sometimes friction, but they work fairly well together.

6257. Consequently, the non-union men get the benefit of the rules of the union?—They do, and the disadvantages.

6258. They get also the disadvantages, whatever they may be?—Yes.

6259. You refer to the skilled traders; could you tell us what are the skilled trades of Liverpool, generally speaking?—The principal would be shipbuilders, boiler makers, ship repairers, ship carpenters, and ship painters, and then, of course, there are the building trades, house painters, and so forth.

6260. Speaking generally, the staple mechanical trades are largely represented in Liverpool?—Yes.

6261. I understood you to say, that you thought the rules of trades unions governing those mechanical trades were so rigid that they had the effect of causing trade to be displaced from Liverpool in bad times, which never revived?—It is displaced even in normal times. I think it is admitted, for instance, that we have lost a great deal of our shipbuilding to Belfast, Barrow, and other places, because, among other things (I do not say it is the whole reason), wages are cheaper there.

6262. Have you absolute facts in your possession, to prove that the high wages required by the trades unions in these mechanical trades have displaced industries in Liverpool?—To a certain extent, yes.

Mr. *John Burns.*

6263. What shipbuilding industry, in particular, do you refer to; who is it that has lost their work; would that apply to Laird's?—Laird's is distinctly on the down grade, but he is over in Birkenhead; but I may say, that shipbuilding has almost become extinct in Liverpool, whereas it used to be a very large industry.

Mr. *Mather.*

6264. Apart from shipbuilding, have you any other trades in your mind?—We have very little manufacturing in Liverpool beyond sugar refining; that is the only large trade of that sort.

6265. The mechanical trades are so largely employed in shipbuilding, that you would probably say, the engineering firms of Liverpool have, to some extent, diminished in size?—They have, undoubtedly.

6266. In consequence of shipping being built elsewhere?—Yes, very much so; that applies to boiler making and boiler repairing, and all that kind of thing. I do not want the Committee to get the impression that those trades have gone entirely, because wages are high; there is no doubt that is part of the reason, but it is not the whole; there are other things which we need not go into.

6267. Of course you are aware that the men

Mr. *Mather*—continued.

who would work in Liverpool at mechanical trades are the same class of men who would work in Manchester, for instance, at similar trades; they would all belong to the same union?—Yes, and the curious thing is they belong to the same union even when they are working in Belfast.

6268. Can you account for the fact that in Manchester the experience is not at all of the character that it is in Liverpool; that the regulation of wages by the trades unions in mechanical trades in Manchester has not in any way affected the prosperity of those trades; are you aware that what you have described as happening at Liverpool has not happened at all events in the nearest great city, which is Manchester, where the same trades are the staple industries?—No, I am not aware of that.

6269. I understand it is your opinion, knowing the facts in relation to Liverpool alone, that the rigid rules of the trades unions in relation to wages in these mechanical trades have caused the displacement of those trades from Liverpool?—To a certain extent.

6270. Only to a certain extent?—Only to a certain extent.

6271. You do not wish the Committee to assume that that is the sole cause?—No.

Mr. *John Burns.*

6272. Beyond opinion what proof have you?—The men admitted it themselves in evidence. My point is this, that the consequence is that the men have so much broken time that they do not get the benefit of these high wages. I should like to see them getting 35*s.* a week, whereas they do not often get 20*s.* a week the year round.

Mr. *Jackson.*

6273. You mean because they do not get full employment?—Yes.

Mr. *Mather.*

6274. I presume you have examined this question of high wages rather closely, because you spoke of it as one of the causes of distress in Liverpool; do you mean to say if the trades unions in the mechanical trades, in the shipbuilding trade, in Liverpool had reduced their wages 4*s.* a week in certain times of depressed trade that would have made any difference?—I think it would have tended to meet the difficulties to a certain extent.

6275. You think it would have given more regular employment?—I do.

6276. Has there been very much overtime worked in Liverpool in the days of its prosperity amongst these trades?—I can speak more for the shipping than for the skilled trades; at times it is always necessary to have overtime there.

6277. You spoke of Class B. comprising those in want of employment through ill-health, and intemperance; it would include, I presume, vagrants, loafers, and tramps, and so forth, or what may be called the pauper class in Liverpool?—Yes.

6278. The class which is dealt with now by the boards of guardians there?—Yes, when they apply to the guardians.

6279. You

Mr. *Mather*—continued.

6279. You have no suggestions to make as to the action of boards of guardians in regard to this class?—No; we came to the conclusion as a Commission that the poor law was pretty well administered in Liverpool.

6280. As to the children of these people, does not the Liverpool School Board have a complete inspection of all the children of the city, and separate children from parents who neglect them?—I cannot say from my own knowledge what they do.

6281. You have an efficient school board, have you not?—Yes.

6282. The children of the whole city are under the control of that board, are they not, so far as education is concerned?—Yes, nominally.

6283. And there are large industrial schools, are there not, in Liverpool?—Yes.

6284. You spoke of a committee being formed through the town council; I presume you alluded to a sort of public welfare committee?—Yes.

6285. You suggested that the town council should take the responsibility of forming that committee?—Yes.

6286. It would be a voluntary society?—Yes.

6287. So far, I understand, Liverpool has not responded?—I am sorry to say it has not. We may be said to have this little excuse, that Mr. Bowring, who was lord mayor at the time, was away for some time afterwards, and it has been, perhaps, partly through his absence that nothing has been done. I think some steps will ultimately be taken, now that he has returned.

6288. When you speak of labour colonies being formed for a certain class, would that class be within the definition of Class B. that you gave us?—Yes, but who are not in any sense vicious.

6289. You mean what we may call the well-conducted pauper class?—I would not say they were paupers exactly; it would be a class rather better than those.

6290. Would you say the well-conducted working classes?—I mean men and women who are able to do a little work if they are put to it, but who perhaps have not the strength of mind or will to do it without being guided; that is the class of people I refer to. Of course, they are on the verge of being paupers, but they are not exactly paupers.

6291. Speaking generally of Liverpool, taking the unemployed working class, skilled men, and men of no trained skill, but of considerable aptitude in general work, is there a large number of persons in that class continually in Liverpool at all times?—Yes, except in periods of exceptional spurts in shipping there is always a very large surplus of that class.

6292. Do you think that many of that class apply to the guardians for relief?—No, they would rather starve than go near the guardians.

6293. Are they eager to accept relief from your Charity Organisation Society?—I am afraid the Charity Organisation Society in Liverpool, like the Charity Organisation Society here, is not particularly popular, because it makes very strict inquiries; but this class of people, of course, do accept charity through its aid.

6294. But does Liverpool contain a considerable number of people always who do not receive relief from the guardians, who are willing to work if they could get work, and who receive no relief from any other source, because they prefer not to apply for it?—Undoubtedly.

6295. May the Committee assume that in your opinion, formed from your experience in Liverpool, if the whole of the unemployed, to whatever class they belong, were left to the mercies of the poor law guardians, or to the chance of relief from charity organisation societies, those two elements of relief do not in any way touch the class I have referred to?—Exactly; we think they require a kind of buffer, in which they would have confidence, between themselves and the last resource, which is the poor law.

Mr. *Whiteley.*

6296. Is it the fact, as pointed out by Mr. Mather, that the trades union rate for wages for Manchester and for Liverpool in the engineering trade is the same?—I cannot say off the book.

6297. Of course engineering has flourished in Manchester, while it has almost entirely died out in Liverpool?—Yes, but the objects of engineering are different in Manchester and Liverpool; our engineering has been in connection with shipping; Manchester may find a little alteration now that she has got her own port, but hitherto it has been different.

6298. I was going to ask about that; practically there is no competition between Manchester and Liverpool, is there, because the one manufactures locomotive engines and boilers, and the other manufactures engines simply for steamships?—Precisely.

6299. Therefore really the wages paid in Liverpool cannot be compared with those in Manchester, but they ought to be compared rather with those of Belfast and Barrow?—Yes.

6300. They are higher, are they not, than those in Belfast and Barrow?—Yes.

6301. Would it not have been wise for the trades unions to have recognised that fact?—I should have thought so; it is a most extraordinary thing to my mind that they allow the very same men who are receiving this high rate of wages in Liverpool to go to Barrow and Belfast and take a little less.

6302. With regard to your suggestion of a labour clearing house, I suppose all the employers would not join it, would they?—Probably not, but I think a very large number of them would.

6303. Do not you think that the employers who did not join your labour clearing house, would be able to obtain their labour at a cheaper rate from the non-union men about Liverpool?—I do not think so.

6304. What would be the difference between the amount which the employers would pay, and that which the workmen would receive under your system of a labour clearing house?—That is a matter we could only decide by actual practice; but I put it hypothetically that perhaps a couple of shillings a week might meet the difference.

6305. Would it not require a good deal more than

Mr. *Whiteley*—continued.

than a couple of shillings a week?—I do not think so; not if the manager of the association was in touch with his clients, so to speak; the employers. They could tell him pretty well what men they wanted from day to-day.

6306. You do not think a reduction all round of that amount would stimulate trade, and so provide employment for the whole of the labouring population in Liverpool?—I do not think so.

6307. If you reduce wages at all, would it not be desirable to reduce them all round and endeavour thereby to stimulate trade and find employment for all the labouring class?—That is one view; but the object I had in view was to give the men a steady working wage if possible, which must necessarily be a little less than this high daily rate of wage.

6308. But I think you made the suggestion that the steady rate of wages should be graduated according to age?—That is another point again.

6309. Practically, you cannot propose a steady rate of wages?—You might have a certain rate for men who are in full vigour or up to a certain age, and you might have another rate for men who were a little older.

6310. In fact, you suggest a graduated standard rate of wages according to age?—It is a very difficult thing to do. Some of the working men on our committee admitted the evil as it exists at present, but they were afraid that to adopt any disrating of this kind might lead to other evils; it might lead to favouritism, and all that kind of thing.

6311. Even under your labour clearing-house system, would not the employers pick and choose their workpeople and select those who would do the best day's work?—The clearing-house or association would undoubtedly have to keep competent men if they wanted to keep their custom.

6312. They could not keep up a dead level of men, could they?—They could keep up a fair average of men.

6313. As a matter of fact, the better workmen under your clearing-house arrangement would have more constant employment, and the worse workmen would have less constant employment, while they would always receive the same amount of money, one having more work and the other having more leisure?—Of course there is no doubt if a man was a poor workman he would not be used so often in the association as a better class workman would be, but every man taken on would be taken on at all events for a week.

6314. If an employer got hold of a poor man for a week he would not have that man again, I presume?—Probably not.

6315. Therefore, the man who was engaged in the subsequent week would practically displace that man, though at the same time they would both obtain the same payment?—Of course there you come to the old difficulty of a uniform rate of wages for a variety of men.

6316. You spoke of a suggestion to form a strong permanent committee to organise the distribution of relief; by whom was that suggested?—It was suggested by the whole body of our Commission.

6317. Practically you would re-duplicate your means of relief throughout all the districts, would you?—No, it would be merely to supervise the work with other bodies.

6318. With the guardians?—With the guardians, the Charity Organisation Society, and other charities.

6319. Would you give them any funds?—Yes, I would let them be the treasurers if necessary.

6320. Would not that duplicate the means of relief?—No, because you would use the old channels.

6321. A poor man would have the option of going to your charitable agencies or to the poor-law guardians for relief?—Yes.

6322. He might go to both?—Yes, but he would be known.

6323. Do not you think it would be better so to alter the law that your relieving agencies in one district should be one and the same?—No, I do not think so.

6324. In all cases of difficulty you would have two relieving agencies?—Yes.

6325. Do you think a voluntary agency would be able to cope with the difficulty and avoid being put upon in the same manner as the guardians who are regularly at the work would be?—I think, looking at the characteristics of human nature, it is necessary to have the two.

6326. I understand you object to the State making any grant, either to a charitable agency or to the guardians, for relief?—Most decidedly.

6327. Will you explain why you object to that?—Because I think it might lead to a great deal of abuse.

6328. As a matter of fact is not the State doing so in Ireland at the present time; is it not distributing large sums of money for the relief of distress?—I have not any personal knowledge of what is doing in Ireland at the moment, but as I said I think there are exceptional cases where it may be necessary for the State to come to the assistance of the locality, but I should think those cases are very exceptional.

6329. Do you think the recent distress which we have suffered from this winter was sufficient to warrant such a grant?—No.

6330. Not in Liverpool?—No.

6331. Have you any knowledge of the distress that has existed in other places?—Only from what I have read in the papers.

6332. You do not think that any of us who live in the districts where the distress is so abnormal have, at any rate up to the present time, had any claim upon the Government for assistance?—I do not think so, not to my knowledge.

6333. At all events you do not know anything about other districts where the distress may have been more severe?—No, I do not know to what districts you refer. Are you referring to South Wales?

6334. Take, for instance, South Wales, Lancashire, or parts of London?—If you are speaking of the case of the tin-plate workers of South Wales, where there is an industry which has been crippled and partially destroyed by tariffs, it perhaps might be necessary to deal with it in a different way from the way in which we can deal with our troubles in Liverpool at present.

Mr. *Bartley.*

6335. Do I understand you to say that one cause of this want of employment was because the ships were manned by foreigners?—I did not say so.

Chairman.

6336. You said that the boys might be trained up for employment on board ship to take the place of foreigners?—Yes.

Mr. *Bartley.*

6337. That means that a good many ships are manned by foreigners?—Yes, a very large proportion are foreigners; that is a well known fact.

6338. Do you include Lascars among foreigners?—Yes.

6339. Are they foreigners?—I should say so; they are not Englishmen, anyhow.

6340. Are they not subjects of the Queen in India?—I suppose they are, but I should call them foreigners.

6341. As regards this permanent committee you referred to, there is nothing to prevent its being created, is there?—Nothing whatever.

6342. Do you think it will be created?—I hope so.

6343. I should like to ask you about the effect of trades unions; do I understand you to say that the action of trades unions has been to keep up the rate of wages for a shorter time of work per week rather than have a lower rate of wages for work for the whole week?—That is the tendency clearly; it is so much a day.

6344. Is not that a tendency which inclines in the direction of reducing the amount of labour at disposal in Liverpool?—You mean the amount that can be used?

6345. Yes?—I think so.

6346. Is it not one of the sources of difficulty of employers that they cannot then use their machinery and other appliances to the same advantage as if they were working the whole week?—That is my idea.

6347. You look upon the action of trades unions in this respect as, partly at any rate, a cause of the reduction of the amount of labour?—I do.

6348. Does Antwerp compete with Liverpool?—As a port, very largely.

6349. Does it compete for labour?—Not for labour, but as a port it does.

6350. That means labour, I suppose, in the end, because if ships come to Liverpool they would involve a large amount of labour?—Yes.

6351. Are wages higher or lower in Antwerp?—So far as my knowledge goes, the wages are much lower throughout the Continent than they are here.

6352. That is one cause of the want of employment in Liverpool?—Exactly.

6353. Does the action of the trades unions with regard to wages tend to aggravate that condition of want of employment, or to reduce it?—Necessarily if you persist in a high standard and competitors abroad can do it cheaper, you naturally lose the trade, and the workman loses his chances.

6354. You think that foreign competition abroad at Antwerp and other places and the action of the trades unions, are both tending to reduce the amount of available work in Liverpool?—I think so.

Mr. *John Wilson* (Durham).

6355. A good deal of stress has been laid in your evidence on the action of trades unions in increasing the number of unemployed in Liverpool; I suppose that is a matter you have gone into pretty closely?—My theory is this: that if you place too high a price upon any article, and somebody is willing to sell it for less, you must necessarily lose your trade.

6356. But have you tried to ascertain information as to the action of trades unions in increasing the volume of the unemployed in Liverpool?—I only know this, that in the returns they send me in, there is a very large number of men who are unemployed. I have tabulated a great number of the skilled trades; for instance, to the Boiler Makers' Association, the Amalgamated Society of Engineers, the Typographical Society, and so on.

6357. The dispute here is not as to the volume of the unemployed or the amount of it; it is the cause of it we are trying now to get at, if you will follow me. You have been questioned as to the action of trades unions in increasing the volume of unemployed, and, as I understand, you have stated that in your opinion by keeping up a high rate of wages, they have displaced men or prevented the employment of men; have you any facts to show to us to what extent that increase in the volume of the unemployed has been brought about by trades unions?—I only know this, that a certain percentage of men in all those trades are out of employment.

6358. So there are in other parts of the country?—I know; it affects the whole country, of course.

6359. Is there a larger proportion of unemployed in Liverpool among the boiler makers and engineers as compared with any other part of the country?—I cannot say off the book.

6360. Has not that a very interesting bearing on this question; suppose there is not a larger proportion out of work in Liverpool as compared with Belfast and Barrow, how would the action of the trades unions at Liverpool increase the volume of the unemployed?—It would not if the proportion were the same.

6361. You can give us no facts?—I cannot state them off the book.

6362. Is it only an opinion or a theory?—It is an opinion from evidence.

6363. Can you say how much the wages are higher in Liverpool than in Belfast and Barrow?—I cannot tell you off the book.

6364. You have no figures to produce?—I am not prepared at the moment to give any figures.

6365. You cannot give us any figure to support the opinion you have put before the Committee?—No; but I think I am correct in saying that in the evidence it was admitted by the men themselves that the wages were higher in Liverpool than in Belfast.

6366. Might it not be a matter of relation; that is to say, might it not be that it would take a higher wage to keep a man in the same position in Liverpool than it would take in Belfast?—It may be.

6367. Therefore, what would be higher wages, speaking of the amount of shillings and pounds, would really not be higher wages, as a matter of fact, but only apparently so?—The men themselves, perhaps, would not be better off, but it

Mr. *John Wilson* (Durham)—continued.

must tend to the trade going to where the work is cheaper.

6368. You have no figures to show how much the wages are?—I have not prepared any.

6369. Now, as to the use of machinery as to which Mr. Bartley asked you, have you any figures to show how much shorter a time the machines have been working at Liverpool than at Belfast and Barrow?—No.

6370. I think you stated that the higher wage kept up by the workmen limited the possibility of the employers working the machines?—I did not say so.

6371. I thought you said so in answer to a question put by Mr. Bartley?—As an academic question I should say it would be so.

6372. I understand you have no figures to prove that it has been so?—No.

6373. With regard to this suggested clearing house for labour, I wish you would show me, for my own information, how this clearing house will employ more men in Liverpool than are now being employed?—I do not say it would employ more men; I say it would give regular and satisfactory employment and better wages for those who are employed, and prevent the inflow of this surplus labour which is causing so much damage to all concerned in Liverpool.

6374. Those persons then would have so much less employment?—They must be drafted off in some other direction.

6375. In your definition of the unemployed you would not include men who are working three or four days a week, I presume?—No, those are only partially unemployed.

6376. Would if be fair to say that if your clearing house were adopted now the volume of purely unemployed would be greater?—For the time being they would have to be provided for and tided over for a time.

6377. Would not the effect be that the strong men would be taken and the weak left unemployed?—That obtains at the present moment.

6378. You put it, I think, that a man's strength wore out because he is so driven by the overseer?—I do not say he is exactly driven.

6379. You said he was worked hard?—No doubt the work is done at high pressure.

6380. And therefore the conclusion would be that if he had 25*s.* a week instead of 20*s.* a week the overlooker would ease off the pressure?—I do not see that it follows.

6381. You say he presses the man at 27*s.* a week?—Yes. According to our labour clearing-house system we should still give the standard rate; I mean to say, the employers would still have to pay 27*s.* a week.

6382. Would he still press the man at 25*s.* a week?—I think things would not work in the same way.

6383. His strength would be exhausted the same as before?—Possibly.

6384. Then it would not be any better for the man?—Yes, he would have regular work, probably, the year round.

6385. But he would be exhausted at the same time, and, therefore, be an old man as soon?—Not necessarily.

6386. I gathered it was so from your answers. At present you say the excessive hard work forces on these men very much, and the

Mr. *John Wilson* (Durham)—continued.

man becomes prematurely old; if you had a clearing house, do I understand you to say that this driving would be eased off, and the man would retain his strength longer?—I do not say that.

6387. I suppose it would take some time for your clearing house to affect the question of the unemployed?—It would necessarily entirely depend upon the scale on which it was taken up.

6388. Supposing you had a clearing house that included all workmen and all employers, it would take some time before the drift of immigration to Liverpool was checked, would it not?—No doubt.

6389. Consequently, it would be some time before it affected the unemployed question?—Yes, but it would tell pretty quickly, I expect.

6390. As to arranging the weekly wage between the employer and the employed, could you explain that more fully, because it is a very interesting question?—My object would be entirely that the men should get better wages in the end than they do at present; and, at the same time, if the employer was able to work cheaper he would be better able to compete, particularly with the foreign competitor.

6391. I thought they were two distinct ideas: one was a clearing house for the casual and fluctuating labour at the docks, and the other was an arrangement between employers and employed in skilled trades to fix for a certain time ahead the weekly wage?—Yes. I will give you an instance; I do not know that I should mention names, but I may say that one of the very largest of the great employers of labour a few years ago had an offer of certain very large contracts which would have given employment for one or two years. He called his men together and said to them, "Now, I can take these contracts if you will take a certain per-centage less in wages, otherwise I shall lose them." They considered the matter and the men refused to take less wages, and the contracts were lost and the men were walking about the streets instead of working.

Mr. *John Wilson* (Govan).

6392. Do you think that the opening of Manchester as a port last year had any effect upon the interests of Liverpool?—Not the slightest.

Mr. *John Wilson* (Durham).

6393. This Clearing House Association would be a conciliation board between the employers and the employed to fix the weekly wage ahead?—No; I would have them bargain amongst themselves.

6394. Each man individually?—It would be a matter for consideration by the trades unions whether it was wise to allow each man to do the bargaining; they probably would not allow that. It would be better, I should say, for the trades unions' responsible officers to do the bargaining themselves.

6395. That is to say, the committee of the trades unions in Liverpool would meet the committee of the employers?—Yes, or the individual employers.

6396. They would fix the wage for a certain time ahead?—Yes; I think that would be a desirable thing.

6397. Would they take into consideration the physical

Mr. *John Wilson* (Durham)—continued.

physical ability of each man in fixing his wage? I really am not myself an employer of labour in the sense of being able to speak to such a matter as that.

6398. But you have suggested this scheme as a remedy; would they take into consideration the physical ability of each man for so many weeks ahead, and say that he should have this wage for six months ahead?—I should like men who are capable to be paid for their capacity, so far as I personally am concerned; but whether such a thing could be arranged is another matter, because the unions naturally have to look to the great body of their men and to protect them, and I think they ought to protect them.

Mr. *Heywood Johnstone.*

6399. I understood you to say that you would deal with some of the members of Class B., by putting them on labour colonies or labour farms?—Yes.

6400. Class B. are mainly the unhealthy, incapable, improvident, and unlucky, are they not?—Yes.

6401. What would they do when they got on to the farm?—They would have to be trained, and disciplined, and taught, and led, to produce a certain amount, at all events enough to support themselves.

Mr. *Mather.*

6402. That was not the answer you gave me to the same question; when I asked you the question, I understood you to say that you would take the well-to-do, and well-conducted, and capable, out of Class B.?—I thought I gave the same answer. I thought I was asked whether they were paupers, and I said I meant a class better than paupers.

Chairman.

6403. But, still, in your Class B.?—Yes.

Mr. *Heywood Johnstone.*

6404. They are men below the average standard?—Yes.

6405. Would such want of health be a great drawback in occupation on agricultural labour?—No doubt, to a certain extent, that would have to be considered. The probability is it would improve their health.

6406. They would not be at all equal to the ordinary standard man?—No.

6407. They could not possibly compete on equal terms with the ordinary agricultural labourers on the surrounding farms?—Certainly not, at first.

6408. They would have to be specially trained and educated for what would be, virtually, a new profession?—They would.

6409. Have you considered the cost of that?—I only know from the experience in Germany; it appears they are able to produce enough to support these colonies, or very nearly so, within 5*l.* per head per annum, I believe.

6410. Is that per head per labourer, or per head per family?—Per labourer, I imagine.

6411. I understood you to say that the wife and family would accompany the man to the colony?—That is a matter of detail; it is most desirable they should, if possible.

Chairman.

6412. In the case of the German farm colonies, are the men taken from the vagrant class?—Yes.

6413. Entirely?—Very largely.

Mr. *Mather.*

6414. Are they not taken entirely from the vagrant, or criminal class?—They find, apparently, that about 25 per cent. become permanently reclaimed.

6415. When they are taken, they belong to the vagrant or criminal class, and it is for that reason they are taken, is it not?—Yes, as a rule.

Mr. *Heywood Johnstone.*

6416. You say 25 per cent. become permanently reclaimed, and are absorbed in the general population of agricultural labourers?—Yes.

6417. What becomes of the other 75 per cent.?—They seem, according to the German system, to keep moving on from colony to colony; they are not allowed to stay more than two years in one colony.

6418. The colony becomes a sort of casual ward to them, with this kind of labour task in place of the stone-yard?—Yes; it enables them to produce what will keep them, partially, at all events.

6419. You have not worked out any figures as to what the cost of such a system might be in England?—No.

6420. Can you tell me, with regard to these German colonies, whether there is any rentcharge or interest on the purchase money of the land?—I have read a number of accounts of those cases, but I really cannot tell you off the book.

6421. You cannot give the Committee any figures which would usefully guide us in forming an idea of the expense of such a scheme?—No, but such information is very readily procurable; there is quite a literature on the subject now.

6422. You have not sufficiently studied it to be able to give any figures on the subject?—No.

6423. I take it that farm colonies must undoubtedly result in a loss?—I should say so.

6424. The benefit to the community arises (if it arises at all) principally in the next generation?—Yes, and I think it would be a benefit to the community to have these people, at all events, usefully employed in the meantime.

6425. Their surroundings would be better, they would be in a more healthy atmosphere, and they would be doing something?—Yes.

6426. Although it might be considerably less than the ordinary agricultural labourer is doing for 12*s.* a week?—Yes.

Mr. *Keir-Hardie.*

6427. You spoke about the rates of wages ranging from 27*s.* to about 40*s.* a week?—Yes.

6428. That does not mean that the man earns that sum, but that that is the daily rate of pay which would enable him to earn that amount in the week if he were in regular employment?—That is so.

6429. You spoke of a class whom you described as steady, capable, men, only earning about 13*s.* a week on the average?—That is so.

6430. Have you any idea what proportion of the steady, capable, men employed about the

Mr. *Keir-Hardie*—continued.

docks average 13*s.* a week?—I think it is practically impossible to say. I do not think even the labour leaders themselves can tell you that. I only know this from my own experience as a cotton and sugar broker. I used to employ a good many men, and I know my warehouseman has often told me that on the average, taking the year round, those men did not earn more than, perhaps, 13*s.* a week.

6431. I suppose that was due to the fact that there were more men seeking work than there was labour for them?—Exactly.

6432. Can you give the Committee any idea as to the number of dockers employed in Liverpool at the busiest season?—I tried to work that out before I came away, and I thought of applying to a certain gentleman who is present here now, but I felt it was impossible to go into figures.

6433. Would 15,000 cover the number?—I should say it would be infinitely more than that.

6434. You think that on any given day more than 15,000 would be employed?—Yes.

Mr. *Lawrence.*

6435. I see the figure given in the Report on the Unemployed is 30,000?—That is only guess work.

Mr. *Keir-Hardie.*

6436. Would it be safe to say one-third more men are constantly seeking work than there is work for them?—I do not think it would be very wide of the mark, taking the year round.

6437. I want to ask a question about the shifting of trade; being a Liverpool witness you have been dealing here exclusively with Liverpool?—Exactly.

6438. If the trade had not gone from Liverpool to Barrow and Belfast, is it not the case that there would have been slackness in those places?—Those places would not have been what they are now certainly; they would not have grown.

6439. My point is, that there has been no diminution in the work being done in the country by the local causes which you say prevail in Liverpool, but that the work has shifted from one part of the country to another?—Exactly, because the work can be done cheaper elsewhere.

6440. So that the total number of the unemployed is not affected?—No.

6441. You spoke about the desirability of having labour better organised; "decasualised" was your phrase, I think; would not the result of that be to throw a larger number of men permanently out of work?—For the time being undoubtedly.

6442. Until some other kind of work could be provided for them?—Certainly. Then I think that steps should be taken in decasualising to provide for that emergency.

6443. Have you any other suggestion to make as to how it could be provided for, apart from labour colonies?—It is a very difficult thing, but I think the community would have to take it in hand in some shape or other.

6444. You have great objection (save in cases of special emergency) to any grants being made from the Treasury to assist local distress?—I have.

6445. In the disbursing of money, does it

Mr. *Keir-Hardie*—continued.

make any difference to the recipient whether it comes from the Treasury or from the local rate?—No.

6446. Then what is your objection to its coming from the Treasury?—Because I think it would lead to things that ought not to take place. I think the community in which the distress occurs knows best what the local conditions are, and that it should itself be responsible, and, if necessary, put its hands into its pocket and provide for its distress. I think it would be much more carefully managed under those circumstances than if they felt they could put their hands into an irresponsible purse, and perhaps distribute it in ways that ought not to be.

6447. It is solely on the grounds of lax administration that you object to a State grant?—Yes.

Mr. *Logan.*

6448. I think I am right in understanding you to say that the fact of there being a large number of unemployed people in Liverpool is largely due to the casual nature of the employment at the docks?—Yes, that is the principal cause.

6449. Is it your opinion that if the work were more constant there, it would largely help to solve the question of the unemployed in Liverpool?—No doubt; but from the nature of the work you cannot make it absolutely constant. There is no doubt the steamships have made it more constant than it used to be. For instance, Mr. Ismay told me he practically has his men regularly on, because his steamers come in so regularly to time, week by week, that his men were practically to a large extent permanent. But even now it fluctuates very considerably.

6450. If it were possible for all employers to do what this gentleman whom you just mentioned has done, and work became more constant, it would do away largely with the question of the unemployed, would it not?—No doubt it would tend to prevent the inflow of men from the country, because they would feel they could not displace men who were permanently employed.

6451. Does not the casual nature of the work, besides creating unemployed, have the tendency to add constantly and always to the number of paupers in Liverpool?—No doubt.

6452. You said just now that the men in the docks in Liverpool were used up at 45 years of age?—I put that as the minimum age at which they begin to be used up. I do not say every man at 45 is used up; some men may go on to 55.

6453. Supposing these men had constant employment instead of casual, would it use them up quicker?—Not necessarily.

6454. Then how do you make out that at present it is the hard work that uses these men up at 45 years of age; surely if three days a week hard work uses a man up, six days a week hard work would use him up quicker?—Not necessarily, because he may work desperately hard in those three days in order to keep himself for the other three days.

6455. That brings me to another point: how do the employers in Liverpool get that amount of work out of the men if, as I understood you to say, the men do not work piecework, but day-work?

Mr. *Logan*—continued.

work?—From the very fact that the high rate of daily wage compels the masters to pick out the best and strongest men; in the very nature of things those best and strongest men will yield a better return in labour than the average man.

6456. They really pay them to work harder?—The very fact of the high wage brings the best men to the front.

6457. These best men, as you call them, do actually in a day more work than the average men could do?—Yes; when I speak of their being knocked up, it is not only the day work they do. Dock labour is not an unhealthy labour; it is a distinctly healthy labour, but they often work long spells of overtime.

Mr. *John Burns.*

6458. Eighteen to 24 hours?—It is the overtime on top of the daytime that knocks them up, and they do that to gain the large amount of money.

Mr. *Logan.*

6459. In your opinion is this overtime absolutely necessary?—Yes.

6460. You do not think that any system of working in shifts would do away with the necessity of overtime?—Not always.

6461. Would you be surprised to hear it said that in some places, Australia, for instance, where they work shorter hours than we do here, it is only under very exceptional circumstances that men do work long hours of overtime?—I think it would be better for the men in the end if they did not work such long hours of overtime.

6462. Do you think there would be difficulty in doing it in Liverpool?—The difficulty is the necessity for the quick despatch of steamers. It is a matter of practical working.

6463. You suggested, as I understand, an association on the lines of a clearing-house to farm out the men to employers?—Yes, in order to give the men steady work and better wages taking the year round.

6464. Would your association employ those older and less capable men, or would they confine themselves to employing simply the very pick of the men?—They would have to employ a fair average, clearly.

6465. Then you would not get away from the difficulty of those who were less capable of falling out of employment?—My suggestion for these men is that if it could be arranged (I do not say it could), they should be permitted to work at rather less money rather than be thrown upon the rates. Of course there are practical difficulties in the way which I see very clearly both from the men's point of view and the masters'.

6466. I suppose in actual working it would be possible to employ these men at a less daily wage and yet that the work itself, that is the actual transhipment of goods, should not cost any more money?—Certainly.

6467. As regards your suggested association, do you think it would work; do you think it possible that one body of men should pay a man and another body of men supervise his work?—I can only say that it was deemed practicable by

Mr. *Logan*—continued.

a lot of hard-headed business men in Liverpool; of course we have not tried it.

6468. You could not give an instance where it has been tried?—No.

6469. Do you not think if such a scheme were possible it would be in work now; supposing it were possible to estimate so accurately how many days' work you could give a man in a week so as to work your clearing-house association, do you not think it would have been done already under the system of piecework?—Not necessarily so, I think.

6470. Has it ever struck you that the working of your association, although it might, and very likely would, solve the question of the unemployed in Liverpool by preventing the influx of men from the country, would still leave us in the country to deal with the question of the unemployed?—Certainly.

6471. You said that agricultural labourers came into Liverpool largely?—Yes; labourers of all kinds.

6472. Have you ever thought of any means of keeping those men employed on the land so as to prevent them coming into Liverpool?—Of course there are a great number of theories in connection with that, and quite a literature on the subject. I have no special knowledge on the subject.

6473. You have no suggestion to offer?—No.

6474. You suggest that after they have come in and joined the ranks of the unemployed you would then send them back again on to farm colonies; you think that would be cheaper than maintaining them as we do now in idleness, and many of them, I am afraid, perhaps joining the ranks of the vicious?—I think it would be cheaper and better for the men themselves.

6475. Do you think it is possible that we might devise some scheme of preventing them from coming into the towns?—I do.

6476. That would be better still, would it not?—It would.

6477. You said just now that there were a large number of honest working men unemployed in Liverpool who would rather die than go to the guardians?—That is so.

6478. And who, may I take it, would almost go through any privation short of dying, perhaps, rather than go to the Charity Organisation Society?—That is a little strong, perhaps.

6479. Then I gather that the Charity Organisation Society in Liverpool have not helped you generally to deal with the question of the unemployed there?—I would not say that. I think the Charity Organisation Society or the Central Relief Society has done a great deal of very excellent work in Liverpool.

6480. You made use of an expression just now which struck me very forcibly; you said there was a great deal of child-life running to waste in Liverpool?—Yes, I think it is the greatest scandal we have.

6481. The fact of having that child-life running to waste is consequent, I suppose, upon the existing conditions of labour?—To a large extent, and also the children are very often the children of vicious and drunken parents.

6482. Seeing that many of these children join the ranks of paupers, and vagrants, and criminals,

Mr. *Logan*—continued.

minals, and come to be kept eventually by the country, would you be in favour of the State recognising their responsibility and endeavouring to regulate labour so as to prevent (if possible) this child-life running to waste, as you say?—Do you mean that the State should regulate labour, or take charge of the children?

6483. I do not suggest that they should do either the one or the other, but I suggest that, putting it on no higher grounds, it would be cheaper if the State were to recognise that our existing conditions do cause this child-life to run to waste, and to recognise their responsibility to see whether some scheme cannot be devised to prevent the present condition of things?—I think it would, but at the same time I admit the question is surrounded by very great difficulties.

6484. But in your opinion that would be better than the present happy-go-lucky system?—On the whole, I think, it would; it would be worth trying, at all events.

Mr. *Lawrence.*

6485. Have you had any Poor Law experience?—Not personally.

6486. How long have you been interested in philanthropic questions?—For a good many years, but I have not taken any active part in it until I retired from business about a couple of years ago.

6487. You gave very strongly your opinion against indiscriminate charity?—Yes.

6488. Your committee strongly emphasise the need, do they not, of taking hold of the vagrant children; is not your opinion that to a great extent the vagrancy of children in Liverpool has been in the past, and up to within the last few years, largely owing to the indiscriminate giving of relief in the streets?—I cannot say that that is the principal cause; I have no doubt it adds to it very materially.

6489. In the Report which you have issued, is there not a very striking statement by a witness who presumably is a person of some authority, the secretary to the Warehouse Porters' Union, who says, at page 41, question 504, that "Those of us who have thought these matters out have found that in Liverpool there are more people living on others than in any other large town in the kingdom, with the exception of London. And those I term parasites. That is, they practically live on other people." Is it your opinion that there is an excess of indiscriminate charity in Liverpool?—It is.

6490. As to the recent distress, is it not an allowed fact that up to the time of the frost there was an unusual amount of labour among the dock labourers and warehouse porters?—Yes; the trade had not been so brisk for years, and also the building trades had been well occupied up to the time of the frost; but I think one ought to say that that spurt was only a matter of about two or three months, and that there had been great distress among the dockers up to the beginning of November, all through the summer; in fact the summer time is our worst time at the docks.

6491. It is to a great extent a season trade, because the great trade is when the cotton crop is coming in?—Yes.

Mr. *Lawrence*—continued.

6492. Bearing upon this matter of distress, and indiscriminate charity, in the leaflet of the Charity Organization Society which you have presented to the Committee, do not they state that out of 57,500 tickets for relief that were issued by that society only 40,342 were returned, showing that 17,158, each worth 6*d.*, were never made use of?—Yes, they make some statement to that effect here.

6493. And do they also adduce some extraordinary instances of the overlapping of relief?—Yes.

6494. Is it your opinion that lavish relief will create undue demand on the part of the people?—Certainly.

6495. Therefore, would not you be very careful in creating various bodies to give relief?—Certainly.

6496. I understood you to say that you would still like another relief agency between the Poor Law and voluntary charity; some other body which you did not quite define, but which you said in your mind you desired?—It was more as a sort of supervisor and moderator of the others than that it should be in itself a new distributor of charity.

6497. But you stated that many men would not apply for relief to the guardians, and for those people who would not apply you would have another body who should give relief, did you not?—Not to give relief unless they found they were worthy of it.

6498. But still, another relieving agency?—I would not put it exactly in that way.

6499. But if people who were worthy might get relief from it, and it was not an ordinary voluntary body and not an ordinary Poor Law body, surely we must conclude it is to be a third body, must we not?—No; I think the idea in the minds of those who suggested the new committee was that it should be a committee in which the people generally should have confidence; that it should be a voluntary committee of some of the leading citizens of all classes, and that its scope should be rather to watch, and to regulate and supervise the existing agencies for relief, seeing that they acted up to the mark, and in cases of great distress it might also become a treasurer and an almoner of a special fund.

6500. Was it not to be an official body?—No.

6501. Then I understand it is to be really as perfect a system of charity organization as could be brought about?—Yes.

6502. But I suppose you would allow, would you not, that directly a person receives relief from the State, whether under the present Poor Law or any other authority, whether it is by money or by work, the chances are that he practically becomes a pauper, whether he is called a pauper or not?—That is rather a hard-and-fast definition, I think.

6503. Pauperism does not consist in the body that gives the relief, does it, but in the fact that the man is not able to support himself, and has to go to an official body to support him?—No doubt that is so in its essence; but it has become to be looked upon as a little worse than that.

6504. You do not recommend relief works to be started by local authorities, I understand?—Not as a rule.

6505. And

Mr. *Lawrence*—continued.

6505. And you do not desire to encourage the idea of the State or the municipality undertaking to find work?—I do not.

6506. Is it not, in your opinion, the case that if a central authority, much less an official authority, undertakes to provide any excess for the misfortunes of the working class, that fact will tend to kill benefit funds, trade union organisations, and other means by which the working classes are at present encouraged to provide for an evil day?—It would to a certain extent, no doubt.

6507. And would be calculated rather to keep down the rate of wages, would it not?—It would.

6508. As to the proposal you have made of turning a certain class of people who are apparently not able to do much under your Class B. on to land cultivation, do you not think the class you specially want to send to land cultivation are the ordinary people who now go to the workhouse?—No, not necessarily; of course, ultimately they may drift there, but it would be better to prevent them going there, I think, if we could.

6509. Would not your system be only another form of out-relief?—No; it would be rather in-relief. They would be in colonies under supervision, like the workhouse, in a sense.

6510. I suppose it would be a kind of hybrid relief really?—Yes; it would not be out-door relief.

6511. But it would not be at all in the same category as in-door relief, would it; you say you have no experience of poor law administration, but have you any reason to think that you could return back to the land any percentage of these people whom you picked up in the town worth talking of, people who, by-the-by, I think I understand from you, have been driven down to the lowest state owing to the importation of rural labourers?—I think to a certain extent they might be got back.

6512. But many of these people may have never been on the land; they would probably have been brought up in the town, would they not?—Then they would require to be trained, of course.

6513. And as they have failed in everything in the town, one does not generally find that failures in middle life would conduce towards their making effective cultivators?—The experience of Germany is that they are not able to produce enough to support themselves, but to pretty nearly do so, and it seems to be a better system than keeping them idle.

6514. I am only following up your statement that you thought by that means you might return them to the land?—A certain number of them would return.

6515. As to labour at the docks, you said it is very healthy; do you not think you rather overstated the shortness of time during which a man could work there; I see in answer to Questions 45 and 46, presumably a competent witness, who was a master stevedore and master porter, said, "We generally keep the same run of men all the time; I could not say how many, but we have got a few men who have been working for us over 30 years. I have been in the concern 30 years, and I have got men there now as long. (Mr. Alderman *Hughes.*) At what age do the old hands cease to have a preference, for the witness tells us that they give a preference to the old hands? (*A.*) When we find they cannot do ordinary work of a labourer we have to let them go; but in the case of a few old men, I employ them as watchmen at night, as far as we can manage it. I should think that between the ages of 55 and 60 they are about done. (*Q.*) They cease to be superior able-bodied men? (*A.*) Yes." Does not that seem to show that you rather under-estimated it?—I said, I think, that I placed 45 as the minimum age at which they began to be disrated, but many men were able to work at pretty full pressure for perhaps 10 years longer, but of course it depends on the original physique, to start with, to a great extent. One of the Albert Dock witnesses, for instance, says he has a man 70 years of age, but he, of course, is a phenomenon.

6516. I believe, as to the migration of labour, the boards of guardians in Liverpool (adopting a course which you can affirm has been most successfully conducted with the approval of the whole district) have been for many years in the habit of moving girls to mill districts, have they not?—They have, and it has been very successful whenever they have persuaded the people to move; but they have found a great deal of inertia among them; they have found it difficult to persuade widows with families of girls to move; but those who have moved have been successful.

6517. I see according to the Report that not more than one in five can be induced, even with all the help, to move?—It is extremely difficult.

6518. Your committee thought, did they not, that as your trades unions direct how and when and at what wage their members should work during their work time, that they should provide for them a superannuation allowance; is that your opinion?—It is.

6519. I see the Seamen and Firemen's Union refused to give any information regarding their own body to this Liverpool Labour Conference; do you know the reason of that?—No, I do not.

6520. Bearing on the economical condition of the poor, have you been at some trouble to draw up an interesting table as to the cost of the various necessaries of life?—Yes; I found that the witnesses, as a rule, either avoided the question or said they did not know anything about it, so I was obliged to get the information myself, which I did from leading people in the various trades connected with the necessaries of life.

6521. Briefly, comparing the year 1874 with the year 1884, bread had come down from 2*d.* to 1*d.* per lb., and tea of the most popular quality had come down from 3*s.* 4*d.* a lb. in 1874 to 1*s.* 7*d.* a lb. in 1894; sugar had come down from 35*s.* per cwt. to 15*s.* per cwt., and beef and mutton had come down from 68*s.* a cwt. to 38*s.* 6*d.* per cwt., and coal had come down from 22*s.* a ton to 8*s.* 9*d.* a ton?—Yes. I think, with regard to coal, the figure is a little awkward; I had to take the same years so as to compare with the other articles, but 1873 was a year of dear coal, so it is not a fair comparison.

 6522. Bearing

Mr *Lawrence*—continued.

6522. Bearing on the condition of Liverpool and the unemployed, has not the chief constable issued a most interesting statement as to criminality in the district to show that of indictable offences there has been in the last year no less a decrease than 942 cases out of a total of 4,339, as compared with the previous year?—I have read his report and I have no doubt you are quoting it correctly. I have not got it before me.

6523. There are also similar satisfactory indications, are there not, that drunkenness is decreasing, although on some hands we are assured that the unemployed is an increasing question?—The number of arrests for drunkenness have decreased very much in Liverpool.

Mr. *John Burns.*

6524. But still it is a fact, is it not, in Appendix A, of the same report, Mr. Bowring, the lord mayor, Florence Melly, Richard Armstrong, and I believe you, Mr. George H. Cox, made a strong recommendation, first, that "The substantial diminution of the existing undue facilities for the sale of drink, especially in labour centres, as for example, along the line of docks," and 2nd "Insistence by the licensing authorities on holders of licenses for the sale of drink, complying with the original intention of the law, that licensed victuallers should supply food as well as drink." What percentage of the unemployed in Liverpool who could get work are in the ranks of the unemployed, with no work to do, through either past drinking habits, or immediate drinking habits?—That would be a thing which it would be impossible to find out in the shape of a percentage, but one may have an opinion on the subject, and say that there is no doubt a great deal of the want of employment is due to drink.

6525. But as apart from its being a cause, or a contributory cause, it accentuates the difficulty of dealing with the unemployed problem, does it not?—No doubt. Unquestionably one of the evils connected with this practice is the power which young men have of earning a large amount of money.

6526. You stated at an earlier stage of your examination that in your opinion, if the trades unions were to allow their older members to work at lower wages, the unemployed problem could be palliated or mitigated?—I think so.

6527. Do you know that nearly all the skilled trades unions allow that to be done?—I know they do, as far as the joiners are concerned.

6528. And the engineers, moulders, the blacksmiths, and the carpenters?—I am very glad to hear it. It only came out in our inquiry, so far as the joiners are concerned, that they do make some special arrangements when a man has begun to wear spectacles, and that sort of thing, that at once disrates a man. I meant what I said to refer, perhaps, more to the dockers than to skilled trades, because I knew in one instance, at any rate, they do make that allowance, but the dockers do not.

6529. But is it not customary where this rule of the trades union does not apply, for the men themselves in the making up of their gangs at the docks where there are dockers, or stevedores, to squeeze in a certain number of old men, in fact to put the round men in the round holes, and the aged square ones in the square holes; do they not do that at Liverpool?—No doubt it may be done to a moderate extent amongst the sympathetic and kind-hearted warehousemen who put on the men.

Mr. *John Burns*—continued.

6530. I mean amongst the gang themselves?—I am not aware of it.

6531. Are you not aware of a custom prevalent amongst unskilled labour where, if a certain piece of work is to be done by 10 men, and the average age of eight would probably be 30 or 35, they squeeze in one at 50 or 55 to do a piece of work that must be done, but is less fatiguing than it would be for the other eight?—It is a desirable thing to do, but there is no question about it in Liverpool the elderly men are elbowed out.

6532. But are they not elbowed out because the docking and unloading work in Liverpool is done upon a system that very frequently necessitates overside loading and unloading work in mid-stream, necessitating the men working 18 and 20 hours at a stretch?—We do not load and unload in mid-stream except under very exceptional circumstances.

6533. But all your overside work is frequently done for that number of hours, is it not?—No doubt.

6534. Does it not frequently happen that a strong dock labourer in Liverpool will have three days or three stretches of employment in the week, and that in those three stretches he will probably work from 60 or 70 hours?—I daresay that is so.

6535. And is it not very frequently the case that 50 or 60 hours will be compressed into two and a half or three days; and does not that rather beget the habit amongst the men of what they describe as a hunger and a burst?—Undoubtedly.

6536. Do you consider these long stretches of employment are disadvantageous to the men?—Very.

6537. And to the masters as ratepayers?—Yes.

6538. And to the community generally?—Undoubtedly.

6539. What efforts have been made by the sympathetic and the intellectual head centres in Liverpool to prevent this casual, intermittent, and severe employment?—There has been no attempt made at present.

6540. You told us that Mr. Ismay had made some attempt, did you not?—No.

6541. But Mr. Ismay has, in so far as he could, adopted something like regularity of employment, has he not, with regard to his work?—Undoubtedly many employers do endeavour as far as they possibly can to keep a moderate number of permanent men on.

6542. Are you aware that with regard to a similar class of work the London, India, and Joint Docks Committee is gradually decasualising their men?—Yes.

6543. Is there any hopes of Liverpool, as apart from Mr. Ismay and one or two other shipowners,

Mr. *John Burns*—continued.

owners, following that example?—The condition of working at the Liverpool docks is totally different, as far as I understand it, from the West India Docks here. Our docks are nearly all what we call open docks, worked by independent master porters and master stevedores, and therefore there is not the uniform employment there that you have here in your West India Docks.

6544. But given that for dock labour, as a whole, in Liverpool, the alteration made by Mr. Ismay is brought about; it would help things materially from the point of view of organisation of labour, would it not?—No doubt.

Mr. *Bartley.*

6545. I thought what you said about Mr. Ismay was that it was possible for him to do something which others could not, in consequence of the regularity of his steamers working?—That is so. I may, perhaps, make it a little clearer by saying I was discussing with him this theory that we put out with regard to a labour clearing-house, and I asked him, as a practical man, how he thought it would work. He said he saw great difficulties in the way. Of course there are always great difficulties in the way of anything; but he said, "So far as I myself am concerned, I have to a large extent solved it, because my arrivals and departures are so regular that we can keep to a large extent a permanent staff."

Mr. *John Burns.*

6546. But does not Mr. Ismay employ his own stevedores and dock labourers?—He has stevedores and master porters.

6547. But has not he a regular staff of stevedores and dock labourers whom he employs direct?—No doubt.

6548. And to that extent, by the direct employment of these men, he can, so to speak, further your idea of a labour exchange, because the matter is under his own control?—Exactly.

6549. Has there been any attempt made on the part of shipowners, the Dock Company, or the Dock Trust, and the consignees, to have some scheme by which a certain number of men should be more regularly employed than they now are?—I am sorry to know nothing of the kind has taken place.

6550. What is the system of employing labour at the docks; does the shipper unload?—The shipper unloads with the help of a stevedore.

6551. He employs a master stevedore who takes on his men as he wants them, does he?—Yes; then when the goods are on the quay, the quay is worked by what is called the master porter, who employs his men.

6552. Am I to gather, as apart from the men who open the dock gates (the permanent workers in the Dock Trust employ), all the other work, with the exception of Mr. Ismay's, and one or two other companies, is done by contract, or a middleman, or agent?—With the exception of the Mersey Docks and Harbour Board, the closed docks, the Albert Dock, the Wapping Dock, and the Waterloo Dock; there the Mersey Docks and Harbour Board are the employers, and they give their men 6*d.* a day less than the outside men.

Mr. *John Burns*—continued.

6553. By virtue of the regularity of the employment, you mean?—The employment is broken there, too.

6554. To the same extent?—Perhaps not; I think, perhaps, they are a little more considerate.

6555. Do you think Ismay's example, if pointed out by a responsible authority like the Unemployed Committee, would get the shippers, consignees, master stevedores, and porters to regulate the employment?—It has been practicable for Mr. Ismay simply because of the regularity of his steamers. If other people's steamers came in as regularly the same thing, to a large extent, no doubt, would obtain.

6556. But supposing your idea of a labour exchange be established at Liverpool, and in conceiving this idea you have taken into consideration the fluctuations and alterations of employment, whom would you constitute as the medium of working the labour exchange and transferring labour from one dock to another; would you make it the Dock Trust or the Liverpool Corporation?—I do not think that that has anything to do with the question as far as the Dock Trust or the Liverpool Corporation is concerned; it would simply be an association of men.

6557. But whether it was done by the Corporation, or the Dock Trust, or by an association of shippers and consignees and philanthropists combined, there would be wanted a centralised authority through whom the labour would be imported from one dock to another; is not that so?—No, not necessarily. My idea is this: that no one association could possibly be made to cover all the various trades. You would probably have to have a clearing-house for cotton porters, a clearing-house for stevedores, and so on.

6558. But the clearing-house could deal with the cotton porters, stevedores, and half-a-dozen unskilled labourers, could it not?—Yes.

6559. A centralised authority would be wanted to some extent, would it not?—I do not think it is necessary.

6560. Supposing you had a surplus of men at the Waterloo Dock, and you had an insufficiency down at Wapping or at the North end, what would be the medium of communication between the two?—The association would have to set the telephone to work, I suppose.

6561. Then you contemplate, for the success of your labour exchange, that there must be a centralised authority, working within the total jurisdiction of the dock, which would be able to get over a surplus of labour at one dock by providing men where there was an insufficiency at another dock; and you believe that to be practicable, do you?—Yes; but I do not think it is at all necessary to have such centralisation as you evidently contemplate.

6562. I am not thinking of excessive centralisation; do you mean centralisation over the whole of the docks, or do you mean a central bureau acting in correspondence and in communication by the telephone with each dock's local labour exchange; is that what you mean?—That is what I mean. The men come to what they call stands; that is one of the grievances,

Mr. *John Burns*– continued.

and it is an undoubted grievance, there are not enough of these stands. They ought to be multiplied, and ought to be in telephonic communication.

6563. Then, whether it is done by local labour exchanges, multiplication of stands by a public body or private association, do you think your theory of a labour exchange would tend to more regularity of employment in Liverpool, and would mitigate many of the difficulties arising from intermittent employment?—That is what we hope. They have no districts assigned to them, they can go to any dock and work any ship.

Mr. *Bartley.*

6564. Then they are in competition one with the other, are they?—They are.

Mr. *John Burns.*

6565. Does not it frequently happen that where a master stevedore is unloading a vessel in the Waterloo Dock, there are a certain number of preferential or favourite men being transferred from the Waterloo or Wapping Dock to somewhere else?—No doubt.

6566. And the result is, is it not, that those who are not similarly favoured have a long stretch of intermittent employment?—No doubt. I am sorry to say, and I should like to say it in public here too, that there is a great deal of favouritism with regard to the putting of men on, and we venture to call it bribery in our report, in plain English.

Mr. *Bartley.*

6567. Favouritism by whom?—By the gangers, and men who have the power of putting these men on.

Mr. *John Burns.*

6568. Is it not the fact, has it not come out in evidence, and is it not the general impression amongst the men in Liverpool themselves, that to secure employment they frequently have to give a certain proportion of their wages to the ganger, or the master porter who employs them?—That is absolutely true.

6569. And there are demoralising effects from that system, are there not?—Very.

6570. Would your labour exchange tend to abolish that and put the employment on what I may term a non-tipping basis?—Yes; that is one of the reasons we give in our report for recommending the exchange, that it would put it on a better basis.

6571. Another statement you made was that you were under the impression that the relatively higher wages in Liverpool had been to some extent the cause of the shipbuilding industry leaving Liverpool?—Yes.

6572. Of course I do not press you for figures, nor for absolutely reliable evidence, but is that the general opinion in Liverpool?—Yes.

6573. Where has the trade gone to?—Belfast and Barrow.

6574. It is as well to kill fallacies; are you aware that the average wages of the engineers (a very large proportion of the men engaged in shipbuilding) in Liverpool, as per Labour Commission evidence, which I can affirm, is 34*s.* per week, and that at Barrow the wages are also 34*s.* a week; are you aware also that at Liverpool the workman pays 7*s.* 6*d.* out of the 34*s.* for rent, and that at Barrow he pays 6*s.* and 6*s.* 6*d.*?—The amount that he pays for rent does not affect the trade of the port. I mean to say, if the wages are high, it affects the amount of work that can be done in the port.

Mr. *John Burns*—continued.

6575. But still, if he has subtracted from his 34*s.* a large amount, it would make a difference, would it not?—The man is worse off to that extent certainly.

6576. Are you aware that Liverpool, with the exception of Glasgow, where other conditions prevail, is certainly not by any means the highest paid place in shipbuilding and engineering, and that at Newcastle, Shields, Stockton, London, Belfast, and Hartlepool, the wages are either as high or higher, whilst in every other case, with the exception of London, the house rent is considerably lower; now, would you accept those figures as reliable?—I suppose they must be, but they do not tally with the information we got on our Commission.

6577. Do you share the opinion given by the engineers themselves before the Royal Commission, that much of the trade of shipbuilding and engineering had left Liverpool because of the inability of the masters to modernise and to adapt both their shipbuilding yards and their engineering works to new and prevalent ideas?—Yes. I admit there is something to be said for that, and that it is due in the second place to the fact that the Mersey Docks and Harbour Board will only grant a six months' lease of the shipping yard.

6578. Then, as apart from wages, you will admit, will you not, there is much in what Mr. Potter, a well-known shipbuilder, said, when he said, "rent and taxes, high price of coal, and railway carriage, and being handicapped by cartage to the yards, are some of the reasons"?—Yes.

6579. Do you think generally, speaking as a business man, where machinery is an auxiliary to production in any industry, that wages are a material factor at all in trade going here, there, or anywhere else?—Do you mean to say that machinery is a greater factor?

6580. Yes; is not the natural home of shipbuilding the Wear, the Tyne, the Tees, the Clyde, and then Belfast?—But why should it be; at Belfast they have neither iron nor coal.

6581. There iron and steel are won either from the western districts of England, or from Scotland, and as you know, water carriage is very cheap indeed, and in that respect Belfast has an advantage even of the coal and iron fields over Liverpool?—I daresay.

6582. Then only to a slight extent can it be urged that wages in Liverpool are responsible for lack of employment, can it?—I will give another case. In the case of ship-painters there is a great deal of distress among them. It has got to such a point, I believe, that many shipowners have to send their paint, and do send their paint, in their ships, and when they come to some continental port

Mr. *John Burns*—continued.

port they get them painted there. They send the actual paint and get the labour done in the continental port, which is a very unfortunate state of things.

6583. It may be slightly profitable, but it is not patriotic, is it?—It is very unpatriotic.

6584. What steps have the local authority taken in Liverpool with regard to its streets and roads, and its general public work, as to carrying on any exceptional work?—The corporation looked around and did what they could, but they were determined not to make work for work's sake.

6585. But generally speaking, does the corporation adapt the execution and carrying out of normal and extraordinary work to the condition of the labour market and the unemployed?—I think so; I think they are distinctly sympathetic.

6586. Has that in any way operated to the disadvantage either of the unemployed or the ratepayers?—I do not think so, because there has been really very little work enforced, as it were.

6587. Then there has been no specific complaint as to that, either as to cost or work being badly carried out, has there?—No.

6588. Do I gather from you that you do not favour an Imperial grant to local centres?—I do not.

6589. Do I gather from you that you believe that only the local vigilant responsible officers, and elected representatives who know the distress and the want of work, should have the official responsibility, and the administrative responsibility, of grappling with it?—I am very strongly of that opinion.

6590. Do you know of an instance in which the Imperial authority has given a grant in aid which has not been paid back to a local authority for distress?—No, I do not.

6591. As apart from loan, you do not know of any grant, do you?—No. It is not a question of paying it back so much as that it may be maladministered when it arrives; that is the point I am strong about.

6592. You think easy come, easy go, do you?—Yes.

6593. And if a locality gets money for nothing from a central authority, it wastes it, is that it?—It is very apt to do so.

6594. And the consequence of so wasting it leads permanently to very demoralising results, does it not?—Undoubtedly.

6595. Have you visited any labour colonies?—I have not, unfortunately; I have read a good deal about them.

6596. Are you in favour of labour colonies?—There seems to be a good deal to be said pro and con; but from what I have read of these things I think they are worth trying.

6597. Do you think that the averge unemployed man, I mean a man who is out of work and willing to work, whom one finds down Bootle-road, Scotland-road, and North-end, would go to a labour colony?—No, he might object.

6598. Do you think in the majority of cases he would object?—I should think he very probably would; but if it were a question between that and starvation or the poor-house, I should imagine he would choose the labour colony.

6599. You would imagine that, but you have no statistical evidence to show it, have you?—No; it has not been tried.

6600. But generally speaking, do you find amongst the unemployed of Liverpool a repugnance to a country life?—Undoubtedly there is a strong tendency to prefer the town, and that is one reason, over and above the high wages, that draws men from the country into towns; they prefer town life.

6601. Have you come into actual personal contact with these unemployed men?—Yes.

6602. Have you questioned them?—Certainly.

6603. Have you ever met with cases in which men have deliberately left 16*s.* or 18*s.* a week regular employment in the country to come into Liverpool to earn a precarious 27*s.* a week?—Yes; that is the restless type of man.

6604. Is that restless type of man likely to make a good labour colonist?—Yes, under strict supervision.

6605. But to what extent; as in Germany, where the people in charge walk about on a farm with a loaded musket, keeping him to his work?—Do they go to that length?

6606. They do on some of them?—With vagabonds, that is necessary.

6607. That is just the point; do you think the average unemployed man would submit to the penal discipline, or, failing penal discipline, to the severe restrictions that would have to be imposed upon him?—I do not recommend, and we do not recommend, in this report, that the unemployed that I think you have in your mind, the steady and capable man who from misfortune is out of work, should go to these labour colonies. We rather meant them for the men who are thriftless, restless, and improvident; it might be necessary to put them under strict discipline.

6608. Then I gather from you that you would prescribe a different treatment for the steady, regular unemployed man?—Most certainly.

6609. And you would prescribe another form of treatment for the type of man who too frequently lives on his woman-kind or his family, and with the alternative of either going to the casual ward or to the prison?—Yes.

6610. Do you think that kind of remedy would be popular with either of the two sections of the unemployed?—I do not suppose it would be popular.

6611. Have you considered what class of employment these men could have given to them at labour colonies?—The ordinary farm work and reclamation, I suppose.

6612. Assuming that 5,000 unemployed Liverpool dock labourers, good, bad, or indifferent, were taken to a labour colony, say in Cheshire, and they could be persuaded, drilled, or disciplined to grow cabbages, celery, and potatoes, would not those men in carrying out that work, without protection, mark you, displace a similar number of men in growing vegetables, and so forth?—In one sense they would, no doubt.

6613. Have you heard from the unemployed in Liverpool complaints as to prison labour and workhouse

Mr. *John Burns*—continued.

workhouse labour, and labour of Church Army and Salvation Army homes competing with them? —No.

6614. Have you many of those institutions in Liverpool?—There are a certain number of them, undoubtedly, but I do not know that they are producers of anything.

6615. Then, I gather from you that labour colonies are experimental?—They are.

6616. That the Poor Law as administered in Liverpool should continue?—Yes.

6617. That the local authority should charily undertake relief works?—Yes, very charily.

6618. That private charity should be more closely and discreetly administered?—Yes.

6619. That beyond the labour exchange, which you suggest for regulating work, you have not many specific remedies to offer for the unemployed problem?—No, and I have never found anybody who had.

6620. That leads me to my last question. Is it not in your experience, and according to evidence given, that the unemployed exist because wealth is badly distributed or badly organized in its production, and labour is intermittently employed?—Yes, there is a great deal of truth in that.

6621. Do you think that if the total amount of work to be done in Liverpool was averaged out and regulated, your unemployed problem would almost disappear?—No.

6622. You would still have a residuum, would you?—I am afraid so. First of all you would have a residuum of the submerged tenth, and you would have a residuum also of perhaps competent labourers, because if everybody was comfortable, and so on, the population would increase at perhaps an even greater rate.

6623. But is not the opposite the fact that brain does not run to babies, but that brawn does?—That, undoubtedly, is the case, but you require brawn to do the active work.

6624. Perfectly true; you do not favour, do you, any scheme of relief works, or labour colonies, which would get over the unemployed difficulty by adding to the already overwhelming mass of commodities?—No, but I think the theory of these labour colonies is that they should produce what they consume themselves and not to enter into competition.

6625. But supposing they were growing cabbages, they could not live on cabbages, they would have to exchange it for boots and shoes? —No doubt, to a certain extent.

6626. So far then, you have not much evidence to make you very enthusiastic about labour colonies, have you?—The only thing is this: that it would be a production of wealth, and therefore the community would be so much better off, necessarily, if they succeeded in growing more cabbages and more potatoes.

6627. But according to your Report, would not you rather favour the curtailment of the competition of apprentices with men, women labour with male labour, and child labour with women labour; would not you rather look for a relief in that direction than in deporting skilled men with local home associations to labour colonies?—It would undoubtedly be better to send those young men, training them perhaps first, to the colonies.

6628. You mistake my question; is it not the fact that before your Unemployed Commission in Liverpool it was urged that one of the reasons for the large number of unemployed was the substitution of women and boys to do the work performed by men?—That is so.

6629. Would not you rather give employment to unemployed men in Liverpool, by reducing the child and boy competition with adult male labour, than send the father to labour colonies whilst the children were at work?—Certainly, but then the difficulty is to know what you are to do with those apprentices and children; you have to deal with them in some way.

6630. But the gradual raising of the age of child-labour would get over that difficulty, would it not?—Yes.

Mr. *Stuart-Wortley.*

6631. With regard to the sending of children to industrial schools, have you any suggestion to make as to how the present legal definitions could be extended?—Do you mean so as to take the children away from their surroundings and their parents?

6632. No, I mean so as to increase the numbers of children to be so dealt with?—No, I have no specific recommendation to give, but it is a felt want that something of the kind is necessary.

6633. You feel that you cannot so deal with all the children that you would like to deal with, do you?—No. In fact the watch committee, at present, I believe, is trying to get some extended powers to deal with the children who hawk in the streets.

6634. But you cannot point to any words in the existing Industrial Schools Acts which have the effect of unduly limiting the operation of the Acts, can you?—No, I am afraid I am not sufficiently conversant with the Acts to say anything about that.

Friday, 26th April 1895.

MEMBERS PRESENT :

Mr. Acland.
Mr. Bartley.
Mr. Billson.
Mr. Bousfield.
Mr. John Burns.
Mr. Campbell-Bannerman.
Mr. Keir-Hardie.
Mr. Wootton Isaacson.
Mr. Heywood Johnstone.
Mr. Lawrence.
Mr. Logan.
Mr. David Randell.
Mr. Renshaw.
Mr. Whiteley.
Mr. John Wilson (Durham).
Mr. John Wilson (Govan).

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN, IN THE CHAIR.

Mr. EDWARD JAMES PHILLIPS, called in ; and Examined.

Chairman.

6635. You are, I believe, a Justice of the Peace for the county of Monmouth, and chairman of the Pontypool Board of Guardians?—I am.

6636. How long have you been a member of the Board of Guardians?—About 25 years. I have been a member of the Pontypool Board of Guardians for 23 years. I resided in another portion of the county before that.

6637. You have been chairman since 1885, I think?—That is so.

6638. Is the union a large one?—We have 24 parishes in the union.

6639. What is the rateable value of the union?—The rateable value is 155,921*l.*

6640. What is the population?—According to census of 1891 it was 39,791.

6641. What are the principal industries of the district?—Coal, tin, iron and steel works. Then we have in addition a locomotive establishment connected with the Great Western Railway Company at Pontypool-road, which is within the union; there is a large number employed in those works.

6642. I suppose you have periodically had times of distress in your union?—We have ; but upon two occasions I may say they have been very severe.

6643. Generally it was the stoppage of individual works that caused some distress?—The most serious case within my recollection that I can now recall was in 1874, when there was a strike arising in the coal trade, then there was very great distress.

6644. Will you tell us what your board did at that time ; what steps did you take?—We opened a quarry and worked under the outdoor labour test under the powers of the Order of 1844, which we had not adopted until 6th June 1852. Under that Order of 1844 we opened a stoneyard and employed a large nu nber of men, and had a great deal of stone cut. That stone after it was broken we had considerable difficulty in getting rid of; it remained for some years before we could get rid of it.

Chairman—continued.

6645. Was the result at all satisfactory?—It was not satisfactory as a means of profit.

6646. But so far as it was a test applicable to the men relieved did it succeed?—As a test it was used.

6647. Of course you did not open the stoneyard for the purpose of profit?—Quite so.

6648. Since the tin-plate trade has become disorganised have you had difficulties?—The board of guardians have to a very small extent had difficulty, but there has been great distress in the district.

Mr. *Wootton Isaacson.*

6649. Among the tin-plate workers?—Yes.

6650. In the Pontypool district?—Yes.

Chairman.

6651. You have also had, as I think we were told by a former witness, some collieries stopping work, have you not?—That was in 1893. The strike of 1893 was a very short one ; it did not last more than about three weeks.

6652. I am speaking of the Glyn Colliery ; that stopped in 1894, did it not?—Yes, it was an absolute stoppage of the works there, not a strike ; it was an absolute stoppage in consequence of the commercial want of success on the part of the lessees. The original lessees were the Ebbw Vale Company. Those collieries, I may say, were opened for the purpose of providing coal for an ironworks which was close at hand, called the Race Works, and when the Race Works ceased to be used as an ironworks, the coal was thrown upon the market. The Ebbw Vale Company continued for a time working the coal, but after a time they discontinued being coal merchants ; they underleased the colliery to a Nottingham firm, Wood and Company, and they afterwards underleased

Chairman—continued.

underleased to the Bryndu Company. The Bryndu people were unsuccessful, and they ceased to work in April 1894, and upon that occasion a considerable number of persons, I should say somewhere about 600, were thrown out of employment.

6653. What became of them?—There was, no doubt, considerable distress among them, but the bulk of the men, all the young men and men able to work, went into other collieries in Monmouthshire; some went into the collieries in the Rhondda Valley and in Glamorganshire; so that at present I think there is a comparatively small number who have not found employment in the various collieries within reach of where they resided.

6654. The men were absorbed elsewhere?—I think to a very great extent they have been, excepting the old people; they are still in the district.

6655. In 1894 what measures were taken to cope with the distress that existed; there were three separate organisations, were there not, independent of the guardians?—There were. At the time you now refer to a portion of the works of the Pontypool tin trade had ceased to be remunerative, and those men came out as well. I am referring to the Pontymoile works. There were three organisations started, one started in Pontypool; they only started in the early part of this year.

6656. The one at Pontypool was worked by a relief committee, was it not?—Yes.

6657. Over which the vicar presided?—Yes, the Vicar of Trevethin.

6658. Can you put in a table showing the number of people relieved by that committee?—Yes, showing the numbers from day to day.

6659. The numbers relieved run up to nearly 1,200 on some days, do they not?—Yes. The figures extend over several weeks. I have a return here from the 25th January till the 15th day of April. [*The same was delivered in and is as follows:*—]

DATE.	No. of Families.	No. in Families.	Single People.	TOTAL.
1895:				
25 January -	92	468	13	481
24 February -	156	779	29	808
11 „ -	184	896	37	933
18 „ -	211	991	34	1,025
25 „ -	238	1,151	45	1,196
4 March -	227	1,122	46	1,168
11 „ -	218	1,075	43	1,118
18 „ -	169	790	36	826
25 „ -	152	704	34	738
1 April -	132	615	30	645
8 „ -	118	520	7	527
15 „ -	110	481	7	488

Chairman—continued.

6660. Besides the expenditure of money there was also relief given in kind, I believe?—The expenditure up to date has been 200*l.*, but there has also been relief given in kind; for instance, 1,091 loaves were given and three trucks of coal and sacks of potatoes, and so on.

6661. There was a second organisation, was there not?—There was at Pontnewynydd where the steel and sheet works were.

6662. Which also gave relief in the way of provisions and soup kitchens and so forth?—They first of all gave orders for provisions and then afterwards they established a soup kitchen which was opened on the 15th of January and was still going on on the 6th of April.

Mr. *Bousfield.*

6663. Is it still going now?—No, there is a little done.

Chairman.

6664. I suppose during the time you speak of all the persons who really deserved assistance did not apply, but they were helped by their own friends to a large extent, and also, possibly, they lived on the proceeds of their furniture and other effects?—I have not the least doubt, judging from the small number that applied to us, that men who were out of employment during that time, rather than apply to the Board of Guardians got some assistance from their friends and in very many cases disposed of their goods and furniture, and their clothes also, in order to raise money to support themselves.

6665. The third organisation was, I believe, promoted by the Undenominational Christian Mission, which did some good in a charitable way also?—Yes, they did a great deal of good, and I think we cannot give too much credit to Mr. Wintle and the people who organised that work. They are still doing good.

6666. I think between August 1893 and December 1894 they gave 100,000 meals at their different stations?—Yes.

6667. During this time what was done by the public authorities; did the urban district council take any steps?—There are three urban district councils in which this distress existed, the Pontypool, Abersychan and Panteg. The Abersychan placed an advertisement in the paper to say that they would afford work to any persons who would apply to them. The surveyor was instructed to give those who applied work, using his own discretion as to what he should pay for breaking stones and cinders. He commenced by giving them 2*s.* a yard, which was afterwards reduced to 1*s.* 6*d.*, and at that price it now stands. Then the Pontypool District Council employed men in breaking stones, and gave them, I think it was, 1*s.* 6*d.* and 1*s.* 4*d.* a yard. The Panteg District Council gave them 1*s.* 6*d.* for stone-breaking and 1*s.* 4*d.* for cinder breaking, which is easier broken than stone.

6668. But that work has practically ceased now, has it not?—It has really ceased.

6669. Can you say what the individual men made at those prices?—Men who had been working in the tin works I am afraid could not do a great deal; their hands are not accustomed to labour

Chairman—continued.

labour of that description, their hands are tender and soft; whereas if it happened to be men who had been working in collieries, who were accustomed to use a pick and shovel, their hands are harder and they would break more stones. But, so far as I can gather from the letter which the surveyor wrote me, some men would break from five to nine yards, and one or two men broke as much as 12 yards, in the week, and therefore would earn 13*s.* 6*d.* a week, taking nine yards, and taking it at 1*s.* 6*d.* a yard. If they were paid 2*s.* a yard, of course it would be more, but I do not think the 2*s.* continued for a long time. They found the men earned more, and they reduced the price to 1*s.* 6*d.* a yard.

6670. Do you know whether those men were selected in any way; was this test applied to all comers, or were only married men or men of deserving character employed, or was any particular test applied, or any discretion exercised of that kind?—There was discretion used, but so far as I can gather from the reports, and from what I was told, any men who applied were put on to the work, whoever the men were, provided, of course, they were not strangers to the district. The men employed were men who would otherwise become chargeable to the rates, no doubt.

6671. I think the other councils did something of the same sort upon a rather smaller scale?—Yes, upon a smaller scale.

6672. When the distress first commenced what steps did your board take?—We directed our two relieving officers, who lived there, to grant relief in any case that they could meet that applied to them.

Mr. *Whiteley.*

6673. Did you direct them to grant relief in every case?—In every case where they found, upon inquiry, the man deserved relief. Of course no relieving officer would grant relief to a person unless he has made inquiries; he would not grant relief merely because a man applied saying, I am badly off. It is the duty of the relieving officer to make inquiries, to go to the house, and see the condition of the house and the inmates before he gives relief. In every case where, upon inquiry, it was found the man deserved relief it was given.

Mr. *Logan.*

6674. Without any test?—That was so.

Chairman.

6675. Can you say what was the amount spent in out-relief during each of the last three years?—I can. To compare the three years, in 1892-93 the amount expended was 4,399*l.* 8*s.* 6*d.*; in 1893–94 it was 4,719*l.* 1*s.* 4*d.*; and in 1894–95 it was 5,056*l.* 7*s.* 7*d.*

6676. Do you find among the labouring classes a reluctance to apply to the guardians for relief?—I really do. I believe that both skilled artizans and unskilled artizans do not like to apply; they have a feeling of the stigma attached to applying for relief. That is my own experience, I think, that both the skilled artizan and the unskilled artizan are precisely the same in this very high feeling, as I should regard it, that they do not like to come and ask for relief.

Chairman—continued.

6677. With your experience, what do you think can be done in the way of remedy; do you think the Poor Law should be altered to meet such cases?—I do. I think the Poor Law ought to be altered in this way. That some means should be devised by which the guardians should have the power of relieving persons without putting them to the test and humiliation of stonebreaking, if there could be some other means found.

6678. You think that you should, in fact, have greater facilities and greater power of giving able-bodied people relief?—I think I would even go a step further and say that I think the Poor Law should be altered in this way, especially now that our position, as compared with what it was a few years ago, has very materially altered. I think the labour test should not be applied by the guardians at all; I think that is a matter that should be dealt with by a different authority; it should be dealt with by the urban authorities. If we, the guardians, have to use the test of stonebreaking, we have no means of using the stone that is broken; we have to be at the cost of breaking it or bringing it to our place to break, and then afterwards of disposing of it; whereas under the Act of 1888 the county authority receives a considerable grant for the maintenance of its roads out of the Imperial Exchequer. Of course we in the county used to receive a grant; one-fourth of the cost of maintenance of the public roads was refunded. I have a return here as regards Monmouthshire, which shows that our county receives about 30,000*l.* a year from the Exchequer, which they expend upon police and different things, but then, after paying for lunatics, vaccination, and different matters, there seems to me to be a balance of about 10,000*l.*, so far as I can make out, left for other purposes. Perhaps I may make the matter clearer by reading a letter I received from the clerk of the peace for our county. I may say I applied first of all to the county surveyor, thinking he might be able to give me the information, but he sent on my letter to the clerk of the peace, who sent me this letter.

Mr. *Heywood Johnstone.*

6679. Are you referring to the Exchequer Contribution Grant?—I am. The letter says: "The county gets no direct specific allowance from Government towards the cost of maintenance of main roads. Before the Local Government Act of 1888 they did get one-fourth, but that has been discontinued. The county do get grants out of the Exchequer in aid of local rates, amounting in round figures to 30,000*l.* a year. Out of this sum they have to pay, as a first charge, all the claims upon what is called the Exchequer Contribution Account under Section 24 of the Act of 1888; this includes payments towards the remuneration of teachers in Poor Law schools, public vaccinators, inspectors of nuisances, medical officers of health, registrars, lunatics, and union officers. The county also has to pay out of that amount half of the cost of the pay and clothing of the police. If there is any balance left, after paying all these claims, it is transferred

Mr. *Heywood Johnstone*—continued.

to the General County Fund, and, so far, it is applicable towards the general expenditure of the county, which, of course, includes the maintenance of main roads. The balance this year amounts to 10,000*l.*" What I would say upon that is this: the county could find employment in stone-breaking, but since the Act of last year, sanitary matters and improvement to roads, and all matters of that kind, have come within the powers of district and parish councils, and they would be the proper authority to use any test because they could employ the labour profitably, whereas the boards of guardians cannot employ it. They have the officers also in the shape of surveyors, and so on, and could deal with it.

Chairman.

6680. You think the municipal authorities should rather be charged with the relief of distress than the Poor Law authorities, because they have better means of disposing of the material which results from the test?—Yes, I think so, as regards the test.

6681. There may be another reason, may there not, namely, that the stigma which you speak of would not be felt so strongly, at all events, if the relief was given from the municipal authority as if it was given by the Poor Law authority?—I think so.

6682. You desire that the Poor Law authorities should have larger powers of out-door relief, but does not that convey that stigma of pauperism that you spoke of?—I think as regards out-door relief the Poor Law should be more elastic, so that we could distribute relief to the destitute poor to a greater extent than we could now; at present, in order to become entitled to a payment under the Poor Law, the first thing to qualify persons is that they must become destitute; they must have nothing. The law says distinctly that the only people entitled to relief are those who are destitute. My idea is that it would be very much better that some means should be devised whereby those who are not absolutely destitute could be helped. For instance, the mode adopted in Scotland is very much better; there is greater power given to the guardians there, and any deserving person who has through care saved something may get assistance, whereas in England persons in any benefit society or having any other means are not destitute, and therefore are not entitled to relief according to the English law as it stands.

Mr. *Whiteley.*

6683. Would you consider a man destitute if he had furniture or clothing, or other effects, but was without money; what do you consider to be the standard of destitution?—I am merely stating the law, but I am afraid after my admission just now I have done things for which I might be surcharged; indeed I have been surcharged before now in consequence of what I have done; I have taken too lenient a view of the law.

Chairman.

6684. You consider that you have not the power at present (as the law stands now) to give relief of this kind without the danger of being surcharged?—We have not the power to give relief if the person is not destitute as the law stands.

Chairman—continued.

6685. Except with the labour test?—Yes, with the test. The Order of 1844 has been applied to our union, and the Circular that followed it; but the Order of December 1852 has never been applied to our union. The later Order is really almost the same Order, but it is rather more stringent than the previous one; however, the second one has not been applied to our union yet.

Mr. *Billson.*

6686. Where people are over the age of 65 you are at liberty to give out-relief without any test, are you not?—Yes; we do not put them under any test after they are 60 years of age.

6687. Can you give out-relief to persons over 60 where there is not complete destitution?—There is no doubt we have given relief.

6688. You consider, I understand, that it is the law that you shall not give relief unless there is destitution?—That is how the law stands.

6689. Do you think it would be a good thing if an order were made by which the guardians should give relief to all persons over the age of 65 who applied for relief, whether destitute or not, without a test and without disqualification?—I would rather say in dealing with that that my idea is that we should supplement anything that the applicants save themselves.

6690. You mean that you would give something to the thrifty man who had saved something as well as to the thriftless man who had saved nothing?—Yes, to the deserving poor; that is what I understand to be the law in Scotland. If a man has saved some small sum, that can be supplemented by the board of guardians.

6691. If a rule were made or a law passed to that effect do you think it would have a beneficial effect upon the condition of the working classes?—I think it would. If I may put it in my own way it would be this: as the law at present stands we discourage thrift; we say to become entitled to any assistance from the board of guardians you must have made no provision for yourself. If the law was as you put it, if a man has saved some small trifle then we could add to that.

6692. In your opinion ought it to be possible to do that without disqualifying the man from being on the register?—I should much prefer that if it could be done.

Mr. *Lawrence.*

6693. I understand you to say you desire to have two relief agencies in a district, namely, the board of guardians and the local authority?—No, I did not make myself clear if I was understood to say that. My idea is that the board of guardians should be the authority that should deal with the old, the infirm, and the destitute, and with lunatics; with the paupers proper; and they should have power, wherever they could, to provide for respectable paupers by some better mode, giving them greater comforts than we give them now, and to separate them from the idle and

Mr. *Lawrence*—continued.

and worthless paupers. Then what I say is that the labour test (not the relief) should be applied by the district authorities as they have power to do, and can employ the material at less cost to the ratepayers.

6694. By your answer you have stated that the idle, worthless, able-bodied paupers are not to come under the Poor Law but are to go to the local authority to find work and to be tested by work; that is your statement, as I understand?—No.

6695. What are you going to do with the idle able-bodied paupers?—They should come into the workhouse; the idle and worthless pauper should have the workhouse test put to him.

6696. And no stoneyard at all?—He would have to work in the workhouse.

6697. I gathered from what you told the Committee that your chief reason for suggesting that the local authority should use the test of work was that you, as the Poor Law authority, had so much stone broken that you could not get rid of it, whereas the local authority having charge of the roads could make use of the stones?—What I wished to convey was that in exceptional cases of distress, such as the one we have been speaking of, the local authority should deal with it; these cases they have the power to do so.

6698. From your experience as a guardian for many years, would you not think that it would be a bad policy to start two agencies for the relief of distress in various forms in the same area?—I should hardly say that. One of them is for exceptional distress.

6699. Anyhow it would be another agency for dealing with a distress?—The law already provides under the Act of Parliament, or the Order of the Local Government Board, that urban district councils may employ this labour and break stones for themselves.

6700. Unless I am very much mistaken, no law actually authorises a local authority or commands a local authority to provide relief works?—Of course you have more experience than I have, but I had an idea that there was an Order or a letter written from the Local Government Board authorising and directing that district authorities should deal with these things.

6701. I understand there is the well known circular suggesting that the local authorities should direct their work so as to facilitate the employment of people who are temporarily out of work?—That is for temporary distress, and I am dealing with temporary distress in what I say.

6702. Do you want that circular to be made into law so that the local authority should be another relieving agency outside the Poor Law authority to help relieve distress?—To meet these particular emergencies.

6703. You said that working men have great reluctance to apply to the Poor Law; is not that a very proper feeling?—A most commendable feeling.

6704. Would it not be very undesirable that we should promote the popularity of the Poor Law so that people should apply to the Poor Law?—I do not think any Poor Law Authority would grant relief without making inquiries into

Mr. *Lawrence*—continued.

the circumstances of the person applying for relief.

6705. That is not quite an answer to my question. I put it before you that it would be very undesirable that we should in any way make the Poor Law so popular to applicants that by that means we should encourage applications; is it not the case that the facility of relief being given does promote too easy application on the part of people who need relief?—Yes; there is no doubt it is not desirable to make it; so that relief could be obtained easily, but the case that presented itself to my mind was a case where the persons were in distress. No relief would be granted excepting to persons as to whose state inquiries had been made; they would not get relief granted merely because they came and asked the Board of Guardians, "I want you to give me a 1*s.* or 2*s.* a week."

6706. But speaking to you as a guardian of many years' experience, do you not recognise that the weakness of human nature is such that you must make inquiries before you give relief?—Yes.

6707. In fact, if public relief were not given only after as full inquiry as possible, the demoralisation of the district caused by people rushing to the public relief would be very serious?—Quite so.

6708. Therefore you must have a test for relief?—Relief is applied for because they are sick, or because they are ill, or because there is some cause. What I was referring to when I said that two authorities should deal with it, was that the one should find employment which would be remunerative; that would be the district boards; they have full power to deal with these cases, and they would only meet exceptional cases. Supposing in the ordinary course of events ordinary paupers come to the guardians; if they are known to be idle and worthless they are taken into the workhouse, and we do not give them out-relief; they are brought into the workhouse, and they have either to cut up wood or cultivate our gardens. We have, I may say, between nine and 10 acres of ground. That is the way we employ our men.

6709. Are you here as an advocate of doing away with what I believe is at present the rule of Poor Law relief, that a man must be tested as to his destitution before he can get any public relief; do you want to give relief without any test?—No, not without a test; not that the man should be put to work.

6710. Is it not the case within your experience that with all the best ability you can get from inquiry officers, you cannot get at the merits of the applicants as to destitution; and that there must be some test to supplement even the inquiry officer?—There is not the least doubt that we are very often imposed upon, but I think that is exceptional.

Mr. *Bousfield.*

6711. Let me apply what you have said to one specific case, the case of a married man with a family, a workman, say, in the tinplate works, who has a house and some furniture, who has been out of work until he has exhausted all his money,

Mr. *Bousfield*—continued.

but still has a certain amount of furniture left in his house; supposing he applies to you for relief, under the present law what can you do for him?—Strictly, we can do nothing for him.

6712. Forgive me, you are not quite applying your mind to my question. There are certain tests that you apply; would you tell me the course you would have to take under the present law in giving such a man relief?—If he is an able-bodied man he must do work.

6713. Let me put this question first: is it necessary he should have sold or pawned all his furniture before you help him under the present law?—It is.

6714. Could you take the furniture yourself; could you offer him the house and take care of his furniture?—No doubt we could do that.

6715. Is it necessary before you do anything for him that he should have pawned or sold all his furniture?—As the law stands, it should be so; but I have never known a single case where that has been put in force.

6716. You cannot refer us to any statute or rule; you are speaking more from your experience of the working of the thing?—Yes, but there is no doubt that as you put it, as I understand the law, we could not. Let me take a case of this sort: a provident man has been out of work for some time from some cause——

6717. Please keep to the case I put to you, the case of a man who has been out of work for some time and parted with everything except a certain amount of furniture of his house; your view is that you could not help him at all until he had parted with everything?—That is strictly how the law stands, but we have never carried it out so. As the law stands, even if a man had a pig in a sty, for instance, he would not be strictly entitled to relief.

6718. I rather gather your proposal is this: that if a man comes to you to whom in the ordinary way you would apply the labour test before you relieve his family, instead of your setting him to stone-breaking you should tell him to go to the local authority and ask them to assist him to work?—No, not in exceptional cases of that sort. We should be bound to find a man work in such a case.

Mr. *David Randell.*

6719. You have had, I believe, but very few applications from working men in Pontypool for relief?—Very few.

6720. Is that accounted for by the fact that there is an impression in their minds that notwithstanding they are prepared to submit to any test, whether the stoneyard or any other test, still you as a Board of Guardians refuse to give them relief; is that their impression?—I have an idea that is their impression.

6721. Assuming they go up in a body, and I have a telegram here saying that between 50 and 60 have applied to the relieving officer to-day, and he has said he cannot give them relief, but will submit the matter for the consideration of your board; supposing all these men go to ask for out-relief, what is going to be the result, so

Mr. *David Randell*—continued.

far as your board is concerned?—We should have to put them to the stone test.

6722. Do you know to what extent the distress is now existing; things have improved, I suppose?—A good deal of distress still continues in the Pontnewynydd district.

6723. What is the gross number of the cases at present?—I have only returns I can depend upon for 150 in the Pontnewynydd district; as regards the two other districts I have no reliable authority.

6724. From your information there are about 150 out of employment in Pontnewynydd?—Yes, in that one district, and in the others I am told by letter that a great many of the tin-plate men have gone away from the district, but they have about 200 employed now.

6725. Do you know Mr. Wintle, of Pontypool? I do.

6726. He has done very noble work, has he not, in affording relief to the poor?—Mr. Wintle has done a great deal of good, and has assisted very materially, not only in relieving distress, but also in helping to find work for the people.

6727. He is a man who gives his life up to work of this kind?—He is.

6728. He would be personally conversant with the conditions of the Pontypool district?—Yes.

6729. Let me put to you the figures he has given as to the present distress: number of men totally unemployed, 250; partially employed, 350; children dependent, 1,114; women, 350. Then for another part of your union the figures are 180 totally out of employment, and 200 partially employed. Those are the figures for to-day; have you reason to dispute the accuracy of those figures?—I should be disposed to think that is rather excessive.

6730. Then as to the future, in regard to absorbing some of the unemployed, I think the Panteg Council spent 700*l.* on road and bridge work, and the Local Government Board refused to sanction the expenditure of another 800*l.*; is not that so?—They spent 700*l.*, and they are very anxious to get additional work done, but they are unable to get the Local Government Board to sanction that expenditure in which they have spent about 800*l.* more.

Mr. *Heywood Johnstone.*

6731. Has your board any rule regulating the granting of out-door relief?—It is regulated according to the Orders of the Poor Law.

6732. Have you no rules of the board specially?—No; no special rules.

6733. Do I understand you to say that your idea is that the district authorities should deal with temporary distress?—That is my idea; in the way of finding employment and putting the test.

6734. I used the word "temporary." I wish to get exactly at your meaning. Is it temporary distress or permanent distress in the district with which you would deal?—Temporary distress.

6735. From want of employment?—From want of employment.

6736. And that they should deal with those who under the present administration of the Poor Law

Mr. *Heywood Johnstone*—continued.

Law are ineligible for out-door relief?—That is so.

6737. That is to say that they should find work for them?—Yes.

6738. And all those men should have a right to have work found for them. I will put it in another way; the testing authority is to have no option in the matter whether they find employment for them, or not; does not your suggestion amount to that?—It would almost mean that, but I hardly think I wish to convey to the Committee an idea that they are bound to find work for these men because if they were to do that there would be the carpenter, the skilled artizan, whom they could not find work for. These local authorities could only find a certain class of work.

6739. Then with regard to men not habituated to work of that class, what would you propose to do with them; would you put them to agricultural work, or stone-breaking?—Agricultural work would be hardly remunerative in any way for temporary distress; agricultural work would not be remunerative, for we could not put men to dig in order to afford a profit.

6740. Let me take you this step farther. Who is to get the profit; the employing authority?—They would get a certain amount of profit; they would get their stones broken, and any work done at a less cost than if they had to pay otherwise. I do not mean to say they would make a profit out of it, but it would be a less loss to the ratepayer.

6741. Do you mean to say the ratepayer would get the advantage of having some return for the relief afforded?—That is so.

6742. What should the relief be; should it be according to the necessities of the man and his family, or according to the habitual earnings in the trade in which he worked?—According to the Poor Law it must be according to the scale.

6743. I am taking your scheme; take the case of a carpenter out of employment, and he comes to the district authority and asks for work; is he to be paid carpenter's wages in the district, or is he to be paid some other standard wages?—He is to be paid the wages for the work he does, stone-breaking or whatever the test may be.

6744. To be paid simply the wages for the work he does?—Yes; not the wages of his own trade but such a sum as would pay for that work done by another person.

6745. I want to test your scheme; a carpenter has to come to the district authority when he is out of work, and they are to find him work?—Yes.

6746. At what rate are they to pay him?—They are merely to pay him such a sum as would keep his family.

6747. Then it would be simply out-door relief in another form, would it not?—It would really come to that.

6748. And he might work at his own trade if the district council wanted him to do so, might he not?—Then if he worked at his own trade, or they wanted carpenter's done, they would pay him the ordinary wages of a carpenter.

6749. Then it comes to this, does it not, that if they want the work done they are to employ a man at the standard wage, and if they do not want the work done they are to employ a man at some minimum of subsistence money, which equally will come out of the rates, because it is work that is not wanted?—That is so.

6750. That is what it really comes to, is it?—That is really what I tried to convey.

6751. I did not quite understand your point with reference to the Exchequer Contribution Account in your account of finance. Will you kindly explain what you meant?—My own idea is this, that it would go to supplement the road-making, and when there is work done by the stone-breaking method, if it is done at a profit, a portion of the Exchequer Account should go, but if there is exceptional distress in any district arising from no fault of the men, and no fault of the masters, but from a failure of business which is a national calamity, I think there should be some means to meet that.

6752. How does that bear on the Exchequer Contribution?—They should get some Imperial assistance.

6753. Would you use the balance of the Exchequer Contribution Account for those purposes?—A portion of it.

6754. Would you make it a next charge after what I may call the present statutable charge upon it?—Yes, so that there should be some direct assistance.

6755. I want to find out the point of your reference to the Exchequer Contribution Account. You made a point of it in your evidence in chief, and I want to follow it up. Am I right in thinking you suggest that as a particular fund which could be devoted to the relief of exceptional temporary distress?—The county gets its main roads repaired, and a portion of that money is paid out of the Exchequer to assist in defraying the cost.

6756. The county does not get any subvention to its main roads from the Treasury. The main roads are paid for out of the general county funds, are they not?—They are; but a portion of this money is applicable for that purpose.

6757. The balance of the Exchequer Contribution Account is carried to the general county fund, is it not?—Yes.

6758. And as part of the general county fund some of it may be spent on the roads, and you say a portion of that should be spent in relieving distress, do you?—Yes, that is it.

Mr. *Wootton Isaacson.*

6759. You know the Monmouthshire Valleys very well?—Yes.

6760. And you know of all the trades which are done there at the various collieries. I want to ask you whether it is not the fact that there is great difficulty in obtaining proper qualified colliers to do the work in that district?—There is no doubt that one collier will do a great deal more than another collier will do, but it comes to this, that a collier is paid by the ton for the coal that he gets, and he only gets remunerated according to the work he does.

6761. But is there not a difficulty in getting what I may call proper qualified able-bodied colliers all along the Monmouthshire Valley; I will

Mr. *Wootton Isaacson*—continued.

will take all the collieries along there, including the colliery you mentioned?—Yes.

6762. Is it not the fact also that there are large building operations going on all along the valley and that cottages which are built for the colliers are eagerly snapped up by the colliers?—Yes.

6763. I think you are the chairman of the board of guardians of Pontypool and represent something like 20 parishes, do you not?—Yes.

6764. What is the number of unemployed who apply to you for relief collectively?—Are you referring to this particular occasion?

6765. Yes, on the occasion on which we have been called together?—We have none who applied collectively.

6766. Then you had none unemployed, had you?—They did not come as was suggested by one of the members of the Committee, in a body and ask us for relief.

6767. I am taking you now in your position as chairman of the board of guardians of Pontypool and making up your returns once a week; will you tell the Committee what number applied during one week for relief?—I cannot tell you how many applied each week.

6768. Have you not those returns made out?—I have not the figures by me.

6769. What class of people applied to you for relief if they were not unemployed?—The persons applying to us for relief were unemployed.

6770. In what trades; what trades did they follow?—No doubt they had been tin-plate workers and colliers, and such persons.

6771. Then they were the very old men, I suppose?—Yes, the older men. The younger men had gone away; there is no doubt they had found work.

6772. You told the Committee just now that there was great difficulty in getting able-bodied colliers in the whole of the Monmouthshire Valley?—No, I did not say that. I must have misunderstood your question if I said that.

6773. I accompanied that with another question as to the number of cottages being built and every cottage which was completed being immediately taken up?—There have been recently in our valleys, according to a return I have here, several new collieries opened, and one of the collieries I have in my own mind is in our own union, where they are building a number of houses to accommodate those people who are coming there.

6774. That is in the case of a new colliery, is it not?—Yes.

6775. Let me give you this instance; there has been recently started in the Blaena Valley a cottage company, has there not?—Yes.

6776. Which has built a very large number of cottages?—Yes.

6777. And as fast as they can build them the colliers inhabit them, do they not?—Yes.

6778. They have not a single cottage unlet, have they?—That is so.

6779. I know this from personal observation?—That is so.

6780. Andyou may take it all up the valleys in the same way, may you not?—Yes.

6781. Then I want to find out the class of people who have created this distress; the class of people who have applied to you, and who they are?—The distress is on the part of people who have applied to us, who do not live in the district you refer to.

6782. But you represent 20 parishes, do you not?—I can put the thing quite clearly, for I know every step of those valleys. I was a director, and have been a director always of the railways there, and know every step of the valley from the top to the bottom. I perhaps know the county of Monmouth better than almost anybody in the county; from Nant-y-glo to the town of Newport. I know every step of it, and I can make the matter quite clear. Taking the various collieries that are now being opened, the people migrate from other places, and as the collieries are opened and developed there is a demand for colliers; therefore, those houses are occupied by men who come from other parts. Take one of the places which we have been now dealing with before the Committee, the Glyn Colliery. There were 600 men employed in that colliery up to April last year. There are 80 houses close to the Glyn Colliery, and we will take five or six people to each house, whichever you like, so there are 400 or 500 people living just round those works. Many of those people had been working temporarily in the Llanilth Valley, where there is another colliery higher up. As the men do not care to travel from the Glyn right over to Haford Yrinis, six or seven miles to their work and back again, they would give anything for a house on the spot.

6783. What was the cause of the closing of the Glyn Colliery, was it the inferior coal?—No; it was the want of success on the part of the lessees of it. As far as the coal is concerned, I am sanguine enough to believe that the colliery will be opened again. The works now will revert to the original lessee, the Ebbw Vale Company. The colliery is 90 yards deep, which is not a deep colliery, and the coal is a very good coal, or a fairly good coal, and it is within nine miles of the shipping port.

6784. May the Committee take it that except for the failure of the Glyn Colliery you had no special distress?—On the part of colliers?

6785. Or from any other source?—Yes, the tin-plate workers are thrown out.

6786. But they are gone, are they not?—A great many are gone, but there are a large number still living in the district; there are about 200 at the outside, who only get spasmodic employment now and again. I think the men have shown a very high spirit. Instead of saying: "I will work the whole time," they have said to their neighbours, "You shall work half a day this day and I will work half a day another day."

6787. What has become of the girls who were employed at the tin-plate works?—They are there now, a great many of them still, having no employment.

Mr. *Whiteley*.

6788. With regard to your idea that the local authority should find the labour test in the case of temporary distress, seeing that the local authority and the guardians represent the same ratepayers, what does it matter?—It is not exactly the same, if you will pardon me. The guardians find

Mr. *Whiteley*—continued.

find employment and payment out of the Poor Rate; the local authority get it out of a district rate, a different rate altogether.

6789. But they are practically the same ratepayers, are they not?—Yes.

6790. And it really makes no difference, does it?—No; but my idea is, it would be very much better that they should have the power of using materials which the guardians have not. We have to bring the material to a place, break it up, and cannot use it, but the local authority might use it for the repair of the roads; they can find employment for men in the district; but we have no power to do anything except to provide unprofitable work.

Mr. *Renshaw.*

6791. You made a statement in respect of the Scotch Poor Law from which you rather led the Committee, I think, to infer that you thought it more favourable to the able-bodied unemployed than the law in England, did you not?—If a deserving poor person in Scotland had saved some small sum, that could be supplemented out of the rates, whereas to be entitled to any assistance from the rates in England under our law, a man must be absolutely destitute; that is really the only test. There is no encouragement in the English law for thrift at all; a man must be devoid of everything to be entitled to relief, whereas in Scotland, as I understand it, they can be assisted in the way I have said. I have instances in my own mind which I have had to deal with, in which I have found the utmost difficulty, and if the auditor had found out what I had done I should be surcharged.

6792. Are you aware that the unemployed, however destitute, under the Scotch Poor Law, if able-bodied, have no claim whatever to parochial relief?—I accept that as true.

Mr. *John Wilson* (Govan).

6793. I think you stated that one of the industries in your district was that carried on at tin-plate works, did you not?—Yes.

6794. Which has been very depressed of late, has it not?—Yes.

Mr. *John Wilson* (Govan)—continued.

6795. On account of the American opposition?—That is chiefly the cause.

6796. Is it within your knowledge that some of the employers of labour at tin-plate works told their men if they would take lower wages, they would be able to employ them still?—I believe that is so, but I am not aware of it personally. I have heard it, but I think it is due to the men to say that; I have also heard the men have made concessions to their masters. We have several works besides the ones I have referred to to-day in our valley lower down, between Newport and Pontypool, but the larger manufactories are in what we call the Western Valley; at one time there was some slight misunderstanding between the masters and the men there, but I have been told, and I believe my information is correct, that the men have met the masters in some way.

Chairman.

6797. Have you anything that you wish to add to your evidence?—Yes; there is one thing I should like to add. I am a very old magistrate of the county; I preside at the court at Pontypool, and I think it is due to the men who have been suffering so much, and who have been subject to such privations to make this statement. The thermometer during January and February showed 20 degrees of frost, and, during the whole of that time, I had not one single case of a workman, or any of the employees at the tin-plate works, they or their children, or their families, not one of them was brought before the court for doing anything which was contrary to the law. I think it is only due to say, however hard their privations were, or however great their sufferings were, they have never been tempted to rob or steal, and that, mind you, in a district where we have a large amount of coal floating about on the railways. I think I ought to say that, in common honesty to men who have suffered so much and who have behaved so well. I think I may also say that at our last Quarter Sessions we had only two prisoners, and neither of them came from that district.

Mr. PHILIP MEADOWS MARTINEAU, called in; and Examined.

Chairman.

6798. You have had a large and varied experience and acquaintance with the subjects with which the Committee have to deal, have you not?—Yes.

6799. I believe you have for many years acted as a Justice of the Peace?—Yes.

6800. And therefore have heard excuses from paying rates on the ground of poverty in St. George's-in-the-East?—And in Whitechapel and Spitalfields, Limehouse, Ratcliff, and in Mile End Old Town, all separate sessions.

6801. Then you have had a still more direct experience of the subject as guardian of the poor in St. George's-in-the-East, have you not?—Yes.

6802. I believe you have for many years acted

Chairman—continued.

in that capacity, have you not?—Certainly twelve years, and I do not miss attendance twice a year from the fortnightly meetings.

6803. Primarily, were you a delegated guardian?—I was.

6804. But now I think you are in another capacity?—I stood my election, and I happened to be returned at the top of the poll.

6805. Which shows, I suppose, that the opinion of the electors, at all events, confirmed your conduct in the previous capacity?—At all events they did not feel strongly that my views were wrong.

6806. I believe you can also speak as a School Board Manager?—Yes.

6807. In the same part of London?—For the

Chairman—continued.

Berners-street School, St. George's-in-the-East, which is, I think, about as poor a school as there is in East London.

6808. Further, were you connected with the Mansion House Relief Fund?—I was. I was one of the two almoners for St. George's-in-the-East.

6809. In what year was that?—That was ten years ago, I think, exactly; 2,000*l.* was sent to me and my colleague, and I had the main distribution of it, because I happened to have rather more leisure than Mr. Sly, my colleague, had.

6810. Further, your position on the London County Council brought you into contact with these questions, did it not?—It did.

6811. In what way?—I was Chairman of the Industrial Schools for the County of London which take vagrant boys from the poorest parts of London. I also was Chairman for three years of the Asylums' Committee of the London County Council, and had to do with all the pauper lunatics of the County of London, and in connection with that I may say that for the last ten or a dozen years, as a magistrate, I have certified the insane paupers for three parishes in East London; I certainly certify one insane pauper every day in my life, averaging 360 a year. I certified three this morning, for instance.

6812. I wish to bring these facts out, because really the authority which is due to your opinion in these matters is almost unique. You also have been, I believe, an active member of the Charity Organisation Society?—I have for ten years, and I very seldom miss their meetings once a week.

6813. Further, are you a director of a dwelling house company?—Yes, for a very poor class especially; for the costermonger class, the East End Dwellings Company.

6814. And lastly, have you been, and are you, an employer of labour?—I was a large employer of labour ten years ago in St. George's-in-the-East, but I am not now.

6815. During the past severe winter, did the East of London poor suffer very exceptionally through loss of work, and what, in your opinion, were the causes of that?—I think in St. George's-in-the-East they did not suffer very exceptionally, only rather exceptionally during the very severe weather, when the river was frozen and the docks were frozen; they did suffer more than usual then, but otherwise not more than they normally do.

6816. Do you think any exceptional distress was due to the exceptional severity of the weather?—I do.

6817. Were there in that locality ways and means sufficient for relieving those who did suffer?—I think there were.

6818. In what way?—The Charity Organisation Society never refused to give help, even money help, in fit cases that came before them. I think every poor person in the parish, with the rarest exception, is aware of that; it is a small parish, and they talk over things together; the relieving officers are also in close touch with the society, and therefore, I think, nearly every poor person in the parish was aware of that society; that they could come before them if they liked, and that if they came their cases were gone into; we never refused help in what we thought a helpful case. The clergy also, I may say, had plenty of funds, speaking not only of the Church of England, but of the dissenting clergy, with whom I am in touch.

Chairman—continued.

6819. You are probably aware, even if you have not seen the evidence, that the Committee have had a good deal of evidence bearing chiefly upon St. George's-in-the-East from Mr. Mackay?—Yes.

6820. With whose views, generally, I suppose, you are in sympathy?—I am.

6821. What is your opinion as to the effect that out-door relief would have had in St. George's-in-the-East?—I think it would have helped us very little indeed.

6822. Do you think it might have done harm?—I do. I knew the place 20 years ago, when there was a great deal of out-door relief given. In 1875, when I knew St. George's-in-the-East intimately, we had in the workhouse then 1,248 in-paupers, and 1,799 out-relief paupers. In this year, 1895, we have 1,016 in-paupers only, less than 20 years ago, though the population is about the same, and only four out-relief paupers at the moment.

6823. And that without leaving, you think, any large number of people in destitution?—They are all very poor; the whole parish is very poor, but I doubt whether any real starvation cases occur, or very few. Perhaps I may say, as a Board School Manager, this last winter I made a point of asking the girls' schoolmistress and the infant schoolmistress several times, whether the children had breakfast before they came to school. I have gone with the mistresses into the schools, looked round at the children, and have asked, can you pick out any children here who have not had breakfast to-day; the ladies have said always, we think every child here has had something for breakfast. I not only have asked that question this winter, but I have made it my business for past winters. I believe those ladies speak the truth. Though they are the poorest children in London, they always come to school with clothed feet.

6824. What is the general occupation of the bread-winners of the people in St. George's-in-the-East?—Dock labourers, carmen, painters, and tailors' hands.

6825. Since what would you consider a more healthy management has been applied to the Poor Law of that district, do you discern any increase of frugality and independence on the part of the people?—I think so.

6826. That they do more for themselves now than they used to do?—I think so. I am intimately acquainted with the neighbouring parish of Bethnal Green, where, I think, they are giving 200*l.* a week in out-relief as against 2*l.* a week with us; and I think the poverty in Bethnal Green is as bad as ours, if not worse. I go to the houses of the poor in Bethnal Green often to certify the lunatics, and the poverty there seems quite as intense as with us.

6827. What have you to tell the Committee as to your experience of the great Mansion House Relief Fund some years ago?—I had

Chairman—continued.

2,000*l.* sent me that year. I gave it away with great misgivings, and then I consider I did as much harm with that 2,000*l.* as I did good.

Mr. *Acland.*

6828. Was that in 1886-87?—Yes. In connection with that I may perhaps say I happen to know that in St. Pancras parish 2,000*l.* was raised this winter to be given away among the unemployed. A guardian, with whom I am very intimate, a man of great experience, told me two days ago that he had great difficulty in getting rid of 1,200*l.* of that; he has 800*l.* left over for the next winter, and his words were, "I look with dismay to having to get rid of that money next winter."

Chairman.

6829. Still, the Charity Organisation Society, with which you are connected, does give charitable relief, but only of a temporary kind, while the recipients are looking out for something to do?—Yes; and not to a greater extent than 500*l.* or 600*l.* a year all told in St. George's-in-the-East. The last three months were exceptional, and the amount then distributed was 200*l.* about.

6830. Then is it your opinion that men out of employment can get along without out-door relief?—I think they can get along hardly and poorly, but I think they can get along. Some three days ago I met an old hand of my own, a man about my own age, and I said to him: "How have you got on this winter"; he said, "I have managed it. I have one or two children." Children in St. George's-in-the-East can always pick up money.

6831. In what sort of way?—As errand boys, and in carmen's places they can always get employment; in fact at times I cannot even get boys from my Berners-street Board School for posts I can get them. The women can always earn a few shillings a week at sack-making, and the men get odd jobs. This man I allude to, not a skilled hand, had managed to rub through this winter without coming into the house.

6832. And equally without applying to the Charity Organisation Society?—Yes, he had got no help. The poor are extremely neighbourly and helpful one towards another.

6833. What do you believe to be the general feeling in the parish as to out-door relief?—I do not think they can feel strongly in its favour, or they would hardly have returned me, a known opponent of it, at the top of the poll.

6834. Do you draw any distinction between ordinary and exceptional times?—Personally, I should be always against out-door relief in St. George's-in-the-East. I am only speaking of a parish I know. We have got through the last winter without it.

6835. But supposing in another parish there was, from exceptional causes, and causes implying no fault at all on the part of the people affected, a great amount of distress; would you still harden your heart against out-door relief?—I should like to try and meet it by the local charities and the Charity Organisation Society; until they failed I should have faith in them.

6836. Do you think the giving of what we call

Chairman—continued.

charity in that manner has something of the degrading character of Poor Law relief?—I do not think it does so much harm, because if there is Poor Law relief given, everyone thinks they have a right to it. If it is charity they are more diffident about applying; they do not feel they have a right to it. I think in our parish if we had out-door relief we should have to give it to pretty nearly half the parish, to be just. They are all very poor.

6837. Among your many charitable occupations and public duties, you are manager of a company for dwelling houses for the poor in Whitechapel, I believe?—Yes.

6838. What was your experience this last winter with regard to that, as to rents?—The arrears of rents did not grow; they were scarcely larger than in previous winters.

6839. And that is with reference to the very poorest class, is it not?—Yes, for the very poor we have rooms as low as 1*s.* 9*d.* a week; costermongers I put as the lowest respectable poor people there are.

Mr. *Bartley.*

6840. Costermongers sometimes make a good living, do they not?—Oh yes, they make a living.

Chairman.

6841. It has been proposed that the Metropolitan Common Poor Fund should be extended to out-door relief; what is your view upon that point?—I am very strongly against that. I find in our poor parish whenever anything can be got from the Metropolitan Common Poor Fund the tendency is to have it; and I think if out-door relief were found by the Common Poor Fund, a poor parish like ours would think we ought to have a giant's share of it.

6842. And create a demand upon it, even if the demand did not actually exist?—I think so.

6843. Would that be equally your view of any form of public subvention?—It would.

6844. In exceptional winters, I suppose, the ordinary sources of charitable assistance are more active and widely opened than usual, that is to say through the clergy and different societies?—Yes. East London gets plenty of money sent it in bad winters.

6845. We have heard it hinted to this Committee that East London gets a little too much charity?—I am not sure that it does not.

6846. I am not sure it was not an honourable Member of the Committee who said if there was a barrier at Temple Bar to prevent anything going from the West to the East, it would be an advantage to the East. That may be too broadly put, but there is something in that view, is there not?—Yes, there is something in that.

6847. Are you able to compare two parishes where out-door relief is not given?—Yes; Whitechapel and St. George's as against Bethnal Green.

6848. Have you any figures you can put in?—I can merely say, roughly, that in Bethnal Green they give 200*l.* a week compared to our next to nothing in St. George's, and I am confident that the poverty in Bethnal Green is as severe and acute as it is in our parish.

Chairman—continued.

6849. Have you any general remarks you would like to make?—I would like to say my own view is that what we should do is to make the poor more independent, more thrifty and careful, as far as possible; to discourage the very early marriages that occur with us. We have boys of 18 and 19 constantly marrying girls of 16 and 17, and even 15. I should like also to see wages rather higher and better than they are. I am in favour of trades union rates of wages being paid; I am against sweating; I should improve, as far as possible, the status and pay of the working man; I should like as far as possible to encourage their being in clubs; I am a strong advocate for teetotalism, certainly temperance among the poor, and I wish the children could be brought up to some skilled work. The great trouble we have is when a poor man comes and asks for work, and we ask him what he wants, he says, "I can take anything"; that means he can do nothing; and if the children could only be taught some definite trade, instead of being brought up to nothing definite, it would be better. Then the children of the very poor in East London do not get their schooling; they shirk and escape their schools. At the industrial schools of the London County Council, countless waifs and strays come of 13 and 14 years of age who have never been to school; they are not caught. They are of the vagrant class, living sometime two or three weeks and then shifting somewhere else. I am much impressed with the enormous benefit board school teaching does to children not only with regard to their lessons but in their cleanliness and health, and making them manly boys and womanly girls.

6850. That would be a difficulty which could not be got over, would it not?—I think it ought to be got over.

6851. It is not from want of care on the part of the school board officers, is it?—I think they go after the easiest cases of course. Then I think that children should help their parents more than they do. They are so inclined, in East London, to cut themselves adrift by these early marriages and not help the old people. I see a great deal of that.

6852. I suppose there is no way of preventing them, but if there were any means of discouraging early marriages would not that lead to other evils?—Of course there is that; but 17, 18, and 19 is very young to think of marriage. My own feeling is, that out-door relief, and also finding State money for the unemployed in exceptional times, would run counter to all these views that, rightly or wrongly, I think to be the sound ones; and I am even inclined to question whether pensions in old age is not a subject which ought to be very carefully considered and weighed before legislation takes place in that direction.

6853. There would no doubt be time for that, because no scheme for that purpose has yet been put forward?—Quite so. Perhaps on the question of rate appeals I should say this: We can excuse rates on the ground of poverty only when the appellants ask to be excused their rates. When, 15 years ago, I used to sit, we used to excuse a great many poor people from paying their rates. I generally sit with a colleague, sometimes alone, and in all the cases that come before us now we hardly ever excuse at all, and I do not see that the poor have suffered by our ceasing to excuse their rates. It used to take, in Mile End Old Town, two days to hear the cases; now I hear them in an hour and a half. They do not come, and I do not think they suffer.

Chairman—continued.

6854. What moral do you draw from that?—I think that if you help number one in a street by excusing him on the ground of poverty, number two, up to number one hundred, will all come on the same grounds. You must excuse them all, and, if you do not excuse number one, he does not come up again and does manage to pay somehow.

6855. The rate is not a very heavy amount, after all, is it?—In the cases I am speaking of it may easily be 10*l.* a year. So many live by taking lodgers; those are the people who come and say they cannot afford to pay, because the lodgers do not pay them.

Mr. *Heywood Johnstone.*

6856. What sort of assessment would that represent?—The rates are about 6*s.* in the £. with us, poor and general.

Chairman.

6857. Do you think that the boards of guardians have, at present, enough powers to deal with their duties?—I do.

6858. And you would not extend those powers, would you?—No; I do not think we are perfect, but I think the present Poor Law works well.

6859. In cases of positive destitution do you think they have perfect power?—Yes, I am sorry to say it, but I think there is the workhouse for those cases.

Mr. *Acland.*

6860. You have read Mr. Mackay's evidence, I suppose?—Yes, in the papers.

6861. And I gather you agree in the main with his views, do you not?—Yes, I do.

6862. You think, do you not, that stone-yards and out-door relief are mistakes?—Yes.

6863. And that all forms of relief works are mistaken methods of helping the poor?—Yes.

6864. I rather gather that you think the amount of charitable funds required by what I suppose is a well-administered society like the Charity Organisation Society, is really small even in a district like your own?—That is so.

6865. Are they trusted with the administration of existing charitable endowments?—Yes.

6866. Are they many?—We have not many in St. George's-in-the-East. I am upon one or two of them, but they would be mostly pensions.

6867. Supposing anyone left a considerable endowment for nursing the poor, and old age pensions, in St. George's-in-the-East, which amounted to a large annual sum, do you think that possibly might do more harm than good?—I do.

6868. And you are doubtful, are you, whether any form of bequest for old age pensions would be a good thing?—I think it wants very careful watching indeed.

Mr. *Acland*—continued.

6869. You would not welcome, in fact, any large charitable gift to the parish?—I should be very sorry to have to give it away.

6870. Even if it took the form of a charity for nursing the poor?—I think there is almost sufficient done in that way now there.

6871. Do you think the very poor people in the parish really have enough in the way of comfort and assistance in sickness at the present time?—I daresay they would benefit by having more, but extreme care would be required in giving it. If given with very great discretion, as the Charity Organisation Society gives it, I think it might be given.

6872. Do you think the sending of a capable nurse to the house of a poor person in a case of real sickness would have a demoralising effect?—I would rather take them to the hospital; I do not know that it would demoralise them.

6873. You do not feel confident, then, that the sending of a nurse to a sick home would necessarily be demoralising?—I would much rather take the poor into an infirmary or hospital.

6874. Do you not think there are a good many cases in which they do not wish to be taken?—Yes, but I think it would be good for them to be taken.

6875. They are very much like other people, are they not, that they do not wish to be moved any more than the rich would like to be moved to the hospital themselves?—But I think a poor woman in one or two rooms, with a nurse, would not be so well off as she would be in an infirmary or hospital.

6876. In your experience of the last 20 years, do you think on the whole there has been a lessening of the poverty in your district?—I think so.

6877. Do you think the general conditions are not quite so bad as they were?—I think they are not quite so bad as they were 10 years ago.

6878. Do you think, on the whole, there is more opportunity of employment than there used to be?—For the children I think there is more.

6879. How about the adults?—For the men there is not more.

6880. Is there a tendency on the part of the children to cut out, by their labour, the older people?—Yes, the growing-up young people cut out the old people.

6881. How are the older people to be provided for?—They are often helped by their children.

6882. Do I understand it is your wish that that help should be much more frequent than it is?—Yes.

6883. And where it is not given, the older labourers are in a difficult position, are they not?—The older people ought, if they had been in good work, to have saved a little something.

6884. But there are a good many cases, are there not, where illness and trouble come upon them, in which it would be very difficult for them to do so, however much they might wish to do so?—That is so.

6885. I suppose there are a certain number of workers willing to work who do find it difficult to keep in continuous employment, are there not?—Yes.

6886. What do you think would be the best

Mr. *Acland*—continued.

way of dealing with them?—I do not like outdoor relief for them, certainly. Are you speaking of people past work?

6887. No, not people past work, but people who find it difficult to get into work?—I should say people who have been in good work, and are now out of employ, ought to have put by something to carry them through the time when they are out of work. If they have not done that, they can get on by pawning, which is not nice of course.

6888. But I am speaking of a class of people who possibly through some deficiency of their own, inherited possibly, are not able to keep in very regular work, and who therefore really find it difficult, or who may have had misfortune or sickness in the family. Take such people, say, of the age of 50; how would you propose to deal with them?—I should think they ought to be helped by their own people.

6889. If they have any?—Yes.

6890. And if they have not?—Are you taking the case of people who could never get work again?

6891. I am taking the case of a man of 50 who cannot get work for some weeks; how would you treat him?—I think he will get on really by help from his children or neighbours. In the case of a man who has no children or neighbours, I think the Charity Organisation Society would pull him through, if it was only for a short time.

6892. Supposing it is a permanent case?—I should think if it is a permanent case, he would have to go into the house if he has made no provision at all, and has no friends to help him; I think he must go into the workhouse.

6893. Even if he has had no opportunity of making provision?—Yes, I am afraid you cannot draw such distinctions.

6894. You would like to see, would you not, if possible, the wages higher than they are now?—Certainly.

6895. But I suppose it is rather difficult to look forward to any method by which that is to be achieved, is it not?—Yes, it is.

6896. With regard to the children who have had something, as you say, to eat before they came to school, I suppose that something may be very small?—Very poor.

6897. But sufficient?—I think sufficient; the children do not look to me starved.

6898. Do cases ever arise in your school where a teacher would feel it necessary to send out, perhaps, out of kindness of heart, to get something for a child to eat?—I am sure the ladies I referred to would do so.

6899. But do those cases ever arise?—I think not.

6900. You spoke of the irregularity of attendance at school on the part of children who come to you for the first time in industrial schools?—Yes.

6901. Do you think there are a certain definite number year by year who really escape school altogether?—I am sure of it.

6902. Have you considered at all, as a manager, or made any recommendations as to how that

Mr. *Acland*—continued.

can be avoided?—No; you see I am not a member of the School Board.

6903. But it is open to managers to make such recommendations, is it not?—Yes, I have often talked it over with the masters and mistresses, but we have always felt the difficulty that they are on the move every two or three weeks.

6904. And you think, do you, it is really difficult even for a skilled attendance officer to get hold of them?—It is difficult, but I think it ought to be surmounted; I am not prepared to say how. I think it is very important it should be surmounted. Sometimes at the age of 16 we have to turn out children from the industrial school who have had very little education; they have had a very bad start in life.

6905. Are you satisfied with the present administration of industrial schools?—Yes.

6906. The weak point is that you do not get them as you would like to get them, is it?—We do not.

6907. You said something about the importance of their having a more definite trade. Have you, as a manager of schools, seen your way to any practical suggestions as to how children should be better taught in that respect?—Yes, we have introduced several fresh trades into our schools in the form of mat-making, basket-making, and other trades.

6908. Do you think that is going to be useful?—I think so.

6909. What you want to do is to make them as handy as possible before they leave school, is it not?—Yes, so that they may be able to say they can do something. We want them to have a definite trade.

6910. When you say a definite trade, it is rather difficult at that age to teach a definite trade, is it not?—Some industries, such as tailoring and shoe-making, can be learned.

6911. Do you think they can learn that before leaving the ordinary elementary school?—Yes.

6912. Then, in your opinion, is there a good deal more to be done in that way?—I think there is.

6913. And that something is gained by making them a good deal more handy in several trades, than, perhaps, their parents have been?—Yes, we teach them gardening and farming, for instance.

6914. Have you opportunities for that?—Yes, we have cows, pigs, and so on.

6915. That is in the industrial schools, is it not?—Yes, in the industrial schools.

6916. I was speaking of the elementary schools?—We have nothing of the kind there.

6917. Are you anxious to see such things in the elementary schools?—Yes, and we have improved them lately.

6918. Then when you talked of definite trades you were speaking of the industrial schools, were you not?—What I mean is this, that it is a pity that the parents do not put their children out to learn something definitely, and not let them work as simple dock labourers.

6919. You were speaking, were you, of what the parents should do, so as to prevent their children growing up without their being able to do anything definite?—Quite so.

Mr. *Acland*—continued.

Mr. *Bartley.*

6920. You heard, did you not, the proposal that those who received relief should not lose the Parliamentary Vote?—Yes.

6921. Do you approve of that proposal?—I should certainly approve of it so far as infirmary relief goes, but I am not sure that I have made up my mind as to out-door relief on the subject.

6922. Do I understand that you consider all these proposals as to State help and employment, and so on, tend to discourage thrift?—I think they do.

6923. Do they tend to decrease the wages?—I think so, certainly.

6924. And that they are such evils that they counterbalance any good they might do?—Yes.

6925. As regards your practical experience over these many years in this very poor district, do you consider that the strict administration of relief has tended to decrease the suffering of the people or to increase it?—I think it has tended to decrease it.

6926. Do you think it has actually decreased it?—I think it has.

Mr. *Whiteley.*

6927. Your experience has been principally confined to the metropolitan district, has it not?—Yes. I live in the country.

Mr. *Logan.*

6928. I understood you to say that you thought the present Poor Law works very well, and that you are opposed to the granting of out-door relief, I might say practically, under any circumstances?—Yes.

6929. Do you consider it fair that a man who has never had a wage which enabled him to put anything by should be compelled, when he is out of work through stress of weather, or through any other cause, to go to the workhouse?—I think an exceptional case like that must go to the workhouse; I should be very sorry for it, but I think he must.

6930. Have you any remedy to suggest for that exceptional case?—No.

Mr. *Lawrence.*

6931. In fact if it was known that relief would be given in the case Mr. Acland put, when a man had turned 50, it would assuredly enable men of his class to work for a less wage than one out of which savings could be made, would it not?—Yes.

6932. Can you give any information as to the causes which have driven the shipbuilding industry from your district. Can you give any figures as to the rate of wages which prevail in that district as compared with what prevails in Glasgow?—I cannot.

Mr. *John Burns.*

6933. You said that you feared that the competition of children and growing-up persons rendered

Mr. *John Burns*—continued.

dered it rather difficult for men above a certain age to secure employment?—Yes.

6934. Is that due to deficiency of adaptability on the part of the older people?—Yes, I think it is to some extent.

6935. A lack of assimilative power?—Yes.

6936. And refused to go outside the immediate district to secure employment?—Yes.

6937. You have had, as I know, great experience in industrial school work; do you find that in your district, with regard to child labour, a certain class of parents are reckless as to what happens to their children until they reach what one may term an earning period of their life?—That is so. They hardly come to see them at the schools till they are sixteen, but when they come to be sixteen and fit to leave and earn a few shillings a week, they show the greatest devotion for them, and forbid us to send them away to occupations we could get for them. When they get to be sixteen they look them up with a view to getting them home, and they tell us they have beautiful berths for them.

6938. To what extent does the tendency of child labour to compete with labour of older persons demoralise men who are over say 35 or 40 years of age?—I do not think it interferes so much with them, but I think a lad of 18 or 20 would cut out a man of 50 at work.

6939. Do you believe that the tendency is for child and young labour to displace adult labour in manufactories?—I was talking more of dock labour. In a manufactory, of course, a skilled man is valuable at 50, and even older.

Mr. *John Burns*—continued.

6940. Then it only applies to certain industries, in your opinion?—Yes.

6941. Have you formed any opinion as to the value or otherwise of local authorities adapting certain of their public works to seasonly and climatic circumstances?—No; I do not know that I have thought of that.

6942. May I put it in this way: supposing you were a member of the Metropolitan Asylums Board, or any other such public body, and they had to spend 50,000*l.*, say, in six months, with two hours a day overtime for all men who worked on that class of work; in the event of it being possible to distribute that work over nine months of a normal day, would you prefer it being done?—Certainly.

6943. Then I gather that you are in favour, where practicable, and not extravagant and wasteful, of distributing the total amount of work to be done under conditions where the greatest number of men would be employed with no overtime?—Certainly I should like to limit all labour, if possible, to eight hours a day if it could be done.

6944. And no overtime?—Yes.

6945. Do you think that would have a beneficial effect on the unemployed problem?—I think it would, and I think the work would be as well done as it is now in the 10 hours.

6946. And do you believe the fact of so limiting the day would lead to steadier and more regular habits on the part of the men?—I do.

Tuesday, 30th April 1895.

MEMBERS PRESENT:

Mr. Bartley.
Mr. Benn.
Mr. Thomas Henry Bolton.
Mr. John Burns.
Mr. Campbell-Bannerman.
Mr. Keir-Hardie.
Mr. Heneage.
Mr. Jackson.
Mr. Heywood Johnstone.
Mr. Lawrence.
Mr. Logan.
Mr. Mather.
Mr. Pickersgill.
Mr. Renshaw.
Mr. John Wilson (Govan).
Mr. Stuart-Wortley.

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN, IN THE CHAIR.

Reverend WILLIAM TUCKWELL, M.A., called in; and Examined.

Chairman.

6947. YOU are Rector of Waltham in Lincolnshire?—Yes.

6948. You have had considerable experience of the condition of agricultural labourers, and have formed strong opinions on the question of their position, and the tendency to depopulation in country districts and congestion in towns, have you not?—I have. I have visited 500 or 600 villages in different parts of England, and have seen the men's homes, and have talked to them, and I have tried an experiment in my own home of replacing men upon the land; and all my experience points to the fact that one chief cause of the unemploy in the towns is the rural exodus from the villages.

6949. Can you give any figures showing the decrease in the village population?—The decrease began, as far as I can make out, about the year 1873. The 1881 census, when dissected, showed that, whereas previously to that the normal increase in the villages had been 17 per cent., in the decade between 1871 and 1881 in 2,000 ex-metropolitan sub-districts one-half showed an actual decrease of population, and that this decrease was most noticeable in purely agricultural counties. For instance, in Lincolnshire, 47 out of 55 sub-districts showed a decrease, and in Wiltshire 27 out of 37 sub-districts showed a decrease. Dr. Wallace, who is an authority on the subject, and has taken great pains with it, adding to this actual decrease the observable decrease from the previous increase of 17 per cent. in the previous decade, works out figures to show that in the 10 years two million persons, including agricultural labourers, small farmers, small tradesmen and artizans, had migrated from the villages to the towns. On the other hand, everyone who investigates the conditions of employment in the big towns learns how very many of the unskilled labourers who flock there have come in from the country; and I observe that Sir John Gorst, in a speech in the House of Commons early in the year, told them that from his observation of West Ham he had ascertained

Chairman—continued.

that out of 10,000 men actually unemployed at the moment he visited it, 5,000 had recently migrated from the country. I have asked Dr. Wallace if he had taken the figures for the more recent decade, from 1881 to 1891, and he tells me he has not, but that all the evidence points to a yet larger decrease than in the previous decade.

6950. Is this a decrease, do you think, of individuals or of families?—Of individuals, the individual representing the family. The figures represent individual heads of families.

6951. What I mean is, have whole families migrated to the towns, or have the more able-bodied members of the community gone to the towns and left the others behind?—Unquestionably the able-bodied members of the community have invariably been the first to go to the towns. Villages in many parts of England now are garrisoned, like David's Jebus, by the halt, the blind, and the lame, who were "hated of David's soul," because the able-bodied men have gone to the towns.

6952. What is your opinion as to the causes of this exodus?—First of all there has been the diminished demand for labourers. The obsolete methods of farming which the big farmers throughout England have continued to practise are ruining them in every direction, and have compelled them to starve their labour bill. I know an immense number of places where three men are employed now where as many as a dozen used to be employed; so that a young man looking round for his livelihood finds he will really have no chance of being employed at all in the country and leaves the village.

6953. You think it is not that they have adopted a new system of agriculture which requires fewer hands?—No, I think not.

6954. But that they are applying the old system with a diminished number of hands?—That is what I wanted to convey. Then a much more important point is the growing formulated discontent of the labourer with his condition. In former days he took it as he took rheumatism or the

Chairman—continued.

the bad weather. But education has shaped and increased his discontent with it. He feels, first of all, discontented with his poverty. It has been shown and proved, and it has never been answered, that a labouring man with a wife and four growing children requires 21*s.* a week to live upon as the minimum of decency and comfort.

6955. In country districts?—In country districts. Now Mr. Kebbels and Major Craigie, who have taken great pains to strike an average, are of opinion that the average wage of agricultural labourers in England, taking the 1*l.* a week of Northumberland and the 10*s.* of Dorsetshire together, and making every allowance for harvest-money and house-money and perquisites, cannot be made more than 15*s.* a week, which is 6*s.* a week below this minimum of decency and comfort. Then, again, the labourer of late revolts against the thraldom in which he is held. He holds his house and his work in almost all cases at a week's notice; he is at the mercy of his employer, and his employer is, in many cases, very merciless. If he shows independence, if he is known to vote against the will of his employer, or if he complains of the foul surroundings of his cottage, he knows there is a good chance of being turned out. It is a common saying, to my knowledge, in agricultural districts, before an election for Parliament, or for the School Board, or for the County Council: "Now mind, John, if Mr. So-and-so gets in it will be worse for you"; and the labourer has come to be dissatisfied with that state of things. Then, finally, the labourer is distressed by the utter hopelessness of his position. His 10*s.*, or 12*s.*, or 14*s.* a week will be his wages for the end of time, and the vista is closed by the workhouse.

6956. Has his condition suffered, do you think, from the loss of income on the part of the squires, and from their absence in many cases from their properties, so that there is less of that generous treatment which used to exist of a patriarchal kind?—You mean less of the coal and blanket element?

6957. I mean that sort of thing. The Lady Bountiful element?—No, I do not think that is so. I do not think there are very many non-resident squires, nor do I think that those who remain have economised in coal and blankets. But the labourer is no longer able to gild with coal and blankets the bitter pill, as he did previously.

6958. Of course, the easier communication with the towns enables them to contrast their own position with that of other people better than they did before?—Precisely.

6959. I understand you have made an experiment in attempting to improve the condition of the labourer; will you tell us something about that?—I was rector of a small and very poor village in Warwickshire, with a population of about 800, and in the beginning of the year 1886 I offered the men 100 acres in allotments.

6960. You say you offered them this land; how did you become possessed of it?—It was glebe land, and it happened to fall vacant; it fell on my hands, and I offered it to the labourers; 80 labourers took it up. We divided it into

Chairman—continued.

portions ranging from a third of an acre up to four acres, and settled by lot, according to what each man wanted, what he should have. The land was very foul, and I gave it to them for two years without rent, on the condition that they should thoroughly clean it in the time, and at the end of the two years it was some of the cleanest land in England. Then I made an agreement with them that they should have it with fixed tenure, as long as my incumbency lasted, at 1*l.* an acre, which was the fair agricultural rent of the district. Once a year I gave prizes for the best allotments, and got Members of Parliament and other eloquent people to come down and talk to them and encourage them. In the year 1888 we found that whereas the average yield of farmers' land in England was 28 bushels of wheat to the acre, our average yield was 42 bushels of wheat to the acre; and the average went on increasing, some men getting as much as 60 bushels out of their cultivated acre of land. Shortly afterwards we began to take stock of the actual money gain, and the result showed that any man working an acre in his spare time could, and they most of them did, clear four shillings a week throughout the year upon his acre of land. That result was disputed, and eagerly disputed. I invited criticism. I published balance-sheets of my labourers' accounts, and an expert from Birmingham was sent down to inspect the sheets and survey the land, and he bore me out in every respect. I had proved my point. The last year I was there (that is the year before last) we found in looking into our figures that we had in the past year taken 800*l.* out of the land and put it into the cottages.

Mr. *Mather.*

6961. In how many years?—The experiment lasted from 1886 to 1892.

Mr. *Bartley.*

6962. Has it stopped now?—I am sorry to say it has. Perhaps I may come to that presently, if the Committee will allow me.

6963. Can you tell us something of the manner in which they cultivated the land?—There are two reasons why allotment land bears so much more than farmers' land. One is that the cultivation is very much better. Where the farmer hoes once, the labourer hoes four times, for he has no labour bill; where the farmer puts on one load of muck, the labourer puts on two. But a much more important reason is that the farmer grows for sale, but the labourer grows for consumption. Low prices knock down the farmer; but the labourer snaps his finger at low prices, for he knows that he must grow very much cheaper than he can buy. A labourer with a wife and four growing children (which I take as a typical family) eats in a year 30 bushels of wheat and 43 bushels of potatoes and 208 lbs. of bacon, which is fed on 13 bushels of beans. If you total that up you find he would pay for that food stuff 19*l.* 10*s.* in the shops. His outgoings of rent, rates, the pig, and manure and seeds and threshing barely reach 5*l.*; so he buys 19*l.* 10*s.* worth of food for 5*l.*

Mr. *John Wilson* (Govan).

6964. Out of how much land?—One and an eighth or one and a quarter acres.

Chairman.

6965. That is your explanation of the large profits that were made under your allotments, as compared with the ordinary results of farming at the present time?—Yes.

6966. Was there anything that militated against the success of your experiment?—Yes, very seriously. I could not give the men permanent fixity of tenure, and I could not enable them to put cottages on the land under the same conditions. It was glebe land. Several Members of Parliament and other gentlemen offered to put up cottages for me; but they were men of business, and, of course, required the security of the cottage and the land it stood upon, and that I could not give, for my successor might have repudiated the whole thing as soon as I left. As a matter of fact, he did repudiate it, which was a question asked me just now. He turned out some of my tenants with no notice, and he has raised the rent on others. To alter a line of Sir Walter Scott's:

"On his head,
A parson's malison be said."

Mr. *Bolton.*

6967. Did you apply to the Ecclesiastical Commissioners for consent to lease a portion of your land?—I might have had 25 years' lease with the consent of the bishop, the patron, and the incumbent; but the bishop refused.

6968. You applied to the bishop for his consent?—Yes, and he refused.

6969. Could you not grant building leases under the Ecclesiastical Commissioners?—I was informed not, without the consent of the bishop and patron.

Chairman.

6970. You applied to the bishop for his consent. Did the bishop say why he did not consent; was it because it was something unusual?—No; the bishop first fenced with it, and said it would be troublesome. I showed him I should not mind the trouble, and then he said he feared it would be disadvantageous to a future rector. My allotment holders petitioned him, and my college, who were the patrons of the living (New College, Oxford), sent him a very strong letter, entreating him to yield, but he was obdurate. I should like to explain why not being able to give cottages on the land is so very serious a point. Only by having a cottage on the land can fruit be grown, and poultry and bees be maintained; and I can show by figures that fruit, poultry, and bees would increase the 4*s.* a week clear profit on the acre to at least 13*s.* a week. I want also very much to bring before the Committee the fact that the great advantage of an allotment is not terminable with the allotment itself, but is comparatively nugatory, unless the allotment can extend into the small holding. I am convinced that the salvation of England in the future lies in small holdings. Great holdings can never more be made to pay; small holdings may be made very profitable indeed. A report was presented to the House of Commons some months ago on the agriculture of Lincolnshire. Mr. Wilson Fox took Lincolnshire as a characteristic agricultural county, with good land, large farmers, having large capital. He picked 17 of

Chairman—continued.

the largest farms from all parts of the county, and stated that in every case they were being worked at a loss, and that the farmer was on the road to ruin. He found, at a village called Wainfleet, a small man, who, 20 years ago, bought twelve acres of land; he had grown on it new potatoes, bulbs, and flowers; he bred pigs and poultry, and in the 20 years he had not only maintained himself and his family in comfort, but he had put by 780*l.* I know two young fellows, lately come from Australia, who have taken a piece of land in Worcestershire and are making very large profits in growing nothing but cut flowers for Covent Garden Market.

Mr. *Stuart-Wortley.*

6971. On what area of land?—About 12 acres. I also know a man in Oxfordshire, near Banbury, who has taken a piece of land of about the same extent, and is growing on it Turkey rhubarb, poppies, and henbane; and is also making very large profits. The old four-course system is done for; we cannot grow cereals against foreigners; we grow them at a loss. But there are enormous quantities of crops for which there is immense demand, which we are importing at great cost from France and Belgium, which are grown in France and Belgium entirely by small men, and which we might grow in England; such crops, for instance, as hemp, flax, buckwheat, chicory, lavender, saffron, stramonium, teazels, and woad, and I might enumerate many more, all which might be grown. Those cannot be grown by a large farmer, but they can be grown by a small farmer, and they can be grown at a profit; only there must be the opportunity of the allotment expanding into the small farm.

Chairman.

6972. You would look to the allotment leading up to a small holding, so that when a man had saved money by the frugal use of his allotment he could extend his borders?—Yes; when he found he could manage more than an acre he might take a hectare, as in France, and so climb up.

6973. There is, of course, a critical time in the process, when you pass from the amount of land capable of being managed by the labour of the individual man to that which requires the employment of horses, as, for instance, in ploughing?—Ploughing is not a very heavy additional item. In most country places you can plough for 18*s.* an acre. But what you want to cultivate the land with is brains, and it is brains that come in when you pass from an allotment, which is almost automatic, to a small holding, which requires great judgment.

6974. What is your view of pasture as distinct from arable land for these purposes?—I have examined the finest pasture allotments in England, Lord Tollemache's, at Peckforton. He has there something approaching two hundred allotments, all in pasture. Each allotment contains three acres, a cottage, a brick cow-house, a pigstye, and a closet, which is let at a uniform rent of 10*l.* a year. Half an acre is kept in arable; an acre is left for mowing, and an acre and a-half for pasture. The men have a cow, a heifer, and pigs, and poultry, and they grow vegetables; they have 15*s.* a week wages, and

Chairman—continued.

and their wives earn 3*s.* a week milking at the great cheese farms. They all told me, and I believe they are right, that the cow and the heifer pay the rent. Then the pigs are fed upon the buttermilk, and the children upon the skim milk and the unsold butter, and eggs and poultry and vegetables are taken in large quantities to Chester Market. I could not find one of them who had kept accounts, but they had all got money, some considerable sums of money, in the savings banks, and the men, women, children, and the pigs are all as fat as butter.

6975. What is the result to Lord Tollemache?—Lord Tollemache gets 2½ per cent. interest on his outlay nominally; but the old lord, who initiated this fine experiment, and who has now passed away, told me that it was quite worth another 2½ per cent. to him, for he picked the finest labourers in the country.

6976. I presume any system of that sort would not be possible in all parts of the country?—It was peculiarly advantageous there; the existing enclosures lent themselves to subdivision. It would be an expensive business to sub-divide on a large scale.

6977. There was also a cheese industry prevailing in the district?—That is so.

6978. Parliament has legislated lately with regard to allotments; what is your view of the probable effect of the recent legislation?—I look upon the Act of Parliament to which you refer as a museum of forfeited opportunities, and among the forfeited opportunities is the opportunity of putting the labourer upon the land. First of all, you will observe the process of compulsion is complicated, expensive, and protracted; and all experience, so far as it has gone hitherto, points to the fact that any landlord with a strong will, with a long purse and a lawyer at his back, who does not want to let his land, can beat the parish council. Now, if it were otherwise, if the men get the land, you will observe first of all it is limited to one acre of arable land, and no buildings can be put upon it; therefore the conditions for advance which I postulated are entirely absent. The labourer wants to grow into a farmer. He cannot do so under that Act of Parliament. The labourer for 10 or 12 years past has been demanding three things: first, as much land as he wants; secondly, that he should have it at a fair rent, to be determined, if necessary, by some impartial tribunal; and thirdly, that he should have perpetual tenure of his land so long as his rent is paid; and none of those things will come from the Local Government Act.

6979. You have, I believe, visited and examined some of the small holdings in France; can you say anything on them that throws light upon the question we are discussing here?—They throw, I think, very much light upon the question. I have examined the holdings in the Pas de Calais, and in the valley of the Somme and round about Paris, and in the Burgundian vineyard district. We found there that in almost every place we visited 90 per cent. of the men own the land on which they work. They began life, as our labourers begin life, earning wages. The regular wage is 7*s.* a week and food; they put by money till they have amassed 40*l.*, and then they buy an acre of land, which is as easily bought in France as a cow or a horse is with us. That increases their savings very considerably, and in a short time they are able to increase their acre to a hectare. Then they buy or build a cottage on their land, or near it. Then they look out for a wife. The girls will not look at a man till he has got a bit of land and a cottage of his own. They bring the money, the money they have been saving; they begin with a well-stocked purse, and become more and more prosperous every year. They have large sums of money after a time in the savings banks. There are 112 million pounds in the French *Caisse d'Epargnes* at this moment, which extracts the sting of old age. But observe the difference between the whole agricultural system of France and that of England. In England we have a little over 300,000 holders of more than an acre; in France they have seven million holders of more than an acre, four millions of whom work the land entirely with their own hands. In England the average size of a farm is 390 acres; in France the average size of a farm is 10 acres. In France there are eight million acres of common land, almost exactly the amount which by successive Enclosure Acts has been taken out of the hands of our labourers and swept into the hands of the landlords in the last 170 years. The consequence is that while, before the recent diminution of the rural population, the average population of the villages in England was 33 per cent., the average population of the villages in France is 75 per cent. The English peasant is degraded and underpaid and servile and despairing; whereas the French peasant is decent and comfortable and independent and full of hope and happiness; and it is simply from this cause, that land in small quantities is easily accessible in France, and is not easily accessible in England. You will excuse my speaking dogmatically; it is the form in which one can best put forward evidence; I do not mean to be presumptuous.

6980. We are much obliged to you for putting it as you do; we wish to get your opinion in the most emphatic form; but of course you know as well as other people that there are exceptions on both sides; that there is another side to the French peasant, and that there is a better side to the English peasant, is there not, sometimes?—I have not seen either.

6981. Now let me ask you what you would suggest to arrest the depopulation of the rural districts which you have referred to?—I do not think an enlargement of the Local Government Act in the direction of my criticism would cover the matter. It would leave the heavy charges, rent, and royalties, and ground rent which cumber industry both in town and country, untouched. It seems to me a Free Trade country like ours cannot bear a double tribute, the tribute of rent and the tribute of taxation, and that only by a gradual and merciful extinction of landlordism and by the nationalisation of land, is there any hope of doing more than scratching the surface of the problem; though no doubt what I should call a righteous Parish Councils Act on extended lines would help it on and improve the condition of the labourer.

6982. What is commonly known as the nationalisation

Chairman—continued.

nationalisation of the land is not the same thing as the creation of a large system of small holding proprietors?—I am not sure that I know what is commonly understood by nationalisation of the land, but I know what I mean by it.

6983. You mean that the land should be the property of those who till it, and it should be capable of being freely disposed of from one to another?—I mean that the land should be the property of the community, and that all rent that is now paid to the landlord should be paid to the community. Were I a statesman (which Heaven has not thought me worthy to become) I would say that from a given date the land of England should pass to the community——

Mr. *John Wilson* (Govan).

6984. To the State?—If you like to call it the State I will not quarrel with that term, but I prefer to call it the community.

Chairman.

6985. May we say the State as the official embodiment of the community?—Be it so.

Mr. *Stuart-Wortley.*

6986. Do you mean the State or the municipality?—If the question is whether I mean nationalisation or municipalisation, I should prefer municipalisation.

Chairman.

6987. The principle is the same in both cases?—The principle is the same. Immediately on this taking place I would have the land of England valued. I would secure to the landlord his fair rent for a certain limited time, 30 or 40 years; or for his own life and the life of his successor. At the end of that time it should lapse to the community, and the landlord would cease to have any connection with it. That process would be absolutely cheap; there would be no passing of money, and it would be intensely popular. There are three topics, I may tell the Committee, which would at once lash the dullest and most bored audience in any town or country, I mean an audience of working men, into passionate enthusiasm, and one of those three is the nationalisation of the land. I want also to point this out emphatically. I have had very large converse with landlords on this subject. I have spoken everywhere throughout England on the subject, and landlords who know that I should treat them as gentlemen should be treated have come to my meetings constantly, and have afterwards come to talk the matter over with me, and I am amazed at the immense number of cases in which landlords have told me that they would welcome such a result. They are in a most forlorn condition at present; their rents are frightfully in arrear, and I am told that some gentlemen in Lincolnshire (it makes one's heart bleed to think of it) are unable to hunt more than two days in the week. On the other hand, they know, or think they know, that a democratic Parliament, which is a possibility in the future, will heavily tax land values, and they would think themselves well out of all this anxiety if they had what is virtually a terminable annuity at 40 years; and if they are anxious for their children, insurance offices would show them how to deal with the question.

Chairman—continued.

6988. Of course, otherwise, your object being to bring about, as I said, small holdings, a system of small farms such as they have in France and other foreign countries, it could be brought about without this somewhat revolutionary process, by facilitating the breaking up of estates and giving larger inducements for men to acquire land for the purposes of tillage?—If they were given as much land as they want, and if they were given it at a fair rent, and if they were given perpetual tenure, it would be a very long way towards it. But the giving of land will not terminate the whole subject. The villages must be made attractive as well as lucrative. The villages require lighting and paving, they require recreation grounds, they require institutes and libraries, and they require cottage hospitals; and if there were no rates to pay (the rates being covered by what is now rent) the money in the hands of the village authorities would enable them to do this, which though they have permission to do under the Parish Councils Act they are unable to do at present because they are afraid of raising the rates. If you wish to bring the people back from the town to the country (and that is my whole point with regard to this Committee) you must not only make the land lucrative, but you must make the village as attractive as the town plus the additional advantages of the country; you must reverse the rural exodus; and in my opinion the first condition of that is the extinction of our system of landlordism.

Mr. *John Burns.*

6989. Do I understand you to say that the rural exodus from the village to the town and city reached its highest point about 1873 or between 1873 and 1880?—No; I said it began about 1873, and I have no figures subsequent to the 1881 Census.

6990. Did it reach its highest point between 1873 and some six or seven years ago?—I should think not. I think it has been increasing ever since, and is now at its highest point.

6991. In your experience where did the people mostly go from the villages from 1870 up to 1880; did they go to the mines in many districts?—I have no statistics that would tell me.

6992. The sudden inflation of the coal trade, and the consequent high wages between 1870 and 1875, would attract a great number of agricultural labourers, who were working on lower wages, to the mines in that period, would it not?—No doubt the inflation of any trade would attract men; for instance, the inflation of the fish and ice trade at Grimsby would attract men from Lincolnshire.

6993. I will go through the trades, if you will allow me; may I take it that an inflation in the coal trade would attract men to the mines?—I suppose it would. But I may say I confined myself to speaking of the loss of the men from the country; I have not followed them into the towns.

6994. You believe that the sudden inflation of the coal trade between 1870 and 1875 would necessarily attract a great number of men from villages

Mr. *John Burns*—continued.

villages contiguous to the coal and iron districts?—It seems probable, but I have no knowledge of it.

6995. You have no evidence, have you, after 1875, of many of the men who took to the coal and iron and steel work going back to the villages that they had come from?—No, I have no evidence.

6996. Do you think they do go back, or do you think that once from the village it is always from the village?—I fear it is once from the village always from the village.

6997. Would not the similar inflation of trade at that period with regard to factory works also be another attraction from the village; would not the sudden accession of profitable business in the factories and workshops from 1870 to 1875 and 1876 act similarly to the mines?—If you mean it would attract men from the pauperised villages, no doubt it would be so.

6998. The sudden development by local authorities of water and gas and tramways in neighbouring towns in that same period would also be an additional attraction besides that of mines and factories, would it not?—No doubt.

6999. As apart from the economic reason through high wages attracting the agricultural labourer of lower wages to the town, is there an individual repugnance on the part of the labourers to village and agricultural life?—No, I think not; I think the hereditary local feeling is very strong, and if life were possible in the country they would stay there.

7000. Do you think the hereditary feeling, as you very correctly put it, the desire for a healthy open-air life, strong enough to resist the counter attraction of the town and the city?—You mean that the smell of gas beats the smell of the honeysuckle. I would have the smell of gas in the village, too.

7001. Or, rather, you would have the electric light?—By all means.

7002. Do you think, as apart from economic and industrial causes, there are moral causes operating to attract the labourer to the town and city?—Would you indicate what you mean by moral causes?

7003. Is not there a desire on the part of the labourer to be less under the supervision, say, both of the parson and of the squire?—Undoubtedly. That is what I spoke of under the head of thraldom.

7004. But it does not only apply to the squire or the landlord, or the farmer?—No.

7005. It applies also to other institutions of the village, more or less dependent upon territorial influence, or to any small community?—Precisely.

7006. In many cases he prefers to be exempt from the irritating inquisitiveness both of the squire and the landlord, and, I may say, his neighbours?—Or, say, the parson. My relations with my men have been so absolutely fraternal and unparsonic that I cannot give an opinion upon the subject, but I can suppose it is so.

7007. Do you also think that the long hours, and the monotony of agricultural work under the existing conditions, act as an incentive, even where permanent work exists, to take men to the town; do you not think that the mere monotony of agricultural employment under present conditions drives men to the town?—As a passionate horticulturist, I see no monotony in any agricultural operations.

7008. May I put it that every agricultural labourer is not a modern Vicar of Wakefield?—He is happier than if he were employed in looking after a machine, or, for instance, in making a safety pin, which involves the twisting of his thigh at regular intervals for 10 hours in the day.

7009. Has an agricultural labourer the sense of proportion to see that, or does he see it?—So far as I know, I think he has.

7010. Coming to another point: you said the present methods of farming in the main were obsolete?—Yes.

7011. You simply stated that?—Yes.

7012. Can you give us one or two practical instances, because it bears upon the migration of the labourer to the town?—Abundant instances are given in the very interesting report I quoted from Mr. Wilson Fox with regard to Lincolnshire. He gave us as the causes of the sufferings of the farmers, first of all the falling off in prices, and, secondly, the extortionate charges of railroads.

7013. Excuse me; what I am asking is as to obsolete methods of farming, and not as to railway charges?—What I mean is that if prices fall it is an obsolete method of farming to go on growing what will not pay, and that is what farmers do. They know that cereals will not pay. But these great farmers have put their foot down, and they said to Mr. Fox, all over Lincolnshire, "It is either the four-course system or pasture; there is no other alternative." I have tried to show there is a most profitable alternative.

7014. To what extent are farmers indisposed to adopt the principle of high farming, machinery and so forth; would you say that farmers generally were indisposed to adopt machinery?—Oh, no.

7015. Or that they were indisposed to adopt modern notions?—I have tried to indicate modern notions by what I have said about small farming; and I am sure 99 out of 100 of what are commonly called farmers would refuse to adopt anything of the kind, but cling to the old arrangements.

7016. I want to know to what extent large holdings, by obsolete methods of farming, are throwing men out of work?—That means you wish me to define what I meant by "obsolete." I meant growing food-stuff that will not pay.

7017. You mean a lack of adaptability on the part of the farmer to meet the market?—Yes.

Mr. *Heneage.*

7018. What do you mean by large farmers?—Mr. Wilson Fox means farms from 500 to 1,500 acres. I should have gone a little higher, but that is Mr. Wilson Fox's estimate.

Mr. *John Burns.*

7019. To what extent does the agricultural labourer get permanent labour from the landlord who cultivates, as compared with the intermittent character of his labour from the tenant; or, putting

Mr. *John Burns*—continued.

putting it another way, is the labour of an agricultural labourer when employed by a tenant more intermittent and casual than it is when he is employed by a landlord who farms direct?—I have too small an experience of landlords farming their own land to tell you.

7020. Where you have had that experience, did you find the landlords and landowners less inclined to suddenly terminate the labourer's work than where the land is cultivated by a tenant who does not own it?—So far as I know, they would be disposed, as men of business, to look at their balance-sheet as a farmer would, and, if it were necessary to economise in the direction of labour as being the weakest point, they would do so.

7021. Obviously, the landowner who cultivates himself must be as susceptible to commercial influences and the sudden termination of his labourer's employment as a tenant?—We must allow for the principle *noblesse oblige* as affecting the landlord rather than the farmer.

7022. Does that operate to a greater extent to-day than it did 20 years ago?—I am not prepared to say.

7023. You said you had a hundred acres under allotment, which was glebe land, and unfortunately did not continue to be dealt with in that way after you left, and you said that whereas on large farms 28 bushels on an acre had been grown, on your allotments from 42 to 60 bushels were grown?—Forty-two bushels I took as the average.

7024. You said that this difference between 28 bushels per acre, on outside farms, and 42 on your allotments, meant a money advantage of 4*s.* per week to every allottee?—Yes.

7025. That is out of one and a-quarter acres?—Yes; you may call it one acre.

7026. You said that the total product from each allotment was 19*l.* 10*s.*, or you put it in this way: that from his allotment a man got for 5*l.* expenditure 19*l.* 10*s.* worth of products?—Yes.

7027. I want to know what would have been the result to the agricultural labourer if the 19*l.* 10*s.* worth of agricultural product had been paid for per hour, at the price that he was getting from the farmer per hour during the period of cultivating the allotment?—I do not quite follow the question.

7028. I want you to tell me, if you can, how many hours a labourer, working at the same price per hour as he received from the farmer, put into the 19*l.* 10*s.* worth of product that he raised from his acre?—Not one. That is the kernel of my scheme. Unless the allotment is worked in the man's spare time I treat it as a failure.

7029. What do you call "spare time"; were these allotments cultivated after the man had done his day's work?—Yes, and before his day's work began; they were cultivated very largely by the men's wives; the wives in my parish were as good farmers as the men; they could do everything except dig and hoist the sheaves, and it may be there are growing children.

7030. What was the number of hours per day at regular farming done by the allottees?—Taking the time for meals, taking the time of absence from home, it would be 12 hours.

Mr. *John Burns*—continued.

7031. What was the average number of hours per day through the year, after he had done his day's work for the farmer, that he put on to the allotment; was it two or was it four hours a day?—I totalled it, and I made out that he would have to spare for his allotment 372 hours in the year.

7032. That is roughly one and a-half hours a day?—Yes, you may take it at that.

7033. That means 13½ hours a day altogether. Does that include Saturday?—There is no Saturday half-holiday with these men.

7034. Then I gather from you that their hours per week would be six times 13½; is not that so?—Yes.

7035. So that altogether, working for the farmer and working on his allotment, your ideal allottee gives an average of 81 hours per week between the two?—Yes.

7036. Do you consider 81 hours per week is the standard of hours that ought to prevail in Arcady?—Well, you know a man's nature, both moral and physical, is such that he acts very differently on land which is his own and land which is another person's. Charles Lamb says somewhere that his pen never frisked and frolicked so delightfully as when he had been grinding at the India Office all day; and my men were never so happy working on their allotments as after they have been working for the farmer; they worked till it was so dark that they could not distinguish a spade from a fork, and one of them fastened a lamp to his trousers to work by, and then, after working on the allotment, instead of going to the public-house, they went to bed, and slept the sleep of the just. I think on the whole they were morally gainers, and certainly they were not physically losers by the large amount of time they spent on the allotments.

7037. Do not you apprehend that the development of this spirit of thrift which wishes to work 81 hours a week, either on the farmer's land or on the allotments, might give rise to that earth hunger that the small peasant proprietor has in France and Belgium?—So far as we saw it, the earth hunger had anything but an evil effect in France and Belgium.

7038. You think it has not an evil effect?—Wherever I have had personal experience of French land, I should say not.

7039. Have you visited the French peasants yourself?—Yes; I described to the Committee when you were out of the room what I had seen of the peasants in the valley of the Somme and around Paris and in the Burgundian vineyard districts.

7040. Are you anxious to reproduce the healthy earth hunger of the peasant proprietors of France?—I am not anxious to reproduce the system of peasant proprietors, but I am anxious to reproduce it in the form I have stated, as tenants of the community.

7041. You would not like to reproduce the family system of cultivating allotments that one sees in peasant life in Belgium and France, where the peasant works 14 and 16 hours a day for six days a week, with his wife and children frequently working on Sundays on his small allotment; you would not like, I presume, to see that adopted as your ideal?—I saw no working

on

Mr. *John Burns*—continued.

on Sunday; Sunday was a holiday—a day of best clothes.

7042. For half the day?—As regards the families, I never saw happier families, parents or children, in any part of the world than I made acquaintance with on those French holdings.

7043. Have you calculated, if your system of allotments was general and the product from those allotments entered into competition with the professional farmers and professional labourers who have no allotments, what would be the effect in displacing what I may call the professional agricultural labourer?—Do I understand you to suggest that the small farmer would displace the labourer?

7044. No; do you know anything of Nottingham?—No.

7045. I daresay you know it is a district in which small allotments generally prevail around the town?—Yes, I know that.

7046. Are you aware that those small allotments have displaced, for a ring of 10 miles, what was formerly the professional farmer and the professional agricultural labourer; do you know he has been displaced by the grower of flowers, cabbages, and vegetables which these professional labourers previously produced?—You mean that he grows them for himself instead of for a master?

7047. Yes, and sells the surplus in a competitive market in the town?—I do not know it.

7048. Would not an indefinite extension of your small allotment system lead to that all over the country?—In all I have done I have rather shrunk from adopting the rôle of prophet; or rather modern criticism points out that the rôle of a prophet is hortatory and not predictive; so that I would decline to say what would be the result under a combination of circumstances that I have not considered.

7049. Taking your 80 allottees, with their 100 acres of allotment, do you not think if the 100 acres, instead of being split up into 100 allotments, was farmed co-operatively with the 80 men as a farm, that would give practically as much produce as they now produce, with considerably less labour?—I have only seen one instance of co-operative farming. It was undertaken under very favourable circumstances in the neighbourhood of Warwick, and it was an absolute failure.

7050. What was the reason?—It issued in the whole thing being abandoned as not paying.

7051. What reasons were assigned?—The reasons assigned were that the profits gained upon the farm were not sufficient to divide in bonuses and make the labourers better off than they would have been if working by themselves, nor, indeed, so well off.

7052. I gather from you that what an allotment scheme requires is the individual incentive of personal profit; is that so?—Yes.

7053. And a nucleus of permanent, or relatively permanent, employment from the farmer or adjoining landlord; would you add that as another factor?—I am not quite sure that I follow you.

7054. My first point is the individual incentive of personal profit?—Yes.

7055. And, secondly, that the agricultural

Mr. *John Burns*—continued.

labourer who worked the allotment should have either regular, or relatively steady, employment from the farmers or adjoining landowners?—Precisely.

7056. And the allotment system under present forms of agriculture must necessarily mean very long hours?—Yes.

7057. You are anxious to see that system reproduced and extended?—As a step towards something better.

7058. You said that on many allotments it would be possible to grow flowers and vegetable products which are now grown in France and Belgium?—Yes.

7059. I gather from you that till the French and Belgian producer was, so to speak, starved out of the English market, the allottee would have a barely better time than if he did not have an allotment at all, and that in keeping the French and Belgian cultivator out of the market the allottee would have a much better position till that was exhausted and done away with; but what would happen then?—I did not speak of the allottee growing those things for sale; he grows for his own consumption. It was the allottee growing into the small holder who was to grow these things for sale.

7060. I gather your system of allotment for the agricultural labourer means that he should only grow for his own consumption?—No; I would repeat that that is what I have done in default of better possibilities; it is only the first stage towards what I should put down as the necessary thing, namely, the expansion into the small holder; that is a man who, instead of working on his small allotment, gives all his time to his little farm.

7061. Would you not prefer, with the view of employing more labour (which is the object of this Committee), that the local authority, or the county authority, or the municipal authority, should endeavour to farm co-operatively, under decent hours, wages, and conditions, rather than have the present system of allotments, with its extravagantly long hours and its consequent disadvantages?—Subject to the conditions I laid down, I think that is the idea, that the municipality, or what you please, should be the proprietors of the land, and should let it to the men on conditions of perpetual tenure, fair rent, and as much land as the men want.

7062. Would you not rather see the total amount of agricultural labour to be now done spread over the existing number of agricultural labourers rather than more farms, more homesteads, and more villages being created; would not that be better than building up a new system?—I suppose the desire to rise is inherent in our nature, and my object has always been to give the agricultural labourer the chance to rise, which he will not do if you fix him on an allotment; that is gilding the pill for ever.

7063. Would he have an opportunity of rising if he had an allotment under the local authority or the parish council?—Not as at present worked under the Act.

7064. Would he if it were worked on the co-operative principle?—It may be so.

Mr. *Lawrence.*

7065. You spoke very highly of the French system; are you aware that recent French statistics show that the great towns in France are increasing relatively just as they are in other countries, in spite of the land system?—I am not aware of it. It is an interesting fact.

7066. It is the fact; is it not the case that, so far as anything so uncertain could be proved, the land system in France is responsible for the stagnation of population there?—I suppose the stagnation of the population is a matter of economy, and that the motive of economy, taking their *quasi*-Malthusian lines, would operate off the land as well as on it. If you get it into the mind of a man that he is only to have two children, he will have only two children, whether he is off or on the land. I should not connect the land with it.

7067. I can imagine that economical principles might operate outside agricultural districts; but where you find practically in almost every other country in Europe an increase in population and in France a stagnating population, France being a country which is largely agricultural, is not it natural to connect the agricultural system with that singular fact?—I do not see that there is necessarily any connection, any more than between Tenterden Steeple and the Goodwin Sands.

7068. Have you not heard there is an undue amount of litigation among the small peasants on the small pieces of land liable to fall to the different members of a family?—I am only speaking of France from my own personal knowledge, and all I can say is that I came across no such instances. It may be so.

7069. Have you had occasion to look through a book by Lady Verney in relation to this subject?—Yes. Her evidence is very interesting, but it belongs to a part of France I have not visited, and she has not visited the parts of France I have visited.

Mr. *John Burns.*

7070. Have you read Zola's book, "La Terre"?—No, I have not; but I may point out that Zola is a novelist.

Mr. *Lawrence.*

7071. Is it not the case that the indebtedness of the peasantry is very great in France?—In our experience it is quite the contrary. We hardly found a family who had not money in the bank.

Mr. *Bartley.*

7072. May I ask who you mean when you say "we"?—I mean an experienced friend who accompanied me, and myself. I used "we" from feelings of modesty, to avoid egotism.

Mr. *Lawrence.*

7073. I understand from the Blue Book of a few years ago that the indebtedness of the country round Nantes is very extraordinary?—I did not visit Nantes.

Mr. *Logan.*

7074. You do not advocate allotments as likely to bring about the Millennium?—No.

Mr. *Logan*—continued.

7075. But simply as a stepping-stone to something better?—Yes.

7076. The agricultural labourer, if he is to rise, must begin at the bottom of the ladder and make himself master of his business?—Yes.

7077. You do not believe that allotments should stand in lieu of wages?—Certainly not.

7078. You would rather see the agricultural labourer working eight hours for the farmer and the same number of hours for himself that he does now so as to make his day shorter?—Certainly I should.

7079. You mentioned small holdings as being the ultimate aim of the agricultural labourer; do you consider that the Small Holdings Act, which was passed some two or three years ago, is at all likely to lead to the acquisition of small holdings by the agricultural community generally?—No, I think it is even less likely to do so than the clauses in the recent Act.

7080. Will you tell us shortly why you think so?—Because of the extraordinary difficulty of getting land under the Act.

7081. You are aware, I suppose, that it is currently said that any quantity of land can be got in the neighbourhood of our villages?—It cannot be got in small quantities.

7082. But you are aware of the fact that people discussing this agricultural depression question generally assume that land can be got?—I have heard it assumed.

7083. Perhaps you would not be surprised to hear that a gentleman told me the other day that I could have any quantity of land for 2*s.* 6*d.* an acre?—I should be very much surprised.

7084. In your experience in going about England can you tell the Committee whether you have found that it is a very easy matter to purchase small quantities of land at a reasonable price in or near our villages?—Not without mortgaging; and that plays into the hands of the money-lender rather than the labourer.

7085. Even by mortgaging do you think land in small quantities can be got at anything like a reasonable price?—Certainly not in the places I have visited.

7086. You have told us that you have had some considerable experience of French peasant proprietors, and that the peasant proprietor is prosperous in France; can you give the Committee any proof of the prosperity of the French peasant proprietor?—I put on record a great number of proofs a year and a-half ago in an article in the "Contemporary Review." It is an elaborate sort of proof, and I could not at this moment recall it; but wherever I went I found that the man was saving on every year's experience; that his possession of land and his addition in the shape of beasts, and so on, was growing, as the money laid by in the bank against old age was also increasing.

7087. Has it ever occurred to you that the small proprietors of France have found the great bulk of the money for the loan?—I believe that is notorious.

7088. Does not that rather prove that the peasant proprietor must be fairly prosperous?—Undoubtedly he is prosperous. The 112 millions in the Caisse d'Epargnes, I am informed, is almost entirely in very small deposits.

7089. Supposing

Mr. *Logan*—continued.

7089. Supposing the fear which was expressed by one of the Members of the Committee just now that the allotment-holders might, by growing large quantities of stuff more than they wanted for their own consumption, displace the produce grown by the farmers, do you think that would be a very serious difficulty?—You mean as tending to extinguishing the British farmer?

7090. Yes?—I think it would be a gain.

7091. Would it not be a national gain, supposing it had been possible to multiply by a thousand the 100 acres which your men cultivated?—It is obvious that instead of taking 800*l.* a year out of the land, it would have taken 800,000*l.* out of the land, and the community would have been 800,000*l.* a year richer.

Mr. *John Burns.*

7092. Or would it have enabled them to work for lower wages; do you think that if, on the average the allottee, from his allotment, adds for the moment 4*s.* per week to his spending power, if that were generally expended would the farmer not exploit that condition of things by reducing the wages?—No; I think the men would be strong enough to prevent that; because the prosperous allottee is a much stronger man than the penniless non-allottee.

7093. Is it the fact that the allottees resist the reduction of wages more strongly than men without allotments?—I am afraid they are too few to enable one to judge.

7094. Have you any information in that direction?—No.

Mr. *Logan.*

7095. You think that the man with an allotment is much more likely to be independent than the man without it?—He is on his way to independence. He clears 4*s.* a week, that is 10*l.* a year, and if he runs it up to 13*s.* a week with his wages he has touched the limit I have laid down for decent living.

7096. So that the man with an allotment is not entirely dependent upon the farmer, and is not compelled to take whatever wage the farmer chooses to offer him?—That is what I meant to say.

7097. Are we to understand that your proposed remedy for the want of employment in this country is land nationalisation?—Yes.

7098. You have gone very carefully into the subject; are you of opinion that the present system of land tenure, apart from its effects on agriculture which you have slightly touched upon, is detrimental to the interests of the community?—Clearly; I have always been of opinion that the system of royalties and ground rents is seriously detrimental to the interests of the community.

7099. Would you explain what the effects of ground rents are upon agriculture?—I understood you to ask, apart from the effects upon agriculture, what was the effect upon the community. Ground rents affect the urban community; I am not prepared to connect them with agriculture.

7100. I ask whether, apart from its effect upon agriculture, the effect of the present system of land culture in the urban districts is detrimental to the interests of the community?—Yes; that is the question I answered.

Mr. *Logan*—continued.

7101. Have you ever considered where the large increase in land values comes from?—I suppose it comes from the enterprise and energy of the individuals who, by building houses and shops, and by causing trade to flow to the place, and setting up churches and theatres, and so on, have raised the value of the land, acre by acre, and yard by yard.

7102. You said, just now, that the present system of land tenure had a detrimental effect on the community by increasing land values; was that so?—I think you suggested the increase of land values.

7103. You agree with that?—Yes; that is increasing the land values for the proprietor, and not for those who create the increased value.

7104. You would say that these increased land values, which are the result of the industry of the people, are used to the detriment of the people from the fact that an increased rent has to be paid?—Yes.

7105. You say that landowners would welcome your system of land nationalisation?—The rural landlords would.

7106. Do you think the town landlords would?—I cannot say; I should be very much surprised if they did.

7107. So should I. You suggested terminable annuities to be given in exchange for the land?—I suggested the equivalent of terminable annuities. The security of the rent for a given period.

7108. Could not the same thing be effected by land bonds?—Possibly.

7109. As you believe in land nationalisation, I suppose you hold that the creation of a large number of small proprietors in England would only intensify the present evil?—Of course it would retard land nationalisation indefinitely, for it would arm a very large number of persons against it.

7110. You consider that what is known and what you advocate as land nationalisation would be absolutely just?—It would be ethically just absolutely, as it appears to me.

7111. Therefore it follows as a matter of course, does it not, that the present system is an unjust one?—Not necessarily; but I think it would be just to do as I have suggested.

Mr. *Pickersgill.*

7112. You have drawn attention to the insufficiency of the wages of the agricultural labourer for his decency and comfort; the question I want to ask is this: is there distress amongst the agricultural labourers arising from want of employment?—I think the problem solves itself at once in the direction of the men leaving. I do not think you find men loafing about the villages except in the winter time; in winter they suffer very much, but if a man finds he has no chance of employment for the greater part of the year he goes away.

7113. Is it your experience that agricultural labourers are discharged during the winter?—Yes, in very large numbers.

7114. Are they not kept on in large numbers during

Mr. *Pickersgill*—continued.

during the winter?—It depends upon the farmers' necessities; we have always had, in any village I have been in in the winter, men thrown out of employment.

7115. Have not the wages of agricultural labourers risen during recent years?—Not in the 10 years I have been concerned with.

7116. You mean the last 10 years?—Yes.

7117. According to your experience, agricultural wages have not risen during the last 10 years?—No.

7118. To what parts of the country does that apply?—I have visited in every county.

7119. You state that generally?—I state that generally.

7120. Would you agree with what has been stated here, that the supply of competent agricultural labourers is not equal to the demand in country districts?—I have rather tried to show that it was more than equal to the demand, that men were leaving because they could not be employed.

7121. As I understand it, the object of your proposals (to use your own words) is to bring the people back from the town to the country?—Yes.

7122. Are we to understand those words literally, that you contemplate people who are now in the town actually going back to the country?—Yes; I think that a man who finds that advantageous circumstances have supervened in his old home, would find the ties of his old home draw him back on the chance of sharing in them.

7123. Although he was employed in the town?—I was thinking of the unskilled labourer, who is congesting the towns, and is, in a great measure, unemployed.

7124. That is clearly the great object of our Committee, to deal with the unemployed in the towns?—Yes.

7125. That is what I wanted to put to you specially; whether your proposal, in your opinion, supplies an immediate means of relieving the unemployed in towns?—I put it, if carried out as I have proposed it, as an immediate and effective bait to the unemployed in the towns.

7126. Do you think, then, that the unemployed in the towns would, of their own motion, individually go back to the country?—After learning from their old friends how things were going, I think they would.

7127. Does not that imply the lapse of time for the operation of these legislative changes?—Undoubtedly.

7128. Then your proposal is not an immediate means of relief, but one that would operate only after an interval?—I think the complete reversal of migration would be a matter of time; but I think the moment it was understood that the condition of the agricultural labourer was ameliorated in the country, the migration from the town would begin.

7129. So that it would be, in your view, an immediate means of relieving the pressure?—It would be a commencement of relieving the pressure.

7130. Do you contemplate the people in the towns being left to their own initiative, or do you think that the community should take some special means to transfer them back to the country; in other words, do you think the attraction would be sufficient in itself, or would the community have to take special means to reverse this process?—I think it would be automatic; I think it would act of itself.

7131. Are you in favour of the establishment of farm colonies?—I have seen two or three, and I think as a palliative they are useful; but I should not take them as supplanting my scheme.

7132. I meant rather, supposing your scheme were accepted, would farm colonies be a medium of bringing about a reversal of the process more quickly than leaving people to their individual motion?—No doubt it would create new areas to which the unemployed would be brought.

7133. You would be in favour of farm colonies concurrently with your own scheme?—Certainly.

Mr. *Heneage*.

7134. When Mr. Burns referred to labourers working 13½ hours a day by working on their allotments after their day's work for the farmer, you said that it would be better for them to spend their evenings at that work than in the public-house. Is it your experience that labourers after working 12 hours spend their time in public-houses in agricultural villages?—Yes.

7135. I am sorry to hear that that is your experience; where else are the poor fellows to go?—At any rate, they do go there.

7136. How long have you lived in Lincolnshire?—I am so unfortunate as only to have been there for 14 months.

7137. Then may I take it that you do not speak on behalf of the Lincolnshire labourers in that respect?—Except so far as what I have seen of them within the 14 months.

7138. I gather that you thought it was a great objection that the cottages could not be built on each allotment?—Yes.

7139. Is it not better that the gardens or allotments should be adjacent to the cottages than that the cottages should be all crowded together on the allotments?—I do not care whether Mahomet comes to the mountain, or the mountain to Mahomet; but the allotment-holder is dependent upon fixity of tenure for his cottage.

7140. You stated that you wished a cottage to be put on each allotment of one acre each, that is to say, in a field of 20 acres there would be 20 cottages crowded together one to each allotment; is it not better for the health of the labourer, and in his interest that the cottages should be separate with the gardens or allotments adjacent to them?—If you mean an acre to each existing cottage, I should have no objection whatever to that.

7141. Now, with regard to the point of large farms, you take large farms as over 500 acres; is it not the case that labour on those farms has been very much diminished by laying down a great deal of grass, and by machinery, and by the fact of farmers reducing their labourers and taking a larger share of the supervision of the work upon themselves and their families?—As regards what you say about pasture, that is so, to some extent, no doubt; but I do not think the other

two

Mr. *Heneage*—continued.

two elements come in in Mr. Wilson Fox's report, which is what I was arguing upon.

7142. Is it not the fact that where farmers 10 years ago were employing, we will say, nine or 10 labourers, with a foreman, a shepherd, a gaffman, and a couple of waggoners, they have now reduced the number of what I may call their confined labourers, and are now doing by themselves or by their sons the shepherding and foreman's work, and other work, and that that is the reason why there is less labour employed on the farm?—May I ask whether the honourable Member is speaking of very large farms?

7143. I am speaking of all farms above 200 acres?—I should not have thought on a thousand-acre farm the man and his sons took much part in working the farm; I should have thought it was entirely done by hired labour. But my experience is that the great cause of the reduction of labourers is the desire to economise, and that the land suffers by the reduction of labourers.

7144. Then I will take a thousand-acre farm. Ten years ago on a thousand-acre farm you would have not less than six confined labourers; is it not the fact that on very few of these thousand-acre farms are there more than three or four such labourers now?—I am afraid that is quite true.

7145. Is not the reason of that because a farmer who kept 10 years ago, we will say, a foreman, a shepherd, a gaff-man, and three waggoners, now does a great deal of the foreman's work and the shepherd's work himself, and his son acts as a sort of head waggoner, and therefore they only require three of these men instead of six, and the other three men have to find work elsewhere?—It is absolutely true that in adverse times they require very much less labourers than they did in prosperous times.

7146. Because they are economising?—Because they are economising.

7147. Is it not the fact that about 20 or 25 years ago a farmer made 8 or 10 per cent. on his capital even at the higher rent he was then paying?—I should think that is very possible. If you put it between 1852 and 1872 I think you are right.

7148. I will say up to 1872?—Yes.

7149. Is it not the fact that the farmer, upon a rent now reduced by 30 or 40 per cent., is not making 5 per cent. on his capital?—I do not think he is making one or a-half per cent. According to my experience he is farming his land on borrowed money or unexhausted capital.

7150. At any rate, he is not making 5 per cent.?—Certainly not.

7151. Therefore he is compelled to make these reductions?—Quite so.

7152. You stated in answer to the Chairman that in your opinion in Lincolnshire the rents were greatly in arrear, and that farmers were unable to farm their land; do you know of many estates where the reduced rents are in arrear, or where farmers are unable to farm their land?—In saying that I was quoting entirely from Mr. Wilson Fox's report. Whatever information I have upon that point is public property.

7153. I have read Mr. Wilson Fox's report; but his report divides itself into different districts very much. He deals with high lands and low lands, strong land and small holdings, and so on. However, I will pass from that. Now, still limiting myself to Lincolnshire, you also stated that labourers were in the habit of being sent away at a week's notice, especially before any election, whether Parliamentary or otherwise; are you aware that the great body of labourers in Lincolnshire are yearly labourers?—I said that where the tenancy was by the week the labourer was warned before any crucial occasion that his action would be watched.

7154. Do you know of any farm or any estate where labourers are let by the week except in the case of builders' cottages or jerry-built cottages?—I know of hundreds.

7155. Can you name one single estate in Lincolnshire where that is the case?—No, not in Lincolnshire. In Lincolnshire, I believe what you call the confined system of labour prevails, but that is not usual in England. As regards Lincolnshire, I will make you a present of Lincolnshire, if that will save any trouble.

7156. Then I need not carry it further?—I have abundant evidence from all over England, and I will not press Lincolnshire.

Mr. *Keir-Hardie.*

7157. You spoke about the difficulty in getting farmers to change the methods of cultivating land; that is due to the fact, I suppose, that their knowledge is largely traditional and handed down from father to son by rule of thumb, so to speak?—Yes, and is not supplemented by any system of agricultural education.

7158. In your opinion, would the establishment of agricultural schools, or training colleges; call them what name you please generally; get over that difficulty?—Undoubtedly. We have no agricultural colleges in England, except two, namely, Cirencester, which is only for rich people, and Aspatria, which costs 50*l.* or 60*l.* a year. In France there are scattered all over the country agricultural colleges on a very large scale, the education at which costs only 18*l.* a year, supplemented by 240 free scholarships given by the Government. Every young fellow who goes there, and labourers' sons go there quite as much as farmers' sons, spend three years in going through a course of partly theoretical and partly practical agriculture. The result is that those men are sent out first-rate farmers and know how to lay out land, as our farmers will never know, until such a system is adopted here.

7159. If the County Council had power to establish these agricultural technical schools, as we may term them, do you think it would be advantageous?—We have the material absolutely to our hands. There are enormous educational endowments, not only in the universities and the great schools, but in the grammar schools all over England, and nine-tenths of the money that feeds those schools was bequeathed by the donors to "*pauperes scholares*," which means the sons of poor men; but we maintain, at a considerable cost, an institution called the Charity Commissioners, which has suggested that *pauperes scholares* means the sons of the well-to-do, and as the land has been taken away from the labourers, so too have the educational endowments.

Mr. *Keir-Hardie*—continued.

I would get back that money. I would pick the most desirable secondary schools, the grammar schools, in every county, and abolish Latin and Greek, which are luxuries and ought to be paid for, and re-convert them to the use of *pauperes scholares*. I would have one as an agricultural college, another as a commercial college, another as a technological college, and another as a women's college for domestic industries.

7160. You referred to one scheme of co-operative farming, which had proved a failure. You have heard of another I presume, which has proved a success at Ralahine, in Ireland; have you heard of that?—No.

7161. You said in your evidence that the smell of the gas was more attractive to the labourers in the country than the smell of the honeysuckle; that is true, I presume, chiefly of the young men. There comes a period in the life of a man, does there not, when the smell of the honeysuckle would be immensely more attractive than the smell of the gas, and when he would desire to return from the life of the town to the life of the country?—Quite so.

7162. This proposal of yours would open up a way whereby there could be a circulation of labour from the country to the town and again from the town to the country?—Yes.

7163. It was rather hinted at that allotments would tend to lower the rate of wages; do allotments lower the standard of living amongst the cultivators or do they live better?—They live very much better.

7164. Having regard to the ultimate bearing of the standard of living on wages, that means that a higher rate of wages will prevail where there are allotments?—It sounds like a sophism, but it may be so.

Mr. *Heywood Johnstone*.

7165. I understood you to say that you would wish to see more attention paid to agricultural education in England?—Yes.

7166. Are you aware that under the Technical Instruction Acts agricultural colleges can be founded and are being founded?—Yes.

7167. And that agricultural scholarships can be offered and have been offered?—Yes.

7168. Are you also aware that a Bill has been before this House for some years which would enable agricultural education to be given in elementary schools?—Yes.

7169. You would gladly see that done?—I should he very glad to see that done.

7170. It is now done in Ireland. but there is no power at present in England to teach agriculture as a subject in elementary schools?—Quite so.

7171. Passing from that I understood you to say that in your experience the condition of the French peasantry was much superior to that of the English peasants?—That is so within the limits of my experience.

7172. In that respect we might learn a lesson from France?—Yes.

7173. France is a country where, for good or evil, there is a very high protective duty as a matter of fact, is there not?—Yes.

7174. At present I think the duty on imported corn is equal to 12*s.* 3*d.*?—Yes.

Mr. *Heywood Johnstone*—continued.

7175. And, in fact, very considerable bounties are given to the growers of certain crops?—Yes, tobacco for instance.

7176. And sugar beet?—Yes.

7177. Have you any knowledge of what is the amount of taxation upon agricultural produce in France?—It is a point that I have not been able to ascertain, and it is a factor in my contention.

7178. May I ask you if it is not stated in the last edition of Mulhall's Dictionary of Statistics that, whereas the value of agricultural products in France is 460,000,000*l.*, and taxation on land is only 21,800,000*l.* in, England, the value of agricultural products is 251,000,000*l.*; that is to say, about half that of France, and the taxation is 20,800,000*l.*, nearly the same as that in France; that is to say, the agricultural products in England are taxed almost twice as much as the agricultural products of France?—That is a most important factor.

7179. You are not aware whether that is the fact or not?—No.

7180. Continuing with France, can you tell us what is the cost of living there for the ideal family you have given us, namely, a man and his wife and four children?—I think, so far as our experience went, their dexterity in cookery lowers the cost in living considerably.

7181. Can you give us the figures?—No, I cannot; I hesitated to ask them that question.

7182. Would it be 10*s.*?—Are you speaking of food alone?

7183. You gave us the figure of 21*s.* a week as a minimum for England?—That includes everything except beer and tobacco.

7184. That includes all the necessaries of life?—Yes.

7185. Can you give us any idea of what a similar provision for a family would cost in France in money value?—No.

7186. Have you any idea of what you should put aside for rent or interest on capital in France?—There is very little land rented. Interest on capital, of course, ought to be considered. I am not prepared to say how much it would be.

7187. As a matter of fact, broadly speaking, a French peasant and his peasant's family could live on very much less than an English peasant and his family could?—That is so.

7188. Whether they make the money go further or not, the fact remains that they require much less for their sustenance?—Yes.

7189. To some extent, if not to the entire extent, that might account, might it not, for their thriving so much better than the English peasant?—It would enter into it,

7190. I think you said in your examination in chief that it had been shown that 21*s.* a week was the smallest sum on which a man and his wife and four children could live with decency and respectability; where has that been shown?—I have shown it in a great number of publications, and in the newspapers.

7191. Have you a publication here showing that?—I have. This one; it is not quite up to date. The most recent I have is in an article in the "Contemporary Review," but the Table I have here will give you an idea of it.

7192. Can

Mr. *Heywood Johnstone*—continued.

7192. Can you give me the items?—They are contained in this table, which I will hand in.

[*The following Table was handed in*:—]

	s.	d.
Rent of cottage, with small garden and pig-sty, per week	2	–
Sick club	–	6
Bread, eight loaves at 4*d.* to 5*d.*	3	–
Flour	–	9
Meat, 6 lbs. at 8*d.*	4	–
Potatoes	–	10
Cheese, 1 lb. at 8*d.*	–	8
Sugar, 2 lbs. at 3*d.*	–	6
Tea, ½ lb. at 2*s.*	1	–
Butter, 1 lb. at 1*s.*	1	–
Milk	1	–
Treacle	–	3
Salt and pepper	–	2
Candles and paraffin	–	6
Fuel	1	6
Clothes, washing, materials, repairs, &c.	2	8
Tools, furniture, sundries	–	10
Total	£.1	1 2

7193. You put the rent at 2*s.* a week?—That I found to be the average rent.

7194. And the schooling at 6*d.*?—That is obsolete now, of course. That Table is not up to date. This was in 1887. I have republished it at a much later date.

7195. That item for schooling may be knocked off now?—Yes.

7196. Have you compared it with the labourers' budgets in the Reports of the Agricultural Sub-Commissioners to the Labour Commission?—I have not.

7197. May I ask you, with your 18 years' experience of your late parish, what is the average labour wage?—We were highly waged because there is a large cement industry in the place, so that our wage was 14*s.* a week; that is higher than our neighbours; 12*s.* rules at a little distance.

7198. I suppose you have families consisting of a man and wife and four children?—Many.

7199. Are none of them decently and properly clothed?—My allotments helped them materially in that direction; but before I came they were all suffering more or less from the want of sufficient income.

7200. You think it is absolutely impossible for a man to keep himself and his family in decency and comfort on 14*s.* a week?—Decency and comfort are relative terms. I had better put it in this way: admitting my estimate of the items to be a fair one, the result shows a minimum of 21*s.*

7201. I am asking as to practical experience now, not as to estimates. Have you not experience of married men with families living respectably and comfortably on 14*s.* a week?—Not comfortably.

7202. Where does the discomfort come in?—In stinting of every description, stinting of food, and ragged clothing and various items.

7203. Have you not experience of a man making 14*s.* a week whose children and himself are decently clothed?—Fairly clothed, undoubtedly.

7204. With sufficient warmth?—Tolerably.

7205. You will not go further than that?—No.

7206. Does not it very largely depend upon whether the wife is a good manager or not?—And whether the man drinks, of course all those things enter into it.

7207. Of course, if the man drinks, 24*s.* a week might be too little?—Decency and comfort being such very variable quantities, I have rather preferred to put the figures of the "weekly budget," and to say that all that falls below that total is insufficient; if people accept that as a fair budget, then my case is proved.

7208. You would say that a man can live very well for 21*s.* a week?—Yes.

7209. Is it not the fact that a very great number of our decent and self-respecting labourers who are held in proper respect by their neighbours do live decently and comfortably on 14*s.* a week?—If "very well" is applied to 21*s.* a week, I could not use the term for 14*s.* a week.

7210. I do not use the term "very well" in the sense of the family having hot suppers and that sort of thing, but I ask whether they do not satisfactorily lead decent and respectable lives on 14*s.* a week?—Not to my satisfaction, and I should think not to their own.

7211. May I take it that that refers to Lincolnshire alone?—No, to England generally; we have made Mr. Heneage a present of Lincolnshire.

7212. Will you make me a present of my own county, Sussex?—I know very little of Sussex; only the north of the county.

7213. At any rate, I put it to you, is it not your experience that men do live respectably and comfortably on 14*s.* a week?—No.

7214. Do you give it as your deliberate answer, that you have no experience of a man living decently and comfortably on 14*s.* a week?—Not what I call decently and comfortably. I can only give my view; it is the subjective aspect of the case.

7215. You have no experience of that being done in your own parish?—No.

7216. In this parish, where you have been for 14 months, how many of your labourers have left the country for the town during the 14 months?—I do not think there has been one instance in the last 14 months. The labourers are, as Mr. Heneage called them, confined labourers; they would only leave at the expiration of their terms. My parish is peculiarly situated; it is broken up into small farms of 50 acres, and there is not likely to be that same decay of rural labour.

7217. What you have told us as to the rural exodus is based more on the figures of other people?—I gave the figures.

7218. And not upon personal knowledge?—It is based very largely on my personal knowledge. I have been a sort of missionary for many years, visiting the villages in every part of England, and viewing farms and the labourers, seeing their homes, and learning their histories, and my information is derived from that experience.

Mr. *Heywood Johnstone*—continued.

7219. I gather that you cannot give the experience from your own knowledge of labourers going from the country to the town, can you?—Yes, I can.

7220. Can you give me concrete instances; will you take any instance, and say how many labourers have gone in the 12 months?—I could not tell in 12 months, but taking 10 years I could easily tell.

7221. Taking 10 years, will you tell me what the number is?—I could not at a moment's notice. I should have to go to my parish and see how many had moved into the towns.

7222. Will you give me figures for one year?—I could not at a moment's notice.

7223. You cannot tell me where they went?—Yes, I think I could tell you where my men in Stockton went to; they went to Birmingham.

7224. Had they any employment in view?—I fancy not.

7225. How many went?—I cannot without looking at the figures say.

7226. Was it 3 or 5 or 15?—A great many more than that in the 10 years.

7227. You cannot give me the figures?—No.

7228. You cannot give me any actual facts that I can test; beyond this figure you have given, which is derived from others?—No.

7229. I gather that they went in spite of your experiment with the allotments?—They went before my experiment began. We lost very few after it began.

7230. I understood you to say that for two years you gave them allotments with no rent at all?—Yes, on condition that the land should be cleared.

7231. What did they do in the two years?—They dug, and cleaned, and burnt the twitch, and in the meantime they grew potatoes.

7232. And manured it pretty heavily, I suppose?—Yes.

7233. For two years they got a present of the land?—Yes.

7234. After that it was let at 1*l.* per acre?—Yes.

7235. Did that include rates?—No, they paid their own rates and taxes.

7236. Did you make any road?—No.

7237. Did you put up fencing?—Yes.

7238. What did the expense of fencing per acre come to?—A trifle; taking the whole 100 acres, I should not think more than 2*s.* 6*d.* an acre.

7239. So that your net rent would be 17*s.* 6*d.*?—Yes.

7240. In fact, it would be less than that. What had been the last rent of this allotment ground of 100 acres?—When I went to Warwickshire it was letting at 33*s.* 6*d.* an acre, but it fell out of cultivation for a time. Then I let it at 1 *l.* an acre, or about that, and it was given over into my hands at the beginning of 1886, when I let it to these men.

7241. So that you practically let it at the same rent which had been received previously?—Very much so, after the first two years.

7242. That is to say, the market rent?—The agricultural rent of the district.

7243. You took upon yourself none of the expenses which the local authority has to take upon itself in breaking up land for allotments?—No; I was at the cost of measuring and pegging, and I gave them the use of a large barn. That, I think, was the extent of my benefaction.

7244. Of course your experience would lead you to say that where allotments can be provided by voluntary effort it is much better and cheaper than to resort to legislative machinery?—No doubt under present circumstances that is so, because then there is no limit to the extent they can have. I have just let land to some of my labourers at Waltham by private arrangement with the parish council, but I have not been able to let it on terms I desiderate, that is to say, as much as they require, at an agricultural rent with fixity of tenure.

7245. May I ask as to my own county of Sussex, do you know a single instance where men have applied for allotments and have not been able to obtain them?—I have no knowledge one way or the other.

7246. Have you any knowledge of the working of the Small Holdings Act?—No, I have not been able to put my knowledge in a shape that I care to produce.

7247. Would you be surprised to learn that in the county of Sussex we have got it into operation, and have found no difficulty in obtaining land, which the men have been ready and perfectly willing to take?—I am very glad indeed to hear it.

7248. You said that one of the reasons which drove men from the country to the towns was the thraldom, to use your expression; and one instance of that thraldom was that they held their work subject to a week's notice, and their cottages also?—Yes.

7249. What notice do they receive in town as regards work?—I do not know.

7250. Would you be surprised to learn that a man's work may come to an end at any hour of the day?—That makes it much worse for him, poor fellow, but no better for my labourers.

7251. If that is so, would not the thraldom be just as great in the town as it is in the country?—I cannot speak from personal experience of urban artizans, but the general impression is that they are far more independent than the agricultural labourer.

7252. One of the instances you gave of the thraldom was that their work and lodging were subject to a week's notice. I ask, as a matter of fact, does the labourer escape from that thraldom by going to the town?—I supplemented that answer by saying that the employer in many cases used his power mercilessly. You must not cut the statement in two.

7253. I must take it bit by bit; but I think we may discard the idea, may we not, of any thraldom on account of the week's notice; then we will come to the pressure which I understood you to say was put on at election times?—At all times, I say.

7254. You instanced especially a common saying in your district; is that where you are now?—No, that is in my old district, in Warwickshire.

7255. You said, "It is a common saying in my district;

Mr. *Heywood Johnstone*—continued.

district: "Now, mind, John, if Mr. So-and-so is elected it will be the worse for you." Have you heard that yourself?—Repeatedly.

7256. Often?—Hundreds of times; the men have repeated it to me.

7257. Have you heard it said to the men?—No; they would not say it in my presence, but I have heard it repeated.

7258. The labourer has told you that that has been said to him?—Yes.

7259. At election times?—Yes.

7260. Has it come to your knowledge at election times?—Yes.

7261. It has been said to the labourer by an employer of labour?—Yes.

7262. What steps have you taken?—I have done nothing, for it would be no use. The man would not dare to say in public what he had told me in private.

7263. How many have told you that?—It is a common thing.

7264. Would you say as many as fifty had come at one election, and told you that?—No.

7265. Twenty?—I cannot say how many. I could only say it has been a common thing, and I have shrugged my shoulders and passed on unhappy.

7266. Have you taken any steps to test it?—The only step I could take would be to grapple with the man, and if the man knew that his tenant had told me he would suffer.

7267. Have you ever taken any part in politics yourself?—Occasionally.

7268. Have you ever brought these facts to the knowledge of an election agent?—No, I have nothing to do with election agents.

7269. Have you brought them to the knowledge of a defeated candidate?—Certainly not.

7270. Either at an election to Parliament, County Council, District Council, or anything else?—I brought it to the notice of a winning candidate, but never to the notice of a defeated candidate, that I am aware of.

7271. Are you aware that you might have upset an election by an instance of that sort?—That is possible; but my mission has hardly been to upset elections so much as to promulgate what I look upon as truth.

7272. Do you think it is more desirable for the promulgation of truth that these statements should be tested in a court of law, or that they should be made, I do not doubt, in perfect good faith, but without an opportunity of testing their accuracy?—It would be all important if they could be tested in a court of law; but my point is that I know it to be hopeless.

7273. You said that land nationalisation was a subject that always excited enthusiasm amongst rural labourers?—I should say among the working classes generally.

7274. Your solution of the question is to give the landlords something like 40 years' terminable annuities?—Yes.

7275. Supposing that done, do you not think that in 10 years time enthusiasm might be equally stirred by some person who came to the labourers and said that this 40 years' annuity was another form of robbery, and that they had better get rid of it altogether. Is it not possible always to find the subject of enthusiasm, if you propose to transfer the property of one man into the hands of other people?—That is possible; but I cannot forego the present enthusiasm, which I consider is righteously directed, for fear that the enthusiasm of 10 years hence should be wrongly directed.

Mr. *Heywood Johnstone*—continued.

7276. The enthusiasm exists, because it is suggested that what is now the property of one person should be conferred upon the community?—I should not put it in that way. I should say that the enthusiasm exists because a method is proposed of dealing effectively with the raw material of the world on which ultimately all prosperity depends.

Mr. *Bolton.*

7277. You advocate small holdings, because you think they will attract a larger number of people to the country to remain in the country, and so give more employment, and deal with a certain portion of the question we have under consideration?—Yes.

7278. You approve of small holdings such as have been established on Lord Tollemache's property?—Merely as an initial step; they are not by any means final. I do not think they themselves will attract back from the towns a sufficient number to meet the case.

7279. But if there is such a condition of comfort, such as you have described, that would afford an attraction, surely, for people to remain rather than to crowd into the towns?—They would remain; whether they would be sufficiently attractive to draw them back is a question.

7280. Do you think that any system of small holdings would be possible under your proposals of land nationalisation?—I see no difficulty.

7281. You say there must be fixity of tenure?—Yes.

7282. And you say there must be fair rent?—Yes.

7283. You must have combined with fixity of tenure and fair rent freedom to the man to dispose of his holding, must you not?—Not necessarily.

7284. If he cannot dispose of his holding, what inducement is there for a man to work on it and improve it?—Its improvement will be to his own advantage. His object is to make it pay. If it does not pay he can surrender it.

7285. Is he to adjust his labour so that it barely pays him, and not to make improvements that increase the fertility of the land and produce improvement?—On the contrary.

7286. If he is to improve his holding, to build on the land and to lay out money, he must be encouraged by having liberty and freedom to sell his improvement, must he not?—He must either recover the cost of his improvement from the landlord or from the in-coming tenant.

7287. Does not that amount to free sale?—If you like to call it so I have no objection.

7288. Then your proposal is that there should be State ownership of the land, with fixity of tenure, fair rent, and free sale?—Yes.

7289. Now, when a man in possession wishes to relinquish his holding, or if a man who has a holding dies and his executors want to realise his property in it, it must be put in the market for sale,

Mr. *Bolton*—continued.

sale, must it not?—Subject, of course, to the decision of the owners, that is, of the community.

7290. That is a limitation of free sale?—I think I limited my free sale by giving the community a check. I think that parting with the land must be subject to the community. The community can refuse to receive another tenant if it pleases.

7291. On what grounds?—The ground of unfitness and incapacity; the grounds on which a private landlord would refuse the tenant.

7292. Can a community exercise the same discretion that a private landlord can?—A local community.

7293. Would not that lead to favouritism if it were exercised on other than economical grounds?—Hardly, I should think, because the local community is dependent on the public of the place.

7294. What right has one man more than another to have the use of this land on these favourable terms?—I suppose you must leave it to the community to decide.

7295. But the community must be governed by some principles of action in dealing with the man?—That they would lay down.

7296. Would you leave the community to lay down the principle of action?—Absolutely.

7297. So that you would have one system of letting this common land in one district, and another system in another?—I think so. I see no objection. I think these are details that would easily be overcome in practice.

7298. Do you not see that if you establish this fixity of tenure and fair rent, and free sale, you set up tenant-right in the occupiers!—Free sale you inject into my proposals; it was not part of my proposal.

7299. Even with a limited sale do you not set up tenant-right in the occupier?—

Chairman.

7300. Fixity of tenure involves tenant-right?—Yes; I quite understood that.

Mr. *Bolton.*

7301. Is not that a saleable property?—Yes; I suppose it is.

7302. If that were sold in the market that would involve competition, would it not?—Yes.

7303. And if the people competed for it, whether there were many or few, or whether they were limited to people in the locality or not, there would be still competition?—Yes.

7304. Therefore a man wishing to occupy land would have to pay a competition price?—That is what I want to avoid.

7305. How will you avoid it?—By placing absolute power in the hands of the community, in the hands of the municipal body.

7306. Would not that lead either on the one hand to competition such as I have mentioned, or jobbery and favouritism on the other?—I should prevent the competition at any cost, because I think the land should be let at an economic and not at a competitive rent; and as to the jobbery and the favouritism, one must take one's chance I am afraid.

Mr. *Bolton*—continued.

7307. How do you distinguish a competitive rent from an economic rent?—An economic rent is what the land can carry in the opinion of experts, and the competitive rent is what people are foolish enough to give apart from what it will pay.

7308. Does not competition govern the economy of the situation?—It has done so in the past.

7309. Must it not necessarily govern it?—I should have thought not.

7310. Why not?—You see the initial step is to value the land. Then the land, being valued, is handed over to the local body, and the local body lets the property, and it lets it on a recognised system of rental, and if the State thought right it might be revised from time to time; but subject to such revision I should keep down the rental to the original sum that was supplied to the letting body.

7311. Then the tenant is to sit not at a competitive rent, not what any other tenant would give, but he is to sit at a favoured rent, a low rent?—He is to sit at an economic rent, a rent that is justified by experience as what the land will carry.

7312. Without regard to competition?—Without regard to competition.

7313. Then he is to be a favoured individual?—If all are equally favoured you can hardly use the word favoured.

7314. How can all be equally favoured under your system?—Because the rent is uniform for all tenants.

7315. Can you suggest a uniform rent of all parcels of land held by the municipality?—The beginning of my process is a valuation of the land that stands as a State document.

7316. Would you kindly answer my question; forgive me for saying you are not doing so?—Does not my answer answer your question?

7317. No, you go back again to repeat what you have said before twice?—We have a recognised statutable valuation of the land, to which the letting authority, the parish council, or whatever it may be, the municipality, assent.

7318. Then when the man cultivates the land he either keeps it exactly in its present position, or he deteriorates it, or he improves it?—Yes.

7319. It must be one of those three things?—Yes.

7320. A good tenant improves it?—Yes.

7321. He puts more into it?—Yes.

7322. He puts more work into it; hoes it so many times; six times, as you suggest?—Yes.

7323. He makes the land more fertile. Is he to sit at the lighter rents, or is he to ask for a re-valuation, or are the community to ask for a re-valuation against him?—I should say if the good tenant has improved the land he will not want to go out of it, and if the bad tenant has deteriorated the land he ought to be turned out of it.

7324. If he would not want to go out, he does not want to go out because he has created a property in the land which is tenant-right?—You mean so far as fixity of tenure involves tenant-right?

7325. Yes?—Certainly.

Mr. *Bolton*—continued.

7326. To realise that property he must have the right of sale?—Of sale under certain conditions.

7327. That involves the payment, by a man entering into it to cultivate, of a sum of money, does it not?—You mean for improvements in the land.

7328. For tenant right?—That comes to very much the same thing, does it not?

7329. Yes. Does not that mean rent?—Hardly. I should say that if I succeed to a property and it involves a kitchen garden, and it is full of valuable shrubs, gooseberry bushes, and so forth, for which I have to pay, I should not treat that as a rent; I should treat that as merely putting improvements in the place of the man who is to go out.

7330. Is not the interest of the money he sinks in it equivalent to rent?—The interest of all money you sink is equivalent to rent.

7331. Therefore he must pay a rent?—If you like to call it so.

7332. Under this system of yours, if he has to pay rent, how much better off is he under the State than under a landlord?—Because the rent in the case of the landlord is an abiding and permanent, and, to my mind, excessive charge; whereas the rent in the case of the other would merely be the very small interest on the goods which he would take over on going into the land.

7333. In the first instance, you are going to pay the present landlords for 40 years the rents they at present receive; therefore, the community must charge those rents over against the tenant?—Clearly.

7334. And you are going to create in the tenants a tenant right which is saleable, I put it to you. Under those circumstances, how much better off would a tenant under this system of yours be than he is under the landlord?—Because the payment of rent to the community instead of to the landlord enables the community to dispense with rates and taxes. The man who now pays 100*l.* a year in rent, and 30*l.* in rates and taxes, would pay his rent to the community, and he would pay no rates and taxes at all, because the rent would more than cover the rates and taxes.

7335. He would have to pay to the community the valued rent, and he would have to pay to his predecessor, from whom he took it, the capital value of the tenant right, which would be equivalent to an additional rent?—He would only pay, surely, the capital value of the land which he takes over.

7336. Certainly, the capital value, but the incoming man must pay the capital value of the tenant rights somehow or other?—I do not see the difference between the present system and the other as regards an excessive rent. I rent land now of a landlord; I give it up. I cease to have any obligations to the landlord, having paid my rent. I claim of my successors the value of certain improvements I left in the land. It would not occur to me to call that rent on the part of a man coming in.

7337. If a man has to sink a large sum of money in purchasing tenant rights, is it not equivalent to the tenant right being in the hands of the landlord and this man paying rent on that?—Certainly not; if a man had taken from the land, he would have to spend a larger sum in keeping land that he wants until he pays capital to the outgoing for the stock already there.

7338. I am afraid we are arguing in a circle?—I think we are. I do not see the point.

7339. Do you think that under any system of nationalisation or communal ownership, small holdings, such as you have mentioned as existing in France, and such as you say were established by Lord Tollemache, would be possible?—I should hope not. I should hope much larger holdings than those established by Lord Tollemache would be possible. My whole object is to make the allotment which is possible at present, or would be possible, with slightly improved legislation, grow into the small holding.

7340. This is the question of expense. The local community will want to be paid interest on the capital sunk, will it not, in making these small holdings?—Do you mean for fencing, and so forth?

7341. Have you ever considered what it would cost to convert a farm of 200 acres into 10 holdings of 20 acres each?—To convert a farm of 100 acres into 80 holdings, of about an acre and a-quarter each, cost me certainly not more than half-a-crown an acre.

7342. I am speaking of small holdings, not allotments?—The men would put up their own buildings. Nobody has dreamed of the municipality putting up particular buildings.

7343. To whom do they belong?—To the men, undoubtedly.

7344. That is a greater reason why they should be able to sell their holdings in the open market?—Precisely, only they take the same ground as gooseberry bushes would in a garden in the present day.

7345. Have you ever considered what it would cost to convert an ordinary farm of 220 acres with farmhouse and ordinary farm buildings into ten holdings of 20 acres each?—What it would cost the tenant?

7346. No, what it would cost the community?—Where would the cost to the community come in?

7347. Or to anyone to put up ten cottages suitable for men to live in?—My point is that the men themselves put up the cottages. We are not trying it like Lord Tollemache.

7348. You practically suggest that the agricultural labourer, as we know him, can go into 20 acres of land and put up a cottage with buildings, and fence the land, and make the alterations in drainage, and dig a well, which in itself may be a very expensive thing, make roads and drains, and then in addition to that find the stock to stock it, and the capital to live upon for the time until the land is productive. Is it a practicable suggestion at the present time to suggest such a thing?—It is done in France every day, and what is being done in France might be done here in England.

7349. What is done in France has been done for generations?—Yes, but I want to begin; and

Mr. *Bolton*—continued.

if 40 years is given to nationalise the land, that must involve improvement.

7350. Do you think 40 years is enough to carry out, by this process which you have described, a vast revolution such as you have suggested?—If any one will show me a shorter one I will gladly adopt it.

7351. How is this to remedy the present distress from want of employment, which is what we are considering?—Because my point has been that the immediate establishment of equitable allotments on a small scale would begin to reverse the migration; and in proportion as these small holdings were increased, as they might be under certain legislation, the reversal would continue.

7352. All you suggest is to inaugurate a policy which is to extend over many generations, the effect of which will be to encourage small holdings throughout England, which you believe will keep more people employed?—Just as you have suggested, I agree with you.

7353. How is it possible to do this in years?—I think it is very possible.

7354. Where is the money to come from?—I am afraid I come back to the old statement. I do not think you realize the fact that I name, not that the community is making a vast outlay for this purpose, but each man is doing it for himself. I could point out to you no end of labourers who, had they had the opportunity in Stockton, would have climbed from their acre or two-acre allotments to six or eight acres, who would then as they call it have "chucked up" work and become small farmers, and with the help of a building society built cottages on the land, if only it had not been glebe land, and I had an opportunity of making the tenure firmer.

7355. This tenure involves the three considerations I have mentioned: it involves fixity of tenure, fair rent, and it involves free sale; and when you have done that, how much further are you towards the limitation of rent, and the very favourable conditions of agricultural life which you suggest?—It is obvious that the rent which used to go to the individual would go to the community. Take Giffen's figures, and say that the rent of England amounts to 100,000,000*l.* a year, then, roughly, the taxation of England, amounts to 80,000,000*l.* a year; if the rent is paid to the community instead of to the individual all rates and taxes would be paid thereby, and a considerable surplus would be in the hands of the State if you like, or of municipal parishes, if you like, for the purpose of improving the condition of the community.

7356. If you rob the owners and take their property, you can distribute the proceeds?—I have avoided the word "rob." I am under the impression that a community cannot rob itself. If it is wrong to call robbery what an Act of Parliament has done, it would be wrong to call robbery what an Act of Parliament undoes.

7357. If I have laid out 1,000*l.* in buying some land, which the State has recognised, and that land is taken away from me without fair compensation, is not that robbery?—Now we come to the ethics of the question. Forty years ago I was

Mr. *Bolton*—continued.

a Fellow of a certain college at Oxford, and I had an income fixed as absolutely as any income could be. It was considered by the community that a portion of this money should be taken away and spent on professorships, and a hundred a year was taken away from me, and I did not grumble, for I said the community has allowed me to have this money in trust for the community; the community is of opinion that the money is not being used for the good of the community, and re-distributes it. I apply the same principle to the parson; I apply the same principle to the landlord. *Suprema lex salus populi.*

7358. You did not buy with your hard-earned money the right to receive the rents from this particular property or this income?—I earned it by intellectual exertion and competition, which is as good a price to pay for it as money.

7359. You had no freehold estate in it?—A freehold estate is surely only a particular form of tenure which the community says is desirable, and whoever holds freehold, or copyhold, or any hold, holds what the community has given, the condition being that it is for the good of the community that he should hold it. I am referring to what you have raised, the ethical point. If it is thought undesirable for the community that this should continue to be held on those terms, I argue that the community may resume it with fair treatment to the individual.

7360. What is to be fair treatment?—I look upon 40 years as an exceedingly fair treatment.

7361. You think that payment of the full present rental for 40 years would be compensation for the freeholder?—Looking to the historical account of the acquisition of land by the landowners of England I think they may think themselves overpaid with 40 years' fair rent.

7362. Then it is to be a State annuity for 40 years?—Right; you may call it that. It comes to that.

7363. Equal to that amount?—Yes.

7364. Do you think that the rent, or interest, which the tenant would have to pay upon that capital value, coupled with the tenant right, and all those other things, would be much less than the rent which now, under present conditions, he pays?—I cannot quite seize the point.

7365. If the owner is to have for 40 years a guaranteed income equal to the income he now receives——?— To the valued income.

7366. A guaranteed income equal to the valued income, that is a charge on the State, is it not?—Yes.

7367. That will carry the necessity for the tenant cultivating the land to pay a certain rent?—To pay the same rent he would have paid the landlord, probably less.

7368. How much better off is he?—Because at the end of the 40 years the land will be out of possession of the landlord.

Chairman.

7369. I think you mean that this system would come into play at the end of the time during which the landlord was to get this; 30 or 40 years?—Yes.

7370. The

Chairman—continued.

7370. The benefits would be in suspense?—Yes.

Mr. *Bolton.*

7371. It is practically to be postponed for 40 years?—If he lives long enough. I gave it to him for 40 years; or to him and his son, the two lives, live as long or short as they may. It is repaying the landlord, which you must do: it is compensation to the landlord.

7372. It is to the man himself, who is in possession, and to any son of his?—That was the alternative I proposed; he and his son, or 40 years.

7373. Is he to have the choice of the 40 years?—Yes.

7374. Then, it is to be two lives, or 40 years, whichever he prefers?—No, he is to say at once which he likes.

7375. He is to have an option now to say which he will take?—Yes.

7376. Then, is he to be paid the capital value of that down?—No.

7377. He is to wait?—He is to have his rent secure for 40 years, as he was before.

7378. Is he to have a saleable interest?—No.

7379. Why not?—We secure him his rent, and there is an end of him.

7380. He is to have something?—Nothing whatever, but his secured rent for 40 years.

7381. He is to live himself?—No, he is wiped out of the place; the land becomes the property of the community on the 1st January next.

7382. He is surely to live on the community?—Nothing, except to have his rent.

7383. He is to have that?—He is to have that.

7384. To do what he likes with it?—Yes.

7385. Then he may sell?—Yes, for the time.

7386. What is the difference between that and providing that at the end of 40 years, or at the end of the term of two lives to be selected by the owner, all property in land should cease, and it should pass to the State?—That is what I propose.

7387. Is not that confiscation of the landlord's interest, other than the interest that you give to the man that you carve out of the property?—That is the ethical question I have treated.

7388. He has paid for the property with the money which he has earned by his brains, as you have. He has paid for that land his hard-earned money. Why should he have appropriated by the State a portion of that without compensation. To put it plainly, is not that taking away a man's property without paying him for it?—Have I not made the ethical part of the case, as far as I can, clear?

7389. Is not what you propose, taking away a man's property without paying him for it?—I think 40 years is a full receipt. Look into the history of the past.

7390. To the extent of the property remaining after you have given him this portion of his own property, is not that taking away his property without paying him for it?—You mean without paying him a sufficient price?

7391. Without paying him at all?—No; you

Mr. *Bolton*—continued.

give him 40 years' annuity; that is the price you give, and I think it is a sufficient price.

7392. I suppose you would let him commute this annuity, or life interest?—I should let him do anything which the life societies would allow him to do.

7393. Do you think that in such a land system there would be such encouragement to the cultivator as to induce him to work on the land?—That is my whole point; I think it would.

7394. Do you not think the reason why land is cultivated in France by peasant owners is because there is ownership, because the man gets the full benefit of his labour on the land?—From my experience they would be much better off if they paid a rent to the State, or community, instead of having laid it out on the land.

7395. Do you think, as we are here as practical men to deal with a practical question, distress arising from want of employment at the present time, not in 40 years, that this proposal of yours will, in any way, assist us to make a practical report?—I think if my proposals were taken *en bloc* they would begin to reverse the migration to-morrow.

Mr. *Bartley.*

7396. I wish to ask you just a question about this 40 years. Is it not a fact that very little land is worth 40 years' purchase? Is any land worth 40 years' purchase?—I know of no rural land that is worth 40 years' purchase.

7397. Then, practically speaking, your theory is, as I understand it, that the whole cost of the land is to be paid to the landlord?—I propose that the land should be revalued, and that the revalued rent should be paid to him only. That was the condition of my plan.

7398. Not the present rent?—No; which is avowedly, by the landlords themselves, very often an inequitable rent, because they give back very large quantities every year.

7399. Your theory is that you are going to pay the landlord the present real value of the land, and, somehow or other, the new tenants will have to pay that?—Yes.

7400. Is not that the same thing as giving ultimately to all the present amount of taxation?—No; I have tried to explain that the rent will wipe out the taxation.

7401. You said that where you let these 100 acres you could not give them any fixity of tenure because you were only the rector, and that therefore you had to give it up. Was there not any land in the district to let?—None available; none that they could use; none that could be got.

7402. Do you mean to say there was no land to be let at all within a reasonable distance of that village?—No land within ten miles that was available for any practical purpose; no land within a mile that could have been held in allotments, and the allotted land must be as near the home as possible. The advantage of my land was that it was close to the homes.

7403. I understood your proposal was that they were ultimately to build their own cottages?—It was my wish, but it was hopeless.

7404. Not if you could have got other land near?—I would much rather they would have

Mr. *Bartley*—continued.

put up nice new houses on the land they had than the villainous old hovels with which the village was dotted before.

7405. Surely in the district there were farms to let, were there not?—Not to be cut up. Proprietors must cut them up into allotments.

7406. They would not allow them to be cut up?—That was ascertained before I made the offer; there was no other chance.

7407. Could you not get the land?—No.

Mr. *Renshaw.*

7408. You have told us what your proposals are as to pointing out that the landlord is to get for 40 years a revalued rent. Will you tell us how that revaluation was to be arrived at?—I would have a special process for the entire land being valued.

7409. Over the whole country?—Over the whole country.

7410. Would you be prepared to apply the same principle that you proposed to apply to the landlords in respect of agricultural land to house property?—Yes.

7411. All over the United Kingdom?—Yes.

7412. And to factory property?—All property that stood upon land, which is virtually all property.

7413. So that you practically propose that everything which at present is individual property should become State property?—Yes, all land.

7414. Houses, factories, agricultural land?—Absolutely.

7415. May I ask you, in regard to the statement you have made as to the present portion of agricultural labourers, whether what you have said applies equally to all parts of the United Kingdom?—I mentioned, at the beginning of my evidence, that I had visited 500 or 600 villages in a great many counties, and my evidence represents the aggregate of the information I obtained from the lips of the men. I have closer and minuter evidence in some parts than, of course, others.

7416. Have you had any practical experience, or do you possess any knowledge which would allow you to apply the expression you have made use of in regard to the landlords to Scotland?—None whatever.

7417. So that you have no knowledge whatever of the position of the agricultural labourers, or their relations to the landlord in Scotland?—Absolutely none. I beg your pardon; when you said "United Kingdom," I should have confined myself to England. You said "United Kingdom" just now.

7418. In a previous question?—Yes. I took it as England.

7419. You limit it?—I limit it to England; I leave out Scotland and Ireland.

7420. You spoke about obsolete systems of farming being pursued, and I think you rather suggested to the Committee that you referred, as obsolete forms of cultivation, to farms which are occupied by single farmers to the extent of several hundreds of acres?—My objection to the obsolete method was to the growing of cereals throughout England, and to what is still known s the four-course system.

Mr. *Renshaw*—continued.

7421. That is not bound up with it?—No, not necessarily; it is a two-course system in Warwickshire.

7422. Has it ever occurred to you to carry your investigations over the border, and, as you make a statement of this character in regard to the system of cultivation which you regard as obsolete in England, to find out whether it has been successfully carried out in any other part of the kingdom, or not?—No.

7423. Are you aware that, at the present time, the ordinary wage for a ploughman on these large Scotch farms is 20*s.* to 21*s.*, with a house and a certain provision of meal and other things in addition?—I can well believe it, because the Northumberland labourer's wage is 20*s.* a week.

Mr. *Stuart Wortley.*

7424. How long were you at Stockton?—I was there 18 years.

7425. How long were you there after 1886. You were there when this scheme of allotment was issued?—Yes.

7426. The Glebe Lands Act came into operation during that time?—Yes.

7427. Did you consider or make any attempt to put into operation the provisions of that Act?—No, the thing was working so well.

7428. Was it not represented to you that you could?—I had ascertained the effects. They did not appear to me sufficient.

7429. Was it brought to your mind that you could, under that Act, have given the very security, if the provisions had been carried through successfully, which you wanted to give your labourers, the fixity of tenure?—You raise a new point to me. I did not know that was possible.

7430. Have you considered whether, under your scheme for what you may call municipal ownership, for that is what it comes to, the tenants will practically be a privileged class in the whole community?—How so, more than the farmers in the present day.

7431. They are to be at less than the competitive rent to begin with. Is it your belief that if they sell their interest there is nothing to sell except the improvements and the growing crops?—That is my impression.

7432. It is in that belief that you have constructed this system?—Yes.

7433. Have you considered the question of how these holdings should be taxed, either for Imperial or for local purposes; upon what basis of value?—Do you mean as apart from the revised rental?

7434. Yes?—No; the revised rental seemed to me an obvious standard.

7435. That is, by this scheme, less than the full marketable rent?—It may be. I cannot tell. In some cases it would be.

7436. Practically, it is granting aid out of the taxes of the rest of the country?—It may be, I do not know.

Mr. *Mather.*

7437. I understand you have passed almost the whole of your life in the agricultural districts?—Many years, the last 20 or 30 years.

7438. Therefore you are quite familiar with agricultural life?—Yes.

7439. In

Mr. *Mather*—continued.

7439. In the small villages where you were?—Yes.

7440. Especially in the Midlands of England?—Yes. In the Midlands and in the south-western peninsula.

7441. Are your views based chiefly upon the results of the experiment you made yourself with the hundred acres of glebe land as to what the land would produce and how far it may be remunerative to farm labourers?—Chiefly.

7442. You spoke of the success of that experiment as to a certain extent proving, as I understood it, the obsolete nature of the system at present in work in the large farms in the country?—Not exactly, did I? I distinguished consumption from sale, nothing more than that; but you see consumption is inevitable in a small holding, and I went on to say the sale might be profitable if the proper things were grown.

7443. You do not desire it to be inferred from any statement, as the result of your experiment, that large farms are necessarily obsolete as a method of farming the land of this country?—Well, I think that almost follows from my evidence. I have pointed out that the profitable farming is the farming of certain crops which, in fact, are not cereals. I doubt very much if large farmers could profitably raise these fancy crops, as I call them, without a labour expenditure which would make their farms not pay.

7444. Do you admit that in England now, farmed upon large areas of land, possessed by one man and farmed by one man with sufficient capital, a sufficient number of crops may be still grown in this country, notwithstanding the amount of agricultural produce that we import from other parts of the world?—Do you mean cereals?

7445. Yes?—No, I do not see that you could.

7446. You would divide the whole surface of the farming land in this country into small holdings?—Yes.

Chairman.

7447. I think you stated that cereals can be grown, but they cannot be grown to compete in price?—Quite so, and they may be grown for consumption and straw, but they cannot be grown for price.

Mr. *Mather.*

7448. Those products must be imported from other places, therefore you divide the whole country into, first of all, allotments?—Into the allotments as a preliminary to the small holding.

7449. Then you would divide it into a small holding, so as to create a farming class in the country on the land, who would wholly devote their own hands and their own skill and daily labour to the cultivation and tillage of these small holdings?—Yes.

7450. Therefore, you would expect by that means to get rid of the intermediate labouring class now applying to be paid for hire?—I think a man who started in life would always do a certain amount of labouring work until he had acquired sufficient to start himself in them, but the man at a certain time of life would be a farmer and not a labourer.

Mr. *Mather*—continued.

7451. You would allow these small holdings to be multiplied under one farmer. Supposing a man first had an allotment in your parish, and then by saving and by working 16 hours a day, and so on, he could obtain sufficient means to put money into a small holding, and to obtain a small holding with fixity of tenure, would you allow him after he had cultivated that, and saved more money, to take another small holding of equal amount?—I think so.

7452. You would gradually allow that individual to become, probably at the end of 20 or 30 years, a large holder?—Yes.

7453. So that you would allow a man to acquire allotment after allotment, or small holding after small holding, until he became really a large farmer?—I would. I would leave it to the community, which would judge of the necessities.

Mr. *Lawrence.*

7454. Arising out of that question, may I ask whether you mean that these large farms are to be occupied by one man, and the man is not to occupy more than he can work?—Sub-letting I should prevent most rigidly.

Mr. *Mather.*

7455. I understand the whole scheme to depend on the individual work of the men occupying the land?—Not altogether, but in a great measure. In France, out of the seven millions four millions are worked only by the owners, the other three millions involve a certain amount of labour, certainly, and I should not prevent that.

7456. About the nationalisation of land, it appears to me that some misconception has obtained in the minds of the Committee as to the meaning of the nationalisation, at least I gather so from the view of some of my colleagues, that they look upon your scheme as only being possible on the whole of the United Kingdom, or say England, if taken up at once by the nation, that is to say, by the State. I use the word State as covering municipalities. Do you consider it is necessary for the realisation of any of your schemes, which I take to be in the main contained in your first sentence, namely to bring back to the land the millions of people who have in the last 30 or 40 years left it; is it necessary to the realisation of your scheme in any degree that the whole land of this country should be nationalised, that is to say, should become the possession of the community or the State?—My experience leads me to say that the extinction of landlordism is an initial necessity.

7457. Short of extinguishing landlords as a whole, suppose the State did nationalise, say, 5,000 acres anywhere, or 1,000, it would nationalise it simply by buying it. It is all the same, I presume, to you whether the State guarantees the rental for 40 years, which is the income of the landlord for 40 years, during which period of course the land becomes the property of the State; but I will assume that by any means the State acquires the land, and

Mr. *Mather*—continued.

makes it national, because all that the State possesses is national property. Is it necessary for your scheme that the State should acquire the whole of the land of the country on that basis, either by guaranteeing the rental for 40 years or buying it outright, for your peasant ownership to be established?—I look upon rent and royalties and ground rents as burdens to be extinguished as soon as possible, and therefore I want to see the whole land nationalised.

7458. That is, of course, a wide-embracing and far-reaching scheme. Another, if modest, rather points to a more practical idea than the ideas you have promulgated this morning, dealing with the question as a whole. You began with 100 acres; you were practically the State yourself, as far as your labour was concerned. You said, "I am the State; I take this land, it is mine; I give it to you, it is divided into 80 portions"; 80 men were put upon it. If the State assume towards any given area of the country the relation you hold towards those 80 men, would your scheme not, in that way, receive a very large impetus? Would not it begin immediately, and would not it grow from that, if the State found it useful to the community without any waste of the national money? Would you not find that a method of nationalising on your system?—It is very possible, and I remember that Aristotle says he is a fool who knows not how much the half is better than the whole; but, as a matter of perfection, I prefer my desire for the whole.

7459. You have come here to try and instruct and enlighten the Committee in their labour, which is arduous enough; to find some light and some leading on this question of dealing with national distress, and even permanent want of employment. Is it necessary that we should reject all your evidence to-day as being visionary, or perhaps I would rather put it as far too enthusiastic to be accepted largely by the House of Commons, or by the country, simply because of the demand that the whole of it shall be taken at once, instead of beginning step by step and proving how it progresses before you commit yourself to the whole?—Of course, I should be sorry indeed to refuse to take a part because I cannot take the whole. I do not think I can say more than that.

7460. Are we to understand that taking your 100-acres scheme (for that is really the practical fact we have got from you to-day, for it is a most important fact), if we were to multiply your 100-acres scheme a thousand-fold by some method that would enable the tenants on the land, divided up as you would divide it up in larger proportions; that is, instead of being an acre, suppose you give them six or seven acres per head, it would enable a family to live and to use the whole of their time on that land, if such land were, under certain conditions, bestowed upon those who were needy, who were out of employment and were distressed, and had an opportunity of getting into work of that kind, either temporarily or permanently, would not that be in accordance with the results of your own experience?—Quite so. I should die, if you were to do that, much happier than I am likely to do, and I should leave my successors to work for the rest.

Mr. *Mather*—continued.

7461-2. Multiply by a thousand. I am only using figures simply in a representative sense?—If it is a question between accepting your limited proposal or of rejecting the whole as visionary, I, of course, take your alternative.

Mr. *Wilson* (Govan).

7463. The district you come from is entirely a rural district?—Except that there was a cement industry in the village.

7464. Have you had much distress during this last winter?—Very severe distress.

7465. How did you meet that?—We met it by special subscriptions spent in coal and food.

7466. By voluntary effort?—Voluntary effort.

7467. You state that the first migration of the labourers leaving the villages was from want of employment on account of the large farms being conducted on public methods?—And the consequent economy of labour.

7468. Do you think it is probable that these same labourers would come back to the land again?—I hope so.

7469. Would prefer the work?—I do not say that those who left in 1873 will come back now. They have worked out their life on new lines. I think the recent importations would.

7470. You said something about the houses of the labourers. Do they belong to the farmer or to the landlord?—The custom all over England in most cases is that they belong to the landlord.

7471. Do you think that if the labourers were to have an allotment to cultivate it, as you suggest, that they would build cottages for themselves upon it?—I think so.

7472. That is to say that, provided they could get fixity of tenures, they would have some good ground for considering that, if they built a house on land, it would not be taken away from them?—Yes.

7473. You think so?—Yes.

7474. Would that have the tendency to keep the families of these labourers in the country districts?—Undoubtedly.

7475. And if the labourer was a thrifty man and industrious, and suppose he worked during his own hours in cultivating his allotment, he might, in course of time, stretch out for something better in the way of getting a small holding?—Quite so.

7476. You think that, so far as the country labourers are concerned, this is the best way of getting over the difficulty and not crowding the towns with other labourers?—That has been the point of my evidence.

7477. There has been a good deal said about the nationalisation of the land, and your theory of 40 years rent, paying for both rent and profit. I understand that is your view?—Yes.

7478. Supposing that an estate was worth 20,000*l.*, and that a man had 20,000*l.* in money and he lent the money on interest; what would be the difference at the end of 40 years, between the man with 20,000*l.* and the proprietor of the estate

Mr. *Wilson* (Govan)—continued.

estate worth 20,000*l.*, who had got a rent for his 20,000*l.* instead of interest for the 20,000*l.* What would be the difference?—Is the estate worth 20,000*l*?

7479. Yes, the estate worth 20,000*l.*?—What will he get his rent at?

7480. And the interest on the money was paid in rent not higher than the interest on money going outside. At the end of 40 years the man who loaned the money would get his 20,000*l.* back, and have his interest all these years—Yes.

7481. In the case of the estate the man who owned the estate got his rent for 40 years, and the estate would then pass from him to the man who paid the rent?—Quite so.

Mr. *Wilson* (Govan)—continued.

7482. Do you think that would be fair?—I think the man would take it out of the land and put it into consols, and perhaps when we have done nationalising the land we may deal with the consols.

Mr. *Bolton.*

7483. You mean by nationalising, wiping them out of existence?—Yes, with 40 years in the same way.

Friday, 3rd May 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. Bartley.
Mr. Billson.
Mr. Thomas Henry Bolton.
Mr. Bousfield.
Mr. John Burns.
Mr. Campbell-Bannerman.
Mr. Keir-Hardie.
Mr. Heneage.
Mr. Wootton Isaacson.
Mr. Lawrence.
Mr. Logan.
Mr. Mather.
Mr. Pickersgill.
Mr. David Randell.
Mr. Renshaw.
Mr. Round.
Mr. Whiteley.
Mr. John Wilson (Durham).
Mr. John Wilson (Govan).
Mr. Stuart-Wortley.

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN, IN THE CHAIR.

Mr. JOHN THEODORE DODD, called in; and Examined.

Chairman.

7484. WOULD you say what position you hold, and what experience you have had, which enable you to speak with some degree of authority on this matter?—I have been for a great many years standing Counsel to the Allotments Association of Birmingham, and was formerly Chairman of the Poor Law Committee of the London Reform Union; I am at present Councillor for the West Ward in the City of Oxford; I have also written several works connected with Local Government and Parish Law, and have given some time and study to the subject.

7485. The Allotments Association to which you refer is a voluntary body, I believe, for promoting the use of small holdings and allotments?—Yes; it was founded originally mainly by the efforts of Mr. Jesse Collings, and I think Mr. Chamberlain also assisted; but now, I believe, Sir Walter Foster is one of the leading men; he has been on it for many years.

7486. All that has given you great knowledge of what has been done, and experience as to the best way of dealing with the subject?—I think it has given me some knowledge.

7487. What is your view as to the best way of meeting the difficulty that we are endeavouring to deal with?—I think it may be dealt with either by drastic changes in the social organisation or by means of a large number of small reforms and improvements; I propose the latter. Many of these reforms are attainable without any Act of Parliament; others are merely extensions of principles that have been already accepted by the Legislature.

7488. You think you see your way by these small changes, either legislative or administrative, to do at all events a great deal of good in the way of relieving the difficulty which now exists?—I think we can do a great deal of good.

7489. You first wish, I understand, to give us your opinions on the subject of the charitable endowments which exist and which might be used for this purpose?—Yes.

7490. Would you say what your view is on that point?—I think that property left for the employment of the unemployed ought not to be transferred to education. I will take an example or two to make my meaning clear. Under the scheme for Hunt's and Atwell's Charity (London), property, left for the employment of the unemployed, was used for education.

Chairman—continued.

7491. Was it left to the unemployed *eo nomine*; was it so described?—Yes; I can give you from memory the plan: it was that a stock of goods was to be purchased, and then employment was to be given, and then the profits of the employment were to be used for obtaining more stock. The following is briefly the account given in the large Report of Lord Brougham's Commission, No. 8, p. 375. The rents were to make a Stock to be employed so that poor people, especially such as were free of the Skinners' Company, might be set on work and yet the stock kept whole and increased yearly; but 20*l.* a-year out of the stock was to be yearly allowed for a dinner.

7492. What was the date of that charity?—It was in the time of Elizabeth.

7493. What was done in that case?—It went to a middle class school.

7494. Under what authority?—I cannot tell you. It is now employed for a middle class school under the authority of the Charity Commissioners, but I think it is quite possible that the alteration may have been made before the time of the Charity Commissioners.

7495. Do you know the date of the scheme of the Charity Commissioners?—It was somewhere about six years ago.

7496. But you are not sure whether this change, to some extent at least, may not have been effected earlier?—It is quite possible that it was.

7497. Did it involve a large sum of money?—I do not know what the amount was. The gift included land in the City of London, probably of large value. The scheme was for Hunt's and Atwell's Charities, but Atwell's was the one for the unemployed. The second example is a recent scheme for a Lincolnshire charity, where a similar misuse, as I should call it, took place. I think the name of the place was Donington. In this case, again, I do not know that change was effected by the Charity Commissioners; it may have been done, and very probably was done, by some earlier authority.

7498. Do you know the date of that scheme?—It would be about three years ago.

7499. Are you aware whether there are many charitable endowments devoted in this way to finding employment for the unemployed?—I cannot tell the number; but considering that I have come across a couple in the schemes of the

Charity

Chairman—continued.

Charity Commissioners, I think there must be a considerable number altogether.

7500. You accidentally found those two cases?—Yes; I was not searching particularly for them; and I know there are more.

7501. How far has the change which has been made been final; can it be recalled or cancelled?—The Commissioners say that when money has been taken for educational purposes they have no power to re-transfer it to charitable purposes; and I think that view of theirs is usually correct, although I believe there may be some exceptions to the statement.

7502. Do you mean that they have no power under their constitution, or do you merely mean that having once been done it would cause an insuperable amount of difficulty to undo it?—I mean that in most cases they have no power to undo it. In some cases probably they have; but not in very many.

7503. You think that once money goes into the jaws of education you cannot get it out again?—As a general rule you cannot, for this reason: The Endowed Schools Acts carefully provide that money given for doles, &c., may be transferred for education, and, naturally enough, they do not provide for the opposite function. Therefore, the only case in which the Charity Commissioners could transfer property now used for education back again to charity would be a case in which the *cy-près* doctrine was applicable. Supposing they found an educational endowment which was practically become obsolete, or which would not work, they might possibly transfer it back to the charity. But, of course, for a long series of years the tendency of the Court of Chancery has been distinctly in favour of education as against certain forms of charity; so that the Charity Commissioners, in re-transferring to charity money transferred to education, would have to go against the principles which the Court of Chancery has laid down for some considerable period, and they would also have to go against their own practice for a considerable period, so that it is not really at all likely they would effect such a restoration, though, technically speaking, they possibly may have the power in some cases.

7504. In the case of property left for apprenticeship, what is your view?—I think it should not be transferred to middle-class or secondary education. One of the causes of want of employment is the ignorance of any definite employment; no doubt that has been urged upon the Committee already.

7505. You would like to expand and reinstate the practice of apprenticeship?—Yes, or some other method of teaching a definite trade. I should like to mention that, since the time that powers of diversion were given to the Charity Commissioners, they have diverted from charity to education property giving an income of about 20,000*l.* a year. I think that where money has been ordered to be taken for education from charity, and not actually used, it should be restored. There are a number of cases in which there are schemes providing that money given for charity shall be used for education, which schemes have not been carried out, for some reason or other, as where, for instance, they are delayed for money to accumulate and the like; in any case of that sort I think the money might be restored.

Chairman—continued.

7506. You quoted a figure of 20,000*l.*; where did you get the figure from?—It is from a reply to a question in Parliament.

7507. Of course, the reason of this tendency in recent years has been the widely-spread belief that much of the money that was left for charitable purposes had come to be greatly abused; you are aware of the existence of that belief?—That is one reason, no doubt, and another reason was that 50 years ago it was practically impossible to get education for the poor. There were those two reasons.

7508. You think that the spread of national education has greatly altered the case?—I do. I also think people have found out that there are many ways of helping the poor that are extremely useful. As a precedent for restoring money that has not been actually used, I would quote the Poor Law Bill which was introduced by Mr. Alfred Thomas, and backed by Sir Walter Foster, which has a similar provision as to money left for almshouses, and transferred for education.

Mr. *Bartley.*

7509. That Bill was never passed, was it?—No.

Chairman.

7510. Was it read a second time?—I do not think so. It was called the Poor Law Reform Bill. It is Bill No. 121, of 1890.

7511. Have you anything to say as to the action of the Charity Commissioners in the matter of allotments?—Yes; one alleviation to the lot of the unemployed would be the provision of allotments. I think no charity lands should be sold. I hold the view that land, which is public property or semi-public property, should not be sold; and especially no charity land should be sold. From 1885 to the present time the Charity Commissioners have sanctioned the sale of land of the value of above two millions sterling.

7512. That is in 10 years?—Yes; and from 1853 to the present time they have sanctioned the sale of land of the value of eight millions sterling. My authority for that statement is the 42nd Report of the Charity Commissioners published in 1895, page 9.

7513. For what reason did they sell that land?—They give two grounds: the one is bad management by the trustees, and the other is the supposed policy of the law of mortmain. I can read you what they said about bad management by the trustees from a Report made many years ago by the Commissioners.

7514. Will you give the date of the Report?—It would be above 20 years ago. This is what they say in one of their ordinary Annual Reports (I find that it is the 20th Report, being the Report for 1872, published in 1873): "The management of these properties is in fact almost universally found to be attended with a more or less excessive amount of expenditure. Instances have come under our observation in which the cost of management has habitually amounted to one fourth, or even a larger proportion, of the gross rental, and this where the members of the governing body have been gentlemen of station and intelligence having undoubtedly the desire to discharge effectively in every particular

Chairman—continued.

their duty as trustees." I think with regard to bad management a partial remedy is provided now by the Parish Councils Act, which enables the parish councils in some cases to appoint some of the trustees; but I am afraid the Charity Commissioners will to some extent rather minimise that remedy, as the Charity Commissioners have shown a disposition to encourage co-optative trustees rather than representative trustees.

7515. There is some truth in the general allegation, is there not, that the management by a public body of any kind is seldom so keen as that of a private owner; I mean there is not quite the same incentive to close management? —I think there is certainly an incentive to treat the tenants well.

7516. But apart from treating the tenants well, as a general theory there may be not quite the same rigid management as when personal interests come in?—It may be so. As regards management by trustees, I may add that I think it has been unfortunate that the trustees, to a large extent, have not sent in their accounts as required by law. The trustees of charities are bound to send in their accounts to the Charity Commissioners, but many thousands of them omitted to do so, and until recently the Charity Commissioners do not seem to have compelled them to do so.

7517. They are doing it more now?—Yes. I think the first ground put forward by the Charity Commissioners, viz., bad management, is not now a solid ground. Then their second ground is the supposed policy of the law of mortmain. The Charity Commissioners took the view which was very commonly held 50 years ago, that it was against public policy for a public body to hold land, and consequently the Charity Commissioners rather encouraged the sale, and discouraged any re-purchases, of land. I submit that that ground has also gone. Lord Herschell's Act enabling charities to be the recipients of land shows the disposition of the Legislature to take the opposite view. Of course, I am aware Lord Herschell's Act provides that the land that the charity receives by way of gift shall be sold within a limited time, unless sanction is obtained for its retention; but still it is a very great inroad on the old law of mortmain that now a man may leave a piece of land to a charity while before he could not unless the charity was one that was exceptionally favoured by law.

7518. Will you give us the short title and date of what you refer to as Lord Herschell's Act?—It is 54 and 55 of the Queen, Chapter 73; it is called the Mortmain and Charitable Uses Act, 1891.

7519. What has been the attitude of the Charity Commissioners, would you say, with regard to allotments?—It has generally been rather opposed to allotments. When the Allotments Act of 1882 was passed, they could give certificates exempting land from coming under that Act, and they did give those certificates in large numbers.

7520. That power of exemption was provided for in the Act?—Yes. Also in nine or ten cases they omitted to obey the law, and omitted to insert provision for allotments in schemes made under the Charitable Trusts Acts. Their excuse was that the Act was recent, that they had overlooked the thing. Even now they usually omit to insert such provisions in schemes made under the Endowed Schools Act, though they insert them in those made under the Charitable Trusts Acts.

Chairman—continued.

7521. When you say that that was their excuse, what reason have you for saying that? —Because, when a question was asked in the House, they laid a paper before Parliament showing the cases in which they had omitted to obey the law, and I think the excuse put forward was that the Act was recent.

7522. Can you give the reference as to that? —No. [I find ("Hansard," p. 1045), that on 4th August 1885, in a reply made on behalf of the Charity Commissioners in the House of Commons, it is stated that the allotment provisions had in some cases been omitted, "partly from inadvertence (chiefly in the case of schemes drafted previously to and established shortly after the passing of the Allotments Act 1882)," and partly on account of a doubt as to whether these provisions should only be inserted in schemes providing for the management of the lands of the charity.]

7523. Was it in a present session?—No; it would be years ago. [I find that the Return is dated 5th April 1886. It was ordered to be printed on 11th July 1887, and it is numbered 218. The explanation given at the foot of the Return is that in some cases "the Schemes were in type before the passing of the Allotments Act 1882"; that in one case the Scheme provided for field gardens, and that "in the remaining cases the omission is due to the use of a form of Draft Scheme printed before the passing of the Act."] They still usually omit to insert this power to let allotments in schemes under the Endowed Schools Act. Whether they have the right to make this omission or not is questionable; but my opinion is that it is very unwise to omit those provisions. All they need do is simply to put in the scheme the power enabling trustees, if the trustees think fit (not otherwise), to let the land in allotments.

7524. Have you any main recommendation to make with regard to the Charity Commissioners, in order to ensure their adopting that view of their duties?—I think they should be brought under Parliamentary control, and that more publicity should be given to their proposed schemes. But the point of Parliamentary control is of course the chief one. Then I think that the result of the public inquiries under the Endowed Schools Act should depend more upon the evidence. When I was counsel in a case at Gelligaer all the evidence appeared to me to be to the effect that the scheme was unsatisfactory. I may say I was counsel against the scheme.

7525. They decided against you?—Yes; they decided the other way.

7526. I understand you to quote that case not because you complain of having been overruled, but as, in your opinion, giving one proof of the necessity for greater publicity in their action?— I think they should give more weight to the evidence they receive, if such inquiries are to be a reality.

7527. You cannot pass an Act compelling a man to take a certain view of the evidence he receives?—Of course the Committee will understand

Chairman—continued.

stand that I am not making any complaint. The Commissioners were perfectly courteous to me. Then my next suggestion would be that no charity lands should be sold; that all draft schemes should be sent to the Library of the House of Commons as soon as they are published; that all draft schemes and completed schemes should contain on the face of them a short *précis* of the original trusts of the charity.

7528. So as to be intelligible?—Yes. I think some of these schemes would hardly have passed if people had seen on the face of them what were the original objects of the charity. I think what I have suggested would be a great protection. Then I think one of the Charity Commissioners should always be a Parliamentary Commissioner, who should be chairman of the Commission.

7529. You will understand we are not sitting here in judgment on the Charity Commissioners, nor is it any part of our duty to make a definite recommendation with regard to them, but I understand you say that in your view the action of the Charity Commissioners has been hurtful to the position of the working classes in two or three ways?—Yes.

7530. In the first place, in transferring to other objects funds that had been devoted to employment; in the second place, interfering with apprenticeship; and, in the third place, not giving sufficient facilities for allotments; that is what you wish to convey, is it not?—Yes; except that I would say with regard to the first point you put, I do not know that they have ever transferred properties left for employment; all I say is the property has been transferred by some authority; but, as I stated, the alteration may have been made before the time of the Charity Commissioners.

7531. Leaving there the question of administrative and any other changes that might be introduced through the channel of the Charity Commissioners, is that all you would say about that point?—Yes.

7532. What have you to say as to the duties and action of boards of guardians?—Useful employment is the principle of the Poor Law. One of the first principles of the Poor Law Act of 1603 (43 Elizabeth, chapter 2) is useful work for the able-bodied. If I may quote the Statute, it says the overseers were to set on work all persons "having no means to maintain them, and use no ordinary and daily trade to get their living by"; that is, as I should say, people with neither private means nor regular employment. Then the parish officers were to raise a convenient stock of flax, hemp, wool, iron, &c., to set the poor on work. Then they were to raise money for the necessary relief of the impotent, and for putting out children to be apprentices. The three main principles of the Act are, (1) employment of the able-bodied; (2) necessary relief for the old and sick; and (3) industrial education for the children. So that it seems to me to be an error to suppose that the guardians have nothing to do with giving employment. I also think it is a mistake to say that the guardians have only to do with the relief of the "destitute," not of the "poor." The Poor Law Act directs provision for the poor who cannot maintain themselves; it does not use the word

Chairman—continued.

"destitute"; it speaks of the sick and aged poor, and of able-bodied people who have insufficient to keep them; and, practically, it is important to notice that the Act does not require that a person should be bereft of every stick of furniture, and have spent his last halfpenny, before he comes for relief. Now, going back to the question of employment, may I mention what Mr. Justice Blackstone says on the subject. He says, in volume 4 of his Commentaries, at page 432, "The number of indigent persons being also greatly increased by withdrawing the alms of the monasteries, a plan was formed in the reign of Queen Elizabeth more humane and beneficial than even feeding and clothing of millions, by affording them the means (with proper industry) to feed and to clothe themselves. And the further any subsequent plans for maintaining the poor have departed from this institution the more impracticable and even pernicious their visionary attempts have proved."

Mr. *Lawrence.*

7533. What is the date of Blackstone's Commentaries?— More than a hundred years ago. The first edition was printed at Oxford in 1765; I quoted the 12th edition "with the last corrections of the author," published in 1795.

Chairman.

7534. As the question of date is raised, can you quote a more recent authority?—Yes; the Poor Law Commission of 1834 very strongly advise useful employment for the unemployed.

7535. Can you give us the reference?—The reference is page 324 of the original edition of the Report of the Commissioners. They strongly advise that useful employment, such as road-making, drainage, &c., should be given to the able-bodied. The Commissioners lay great stress on useful employment, and speak with disgust of useless labour, such as fictitious errands with baskets full of stones, as "pernicious," and state that they ought to be prevented. The Local Government Board, on the other hand, approves of test labour, with useless picking of oakum, and equally profitless breakage of stones. Now, I will read the words of the Commissioners: "The association of the utility of labour to both parties, the employer as well as the employed, is one which we consider it most important to preserve and strengthen; and we deem everything mischievous which unnecessarily gives to it a repulsive aspect. At the same time we believe that in extended districts the requisite sources of employment will be easily found. The supply of the articles consumed in workhouses and prisons would afford a large outlet for the manufactures carried on in the house; and with respect to outdoor employment it is probable that there are few districts to which such evidence as that contained in the following extracts would not have been applicable." Then they give extracts from the evidence of the Overseer of St. Mary's, Reading, and from that of the Rev. James Randall, Rector of Binfield, Berks. To quote another authority, the Court, in Reg. *v.* Collett (2 Barnewall and Creswell, p. 329), declared that it was "the primary duty of the parish officers to employ the poor if possible." "And,"

Chairman—continued.

continues Chief Justice Abbott, "I express the opinion now for the sake of the poor themselves, to whom no greater kindness can be done than by enabling them to earn their own living by labour, instead of suffering them to eat the bread of idleness, by which their habits and morals must soon be corrupted." Then it will be observed that the 43rd of Elizabeth, chap. 2, empowers the boards of guardians to be both manufacturers and merchants; they have power to make goods and to dispose of them.

Mr. *Logan.*

7536. Is that Act still in existence or has it been repealed; is it still the law that the guardians have that power?—The Act is still the law of the land; but the administrators are different. The parish officers have nothing to do now with giving relief; the guardians are the people who have these powers in their hands, subject to the Local Government Board.

Chairman.

7537. That being your view of the original intention, and the high authoritative decisions in the matter, what recommendations would you suggest?—I would recommend that the guardians should be allowed to try to give useful employment where they think fit, and also that they should be allowed to take land for that purpose when they deem it necessary. No power is given by the 43rd of Elizabeth to take land, and I submit that the probable reason is that at that time the parish would be able to employ the waste. But in the present century Acts of Parliament were passed enabling the parish officers to obtain land for employment; and first of all I would quote the Act passed in 1819, the 59 Geo. 3, c. 12, s. 12. This Act gives power to the parish to buy or hire 20 acres of land to set the poor on work. They were to have "reasonable wages for their work, and the poor persons so employed" were to have "the like remedies for the recovery of their wages," and to be "subject to the like punishment for misbehaviour in their employment as other labourers in husbandry are by law entitled and subject to." The point is that they were to have reasonable wages, not merely a pauper's pittance, and also that they were to be treated like other labourers in husbandry. I should submit (but this is quite a moot point) that such employment would not disfranchise them.

7538. You mean that, it being employment of an ordinary kind, and rewarded in the ordinary way, there was nothing in it of a degrading or charitable nature, and that therefore it should not disfranchise?—That would be matter rather of opinion; but I am inclined to think as a matter of law it probably would not disfranchise; though, as I say, it is a moot point.

Mr. *Bousfield.*

7539. You read only the latter part of Section 12; will you read the former part of the same provision?—It provides that the parish officers, with the consent of the vestry, may "employ and set to work in the cultivation of such land on account of the parish any such persons as by law they are directed to set to work" (that must mean poor persons unable to maintain themselves) "and to pay to such of the poor persons so employed as shall not be supported by the parish reasonable wages for their work." Those words strengthen my argument.

Mr. *Bousfield*—continued.

Chairman.

7540. It distinguishes between the two classes, the paupers and the able-bodied working poor?—Yes, that is so. After an experience of more than two centuries the Legislature affirmed and extended the provisions of the Elizabethan Poor Law ordering that useful employment should be given to the poor. Those sections are still in force, and will be found printed in Volume IV. of the second edition of the Revised Statutes published in 1891, pages 215 and 216, although, of course, the powers therein described are no longer in the hands of parish officers.

7541. Has that provision been adopted under the new Poor Law?—I believe it has never been put in active operation, though still law.

7542. In 1835 was it not enacted that this power should be exercised by the guardians?—Yes, this power is now exercisable by the guardians, subject to the rules and under the control of the Local Government Board. But perhaps I may be allowed to go through the Acts in their historical sequence. We had come down to the year 1819. Then in 1831 the Allotments Act of that date (1 & 2 Will. 4, c. 42) declares that the limitation to 20 acres had "been found inconvenient in many parishes," and extends the power of hiring from 20 acres to 50 acres. This Act is in the Revised Statutes, 2nd edit. Vol. 5, p. 101. This statute also gives some further powers for obtaining land which it is only necessary for me to mention here as indicating the thorough conviction of Parliament that useful employment upon the land was the best remedy for the destitution of able-bodied persons. In fact the Legislature was so pleased with the idea that it calls the purposes of this its own Act "salutary" and "benevolent." In the same year an Act (1 & 2 Will. 4, c. 59) was passed empowering the parish officers, with the consent of the Treasury, to enclose forest and waste lands, not exceeding 50 acres, for the purpose of cultivating and improving the same for the use or benefit of such parish and the poor persons within the same. That is further evidence that the Legislature considered the plan a useful one.

7543. Is that Act also still in force?—Yes. It is printed at Vol. 5, page 138 of the Revised Statutes. In the next place it is necessary to show how these powers were transferred from the parish officers to the guardians. That was done by the Union and Parish Property Act of 1835, (5 & 6 Will. 4. c. 69), which followed close upon the Poor Law Act, 1834. Now, Section 4 of this Act of 1835 enacts that all the powers and authorities in and by 59 Geo. 3, c. 12, given to the churchwardens, parish officers, and overseers of the poor for taking land or ground into their hands, and for purchasing, hiring, and taking on lease any land; and all the powers and authorities contained in 1 & 2 Will. 4, c. 42, and in 1 & 2 Will. 4, c. 59, and in 2 & 3 Will. 4 .c. 42, shall in future be exercised (under the control, and subject to the rules, orders, and regulations of the Poor Law Commissioners) by the guardians (Revised Statutes 2nd edit. Vol. 5, p. 778).

Chairman—continued.

p. 778). The present law, therefore, is that, subject to the rules of the Local Government Board, every board of guardians may buy or hire 50 acres of land for each parish, and may stock it, and dispose of the produce; in other words, subject to certain rules and control, they can establish labour colonies. Now, so far, I have been speaking of land which the guardians may take for the purpose of employing people. But the guardians also, by virtue of the statutes of the early part of this century, have the power to acquire land, and let it out in allotments, subject to the rules and control of the Local Government Board. This power is given by 59 Geo. 3, c. 12 and 13.

7544. That is the same Act to which you referred before?—Yes, it is the same Act, but a different section—as amended by the Union and Parish Property Act, 1835. This Act is in several respects more liberal to the labourer than the modern Act of 1887. For instance, the rent under these old statutes is to be "reasonable"; the size of the allotment is not limited; and there are also some minor details which I need not trouble you with. All these powers depend upon the rules of the Local Government Board; but the Local Government Board have issued no rules, although they have been urged very considerably to do so. The whole subject was brought before Mr. Fowler in Parliament in 1893; and the President of the Local Government Board, in the first instance, expressed his ignorance as to whether the Acts were in force or not. On being pressed by Mr. Archibald Grove and Mr. Keir-Hardie, he said he would refer the question of whether these Acts empowering the acquisition of land were in force to the law officers of the Crown. On 12th September he gave the answer that the law officers of the Crown advised that these Acts were in force, and that the law officers also said, with reference to wages paid for employment, that "wages so paid would be parochial relief, and would involve the same disfranchisement as other relief under the Poor Law."

7545. They did not, apparently, attach the importance you do to the difference established in the passage you quoted from one of the old Acts?—That is so. It does not follow that the case was fully put before them, and, of course, it was not argued.

7546. At any rate, it is an arguable question?—Yes, I do not put it higher than that, because one knows what high authority the law officers have. Then Mr. Fowler said that, although these powers remained in the Statute Book, there could be no doubt that during a long period of years they had been regarded as obsolete, and he concluded his reply in the following words: "The principle by which the boards of guardians have been governed in the administration of out-relief to destitute able-bodied persons has been that in each case such relief should be given by them as the necessities of the case require, work being provided merely as a test of destitution." I rather demur to the word "destitute," to start with; that is not the word of the Act, and it gives an idea of deeper necessity than I think the Act warrants. Then, also, as regards the work being supplied merely as a test of destitution, that is certainly not the view taken either by the

Chairman—continued.

Statute of Elizabeth, by Mr. Justice Blackstone in discussing it, or by the Court in discussing it, or even by the Commissioners of 1834. Mr. Fowler continues: "The adoption of schemes for the provision by boards of guardians of work at wages would involve an abandonment of what has hitherto been regarded as the principle of the new Poor Law upon which the orders as to out-relief, which have been in force during the last half-century, have been based. Whether so grave a change in the policy and administration of the Poor Law is desirable, and, if so, whether it should be made without legislative authority, are questions on which I could not express an opinion without the sanction of my colleagues. In the meantime the fullest and most careful consideration of the Local Government Board shall be given to the whole subject." Then again on 10th July he says: "The law does not empower the guardians to provide employment for assisting those who are out of work. Their duty is to relieve destitution, and in connection with this relief they may impose a task of work as a test of destitution." Upon that I submit first of all that the Local Government Board should be fully acquainted with the Statutes which it has to administer, and should know which are in force and which are not. Then also I think it would be very convenient if the Poor Law were codified, so that it would be easier to see the effect of these Statutes. I think also the Local Government Board should have issued rules when they were urgently called for, for the purpose of enabling the guardians, if they thought fit, to give this useful employment. A petition was laid before the Local Government Board asking them to issue rules; and resolutions by various bodies were passed asking them to issue rules. Also some applications were made to them by the unemployed themselves. If the "Times" has correctly reported the evidence of Sir Hugh Owen before this Committee it would seem as if the Local Government Board were not yet quite certain upon the point; because Sir Hugh Owen is reported, in the "Times" of 22nd February 1895, to have said in his evidence before this Committee: "These powers, although absolutely obsolete from the point of practice, had never actually been repealed. They had not been exercised certainly since the Act of 1834 was passed; and if legally the boards of guardians possessed those powers, it was a question whether it would be right to make such a material departure from the accepted practice of many years without the sanction of Parliament." You will observe he is reported as saying "if legally"; as if he had still some doubt as to whether those powers were legally in force.

7547. You are quoting from a newspaper report of what Sir Hugh Owen said in his evidence, which was condensed no doubt, and may not have been entirely representative of his real evidence?—No doubt.

7548. I presume you have not seen the Blue Book containing his evidence?—No.

7549. Let me read this passage from Sir Hugh Owen's evidence of the 21st of February. He says, "The powers of the overseers as regards relief by the Act of 1834 were transferred to th

Chairman—continued.

guardians; and in consequence of questions which were raised the opinion of the law officers was obtained as to whether these provisions were still operative. They were absolutely obsolete, so far as giving effect to them was concerned; but there was the fact that they had not actually been repealed, and were therefore still on the Statute Book. The law officers advised that the effect of the Act of 1834 was to transfer to the guardians the powers of the overseers under the Act of Elizabeth; that although the powers in question are no doubt obsolete, in the sense that they have not for a considerable period been used, they are effective existing powers, available for use if required; that these powers are exercisable subject to the control of the Local Government Board; and that, as employment is a form of relief, the provisions of the Act of 1834 and the other statutes as to poor relief extend to the relief which is given in this way. With regard to setting the poor to work at wages on land acquired under 59 George 3., cap. 12, Section 12, and 1 & 2 Will. 4, cap. 42, the law officers were of opinion that the powers of the overseers had passed to the guardians, and that the guardians can exercise those powers to the extent limited by the Acts in respect of each parish in the union, such exercise being subject to the general control of the Local Government Board in the direction of reducing, not increasing, the average to be taken for each parish." That is not very different from the summary you read; it really emphasises what you said, does it not?—Yes.

7550. Sir Hugh Owen goes on to say, among other things, that the change would be so important a one that it might be a question whether Parliamentary sanction should not be obtained before these powers were exercised?—Yes; he expresses a doubt, in fact, and it appears to me that the law is perfectly clear; of course it is a question of policy, but it appears to me that the Government should take upon itself the responsibility of acting, without consulting Parliament in a case of this sort.

7551. There is nothing in what has been quoted by Sir Hugh Owen which conflicts with your view of the law in the case?—No.

7552. You think that regulations might have been issued with regard to these provisions for useful employment?—I think they ought to have been issued.

7553. And also for obtaining land for other purposes; for allotments, and so forth?—Yes.

7554. You recommend a codification of the Poor Law, including these statutes?—Yes; but it is essential in the codification that no attempt should be made to take away these ancient powers. I think also that general rules should be issued, and I would point out that the Legislature has really put it on the Poor Law Commissioners and the Local Government Board to issue rules by putting these powers in their hands.

Mr. *Bousfield.*

7555. You referred to a petition laid before the Local Government Board: will you tell us what that petition is?—I can hand in a copy of the petition with the statement which accompanied it. It was a petition presented by various delegates, secretaries of labour unions, labourers

Mr. *Bousfield*—continued.

and others, and sent in to Mr. Fowler. The date appears to be the 7th November 1893. It was a petition to put these Acts in force.

Chairman.

7556. Is there much authority or value to be derived from that petition?—It is important in this way: that applications have been made to the Local Government Board to do this work, and the Local Government Board has not done it.

Mr. *John Burns.*

7557. What district does that petition apply to?—The petition was sent by or on behalf of the Berkshire Agricultural and General Workers' Union, Norfolk and Norwich Amalgamated Labour Union, London and Counties Labour League, Warwickshire Agricultural and General Workers' Union, and, I think, of the Hertfordshire and Bedfordshire Land and Labour League, and the Wiltshire Agricultural and General Workers' Union. It was followed by some petitions or requisitions signed by *bonâ fide* unemployed labourers in certain villages of Berkshire, Norfolk, and Warwickshire, which were forwarded to the President of the Local Government Board. The statement accompanying the petition was sent by Mr. F. Verinder. A full account is given in the "Church Reformer" of December 1893. The petition asked for issue of the rules enabling boards of guardians to hire land for unemployed and for allotments. Some of the petitions were sent in duplicate to Mr. Fowler personally and to the Board.

Chairman.

7558. I think we may take it for granted, from the questions asked in Parliament, there is quite sufficient indication in certain quarters that these powers should be exercised, without referring to this petition, unless it raises any further point?—Perhaps I may point out that there is this difference. A question in Parliament is one thing, but a distinct application to a public body to put their powers in force is another thing; and it is laid down by Maxwell on Statutes, that "when a statute confers an authority to do a judicial or, indeed, any other act which the public interest or even individual right may demand, it is imperative on those so authorised to exercise the authority when the case arises, and its exercise is duly applied for by a party interested and having a right to make the application." I do not mean to say a mandamus would necessarily lie to the Local Government Board to issue these rules, but it should undoubtedly weigh with a public authority that they were asked to issue these rules by some people interested in the matter.

Mr. *Keir-Hardie.*

7559. Who presented the petition?—It was sent to Mr. Fowler.

7560. Who signed it?—The secretaries and other delegates connected with agricultural unions, and labourers. Then a request was sent, about 30th June 1893, from the general committee of the London Liberal and Radical Union, asking the Local Government Board to "issue regulations enabling guardians to provide land for setting the poor to work, and for letting land to industrious cottagers." Some more resolutions have been sent to the Local Government Board, which

Mr. *Keir-Hardie*—continued.

which I can put in if the Committee think it necessary.

Chairman.

7561. It is sufficient to have the fact that some applications were made. Would you tell us what your recommendations are upon this part of the case?—I recommend, first, the issue of regulations for the useful employment under the 43rd Elizabeth and disposal of produce.

7562. As to the disposal of produce, have you something definite to suggest?—I think it should be used as far as possible not to conflict with the outside market.

7563. Is not that the very difficulty that has to be met?—It is a difficulty. The Commissioners of 1834 suggested that they might supply articles consumed in workhouses and prisons.

7564. If they supply something which someone else would otherwise have supplied they interfere with the outside market, do they not?—To a certain limited extent that would be so; but I would also suggest that there should be allowances of boots and shoes and clothing, &c., to sick or aged persons in receipt of out-relief, in addition to, and not in substitution for, their "parish pay." This would materially add to their comfort and happiness, without in the least depriving private shopkeepers of any profitable custom. I also think that great help would be given to the recipients of out-relief if chopped wood were given to them in the winter, chopped by persons in the workhouse. Instead of oakum-picking and breaking stones, which is useless, let the inmates chop wood for the poor people outside. We have from the Report of the Commissioners on the Aged Poor full evidence that the out-relief generally given is inadequate. Such out-relief might, therefore, be supplemented by this means, at a very small cost to guardians and with great additional comfort given to the poor people. And work of this kind would be far better for the unemployed who are on the rates than oakum-picking or stone-breaking.

7565. Still you cannot dispose of the produce in any way, not even in that way, without practically interfering with other people, can you?—I think you can; because these people in receipt of out-relief have not got enough in the way of food or clothing, or chopped wood, or anything.

7566. If it is desirable to give the poor people more chopped wood, you may either get that chopped wood from a dealer in chopped wood or chop it yourself. If you chop it yourself you interfere with the man who would otherwise supply it?—Undoubtedly that is so, if you were getting it from someone else; but what I say is, that at present the guardians do not supply it all.

7567. You create a demand to fill up your own supply?—I would contend there is a demand; because the out-door poor need it at present.

7568. However, we quite appreciate what you say upon that point. What is your next suggestion?—Then sales for Her Majesty's prisons, and perhaps also for the Army and Navy, might be permitted, and probably it would not be needful to place any restriction upon the sale of the produce of the farm, the garden, or the poultry yard. I do not think the conflict of such produce with ordinary industry would matter. Then I may point out that the Local Government Board very wisely permits boards of guardians to subsidise the Church Army and the Salvation Army, or like voluntary organisations, to help men in times of great distress; and it appears to me that it should give the guardians power, by way of experiment, to found labour colonies or works of a similar character.

Chairman—continued.

7569. Of course there are initial expenses in starting work of that kind; should they get assistance in the matter, do you think, by way of loan?—I think they ought to have loans at a low rate, and at a reduced rate of interest. In London, certainly, I think the expense ought to be furnished partly, at all events, from the Common Poor Fund.

7570. Within London you think it should be chargeable upon the Common Poor Fund?—Yes, a part of it, I think, should be.

7571. With regard to the Local Government Board circulars as to the unemployed, what have you to say?—My belief is that Mr. Chamberlain's circular in March 1886 was very useful, and Mr. Fowler's in the autumn was still more useful as being issued before the winter; and I would suggest that, when next issued, different circulars should be issued for different authorities, clearly explaining their duties and powers. For instance, one uniform circular being sent round, it happened sometimes that when urban boards of guardians found in Mr. Fowler's circular suggestions that the local authorities should cleanse streets, lay out burial grounds, &c., they said it did not apply to them, for they had no power to do those things. On the other hand, some of the London vestries said they had nothing to do with relief of, or with supplying work for, the poor. The chairman of a London board of guardians said they had nothing to do with finding employment. I suggested to the Local Government Board to send out a circular explaining definitely to boards of guardians in rural districts how they could provide for the unemployed. They did not think fit to do it; so I got one printed myself and circulated it as far as I could. Of course it was not circulated to any great extent, but I will hand in a copy of the circular (*handing in the same*).

7572. Would you state briefly the effect of that circular?—I will state the heads of it shortly. The first one is "Finding useful employment," as I have suggested, by the old statutes. The next paragraph was addressed to "the board of guardians as Poor Law authority," and I suggested, in accordance with some of the resolutions of the London Reform Union, "That the boards of guardians be called upon to employ labour direct for supplying boots and clothing used in the rate-supported institutions under their charge, and that they be requested to carry out all painting, whitewashing, and cleansing in the said institutions without the intervention of contractors, and as far as possible during the winter months." Then the next paragraph was addressed to the boards of guardians in their capacity as sanitary authority, and I pointed out that very few country districts were properly supplied with hospitals, and that it is believed that the Local Government Board will

Chairman—continued.

do all in its power to assist the guardians in providing hospitals. I then called attention to the defective water supply, and pointed out that the board of guardians had certain powers with regard to that. Then I mentioned sewers. Then with regard to the town-like portions of rural districts, I mentioned scavenging and cleansing, and house-to-house inspection, and also a large number of sanitary powers. Then I mentioned the power of guardians as highway authorities.

Mr. *Bartley.*

7573. You have mentioned house-to-house inspection; under what statute are those powers given?—Under the Public Health Act, 1875. Section 92 of the Public Health Act, 1875, provides that it shall be the duty of every local authority to cause to be made from time to time inspection of their district, with a view to ascertain what nuisances exist. Of course the object of the circular was to call the attention of the guardians to all kinds of useful work which they might do, or induce others to do, and if all this kind of useful work were done there would be a great deal of useful employment. Of course I did not propose that they should invent work for this purpose, a course which would be both illegal and improper.

7574. What is the next point you have to bring forward?—I would suggest that the Local Government Board, outside the Poor Law, and the Public Works Loan Commissioners could do something more to encourage useful work by the local authorities.

7575. In what way?—First, by reducing the interest for loans.

7576. We do not want to go very closely into that?—I will take it shortly. The Public Works Loan Commissioners may lend money for a period not exceeding 50 years at 3½ per cent., or such other rate as may in the judgment of the Treasury be thought sufficient. Then the Local Government Board has to decide how long the loan may run. By the Report of the Local Government Board it appears that when the loan is repayable in 35 years the interest charged is 3½ per cent., in 40 years 3¾ per cent., and in 50 years 4½ per cent. The Commissioners only lend for works of primary importance. It will be observed that a lesser rate of interest is charged for a short loan. I suggest that the proper way would be to have one uniform rate of interest, as low as possible, so as to lighten the burden as far as practicable for the present ratepayer. Also I suggest that the Commissioners might charge a uniform rate of interest of, say, 3⅛ per cent. on their loans for permanent sanitary improvements, and, say, 4 per cent. on loans for other objects. All these loans, I ought to say, are from the Public Works Loan Commissioners.

7577. What is your next suggestion?—My next suggestion is, that the Local Government Board might extend the time for the repayment of loans.

Mr. *Whiteley.*

7578. How long would you extend the time for the repayment of the loan?—That must depend upon circumstances. Then I think they might allow the local authorities to carry out

Mr. *Whiteley*—continued.

their works more in their own way. I think more work would be done if there was a little more elasticity, and more liberty given to local authorities.

Chairman.

7579. You would still keep some control by the central authority?—I would; but I feel convinced that it ought to be much less now-a-days.

7580. Now that you have more fully constituted local authorities, you think greater confidence should be shown in them?—Yes, I think our town councils ought to be able to carry out their own affairs in their own way. I quite admit that there should be supervision as to loans.

Mr. *John Burns.*

7581. In fact you think they should be as unrestricted in their operations as private bodies are who get loans from the same Public Works Loan Commissioners?—I am not prepared to go quite as far as that. Then I would suggest that powers given to parish councils should be given to all urban councils who ask for them. Of course, as you are aware, the Local Government Act of 1894 does not give parish councils to towns. At the same time it gives certain powers to the parish councils which the town councils do not possess, and it empowers the Local Government Board to confer these parish council powers upon town councils.

Chairman.

7582. You think these powers should be given to all urban councils who desire to have them?—Yes. We applied for them at Oxford, and after a little correspondence we have got them in part; and we are still in correspondence to try and get more. We think in Oxford we ought at least to have the same powers as the villages around us, especially for these two things. In the first place we ought to have compulsory powers for the hire of allotments. At present the country districts have those compulsory powers on taking the proper steps, but the towns have not. I think the towns ought to have this power where they ask for it without any demur. Secondly, I think we ought to have the power of compulsory purchase under the Parish Councils Act for any purposes to which it applies. At present the villages have a much more simple method of compulsory purchase than the towns have.

7583. You will remember, of course, that we are dealing here with the unemployed; for what sort of purposes do you want the power?—The more power you give to the towns to do good work, the more employment we shall give. Our object is not merely to relieve distress when it is created by want of employment, but to provide useful employment if such can be usefully provided. I would mention that the hesitation of the Local Government Board with regard to the matter was condemned by a conference called by the London Trades Council some time ago.

7584. Of course there may very often be very good reason for great circumspection on the part of the central authority which is never to the taste of those who are applying for certain benefits

Chairman—continued.

fits from them?—It may be so sometimes. Then, coming to the next point, I would suggest certain statutory provisions.

7585. Passing from administration, you come now to some statutory provisions which you think would be desirable in order to encourage useful work?—Yes. I do not think I could adopt that phrase "passing from administration," because I am not quite certain that all the suggestions I have made up to this point can be obtained by administration alone. I now come to the statutory provisions necessary for encouraging useful work, and my first suggestion is that Parliament should provide a simple uniform method for compulsory purchase. There are about half-a-dozen methods of compulsory purchase of land for public purposes on the statute book. The simplest of all is that for widening highways, but it is not generally applicable, so that I will not recommend it. The simplest one that might be made of general application is that under the Parish Councils Act for a few specified purposes. As I have proposed that the Local Government Board should give these parish council powers to the towns for all the purposes for which they are available, so far as they ask for them, so now I propose that an Act of Parliament should be passed providing one simple method of compulsory purchase for all purposes whatever by local bodies. Such method should give the landowner his fair price and no more, or, to use the words of the Parish Councils Act, no extra price for compulsory purchase; and, also, the legal cost should be reduced to a minimum. Then, secondly, I think that the urban landowner (and I would lay stress on the word "urban") should bear a share of local burdens, either (1) by taxing ground values, or (2) by municipal death duty, or (3) by the method in Mr. (now Sir) Robert Reid's Bill, viz., taxation of landlords so much in the £ collected as income tax (he proposed a penny in the £). Persons of small means should be exempt, as in the case of the income tax. This extra tax was only to apply to urban landlords. The Bill was No. 127 of 1888, and No. 134 of 1889.

7586. That is to say, you suggest the taxation of urban landlords for public improvements and for public purposes?—Yes, in aid of local burdens.

7587. That you will admit, while it may be said to affect the question before us, is a very large and thorny question?—Yes.

7588. What is your next point?—I should like to say one word about Oxford. Before coming to give evidence here, I asked a number of the secretaries of trade unions to come and see me, and there were two points that they mentioned. The first one is with regard to the reply made by the Oxford Board of Guardians to the circular sent out on the appointment of this Committee. Without in any way contradicting what the Oxford Board of Guardians mentioned to the Local Government Board on the question of distress, they would say that the board found no additional pressure on the Poor Law, not because there was no extra distress, but because many men were supported by the

Chairman—continued.

trade unions of Oxford, and many by private charity; and one of the trade unionists added, "Many would die rather than apply to the guardians." I would mention this as showing that the fact that there is no extra pressure on the Poor Law does not prove that there is no exceptional distress.

7589. You said that the secretaries of the trades unions mentioned two points; what was the other point?—That the want of employment and the lowness of wages were largely due to influx from the rural districts, and that it was necessary to check this by dealing with the rural land so as to keep the agricultural labourers from flocking into the towns. The remedies which I propose are, (1) Allotments; use the Parish Councils Act fully and extend it as far as you can. (2) Small holdings; I do not think the present Small Holdings Act is likely to be of any use. (3) Proper cottages. You are aware, no doubt, that an Act was passed in 1890 for the housing of the working classes, which extended to rural labourers; the complication of it is so great that it simply will not house the rural labourer. I do not know whether I need go further into that.

7590. I think it is not necessary; we should all agree that any public action that could be judiciously taken in improving the accommodation and the comfort of the labouring population in the country districts would have a tendency to keep the population in those country districts?—The remedy I would suggest is, to enable the parish council, with, of course, the consent of the parish meeting and supervision, to provide labourers' cottages.

7591. Your general disposition is to place confidence in and responsibility upon the parish councils in these matters?—Certainly. Then, again, I think what I said about a simple mode of compulsory purchase comes in here also. Another difficulty has arisen about the Parish Councils Act, which should be dealt with either by administration or legislation, as may be found necessary. A strong wish for allotments, or I may say small holdings, is now expressed by people who are not exactly of the labouring class, and the opinion has been expressed that the Parish Councils Act does not authorise the parish council to take land and let land to people who are not of the labouring class. I doubt whether that opinion is correct, but if it is correct, I think the law ought to be altered. I cannot myself find in the Parish Councils Act any restriction, but if there is such restriction, I suggest that it should be removed by legislation.

Mr. *Stuart-Wortley.*

7592. As I understand your suggestion, you would make it possible for a landlord to avail himself of these powers to take the land of another landlord in order to give himself an allotment; do you think there is any limit upon the class who should have the benefit of this provision?—No; I would leave it to the parish council, subject to supervision. Then, something has been said before this Committee by a previous

Mr. *Stuart-Wortley*—continued.

witness about the Glebe Lands Act. I would point out that that Act does not enable the letting of allotments at all.

Chairman.

7593. Will you go on now to the question of the Poor Law relief for the temporarily unemployed?—The Poor Law for temporary employment may be divided into three heads: (1) Outdoor, (2) Indoor, and (3) Persons in search of work. With regard to the first head, the guardians should be empowered to give temporary out-relief if they have not already this power under the Prohibitory Order of 1844, Article I., Sub-section 1. I have here the collection of Poor Law Orders by Macmorran and Lushington, and at page 22 the so-called Prohibitory Order is described, and out-relief is prohibited in many cases. Among the exceptions is the case where the person applying shall require relief on account of sudden and urgent necessity. The Poor Law Commissioners in an instructional letter have interpreted these words as signifying "any case of destitution requiring instant relief." I should submit that this does authorise the guardians to give temporary out-relief to a man who was temporarily out of employment and unable to maintain himself. If I am right in that, I think the fact that the guardians have such powers should be communicated to the guardians, as I believe there are doubts upon the point. If, on the other hand, I am wrong, I think that the Poor Law Order should be modified enabling relief to be given for a limited period in such cases. This could be done by the Local Government Board. I think that such relief should not constitute disfranchisement; but to prevent it so doing an Act of Parliament would be necessary. I think in these cases in-door relief is objectionable because it means breaking up the home; also it involves sending the children to pauper schools where they may be improperly treated or not properly looked after. I think, moreover, that a suggestion made by the Local Government Board in a circular in 1871 should be rescinded. Their suggestion is this: "(1) That out-relief should not, except in special cases, be granted to any able-bodied widow with one child only; (2) that in the case of any able-bodied widow with more than one child it may be desirable to take one or more of the children into the workhouse in preference to giving out-door relief." I think it is a mistake to bring up children in the workhouse or in Poor Law schools if you can help it. I think that those suggestions in the circular should be rescinded; if not, there must be some more effective government inspection by women, as well as by men, of the pauper schools. If, moreover, you are to treat the temporarily unemployed by in-door relief I think there must be some more efficient inspection of workhouses, and the reports of the inspectors should be published in each locality in a separate form. Of course one can get the inspectors' reports by buying a 3*s.* 6*d.* Blue Book, but I think there should be supplied, at the price of a penny or a halfpenny, the report for the particular locality to which it refers. Publicity is the best alleviation for the evils of the workhouse.

Chairman—continued.

7594. I gather you distinctly prefer dealing with temporary employment by way of out-relief?—I would distinctly prefer giving the guardians the power to do so; the discretion should be left in their hands; I would not dictate to them. The third head is relief to unemployed persons in search of work.

7595. When they are on tramp in search of work?—Yes, as casual paupers who were formerly known as "destitute wayfarers." Last summer I found a man fallen down ill in the road near Skiddaw. He had walked 20 miles from Carlisle, and was going on to Cockermouth, seven miles further. There was no casual ward between those two towns. When a man does arrive at a casual ward after a long journey he ought to be treated decently. I should like, as an example of contrary treatment, to refer to a report of a meeting of guardians at Cockermouth which appears to me to show illegal treatment of paupers in 1894. This is what one of the guardians says, Mr. Jenner-Fust. "At the time of his last visit the men at the Keswick Vagrant Ward were being accommodated two in one bed. That was not a desirable arrangement, as under it a respectable wayfarer might be put in the same bed as a hopeless tramp. He was not sure that the plan of giving the women and children at this vagrant ward only dry bread had been altered or not." (The *Chairman.*) "It has not been altered." Mr. Jenner-Fust said "that something else, some gruel, or something of that kind, should be given to the women and children." The chairman said "that they got something else in the winter months, but in the summer the old system was reverted to." That, in my opinion, is simply illegal. A pauper is entitled either to gruel or broth, as appears in the Regulations of the 18th December 1882, quoted in Shaw's Poor Law Orders, page 723.

7596. Those are rather questions of direct Poor Law administration that can hardly come within our province. We are dealing with the relief of distress. No doubt it is true that the manner of relief of distressed wayfarers comes within our scope; but I think we have not to deal so much with the actual details of administration?—I will merely mention that the Poor Law Orders give, in my opinion, excessive work for casual paupers; for instance, they give nine hours' pumping or four pounds of oakum picking, while in prisons only three pounds of oakum are required. The Local Government Board have an explanation for that, and I have an answer to their explanation, but the Committee will not care perhaps to go into detail.

7597. I think not. Have you any general observations to make on the administration of the Local Government Board?—Yes; I think the Poor Law Commissioners, or the Local Government Board, have rather sharpened the Poor Law against the poor, and I will give two or three examples. The first I would mention is that they have substituted the word "destitute" for poor people unable to maintain themselves. But they have gone a step further in the Memorandum of 1878, which states that "The guardians need scarcely be

Chairman—continued.

be reminded of the broad and general principle of the English Poor Law, viz., that no person has a claim to relief from the rates except in the case of actual destitution." Now the word "actual" is an interpolation of the Local Government Board. Of course, if they had said "actual destitution" in an Order they perhaps might have been justified in saying that they had done so under their *quasi* legislative powers; but this circular had no legislative authority, and it appears to me that they had therefore no right to add the word "actual" to "destitution," which is already a word rather too pronounced. May I mention an illustration of the effect of the doctrine of the Local Government Board which occurred at Chester, where a poor old man who had treasured up five pounds to pay for his burial was turned out of the workhouse because, I suppose, he was not destitute, and promptly committed suicide. In the next place I would point out that by law (namely, the Order of 24th July 1847), the master of the workhouse is bound to admit to that establishment "every person applying for admission who may appear to him to require relief through any sudden or urgent necessity." (Art. 208, Shaw, p. 204.) But in 11 Official Circular 64, we read that the master is bound before refusing admission to satisfy himself that the person does not require relief through any "sudden and urgent necessity" (Shaw, p. 204, note). The "or" is changed into "and." Then, again, in 9 Official Circular 144 (Shaw, p. 97, note), it is stated that a person applying for admission after the workhouse is closed for the night must be admitted "in cases of sickness or of peculiar urgency." The word "peculiar" is, I think, a misstatement of law, and sharpens the law against the poor belated wayfarer, who may be out of employment. Then, again, the Local Government Board has in some cases sanctioned "bye-laws" purporting to restrict the guardians as to out-relief, and I believe even as to medical attendance. I think the legality of this is doubtful, and it appears to me that the Poor Law Circulars, many of which are very old, should be revised.

7598. Do you think they have encouraged in-relief to an excessive degree?—They have discouraged out-relief in an excessive degree.

7599. And thereby forced people into the workhouse?—To some extent that is so, and to some extent the poor have had to shift for themselves the best way they could. Then there are one or two practices in connection with the administration of the Poor Law which I really think discourage thrift, although of course unintentionally. One was that of reckoning against a man all the money he receives from a charitable source, but this is now mitigated by a recent statute, which allows the guardians, if they think fit, not to reckon against a man any sum that he receives from a friendly society. That amendment of the law was passed in 1894. But I think it will take years to undo the effect of the previous doctrine that the board of guardians should not give a man any advantage from the money he receives from a friendly society.

7600. Thus implying that if he saved money

Chairman—continued.

for himself that would only have the effect of preventing him getting the assistance he otherwise would have received?—According to the advice of the Local Government Board, if a man were to receive 3*s.* a week from a friendly society, and he would ordinarily have received for himself and family 5*s.* out-relief, he should only receive 2*s.* out-relief. That was the Local Government Board's strict doctrine. Many of the boards of guardians, of course, did not follow it, and I am glad it has been to a large extent superseded by the Legislature. In the next place, I think it has been a mistake to compel men to contribute to the rates for the support of relatives when they cannot support their own family properly; it prevents a man laying by, and it prevents him in some cases, I think, from having sufficient for the maintenance of his family. It appears to me that the Act of the 43rd of Elizabeth has been somewhat strained in the course of a couple of centuries. Section 7 of the 43rd of Elizabeth, c. 2 (reading it shortly), enacts that the children of poor persons unable to work "being of a sufficient ability shall at their own charges relieve and maintain every such poor person in that manner and according to the rate, as by the justices of peace of that county where such sufficient persons dwell, or the greater number of them, at their general quarter sessions shall be assessed: upon pain that every one of them shall forfeit twenty shillings for every month which they shall fail therein." Put in brief, it is this: it directs that the children of a poor person, where such children are of sufficient ability, shall maintain the poor person, and the penalty is a forfeiture of twenty shillings a month; that is the Statute of Elizabeth. Now please observe the words "of a sufficient ability," and also that the payment by way of forfeiture ordered was 1*l.* a month. It seems to me perfectly clear that the framers of the statute never expected that people of small means, poor people like agricultural labourers or unskilled labourers in towns, should under that Act have to maintain their parents, seeing that the Act uses the words "of a sufficient ability," and also that the payment ordered in case of default was 1*l.* a month. Obviously, having regard to the wages at the time of Elizabeth, people of that class could not pay a pound a month, or anything like it. Then it may be worth while to mention the cases on the subject. This is the dictum of the judges in one of the cases: "There being no temporal obligation to enforce the law of nature, it was found necessary to establish it by Act of Parliament, and that can be extended no further than the law of nature went before." (Pratt, C. J., in Rex *v.* Munden, 1 Stra. 190). In the next case the judge said, "If the grandfather be a rich man, and the father a poor man, they (the justices) may make an order on the former to maintain his grandchildren." In another case the justices made an order against a "very rich" Jew, and, in another, against a wool sorter. I submit the section was intended to apply to well-to-do people and not to poor people. Then the Local Government Board have accentuated the hardship a little by the circular of 1871,

Chairman—continued.

where they suggested "that the provisions with respect to the compulsory maintenance of paupers by relations legally liable to contribute to their support should be more generally acted upon." The Memorandum of 1878 repeats this recommendation, and emphasises it. Now, the Act of Elizabeth says nothing about "contributing." I am of opinion that in cases where people have less than 15*s.* a week, or in London 1*l.* a week, they should not be called upon to contribute.

7601. Of course those which you consider harsh methods of the Local Government Board, if they are harsh methods, have the effect of increasing the want of employment and distress?—I think they increase the difficulty to some extent. As a matter of fact, many of these cases never come before the magistrates, so that there is no publicity as to them.

7602. In fact, you would recommend a modification of the old circulars, and what you consider more humane circulars to take their place?—Yes.

7603. What is the next recommendation you would make?—The next remedy I suggest is the reduction of the hours of labour. It appears to me that the powers of the Board of Trade for that purpose might be extended to omnibus, tram lines, and mines.

7604. That is a large Parliamentary and political question. We have heard your suggestion, but I think we need not go into the details?—Then my next suggestion is that I would give more power to the municipalities.

7505. For what purposes?—In the first place to work trams. That would mean reasonable hours for the employés, and if you have reasonable hours for the employés more will be wanted. Secondly, give powers to the municipalities to hold land whenever they purchase it. Too frequently they have to buy at an extortionate price, and then they have to sell it again under some of the statutes.

Mr. *Mather.*

7606. When you speak of land do you mean land within the precincts of the town, or land in the country for a farm?—I was referring to their ordinary powers. I was not referring to a farm.

7607. Within their own area?—Or beyond it; I am speaking of the ordinary purposes of municipal life.

7608. A sewage farm, for instance?—Certainly.

7609. What do you mean by recommending that they should hold the land?—Under some Acts of Parliament after a town council has bought the land they have to sell it within a certain time, and I wish to remove that restriction.

Chairman.

7610. Then I understand you wish to free them more completely from the restrictions of the Local Government Board?—Yes; to let them manage their own affairs without so much control from the Local Government Board, except when they want to borrow.

7611. What is your next suggestion?—With regard to Crown lands I think that all land belonging to the Crown should be retained and none sold. Especially I think it is objectionable that the foreshore should be sold.

Chairman—continued.

7612. Those things you consider have a direct bearing upon the question of the unemployed?—Yes.

7613. Does that exhaust what you propose to say in what I may call your examination-in-chief?—Yes. I have some documents to hand in if you will allow me. The first is the petition of labourers, to which I have referred, for the issue of rules for acquiring land under the old statutes. In the next place I have some resolutions of the conference on the unemployed and other bodies on the subject (*handing in the same*).

Mr. *Mather.*

7614. I assume from your evidence in chief that the Committee may regard it as your opinion that the old Poor Laws of the country, dating from the time of Elizabeth, and taking the changes in them up to the present day, would amply justify the Local Government Board in authorising local authorities and boards of guardians to acquire land for the purpose of finding useful employment?—That is so.

7615. In your opinion no fresh legislation is needed, I understand, to restore these old laws to a state of active operation?—They could be restored to active operation as they stand, but I think further powers would be found very desirable, if not absolutely essential.

7616. In what respect; do you mean in connection with those laws, or rather to alter, improve, and adapt them to the present condition of things?—I suspect, though I am not sure, that borrowing powers would be required for purchasing land.

7617. All matters, therefore, relating to the finance of the acquisition of land, you think, might require some further legislative enactments, do you?—Not necessarily, because they could hire without borrowing.

7618. You mean they could rent land, do you?—Yes.

7619. Under the law as it now stands?—Yes.

7620. Without further powers?—Yes.

7621. But if they came to purchase, you think it would be necessary to go to Parliament for further powers, do you?—I believe the Local Government Board take the view that they have at present no powers of borrowing for this purpose, and, certainly, the sections in the Act of Will. 4, which empower borrowing, have been repealed.

7622. Are you of opinion that useful employment for those who follow casual occupations can best be found at times, and under certain circumstances, upon the land of the country?—I am not prepared to make quite such a wide statement.

7623. As I take it, you have devoted your attention, so far, to the question of finding employment from the land of the country, and not from occupations of a manufacturing kind?—Mainly so.

7624. You have not mentioned in your evidence in

Mr. *Mather*—continued.

in chief, have you, manufactures of any sort in connection with the finding of employment?—Yes; I think I mentioned the powers of manufacturing and disposal of produce given by the Act 43 Elizabeth.

7625. You said that in former times the disposal of the services of the labourer in search of employment might be used in several ways, that the product of his labour might be sold in the open market; but I understand you to advocate to-day that the employment given for those now unoccupied should take the form of employment upon the land?—I advocate that the boards of guardians should be empowered to do so, but each board of guardians must exercise its own discretion according to the circumstances by which it is surrounded.

7626. Do you think the present law would justify boards of guardians in establishing a manufactory or workshop?—Yes, if they had the sanction of the Local Government Board.

7627. Do not the old statutes you have referred to to-day apply almost exclusively to the occupation of the people on the land?—In the first Act, 43 Eliz., curiously enough, there is hardly mention of the land, the reason being, I believe, that, as I have said, probably the land could be procured without any difficulty. At an earlier period of our history land was available without any difficulty, and stock was the more expensive article to procure. The poor had land.

7628. In speaking of the action of the Charity Commissioners in having disposed of a great quantity of land, I think you said that land to the value of 2,000,000*l.* had been disposed of in about 10 years, and since 1853, 8,000.000*l.* sterling worth of land had been sold by the Charity Commissioners. Do you think that land ought to have been used exclusively for the purpose of employing those people on the land who are destitute or semi-destitute?—No, I did not say so, and I do not think so.

7629. I am simply asking your opinion?—No.

Chairman.

7630. But it afforded an opportunity, as far as it went, of doing so by way of allotments or otherwise, did it not?—That would be so. May I say the Charity Commissioners did not sell the land; they could only sanction the sale.

Mr. *Mather.*

7631. But they had the control of the land, had they not?—Yes; so that they could prevent sale.

7632. And therefore the land was diverted from what you maintain was its original destination and was not available for allotments or small holdings?—That would be so, but the original purpose, of course, was not necessarily allotments or small holdings.

7633. But you described that, did you not, as being the means in the hands of the Charity Commissioners of finding land sufficient for small holdings and allotments?—Yes; some of it would be useful for that purpose undoubtedly.

7634. May I gather from the general views you have expressed to-day that you look to the land as affording local authorities and boards of guardians the best means of producing employment for the unemployed?—I think you must look to the land in all sorts of ways, and to the local authorities in all sorts of ways, and that is why I have advocated these additional powers for local authorities.

7635. I think you said the land would enable the unemployed, the distressed artizan class, to be, at any rate, kept and sustained by the produce of their own labour on the land, and you advocated that as the primary object for placing the people on the land?—I did not go quite so far as that; I advocated that the boards of guardians should have powers to use land for this purpose, but I do not think that the labour colonies, if the guardians established them, would be self-supporting for a considerable period, if at all.

7636. Do you make any distinction between the useful employment of the distressed or unemployed and what may be done upon the land, or what might be afforded by way of employment in manufactories or workships in the towns; do you make no distinction between the two classes of employment; do you think one would be just as good as the other?—I think the guardians should have the power to do both, but it must be entirely in their discretion.

7637. Do you mean that you would permit guardians, irrespective of any interference with the ordinary trade of a town, to establish workshops to produce that which a town is distinguished for; do you think that is a desirable thing in preference to going back to the land?—No, I do not think it would be; the land would be better certainly. I advocate power on the part of the guardians to utilise the land.

7638. And that you think, do you, would be the means of utilising the labour which is now seeking employment?—I think they should have discretion; I want the matter to be really in the discretion of the local authority or the guardians.

7639. Do you know whether the Charity Commissioners have to-day a large amount of property under their control in the form of land which might be sold, as they have permitted it to be sold heretofore?—Certainly, a very large amount. They have jurisdiction over 60,000 charities.

7640. Would you advocate some measures being taken to prevent the Charity Commissioners from disposing of their present property, or sanctioning the disposal of it as they have hitherto done?—Certainly.

7641. In your investigations have you any idea as to the amount of land over which they have control in this way?—I think I can give you a little rough information. For all England and Wales, Mulholland, in his Dictionary of Statistics, at page 69, estimates the capital value of the real estate of English charitable endowments, in 1876, at 31,100,000*l.*, but my impression is that the Charity Commissioners' Reports will give more reliable statistics on the subject.

7642. Would you assume, from the knowledge you possess, that they have the sanctioning, or otherwise, of the sale of some million pounds' worth of land now?—Yes, over many millions' worth.

Mr. *Mather*—continued.

7643. Now still under their control?—Yes; and they are still sanctioning sales, as far as I know.

7644. What would you advise to be done in reference to these powers of theirs; would you restrict the Charity Commissioners?—I think I should stop the sale of charity lands altogether.

7645. How would you dispose of those lands?—The local trustees would manage them as heretofore. I think that every opportunity should be taken of making the local trustees as representative as possible, minimising the co-optative element and minimising the *ex-officio* element.

7646. Is this the property you would first of all endeavour to utilise for the purpose of establishing useful employment on the land for the distressed population?—No, I should prefer that this land should be held by the charity trustees, and that they should be empowered to let land in allotments where they have not already express power, but I should not compel them to establish labour colonies by any means.

7647. Do you regard the land held under their control as a source of that form of useful employment of labour on the land which you have advocated?—I regard the method I advocate as being useful for the purpose and as giving some opportunity for useful employment, but I do not wish to divert the land from the charities to which it now belongs for the purpose of employment.

7648. Do you think a considerable portion of this land is available, or might be made available, for this purpose?—Yes; and further, there is a good deal of money, about 17 millions, in the hands of the Charity Commissioners, some of which, I think, might be usefully invested in land for allotments and similar purposes.

7649. You spoke of Crown lands and forest lands belonging to the Crown, did you not?—Yes.

7650. In your opinion, is it now possible, without further legislation, that the Crown could bestow these lands on public authorities for the purpose of providing employment?—I cannot answer that question off-hand.

7651. You spoke of those lands as being available, did you not?—I spoke of the Crown lands as being public lands, which it was unadvisable to sell. We ought to retain them, and I think it is a mistake to permit the Crown Land officials to sell certain foreshores and quit rents which I deem of importance. Speaking generally (I am not here advocating nationalisation of land), I do think that all land that belongs to the nation or public bodies of any kind should be carefully preserved.

7652. Has not that opinion some reference to the subject which you came here to discuss?—No doubt it has.

7653. I think you meant that these lands were a ready and available source for employment on the part of those with whom we have to deal, did you not?—Yes, in many cases they could be utilised for that purpose.

7654. May I take it that the only difference between your evidence and that of Sir Hugh Owen on the question of these old powers possessed by Poor Law authorities is, that while on the one hand the Poor Law authorities of to-day think there was great abuse in the use of the land in former times in the way of affording employment, you think there is no reason why the Poor Law authorities of to-day could not make their own rules and regulations to make the Poor Law guardians find land for useful employment?—I am not quite sure that there is any difference of opinion as to the state of the law between Sir Hugh Owen (as read to me from the evidence in the Blue Book) and me. There is a difference between the short condensed report in "The Times" as to the law.

Mr. *Mather*—continued.

7655. Then, with the report you have heard read to-day by the Chairman of the evidence of Sir Hugh Owen you entirely agree, do you?—I could not say without reading it very carefully, but it appeared to me to indicate great reluctance on the part of the Local Government Board to do that which I think it ought to do.

7656. In speaking of the hardening of the Poor Law of the present day, as against the distressed and unemployed working people, do you mean that there has been a constant effort to prevent out-door relief being given, and relief of any kind being given, except under very destitute circumstances?—I think there has been a constant general pressure from the Local Government Board against out-door relief.

7657. Are you aware that from some of the evidence given before this Committee by Poor Law guardians and others, that somewhat lavish expenditure has been incurred with regard to out-door relief as applied to the labour test, and that large sums of money have been spent practically to no purpose?—It is quite possible, but I never did advocate indiscriminate out-relief, any more than I should advocate indiscriminate in-relief. It is a matter for discrimination by the guardians.

7658. In any change made under the present system would you very much rely on the wisdom of local authorities and Poor Law guardians for the administration of the law?—Yes; I think they ought to be thoroughly informed what is the law, and then they might carry it out. I think it would be very useful if there were some means of informing guardians what their powers are, because many of them are absolutely ignorant as to their powers.

7659. Do you think any distinction ought to be made in the treatment of the well-conducted working classes, the artisan class, and skilled men, and those who are merely casual labourers, those whose employment is fluctuating and whose habits of life are not exactly the same?—I think a casual labourer may be just as well-conducted as a skilled man. He has had the misfortune not to be taught a trade, but I think each case should be treated on its merits, and a difference made between the well-conducted and the ill-conducted. In advocating out-door relief for the temporarily unemployed I would suggest they should only have it for a short time.

Mr. *John Wilson* (Govan).

7660. I think you stated at the commencement of your examination that the Charity Commissioners

Mr. *John Wilson* (Govan)—continued.

sioners had disposed of a great amount of property, did you not?—I think I said they had sanctioned the disposal of a considerable amount of property, but, of course, there is very much more left.

7661. And the reason was the mismanagement of the trustees?—Two reasons they gave: the mismanagement of the trustees, and the policy of the Mortmain Act; and then there was a third reason that, as a general rule, they secured by sale a greater present income to the charities than was being obtained from the land.

7662. Are you of opinion that none of the charity lands should be sold?—Yes.

7663. You stated your opinion to be that the only way to get out of the difficulty of the unemployed was to put them back upon the land, did you not?—I did not state it quite so broadly as that, but it appears to me that by giving local authorities more powers of dealing with land there would be more employment for the unemployed.

7664. You would scarcely expect that people who had been trained to city life and industrial pursuits should be put back upon the land; they would not be able, would they, to make a living for a long time?—Very probably not; it would be a question for the discretion of the guardians in each case as to whether a man was likely or not to make a living.

7665. Do you propose that the guardians should get up industrial employment for the industrial classes in towns and cities?—If they thought fit to do it by way of experiment I see no objection.

7666. But if it were to be a practicable thing?—I think they might, if they thought fit, but I should not dream of dictating to them one way or the other.

7667. In reference to employing those who may be out of employment and willing to work, what basis of remuneration would you be disposed to pay them?—I think that must be a matter for the guardians to decide; there have been two or three views taken with regard to it.

7668. Would you fall back on the principle of giving them the standard wages of the district?—If the guardians thought fit, or less wages if the guardians thought fit, or they might employ them only so many days a week, if they thought fit.

7669. You stated that the Small Holdings Act as it at present stands is of little use, did you not?—I think it is of very little use.

7670. Is that owing to the legal expenses necessary with regard to it?—There is no power of compulsory purchase, and it is in the hands of the county councils, many of whom are not much inclined to risk expenditure from the rates without a certain return.

7671. Do you think if people had a fixity of tenure in the land they would be disposed to settle down upon it?—I think the best plan of dealing with the matter would be to extend the power of the parish councils.

7672. Do you think the guardians should erect cottages for them?—I think that the parish councils should be empowered to erect cottages.

7673. Would you not be rather inclined to

Mr. *John Wilson* (Govan)—continued.

allow those who have small holdings by their own thrift and industry to endeavour to earn such means as to be able to build cottages themselves?—I see no objection to that.

7674. Do you not think that would be an incentive to them to be thrifty?—It would be a good plan if you could insure sanitary cottages being built, that is the real difficulty in those cases.

7675. You stated, did you not, that in the case of a man out of employment taking benefits from the guardians in the way of dole he should not be disfranchised in consequence?—Under the present law taking relief from the guardians does disfranchise, but I think it would be desirable that it should not, in the case of mere temporary relief. The only point I expressed a doubt about the present law with regard to disfranchisement was the case of a man being employed at reasonable wages under the Statute of Will. 4, and coming within the provisions of that Act.

7676. Then you stated that you thought the guardians did not know or did not fully comprehend their powers of giving out-door relief?—I am sure they do not know their general powers as to out-door relief.

7677. While they give a man out-door relief, if he is a married man with a family, you say they would have to take that into consideration also?—They would.

Mr. *Pickersgill.*

7678. The Statute of Will. 4, which you have quoted, under which the powers with regard to lands were given to guardians was passed, I believe, in the year 1835, was it not; it is 5 & 6 Will. 4, is it not?—Yes.

7679. That transferred the powers to the guardians, did it not?—Yes; that would be so.

7680. And the new Poor Law Act was passed in the previous year, was it not?—That is so.

7681. So that we may take it Parliament had fully before its eyes the policy of the new Poor Law Act when it deliberately transferred these powers to the guardians?—Certainly; but they were transferred subject to the rules and orders of the Local Government Board.

7682. Which you complain have never been made?—That is so.

7683. I do not think you stated, did you, in the course of your evidence, that according to the Statute the 50 acres as a maximum must be in or near the parish?—That is so.

7684. Would not that be a difficulty in the way of London guardians, for instance, acting under these old Acts?—I think "near" must depend very much on the circumstances, and I should say myself that the Poplar Board, or the Mile End Board, might take land in Essex if they liked.

7685. You would say, would you, that "near' must be construed as widely as that?—Certainly.

7686. And that if land could not, practically, be obtained within 20 miles, then the words would cover such a case?—I think they would.

7687. Are you aware that Sir Hugh Owen expressed an opinion that fresh legislation was desirable?—Yes.

Mr. *Pickersgill*—continued.

7688. And you concur with him, do you?—Yes, I think fresh legislation would be desirable.

7689. In order to make the policy of these Acts really effective?—I do not go quite so far as that.

7690. At all events, you would be glad to see, would you not, fresh legislation adapting these Acts to modern conditions?—That, probably, would be desirable, but still they are perfectly workable as they stand.

7691. Are you aware that some London boards of guardians have asked the Local Government Board to permit them to join in the scheme in taking land under these Acts?—I saw something about it in the newspapers, but I am not well acquainted with the details.

7692. Then I will not follow it up?—I think the Local Government Board said vaguely that their request was beyond the powers of the Local Government Board, but I think the Local Government Board did not point out in detail where they had not the powers.

7693. That is perfectly true, and, in your opinion, would it be possible for London guardians to join in the scheme?—I think probably the Local Government Board are right, but it appears to me they might as well have said where the difficulties lay, and then an amended scheme might have been put forward.

7694. Do you think that at least a part of the cost should be charged on the Metropolitan Common Poor Fund?—I think it should, and I think also that to do so would be but extending the principle laid down in the Statute of Elizabeth. The Act of 43 Elizabeth, Chapter 2, Section 2, provides for rates in aid. Where a parish is unable to levy sufficient sums of money for the relief of the poor then they can come upon another parish. They may apply to two justices, and the two justices may rate any rich parish within the hundred to help the poor parish under the circumstances mentioned, that is to say, supposing there was an East-end parish which was so rated that it could not pay the rate, then the justices would have power to rate Belgravia in assistance of such poor parish, both being in the same hundred.

Mr. *John Burns.*

7695. As is now done, practically?—It is done to some extent by the Common Poor Fund. There was a case before the court in which the Mayor of Worcester had been the rating authority. He had selected people in the rich parish to pay towards the expenses of the poor parish, and he had selected in one case a gentleman who lived in the rich parish but who was the owner of land in the poor parish, and the mayor made him pay towards the rates in the poor parish. The matter came before the court; the court upheld the decision, and said it was a very sensible one. The Common Poor Fund is perhaps a more modern way of dealing with a difficulty of that kind, and I quite agree there should be an extension of the Common Poor Fund.

Mr. *Pickersgill.*

7696. I understand you only quote these as precedents, you do not mean to say they have

Mr. *Pickersgill*—continued.

any special value at the present time, do you?—This question was asked in the House of Commons of the Law Officers of the Crown, and the Law Officers of the Crown said they could not tell whether this section as to votes in aid was operative or not. It is in the revised Statutes.

7697. About rating?—Yes; I can give you the reference; it is volume 1 of the second edition of the Revised Statutes, published by authority in 1888, page 547.

7698. You have told the Committee that in your opinion guardians have been too stringent in refusing out-door relief. Do you know anything about the administration of Poor Law in London?—I know something about it.

7699. And you know, do you, that the burden of out-door relief falls on the locality, and the burden of in-door relief is distributed over the metropolitan area?—Yes, and I have long thought that unjust.

7700. Do you think that that tends to make the guardians less disposed than otherwise they would be to give out-door relief?—I think that is the effect.

7701. And it prevents out-door relief being given in cases where out-door relief would be suitable, does it not?—I think that is so.

7702. One question with regard to the relief given to persons on tramp. I do not want to go at length into it, but you have suggested more generous treatment of the casual vagrant, have you not?—I think I rather suggested less cruel treatment.

7703. Do you not think that if the regulations of the Local Government Board were altered in the direction in which you suggest, it would be necessary to distinguish between the professional tramp and the *bonâ fide* workman, or would you give this more generous treatment indiscriminately to all?—I would let even the professional tramp have the law which involves the provision of gruel; I would give even the professional tramp what he is entitled to by law, and I would also reduce the amount of labour, which seems to me excessive for anybody. One can only hope that the guardians do not enforce the nine hours pumping.

7704. Then you do not contemplate any discriminative treatment of persons on tramp, do you?—I think discriminative treatment would be most desirable.

Mr. *Bousfield.*

7705. You have called attention to the powers given under the Act of the 43 Eliz. and other Statutes, and have given your view that those powers still exist, and that your view is that rules should be made enabling boards of guardians to exercise those powers. I gather that you think, also, legislation should be initiated with the object of conferring similar powers on local authorities?—No, excuse me; the powers that I desire for local authorities are simply that local authorities should be able to purchase land for their own purposes for widening streets, markets, and the like by a simple way without more expense than is necessary. I do not suggest that other local authorities should interfere with the Poor Law.

Mr *Bousfield*—continued.

7706. Of course you know that now-a-days the question of Poor Law relief is sharply separated from the question of the execution of local sanitary and other works, that is to say, in urban districts there are a different set of authorities, are there not?—There are a different set of authorities, but the Local Government Board has, if I may say so, very wisely recommended co-operation between the two, and when that co-operation can be obtained I think it is useful.

7707. What I want to point out to you is this, that the view has been expressed here that it is desirable that the local authorities should possess the power of providing work for the unemployed upon land as well as the boards of guardians. Do you differ from that view?—Do you mean simply to make the work.

7708. No. You yourself illustrated a number of works, sewage works, sanitary works, and other works of that kind which are within the province of the local authorities, and which are not within the province of boards of guardians; do you see what I mean?—Yes. I think the local authorities might have an eye to the unemployed and do them some good in the matter. I quite agree with that.

7709. Are you aware of the stock argument which is alleged against allowing boards of guardians to exercise these independent powers?—What argument do you refer to?

7710. The argument that this system was tried up to the year 1834, and found wanting; that it led to a vast amount of corruption and evils, that it had to be peremptorily stopped by the legislature, and therefore we should be reopening again an experiment which had been tried and had failed?—My answer to that is that the Commissioners of 1834, so far from condemning useful employment, rather advocated it. They said the breakdown was not from an observance, but from non-observance of the Statute of Elizabeth. They state: "It is now our painful duty to report that in the greater part of the districts which we have been able to examine, the fund which the 43rd of Elizabeth directed to be employed in setting to work children and persons capable of labour, but using no daily trade, and in the necessary relief of the impotent is applied to the purposes opposed to the letter, and still more to the spirit of that law, and destructive of the morals of the most numerous class, and to the welfare of all." They condemned non-observance of the Statute of Elizabeth. I think in some respects I may say the Report of this Commission, though very valuable, has been a little over-rated for various reasons which I could give.

7711. I want to ask your view upon one or two other points, which differentiate the view in 1834 and the view at present. In a great many of the parishes where those evils arose when these old Acts were in force, was it not due to the fact that the guardians made the conditions of employment more favourable than the conditions of private employment in the same neighbourhood, so that there was an inducement given to people to leave private employment and take parish employment?—You mean the overseers, do you not?

Mr. *Bousfield*—continued.

7712. Yes, the overseers?—It is said that such was the case, but it was before my time.

7713. But a large number of instances are given in the Report of the Poor Law Commission, and I thought you had gone through it?—I remember they do give that reason. I remember, curiously enough, that in one case the poor seemed to have claimed the eight hours day.

7714. As a matter of fact these powers were used, were they not, before 1834, for giving employment of a permanent character nearly all the year round?—Yes.

7715. Whereas you contemplate a resuscitation of these powers, not with the object of giving permanent employment, but with the object of giving temporary employment to the unemployed?—I think that the resuscitation of the powers would allow the guardians to give permanent employment.

7716. But that would lead, or might lead, to a good many of the old evils, might it not?—It might possibly be so, if not properly guarded.

7717. From our point of view the more important object is, is it not, the use of these powers for the temporary emergencies of the people who may be from time to time unemployed?—I have considered both temporary relief and the more permanent sources of remedy, and I think you should put the powers in the hands of the guardians for both purposes, and they must use them as they think fit.

7718. As a matter of fact, I think, you have already said these powers, before 1834, were very loosely used or abused, and there was an entire lack of system and supervision, was there not, in the way in which they were used before 1834?—Not that I am aware of as regards employment on the land; I think the lack of supervision and so forth, referred to the employment on roads and the like. I do not remember cases of employment on the land which turned out badly, though there may have been, and probably were such cases. It is very curious that the Legislature, just before the Poor Law Act of 1834, should have strengthened this Act enabling employment on the land, and talked about useful and salutary Acts, if they thought that form of employment was so bad. I think the evils you refer to existed more with regard to road making, and work of that kind; but of course at that time the local authorities were in a very bad state and they were supervised by the magistrates, who appear to have done more harm than good.

7719. Have you happened to refer to the Act of 30 & 31 Vict. c. 106, s. 13, which I see is one of those you enumerate in a paper you wrote on this subject; that is an Act passed so recently as the year 1867, enabling guardians, with the approval of the Local Government Board, to hire or take on lease temporarily or for a term of years not exceeding five, any land or buildings for the purpose of the relief or employment of the poor?—I believe that is acted upon. I did not refer to it, because of course everybody knows that Act.

7720. But apparently that somewhat shows that the old Act had been forgotten, does it not, in the year 1867, because it is a much more limited power?—It does, but I could not say.

Mr. *Bousfield*—continued.

7721. For what purpose has the Act of 30 & 31 Vict. been acted upon?—I fancy it would be utilised in the case of taking a piece of land for a garden for a union. I remember my father told me that at Woodstock, where he was a guardian, the men used to be lying about and doing nothing, and he and others advocated that a piece of land should be taken. I suppose it would probably be a big garden, and you will generally find in every well-managed country workhouse there is a big garden, and very likely a field next to it, belonging to the workhouse.

7722. Where the able-bodied inmates would be set to work?—Yes; and a kind hearted master, instead of putting the casual paupers to pick oakum, puts them into the garden for so many hours, which is, in my opinion, much better.

7723. I was going to put that to you. Perhaps you know, for instance, that the guardians of Hackney for two or three years have been making repeated applications to the Local Government Board for leave to purchase 50 acres of land and employ it for this purpose?—I have been applying myself to the Local Government Board on the subject, but I did not know they had been applying for two years in Hackney. I am astonished at the action of the Local Government Board if that is so.

7724. Of course 50 acres of land for a parish like Hackney would be a very small amount, would it not?—It would be small, but the power is 50 acres to a parish.

7725. Then you conceive, do you, that that would allow 50 acres for each parish in the Union?—There is no doubt about it.

7726. Are you aware that in our Hackney Workhouse we have 200 or 300 able-bodied inmates?—I did not know that.

7727. At all events, quite apart from setting the unemployed to work, would you not regard it as a matter of importance that we should have land of this sort in order to be able to set able-bodied inmates to work?—I think you ought to be empowered to acquire it, certainly.

7728. You spoke about not wanting to make any cast-iron rule, but giving the guardians discretion in these matters?—Yes.

7729. As a matter of fact, if this discretion were given we might expect one board of guardians to work in one way and another in another way, might we not?—That is so.

7730. Then if this local freedom were given we should have an opportunity of seeing something like the survival of the fittest amongst the different experiments which might be made, should we not?—Certainly.

Mr. *Logan.*

7731. Are the Committee to understand from you that you think that the difficulty of finding work for unemployed people would be largely done away with if boards of guardians did exercise the powers which they have under existing Acts to find employment for the unemployed in doing necessary or desirable work in the various parishes?—I think they ought to be empowered to try. It would be much easier to say whether they would succeed or not after a trial, but I certainly think power should be given to them.

Mr. *Logan*—continued.

7732. You say powers should be given them, but have not they powers under existing Acts?—Yes, except for the obstacle of the Local Government Board.

7733. Then would you recommend that the Local Government Board should advise the guardians to take full advantage of the powers which they already possess?—I would not suggest that the Local Government Board should advise; I only say that the guardians should be empowered; it must be for the guardians to decide.

7734. Do you suggest, in addition, that a means of providing the necessary funds for carrying out such work in urban districts would be by a tax on the ground landlords?—I think I would rather tax the ground landlords for the purpose of permanent works for the benefit of cities or towns.

7735. It comes to the same thing, does it not, if the local authorities employ the unemployed on permanent works?—That may be so, but I think it would be better to put it as a tax for permanent improvements.

7736. Would not you also allow all rural authorities acquiring the same powers power of taxing rural landlords for the purpose of doing permanent work for rural districts?—The present moment, I think, is not a judicious time to put any additional tax upon rural landlords.

7737. Why?—Because many of them are already much worse off than they were formerly.

7738. But are you aware that agricultural rents are to-day 2,000,000*l.* sterling higher than they were 50 years ago?—It may be so.

7739. Then that would not show that they were worse off than they used to be, would it?—But I am surprised to hear it.

7740. Then is it your idea shortly, that if guardians set to work all those who are out of work in the various parishes, it would, to a very great extent, do away with the unemployed question?—I do not go anything like so far as that; I merely suggest that they should be empowered to do these things. I have offered suggestions for many reforms, which are all wanted, and more.

7741. You would not think it unreasonable at all events, would you, for me to think that if guardians did set all the men who are out of work to work it would do away with the difficulty?—I am afraid my opinion would not be of any benefit on that.

Mr. *Acland.*

7742. You mentioned, did you not, the Donington Scheme of the Charity Commissioners about three years ago?—I think it is about six years ago.

7743. Are you well acquainted with the details of it?—I read the scheme at the time. The only thing I remember is that property of the unemployed was converted to something else. It is a scheme under the Endowed School Acts.

7744. Are you speaking of Donington in Lincolnshire?—I believe that is the one; I may have confused it with another scheme.

7745. There has been no scheme of the Charity Commissioners except one, which has just

Mr. *Acland*—continued.

just passed out of their hands, since 1876?—Then it must be another one; it cannot be Donington. I find that I am right in my reference to Donington in Lincolnshire. The surplus of the income of the property of the charity (after certain payments) was to be applied in setting poor people of Donington to work in woollen and linen manufacture (large Report of Lord Brougham's Commission, No. 32, Part IV., p. 24, published A.D. 1839). The scheme took some time in passing its various stages. May I suggest that we should have a return from the Charity Commissioners of the schemes which have passed through their hands and which show there has been diversion of property left for the unemployed to other purposes. May I make that recommendation?

Chairman.

7746. You have already advocated, in your evidence, more publicity?—But now I suggest they should be asked to make a return of the schemes which have passed through their hands, showing diversion from the purposes of giving employment to the unemployed to other purposes.

Mr. *Acland.*

7747. You spoke of Gelligaer also, did you not?—I spoke of Gelligaer.

7748. Do you know that that case has received a good deal more publicity by passing through a Committee than by any such means you suggest?—I do not think there was any want of publicity in that case. I did not think that sufficient weight had been given to the evidence, which was all on one side, against the scheme, while the Charity Commissioners confirmed the scheme.

7749. I thought you quoted it as an instance where there was want of publicity?—No. I was counsel in the case, so, of course, my opinion may be biased.

Mr. *John Burns.*

7750. Am I right in gathering from you that from the Act of 43 Elizabeth up to 1893 there are several Acts of Parliament which give power either to the old overseers, the old poor officers, or to the existing boards of guardians to employ poor people on the land at remunerative work at reasonable wages?—That is so.

7751. Without disenfranchisement, or the stigma of pauperism?—I said disenfranchisement was a doubtful point.

7752. But the spirit of those Acts did not tend to disenfranchisement in your opinion, did it?—That seems to me to be so.

7753. Do you think under those Acts, remunerative work for the unemployed at reasonable wages could be carried on under the supervision of the Local Government Board if the Board was so inclined?—I did not go so far as that. I cannot say whether they would be remunerative.

7754. I will say useful?—Yes, useful, but I do not suppose that if a board of guardians were to create a labour colony, and put their men on it, it would pay.

7755. I will leave out the word "remunerative," and substitute useful?—Certainly.

Mr. *John Burns*—continued.

7756. Subject to the supervision of the Local Government Board, you think there should be Acts or Regulations to sanction these works, do you?—Yes, I do.

7757. Did you see Sir Hugh Owen's evidence on page 46 of our First Report?—No; all I have seen has been the "Times" copy.

7758. He said there that "The Board may at the same time state that if the guardians of any union should determine on a scheme for providing land with a view to its being used so that work thereon may afford a test of the necessities of persons who applied to them on the ground of their being unemployed, and inform the Board fully of their proposals and of the details of the arrangements which they contemplate, the Board will give the matter their careful consideration." Do you consider that quotation as being practically a confirmation of your views?—It confirms my view that these Acts are in force, but also it appears to me that the Local Government Board are extremely unwilling to exercise these powers or allow them to be exercised, or to issue these rules.

7759. Then do I gather from you that there are ancient powers still legal and enforceable, either by Act or Rules of the Local Government Board, that would enable a sympathetic board of guardians to find the unemployed work?—Yes, that is so. There are powers which the guardians, with the consent of the Local Government Board, may put in force.

7760. Assuming that boards of guardians, with the approval of the Local Government Board, could give work to unemployed agricultural labourers on parish land, what form should that employment take?—I think that must be left to the guardians. I suppose it would be agricultural employment if on agricultural land.

7761. Ordinary agricultural work?—I suppose that would be so.

7762. The surplus products of which should be sold in the open market in competition with other goods?—As far as possible they should be used for the workhouse itself, but where they could not be used I do not think there would be any serious objections to their being sold in competition with other agricultural goods.

7763. But man does not live by bread alone, and as an agricultural labourer generally produces 10 times more than he himself consumes, there must be a surplus to go on the market, must there not?—But there are a large number of people in the workhouse who would consume it.

7764. I am not taking of the people in the workhouse, I am talking of the able-bodied agricultural labourer, who has no work to do on a farm, and who is an active producer of agricultural products. Am I to gather from you that he is to be employed on agricultural work, and that the products of his labour where not consumed by himself, should go to the nearest competitive market?—I think they would usually go to the workhouse, where there are a number of unproductive people, women, children, imbeciles, and the like, who would require food.

Mr. *John Burns*—continued.

7765. And would take the place of food that, prior to the labour colony, would have been produced by farmers and labourers under ordinary competitive conditions?—That would be so.

7766. How are the men to live while producing these agricultural products; are they to live in their ordinary homes?—I think that must depend entirely on the circumstances, and with the guardians.

7767. Would you prefer that they should live under the ordinary home associations, as if they were ordinarily at work?—If it were a rural district I should certainly say so.

7768. You would prefer that, would you?—I would prefer that if it could be so arranged.

7769. Do you think morally and physically, and from the point of view of the community, it would be better?—Yes.

7770. That they should live with their families under normal conditions?—Certainly.

7771. You do not contemplate, do you, any disciplinary or penal supervision or conditions of supervision?—If those were found to be necessary they would have to be provided by the Rules of the Local Government Board, I suppose, or, if the powers of the Board are not sufficient, sanctioned by the legislature.

7772. Have you visited Hadleigh Colony?—No.

7773. Have you visited any labour colony?—No.

7774. Have you ever seen the out-of-work labourer at agricultural work under public conditions?—I do not remember seeing any.

7775. Assuming that you had a public body starting a labour colony, or an agricultural colony at work on public land, would you classify the workers at that colony; would you separate them into different grades or not?—I believe some people think it desirable.

7776. Would you have the chronic casual working with the intermittent tramp, and both working with the unemployed agricultural labourer who had never been a pauper?—I think some people think classification desirable, but it must depend entirely upon circumstances and upon the guardians who have the management of affairs. I could not pretend to tell the guardians how they are to carry on their business.

7777. You would not suggest, would you, the unemployed (talking of single men) being housed in barracks, and living under the provisions which prevail down at Hadleigh Colony?—I have not seen Hadleigh Colony, and therefore could not properly express an opinion. I believe, from what I hear, that General Booth is carrying on a good work there.

7778. You spoke about Local Government Board Circulars, did you not?—Yes.

7779. You think in the main the six circulars which have been issued have done good, do you not?—Yes.

7780. Would you desire that those circulars be varied to suit the functions and responsibilities of different localities?—Certainly.

7781. For instance, instead of being sent only to rural sanitary authorities, they might be sent to conservators of rivers, town, and city councils, and so forth, might they not?—They are sent to city councils.

Mr. *John Burns*—continued.

7782. But you would have them sent to other bodies besides, would you?—I think they might.

7783. Say, for instance, to the Thames Conservancy?—Yes.

7784. Or the Woods and Forests?—I suppose it would be hardly etiquette, would it, for one Government Department to circularise another.

7785. The sooner it is the better, you would say, would you not?—That might be so.

7786. What have you to say with regard to the advantage or otherwise of public bodies so re-organising and re-distributing over the year the actual public work which they carry out as to adapt itself to the exigencies of the unemployed?—My own opinion is it would be a good thing, but curiously enough at a conference on the unemployed a strong opinion was expressed the other way by witnesses who had more knowledge of the workers than I had.

7787. What was the reason alleged?—A very curious one; it was that if you separate the work as you suggest, the best workmen would have employment all the year round, but in consequence of having the pressure at one time in the summer, then the second best man and the third best man get a chance; therefore, in the interest of the inferior workers, it was better to have a pressure of occupation at one time instead of spreading the work over the year.

7788. But would not that lead rather to the permanent degradation of handicrafts?—I do not advocate the pressure myself; the suggestion surprised me extremely.

7789. You said that money should be granted to local authorities at lower rates of interest than now prevail, did you not?—Yes.

7790. What would you put as the maximum rate of interest on loans from the central body to the local authority?—I should think 3 per cent.

7791. And the minimum 2 per cent. Do you think that 4½ per cent., as is now charged for loans for 50 years, is too much?—I think it is.

7792. You said that freedom should be given to local authorities in spending the money that they had secured by loan. Have you any instances of restrictions in that respect?—There is one case which come to my mind. I know of a case of eight cottages built under the Housing of the Working Classes Act. The Local Government Board insisted on these being so well built, and so carefully built, that the result is that they are too expensive to let to the labourers; none of the labourers are in them. One cannot of course in the least blame the Local Government Board for wanting the cottages to be thoroughly good, but that is a sort of case where I think perhaps local authorities might really have known what was best in the circumstances. These cottages have done good because other people are in them, and consequently there are so many more inferior cottages left unoccupied which the labourers go into.

7793. That only appears material from the point of view that we have been used to a standard of houses more in keeping with savages than civilised beings, is not that so. You would not surely ask that the Local Government Board should grant money under conditions of jerry building

Mr. *John Burns*—continued.

building and cheap houses, would you?—No, I would not.

7794. Would you not rather ask that local authorities should have that latitude and discretionary power of building and spending their loan money than private individuals have from the Public Loans Commissioners under existing Acts?—I do not think I should give quite so great a liberty as that, because it is money of the future ratepayers; but I would give them more latitude.

7795. But I am talking about money granted to private individuals for private purposes from the Public Loans Commissioners Fund?—But that, of course, is money to be repaid by private individuals.

7796. But so is the loan to the local authority?—The loan to the local authority is repaid by future ratepayers.

7797. But it is a small matter, surely?—There is another point in which there is a little difficulty. Before I went on the city council at Oxford, the council wanted to reform its bye-laws. The Local Government Board, I am informed, insisted on their taking bye-laws, which I have no doubt were perfect, but they were so perfect that the result was the city council did not take to them at all, so that we are still under our old unreformed bye-laws.

7798. Do you share the complaint which was previously made to this Committee by witnesses that the Local Government Board are rather dilatory and long in their replies for requests for loans and so forth?—I do not know it of my own experience, but I have heard the complaint.

7799. Generally speaking, would you like the Local Government Board, representing the central authority, to be more elastic?—I think so, and sometimes a difficulty arises from the Local Government Board's great anxiety for perfection, for which it would be very hard to blame them, but at the same time one has to recognise that sometimes perfection cannot be obtained, and we have to get as near perfection as we can.

7800. What do you consider the main reason for lack of employment in agricultural districts?—I suppose really one thing is the low price of produce, and another thing is that the people cannot get the land. Those are the two reasons, I think.

7801. Do you consider that a great number of labourers are out of employment because there is an overwhelming mass of goods produced. Do you share the view that over-production is one of the causes of want of employment?—I should not have thought so.

7802. Do you not think that labour colonies, farm colonies, allotments, and all methods of adding to the existing over-production, rather accentuate than minimise the evil?—No, I do not think so.

7803. Do you not think that if the same amount of work that is now done was spread over a larger number of men, including the unemployed, much remedial help could be given?—Of course I should like to see overtime reduced, and the long hours of labour reduced certainly.

7804. Would you like to see the agricultural labourer work shorter hours?—Certainly; but with regard to over-production, my impression is the fault rather lies in the want of distribution. I mean, I do not think there are more boots and shoes produced than there are feet to wear them, but somehow or other they do not get to the right feet.

7805. But do you not think that a multiplication of your farm colonies and allotments would lead to an accentuation of the unemployed difficulty which you now, by farm colonies and allotments, wish to relieve?—With regard to farm colonies I only want them to be tried as an experiment; if they fail, drop them; if they succeed, proceed with them and improve them. Allotments are beyond the region of experiment; they do an immense amount of good. Take Oxford, for instance; the people have a very considerable number of allotments there and are delighted with them, even though the situation of the land is by no means suitable for allotments.

7806. Do you share the view raised in some quarters that the fact that a man has an allotment, and through that allotment can add temporarily to his weekly spending power, will ultimately tend, under competition, to reduce the wages of the whole class?—No, I do not think so; a man with an allotment is a little less dependent upon his employer, therefore he is more free to join a trade union and get his wages raised.

7807. Does it not often happen that the possession of an allotment makes him more at the mercy of the employer than otherwise?—I think it is quite the reverse.

7808. Does it not tie him to the place, like a house does a town artisan?—It may afford an additional reason for his remaining in his native village, and I should not be sorry for that.

7809. But you only want him to remain under human and decent conditions, I suppose?—Certainly.

7810. And if the permanent possession of an allotment would impose unpleasant conditions, would you ask that the whole system be changed?—Yes, but I do not think that would be so; the allotment would help him in my opinion.

7810*. Then you want your allotments less for finding work for the unemployed than for bringing the rush of unemployed labour to the towns, do you. I want them not only for reducing the rush to the towns, but also for helping the man when he is unemployed. I refer not only to allotments for labourers in the country, which I regard as of great importance, but also to allotments in towns, which are of equal importance.

Tuesday, 7th May 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. Bartley.
Mr. Billson.
Mr. Campbell-Bannermann.
Mr. Heneage.
Mr. Wootton Isaacson.
Mr. Lawrence.
Mr. Logan.
Mr. Mather.
Mr. Pickersgill.
Mr. David Randell.
Mr. Renshaw.
Mr. Round.
Mr. Whiteley.
Mr. John Wilson (Durham).
Mr. John Wilson (Govan).

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN IN THE CHAIR.

Mr. JAMES BELL, called in; and Examined:

Chairman.

7811. YOU are Lord Provost of Glasgow?—Yes.

7812. How long have you occupied that position?—Two and a-half years.

7813. The Lord Provost is elected for three years, is he not?—Yes.

7814. You have prepared a statement regarding relief works in Glasgow, which you have drawn up in the form of a letter addressed to the Committee; will you put in that statement?—Yes (*handing in the same*).

7815. That statement being before us I need, perhaps, only ask a few questions to bring out its more salient features. You and your predecessors on the Corporation of Glasgow have unfortunately had from decade to decade a good deal of experience of periods of distress?—We have had since 1848 about seven periods of distress. The first page of my statement gives you just a *résumé* of the circumstances, and the table on the second page shows the causes of distress, the relief worke opened, and the kind of work provided, and so on.

7816. With regard to the distress this last winter, taking it broadly (the facts being stated in more detail in this statement); was the amount of distress arising from want of employment excessive in Glasgow this last winter?—No. The cause of our opening the relief works was simply the extraordinary severity of the weather. We made inquiry from the 10th January on to the 28th, and we found no undue distress existing in Glasgow then at all.

7817. Trade and employment being up to the normal degree?—Yes, up to the normal condition. That was confirmed from every source. If you look at page 4 of the paper that I have handed in, the first paragraph gives you the answer on that point.

7818. I gather that the corporation expended, or at all events, the relief organisation directly under yourself expended, a large sum of money?

Chairman—continued.

—Yes. We divided the relief works into two entirely distinct systems: the first was the relief works under the corporation proper, in which we made a labour test part of the scheme. Then as the weather grew more intense we found we could not go further in the way of providing work with the labour test added to it under our corporation, and indeed we had no rating power for that purpose. But early in February the weather got so very severe that I wrote to the newspapers asking for assistance to enable us to give fuel, food, and clothing to those who were suffering terribly; and within eight days I had to restrain their generosity and stop people from sending more money. We received 9,586*l.* in cash, and 1,361*l.* 17*s.* worth of food, provisions, coals, and clothing.

7819. So that you got nearly 11,000*l.* in money and money's value?—Yes, but I may add that out of the second scheme, that is, the distress fund provided by the citizens, we have 5,000*l.* untouched. Under the first scheme, on the relief works promoted by the corporation, we expended 4,854*l.*, and the value of the material resulting from that labour was only 1,894*l.*

7820. But as regards the corporation relief works, the system of relief that you instituted was relief subject to a test?—Yes, for the corporation proper.

7821. That being so, I presume you did not expect that the labour would produce its full market value?—No. At the top of page 5 of my statement you will see rather an interesting table as to that point.

7822. Will you explain that table to us?—We do not on these relief works get the men to work with their usual diligence, and, besides that, for the first week in stone-breaking, their hands are soft and you cannot expect them, and we do not look for them to work very hard. We ask a reasonable amount of work from them; but we do not get anything like the ordinary conditions

Chairman—continued.

conditions of labour. Then, after the weather got a little milder, in the beginning of March, we introduced piecework. In the third column of that table you will see that the last day on which we paid a daily wage was the 2nd of March. We had 1,465 men on that day, and on the following working day, Monday the 4th, when we put them on piecework, the number dropped from 1,465 to 621 straight away.

7823. What sort of wages did you give them?—We gave them 1*s.* a day and three meals a day.

7824. Then there was no particular rate per hour?—No.

7825. You did not have regard to any particular standard wage?—No.

7826. It was a mere charitable assistance?—It was merely to prevent a calamity and to secure that these people, if they were out of employment, should not be in a position of starvation or not able to pay for their lodgings.

7827. In that case it was entirely in a nature of a test of sincerity and honesty?—Yes.

7828. You did not attempt any relief work on which you gave what at all professed to be a proportionate wage to the work done?—Not until the 4th of March.

7829. That is to say, when piecework was introduced?—Yes. Then we gave the usual rates paid for stone-working, by which a man could earn 7*s.* (which was the maximum we paid) in three or four days with ordinary diligence.

Mr. *Bartley.*

7830. Is that the ordinary trade arrangement for stone-work?—No, the ordinary trade arrangement for stone-breaking is that they go on and work the whole week, and whatever amount they have broken they get paid for proportionately at the rate of 2*s.* 4*d.* the cubic yard. But we made the maximum which a man could get at stone-breaking 7*s.* a week; so that when a man had earned 7*s.*, he would go and look for his customary employment.

Chairman.

7831. Looking at the fact that the whole thing was of a charitable nature, with a view, as you say, to prevent a calamity, you thought that as soon as a man had earned 7*s.* it was time you employed somebody else?—We thought it was time he went to look for other employment. I should add that, at the same time, all over the city, concurrently with these relief works, there were 11 soup kitchens scattered over the city, and every person who said he was hungry could go and get as much soup and bread as he could partake of without inquiry, by simply saying that he was in want of food; we asked nothing more.

Mr. *Bartley.*

7832. Not to take away, I suppose?—Yes; in many cases where we knew them we did allow them to take it away. But with regard to the men working in the stoneyards, every inquiry was made as to whether they were married or single, or what dependents they had, and you will find the particulars given on page 6 of my statement. Those men got orders for soup and bread proportionate to the number of the family, to take away from the soup kitchens. We analysed the 3,643 applicants into married, single, and widowers.

Mr. *Bartley*—continued.

Chairman.

7833. What was the nature of the inquiry made into the circumstances of those people in regard to thee genuineness of their necessity?—We accepted the genuineness of the necessity, owing to the tremendously severe weather at the time. If a man came and said he was desirous of working at a shilling a day and his food, we took him on at once. The weather was so severe, and the death-rate was so high, that we had no alternative in common humanity but to take him on in that way.

7834. You took his word about his being married and his having children?—Yes. We made inquiry afterwards at our leisure; but during the severe weather we could not wait to make inquiries before taking them on. The results of the inquiries are all shown in the analysis, towards the bottom of page 6. Above that you see the analyses of the various trades, which are rather interesting when you work them out.

7835. Have you any salient point that you would like to call our attention to?—I should like to remark that, with all the severe weather and the additional expense of living in such weather as we had, as you will see from pages 5 and 6, out of 231 trades, 151 trades out of 231 had only three men or under who applied for relief, and, after you deduct labourers, you find that the trades have only 4½ men per trade applying for relief; which verifies, I think, the statement that the general condition of trade, outside of labour which is employed daily and weekly and hourly, was fairly good. You cannot, in my opinion, devise any possible scheme that will cover the 231 trades.

7836. The experience in various places in England which we have had stated to us, has been that the distress was most acute, as it might be expected, among what are called the building trades; but I see from the table on page 5 of your paper, that there were only 57 masons, 147 builders' labourers, 20 joiners, 9 plasterers, 16 slaters, and 12 bricklayers, out of this large number of 3,643?—Yes.

7837. So that the members of the building trades do not appear to have been forced upon any public system of relief, at all events?—No. I think the masons and joiners in Scotland are very thrifty men and have made provision for a rainy day; for if ever there was a period when the building trades were absolutely stopped it was last winter.

7838. As a rule, those connected with the building trades appear not to bulk very largely in the list on page 5, at any rate not as largely as one would expect from the evidence we have been receiving from other parts of the country. That leads me to the belief that in Scotland members of these seasonal trades, which are liable every winter, or at other times of the year, to suffer from want of employment, made provision for that time out of their wages at other times of the year when they are employed?—We understand that the masons and those in the seasonal

Chairman—continued.

seasonal trades do make this provision. We never had them come to us in any wholesale way asking for relief.

7839. May I take it that the conclusion you come to from your experience is shown in the second paragraph on page 7 of your Statement, where you say: "Were I again on a relief committee, I should strongly urge that after the first week all the men engaged should be put on piecework, even if the ordinary trade rate paid to stonebreakers was exceeded, and the men's earnings limited to whatever sum might be fixed as the maximum by the committee?—Yes. During my term of office we have had two occasions on which we have had relief works, and the instant we applied piecework the men melted away like snow.

7840. For what reason, do you suppose?—I do not deduce any reason; but the fact remains. For instance, in March this year there were on Saturday the 2nd, 1,465 men at work at stonebreaking, and when we arranged that piecework was to take place on Monday morning, there were 621 men turned up. A number of those men commenced to talk and say that piecework was bad in principle, and that they should not be driven to work which they did not understand, like stonebreaking; and they induced the well-to-do men to strike work. You will find the details given in my paper. They induced them to come over and hold a meeting in George-square, opposite the municipal buildings, and then sent in a deputation to the committee in charge of the relief stations. One deputation said the money sent to me belonged to them for the general relief of distress in the city, and that we had no right to alter the conditions, and that we ought to pay a shilling a day and give them free meals. But I pointed out that we were not keeping open these works for any benefit to ourselves, but that they were kept open entirely for their benefit, and that if the conditions were too onerous we would be compelled to reluctantly close the works, but that we would not do so without giving them an opportunity of considering the question again. The members of the deputation went back to the square, intimated that they had been courteously received, and they took a show of hands upon the subject, and the majority carried it, and they went back to the works. That was the end of the unemployed strike which existed for a short time.

Mr. *Logan.*

7841. Was the arrangement to pay the men 2*s.* 4*d.* per cubic yard, the ordinary piece-work price for breaking stones, and three meals?—We gave two meals.

7842. You gave them two meals in addition to the ordinary piecework price?—Exactly.

Chairman.

7843. The meals you considered, in fact, to be the means of keeping the men from starving, and putting them in a position to earn the wages?—Yes; and where a man had children at home, it was giving him the one shilling clear to take home with him, in addition to the dinner of soup and bread which we provided at the various soup kitchens.

Mr. *Bartley.*

7844. I presume, of course, they took none of that food home?—It is very surprising how some of the men we knew took the bread and butter home to their children, not caring to eat it all themselves. One of them at a meeting of the committee, brought out some bread and butter from his pocket, and said he was very thankful he had an opportunity to take something home.

Chairman.

7845. Your Relief Fund and the Citizens' Relief Fund, as you call it, worked in co-operation with each other, did they not?—Yes, entirely in co-operation. But it will be understood that the Citizens' Relief Fund was for the relief of distress, without any labour test whatever. The severe weather put a stop to a great deal of work. The waterpipes in the houses got frozen up; washerwomen were thrown out of employment; and those doing little peddling trades could not go out, and they got behindhand. Then, firing was more than usually necessary, for we had a week with the thermometer far below zero, and the death-rate ran up tremendously. So that common humanity tempted the citizens of Glasgow to make an effort to meet the emergency. Our death-rate at that time went steadily up, from 24·6 in the first week in January, to 53·6 in the week ending the 2nd of March, and our medical officer of health in his Report says: "The health of the people in such circumstances passes beyond treatment by sanitary measures, and becomes only amenable to such benefactions as are now being so freely and judiciously distributed by the Lord Provost's Relief Organization. The only possible palliative is warmth, the warmth of food, fire, and clothing." We endeavoured, so far as private benevolence went, to the best of our power to distribute these benefactions round the city. And we did it in what I think was a novel way. We got the police force entirely to co-operate with us. We had so many contributions of coal and clothes and groceries that we were enabled, through the various police offices throughout the city, to give relief to the people whom the police knew to be in destitution. We publicly invited applications from every part of the city from people who were in distress and in want of relief. Those people went to the police office in their districts, and the particulars were taken down and handed to the policeman on the particular beat in which they resided; so that the whole city was within our grasp in two or three hours. The policeman on the beat could get tickets for relief such as you find referred to on the top of page 9 of my Statement. He would inquire into the case, and, if it was genuine, he left orders, which were cashed by any grocer for provisions or coal; and in that way we had the whole city under a network of relief every time the constables changed.

7846. You are not aware of any feeling against the use of the police for that purpose?—So far from that, I believe it has raised the feelings of the poorer citizens towards the police in a way we never dreamt of. We have allowed the police to look after the clothing distributed by the Charity Organization Society and the Glasgow Needlework Guild; the police go round every

Chairman—continued.

every week and see that the children are wearing the clothing.

7847. You think, in the first place, the employment of the police on that duty is not resented, and does not deter people from applying?—No.

7848. In the second place, you think it has actually increased the confidence and the liking of the community towards the police?—I think it has spread a feeling in the city that we never quite experienced before. I may say I do not think any letters appeared in the papers, or any adverse criticism, on the system of relief that was adopted last year; there was nothing of that sort, to my knowledge.

7849. You were, of course, fortunate in presiding over a city which is proverbial for the generosity of its citizens, a generosity which is proved by your obtaining so large a sum as nearly 12,000*l.* in about a week?—Yes; I had to stop them from sending me more money. But you will find in Table 1, on page 2, that the same thing has been done all through in times of distress, and that Glasgow has never failed, when a crisis of want of employment occurred, but that its citizens were always able to provide for the needs of their own people.

7850. Your impression is, I suppose, that, having been dealt with in this way, the distress last winter passed over with as little evil effect as possible in the way of hardship to the members of the community, and also with as little as possible of what I may call degrading effect upon the habits or tone of the community?—Yes, I think that is so. In a large city like Glasgow, of course, you have a great many people who will always be very glad to take food if you give it them for nothing; you must accept that as the condition of things.

Mr. *John Wilson* (Govan).

7851. People who would prefer charity to working?—Yes, you cannot disguise that there are a certain number of people who always will do that, and would take this as a very good opportunity to have a little more money to spend on their personal pleasure. But I think the respectable people, those who were really in want, did not regard this relief as lowering their humanity or hurting their feelings. In many cases which were brought under our notice from private sources, we did not send a policeman, but sent a man in plain clothes to make inquiry, and relieved the distress as gently as we could.

Chairman.

7852. Having told us what you did with such interesting details as you have furnished in this statement (for which we are much obliged), would you answer one or two questions with regard to what you did not do; you do not seem to have employed the men on ordinary municipal work, such as cleaning streets or any odd jobs that might be required?—We do not see why we should pay off our permanent servants to take on a man who may be out of employment temporarily from his own fault.

7853. At a time when there is snow in the streets, is there not occasion for using this casual service?—We could make very little of it in that way, and it was so temporary that we were

Chairman—continued.

quite able to overtake the snow of last year with the smallest possible assistance.

7854. I gather from your action that you do not see the necessity in any case such as you were dealing with last winter (or even, perhaps, in the most intense case, if it existed) for any large scheme of relief works, agricultural works, or anything of that sort, of a more ambitious kind?—No. I may say we have farms of our own for disposing of the City refuse.

7855. By the City refuse you mean the sweepings of the streets?—Yes. Whatever we do not sell to the farmers we utilise on our own farms, as far as possible.

7856. Is that of the nature of manure?—It has a certain manure value, and, of course, enriches the ground; and as we have it, it has either to be destroyed or put somewhere. We have two farms, one of about 540 and the other of about 100 acres; one on one system of railway and the other on another.

Mr. *John Wilson* (Govan).

7857. Besides the sweepings of the streets, the Corporation also empties all the ashpits, does it not?—Yes. That is mingled with the street sweepings, and has, of course, a manurial value.

Chairman.

7858. You have these two farms; do you find that is sufficient for the purpose?—Yes. We wish one more upon another railway, but we have these two farms just now. But to get at the number of men on these two farms, which have been quite sufficient on the Fullwood Yarm, which is 100 acres, we have nine permanent men; and on the other estate, which comprises altogether about 560 acres, but of which we have 450 acres in our own hands, we have 23 permanent men, and that includes the men who attend to the tipping of the waggons as well. Whatever more labour we put on that would fall upon the rates, and we have no authority and no right to raise our rates for any purpose whatever. We must carry out to the best of our ability, and in the most economical way possible, the duties that devolve upon each particular trust; and that is the way in which we carry out the cleansing and sweeping of the streets, and the disposal of the refuse.

Mr. *John Wilson* (Govan).

7859. Will you tell the Committee what sort of land that was before you emptied this refuse upon it?—On the Fullwood Farm it was entirely moss, which we got at a rental of 1*s.* per acre per annum. We have now reclaimed it, and at the end of 31 years it will go back to the proprietor. Our working expenses just now are something like 2*l.* per acre, and yet we make it pay. But, of course, that is not to be considered as the fair agricultural value, because our manure costs us nothing; we would have to pay to get rid of it if we did not put it there.

7860. If you did not put it there, what would you do with it?—We should have to pay for the ground to put it on, and put a tip and dispose of it.

Mr. *Mather.*

7861. What will the land be worth an acre when you have done with it?—I should imagine 1*l.* an acre.

Chairman.

7862. You have, in fact, made the moor or bog into arable land?—Yes, Fullwood Moss.

Mr. *Mather.*

7863. What is the rent you pay?—The rent is 1*s.*, gradually rising to 5*s.* an acre.

7864. What will it be worth at the end of the time?—I have no idea, but say a rental of 20*s.* We have tried that system once, but we do not propose to do it again. We are now buying all the property which we utilise.

Chairman.

7865. Have you done anything in the way of reclaiming riverside land?—The river is under a separate trust. The river belongs to the Clyde Trustees, and the whole reclamation of the river has been done by that trust body. At one time, a good many years ago, a good deal of land was improved by being raised and treated with the dredgings from the river. It was dredged by dredgers, put on the flats, and then wheeled on to the land, and the ground so improved. But it cost 8*d.* per ton, or about that, to take it from these flats and put it on the land. With the barges we have now the dredger simply dredges the earth, and then drops it into the barge, and the barges steam out to sea; the bottom falls out in the ordinary way, and the sand and refuse goes to the bottom of the sea. We can do that, and take it out to a distance satisfactory to the Board of Trade for about 2*d.* a ton, as against 8*d.* I happen to be, as Lord Provost, chairman of the Clyde Navigation Trust, so that I can speak in both capacities.

7866. Judging from my recollection of questions in the House of Commons, I think you were sometimes accused of depositing this stuff in Loch Long?—Yes. That has been obviated now, because we go right out to Garrock Head.

Mr. *Bartley.*

7867. Then there was something in the accusation at one time, was there?—We still think that no hardship would have been caused to anyone, but we have now arranged to take it out to Garrock Head.

Mr. *John Wilson* (Govan).

7868. As you are officially connected with the Clyde Trustees, you will no doubt be able to answer this question: There is a considerable amount of land lying below Bowling on both sides of the river; would it not be much better for the Clyde Trustees, instead of taking that soil out in barges to sea, to reclaim that land on the banks of the river?—The Clyde Trust is a private trust trading with trust funds, and it would be simply ruin to take that soil and put it upon the land at 8*d.* as against 2*d.* a ton. But besides that, there is another disadvantage: The estuary of the Clyde is rather wide at Greenock, and it is a long, tortuous river to come up to Brumielaw, where out-steamers start, and our engineers advise us that if we built retaining walls and filled up the ground which Mr. Wilson refers to, we would so lessen the flow of the water and the force of the tide to Glasgow that it would entirely cripple our trade. They say that we require this force of water spreading over the banks of the estuary to give us a tide sufficiently quick to get the full advantage of the river as we do at present, so that our engineers' advice is that it would be fatal to the course which is suggested by the honourable Member, in addition to the economical objections which I have already referred to.

Mr. *Lawrence.*

7869. Would it have been more economical for your Corporation to have taken the refuse soil out to sea, or is your late system or present system more economical?—I think our present system is better. We prefer it.

7870. Was it adopted for economical reasons or for philanthropic reasons?—For economical reasons.

Chairman.

7871. The philanthropy involved would be very limited, would it not, because you do not employ many people?—The philanthropy would be practically nothing. We only employ 32 men, and there are 550 acres on the two farms conjoined.

7872. Could you hazard an opinion, although it is not directly within your experience, whether communities in Scotland (yours or any other) could with advantage deal with any question of want of labour and the distress arising from it, by an agricultural process such as we have been speaking of?—I think the so-called farm colonies are simply glorified poors houses.

7873. You think that they do not differ much from the ordinary poor houses?—I think they will not at all. It depends upon how much you are prepared to spend upon keeping the men making chairs, or any other process you may put them to.

7874. They might have the effect of competing unfairly, might they not, with the ordinary outside agricultural work?—That, I think, is a minor matter. I cannot see how (taking my own case, for instance) it is going to help the unemployed difficulty at all taking a certain number of men out on to a farm colony, unless you are prepared to take them in such a number as to remove entirely the possibility of unemployed labour. If you look at the table on page 6 of my statement you will find an analysis of those who applied for relief. Out of 3,643 there were 1,213 single men without dependents, 477 married men with no children under 16 years of age, 106 widowers, and so on. Any farm colony would either be for single men; or if you take away a man with a family, you certainly debar him from putting his children into any position giving them an opportunity of making their way in the world unless you take them up to a certain age. But even beyond that the economical reasons are, I think, deterrent. We certainly could not entertain it. I say so in my statement on page 10, in dealing with the question, which has sometimes been asked, why we do not promote municipal

Chairman—continued.

municipal works when cases of distress arise in our district. We are always building and always doing everything that our experience suggests that the city requires without enhancing the rates in any way. If you take the present time, for example, we must be doing works to the extent of three-quarters of a million, I should imagine, at this moment. If we were promoting any large work we would have to get an Act of Parliament and borrowing powers. That would take a year. I give an example in my paper of a bridge, for which, after we got the Act of Parliament, we would have to get the granite either from Aberdeen or Cornwall, where there might be no undue distress; the iron or steel work might come from Germany or from a district quite well employed; and when we got the materials to Glasgow we might be frozen out and could do nothing at the time we wished to utilise the unemployed upon this labour, because we never have any unemployed labour in Glasgow in summer time to any appreciable extent. Taking the trades to which these unemployed belonged, there were 106 trades of which there was only one representative out of employment, 28 with only two, and 17 with three; and over the whole number of trades outside labourers, the trades are only represented by 4½ men per trade out of employment.

7875. What you said of what are called the seasonal trades in Scotland; namely, that the men employed in them are in the habit of providing against not the rainy day but the frosty day, applies to the population generally in Scotland, does it not?—In the building trades I have come across a great many bricklayers, for instance, who go to America in the spring of the year when trade is in any way good there; they work all summer, make very high wages, and come home here and work in Glasgow, and are fairly well-to-do and well-off citizens. Those men will get on under any conditions.

Mr. *John Wilson* (Govan.)

7876. You do not find any of those men apply for relief in a case of this kind?—Never. At the bottom of page 9, and on page 10, I have ventured to express my opinion upon the subject.

Chairman.

7877. You state your opinion very broadly, at the bottom of page 9; you say: "The solution of this 'unemployed' question is to make it perfectly clear that no Government and no local authority have incumbent on them in the slightest degree a responsibility either to procure or to provide employment or to maintain persons while out of employment"?—Yes, that has been our policy in Glasgow. We have had two very bad banking disasters in Glasgow, in the case of the City of Glasgow Bank and the Western Bank of Scotland; and there was the time of the American War, when cotton ceased to come; and in 1848 we had the cessation of the weaving trade in the East end of Glasgow. All those occasioned very acute distress; but we were able to over-take them by the action of the municipal authorities and the people combined.

7878. Would what you say of Glasgow be applicable, so far as you know, to the whole of Scotland?—I should say that the problem for a small town and a large one is totally different. In a small town they may not have any corporate fund that they can avail themselves of, and they may not have people in the town or city able to give assistance such as we have in Glasgow; they may not have the wealthy people.

7879. And they may be more dependent on a single trade?—Yes. I should say in the case of a small town like that it might be in the power of the small corporate body or the local authority to impose a rate for that specific and direct instance of distress.

7880. We shall, perhaps, get information as to the Scotch poor law better from Mr. Motion, of the Parochial Board?—Yes.

7881. Have you had any personal experience of the administration of the Poor Law?—No, I have never been on the Poor Law Board.

7882. To go on with what I was quoting as your opinion, I may, perhaps, read what you say further on page 9: "The solution of the question rests with the people themselves, and not with any authority. It must be found in prudence, thrift, industry, and sobriety, and the avoidance of early and improvident marriages. This last I see constantly is a very fruitful source of misery. Until these duties are recognised by those who are often out of work in winter time, and provision made by themselves against the days of idleness, we shall have this question annually before us in a more or less acute form. Those who have had the most intimate acquaintance with this question are aware that respectable men, by the varying conditions of trade, are frequently thrown out of employment; yet these are not the men who, at the beginning of almost every winter, call for relief and assistance. There is a certain proportion of workers, who, from infirmity of person or of temper, are always first to be dismissed. Their infirmities do not amount to a disability to work, yet they cause these men to be more often out of employment than the normal condition of their trade warrants, and, having no savings to fall back on, they at once come into evidence when trade becomes dull. We have also the working-man who has got beyond his best working days; others who have never learned to work steadily, and who are nomadic and constantly shifting; and we have still another class, who are constantly being thrown out of employment through being a day off drunk, and finding their positions filled up when they return. It has been advanced by some that local authorities in times of undue distress ought to carry out public works. These suggestions can be advanced only by those who are not cognisant of the working of municipal institutions. We are constantly carrying out all the work which we think is necessary for the corporation, and that as speedily as possible, without increasing our rates; but no work beyond stone-breaking or digging, which the corporation can originate or carry out, would be of the slightest use to relieve undue distress such as we had last winter." That is a summary of your main opinion?—That is a summary of my main opinion, derived from the experience of my office.

7883. An experience which extends over

Chairman—continued.

periods of distress for the last 40 years?—I have summarised what has been done in previous periods of distress, but I give my own personal experience as regards the last two periods of distress in Glasgow.

7884. Which, I gather, accords with the traditional opinion of the Corporation?—Yes; and which is held unanimously by my colleagues in the magistracy to-day.

Mr. *Billson.*

7885. I see you say you had a better return from stonebreaking than from digging?—Yes.

7886. You spent over 4,000*l.* on stonebreaking, and only received in value something over 1,800*l.*?—Yes, taking that as the ordinary value of the material.

7887. Do you think that you could find any work that would give a better return than that?—I am afraid not.

7888. Are you of opinion, as, judging from this statement, you are, that there should be nothing done by the municipality for the purpose of providing employment for the unemployed?—Clearly—except in a case of undue distress.

7889. You are aware, no doubt, as we have been told here, that by the law of England municipalities or public authorities are required to provide work for the unemployed?—We are not in Scotland, and we have no power to devote any rating money to that purpose.

7890. So far as you know, the Acts on that subject do not apply to Scotland?—They do not, so far as my knowledge goes.

7891. Where does the liability of the authority in Scotland come in?—It is simply a question of humanity, and to obviate any calamity through the starvation of any of our citizens.

7892. Have you boards of guardians in Scotland?—We have poor law guardians.

7893. Have you ever been a poor law guardian?—No, I cannot speak to the poor law. I understand there is to be a representative from the poor law authority here to give evidence to-day.

7894. Are you aware that the system of dealing with distress through the police was followed by the Liverpool authorities?—I am not aware of that.

7895. You have had no communication from them?—No.

Mr. *Lawrence.*

7896. Do I understand you to say that your charitable organisation practically invited everybody who wanted relief to apply?—We did. The Charity Organisation Society assisted us in the distribution of the relief.

7897. I was not speaking of the Charity Organisation Society, but of your charitable organisation, your committee?—The opinion was advanced by some that there might be cases of genuine distress where the people themselves would not make the cases known. We invited anyone who knew of cases of distress to come and tell us of it, and we would relieve it.

7898. So that, practically, the applicants enumerated in your list may represent the maximum of the distress in your great city?—I think so.

Mr. *Lawrence*—continued.

7899. What is your population?—Nearly 700,000.

7900. And if you took the figures as reduced by the effect of the offer of piecework, and applied that reduction as if it had occurred earlier, that is, as if piecework had been offered earlier, that would reduce the persons applying on the ground of absolute want to a very insignificant number as compared to the population?—I do not think we should have had the same result if we had applied it earlier. It was on the weather having become milder that we put on piecework; so that we put on piecework at a time when these men were able to get employment more readily.

7901. As you express the opinion on page 7 that piecework should begin after the first week, I presume you would admit the number of these applicants was exaggerated, owing to the facility of getting relief?—We gave them three meals, where customarily we only give them two; and we found that a great many were quite content to go and take three meals a day, and go and sleep in the police office at night, and so have their 1*s.* clear. But I quite agree that we should institute piecework earlier, and have a labour test sufficiently severe. And in a large city like ours we ought to have a test of residence as well; because at present we have 50 or 60 prisoners a day discharged on our streets from 29 different police courts scattered throughout the country round and sent to Glasgow.

7902. There was no inquiry as to how long these people had been resident in Glasgow, was there?—There was at first; but the weather became so severe that common humanity prompted us to open the gates for any one who applied for labour.

7903. You say nothing in your list of applicants as to how many were single women or females in want?—Wherever women applied for assistance we gave it at once without any labour test. We did not apply any labour test so far as women and children were concerned. We gave them relief through the Citizens' Fund, without any test at all.

7904. Then are they not in the lists in your statement?—No, we took no notice of them.

7905. I see that there were 60 painters out of work, which seems relatively a high average. I suppose you would rather agree with me that a too easy granting of relief to members of these skilled trades, which are necessarily seasonal, is rather detrimental to encouraging habits of thrift?—You must not take the relief we gave this year as the ordinary relief we give. It was in a great measure running along with the severe weather, and we were compelled in common humanity to give relief at once, and not to inquire too much into these cases, which would have taken several days. If these men were really anxious to work at a shilling a day and their food, we thought that it was a genuine test, having regard to the severe weather we had.

7906. I gather your general experience is that as you cannot adequately investigate the characters and circumstances of the men you must have a test in the shape of piecework?—Yes.

Mr. *Logan.*

7907. You say that the masons in Glasgow do not, even in the severe winter, have to apply to anybody for relief?—I think it is quite understood in the masons' trade that they put by a certain provision for the frosty weather, when they cannot work.

7908. Their wages enable them to do so?—Yes, they have very good wages.

7909. Is it not your opinion that, supposing labourers had wages as good as the masons they would also be able to provide for themselves in the winter?—They ought to.

7910. Do you not think they would do so?—I cannot say.

7911. Would not the Scotch labourers do the same as the Scotch masons if they had the same wages?—The labourers are not all Scotch; we have them from all parts.

7912. Are all the masons Scotch?—Mostly I think.

7913. I ask that question because I see that out of the 3,600 men out of work, according to your list on page 5, two-thirds, or nearly so, are labourers?—Yes; 2,665 were labourers connected with various trades.

7914. Do you think it is highly probable that if these men did get the same wages as the masons they would take care of themselves in winter as the masons do?—I know you will get very many labouring men who live in proportion to their income and save in proportion to their income; their outgoings are not so great as the masons', but they save and spend in proportion to their incomes; but you would get many thousands of thrifty labourers who save money.

7915. Still, a man upon 3*s.* 6*d.* a day cannot possibly provide for so many weeks of want of employment in the winter as many getting 6*s.* 6*d.* a day?—It entirely depends upon his savings. These people do not take houses at such a high rate, and do not live so well as the masons, and their savings should be in proportion to their incomes.

7916. That may be in proportion to their income; but can a man on 3*s.* 6*d.* a day possibly provide for so many weeks out of work in the winter as a man on 6*s.* 6*d*?—I should say not.

7917. If the labourers had a better wage would they be able to provide for themselves in the winter?—Yes; but labourers as a rule are not thrown out, except masons' labourers; and then they can turn to other employment. The mason, on the other hand, is a skilled man, and has only his individual trade to attend to. The labourer is quite able to take other labouring work.

Mr. *John Wilson* (Govan).

7918. Has not the mason to serve an apprenticeship, whereas the labourer has no apprenticeship to serve?—Yes; that is so.

Mr. *Logan.*

7919. A mason's labourer can turn his hand to anything else as quickly as any other labourer, can he not?—Yes; therefore he has not, like a mason, to lay by for the day of idleness.

7920. Still, notwithstanding that you have a number of labourers out of employment, two-thirds of these men out of work in the winter are labourers, are they not?—I think so.

Mr. *Wootton Isaacson.*

7921. I am so very much impressed with this admirable scheme which you have so well placed before us this morning that I should like to ask one or two questions with regard to the scheme, and my first question is this: In carrying out your scheme, what addition to the rates have you made?—There would be no charge on the rates at all under this scheme.

7922. Do I understand your scheme is carried out purely and solely by contributions from the inhabitants?—The scheme described from page 7 to the end of the statement is entirely carried out under voluntary contributions; and not only that, but I have 5,050*l.* left over. I had to restrain people from sending money.

7923. Have you ever been approached by delegates from labour unions or associations on this subject?—I do not think so.

7924. Not even during this late severe depression?—I think there was a deputation or two to the Council, asking that we should give a higher rate of wages than we were paying: that we should pay the trades union rate of wages.

7925. You do not pay the trades union rate of wages?—We do not, except in piecework.

7926. Not to any of the men?—Not to any; we put them all in the same category.

7927. In employing the police to assist you in distributing the various charities, as you have done during last season, have you found that the fact of employing the police has been a check to imposition?—It was a strict deterrent to the criminal classes.

7928. May I take it you have not found so many men applying for relief or for employment under the category of "the unemployed"?—The police have nothing to do with the employment of labour; they have only to do with the distribution of relief to those in want, requiring fuel, clothing and food.

7929. Do you know that in this large metropolis of ours we have an immense number of men who are known as loafers who will not do work if they can get it, but who would be very glad to obtain relief if it were indiscriminately given?—Yes.

7930. I want to know in what way you carried out my check in the distribution of relief of that kind?—Would you differentiate in what way you mean.

7931. Supposing a number of men applied to you for relief, what steps did you take to see if the cases were genuine?—They had to give us a statement showing the number of their family, their residence, where they were last employed, and their wages; and if it seemed to be a genuine case, as judged by the lieutenant in charge, he would give them a certain proportion of food to tide them over that night.

7932. Would it be in the discretion of the police?—Purely in the discretion of the lieutenant in charge of the police; or if it was an outside station or a central relief office, it would be under the Committee; two members of the Committee sit there from 10 to three or four in the afternoon, and on their judgment relief would be given to tide over the night. The particulars are taken and handed to the policeman on the beat of the address given; he would go there

Mr. *Wootton Isaacson*—continued.

and make inquiry, and if it was a genuine case he had a ticket which he could give on the face of which was printed, "Give the bearer two shillingsworth of groceries," and this ticket would be redeemed by the Charity Organisation Society. These tickets could be cashed at any grocers in the city; and if the case was found to be quite genuine, the constable would give a ticket and we would send coals in addition, or ask the Charity Organisation Society to give clothing.

7933. I understand you left all these matters in the discrimination of men good character who were well known to you in the police of Glasgow?—Yes, the heads of the various police office.

7934. You found that answer very well?—Exceedingly well. As far as possible the members of the Committee went to the police offices, but that was only for an hour or so in the day and the relief went on all day long. 22,000 odd tickets were issued, as you will see on page 9.

7935. Another matter which very much impressed me was this: you told us just now that a number of artisans went to America in the spring where they obtained high wages, and came back again to Glasgow in the winter-time and accepted lower wages at possibly the same kind of work?—Yes.

7936. I suppose you find that at times you have a great dearth of skilled artisans owing to these men remaining in America?—Of course, there is the usual scarcity when trade gets brisk, overtakes the normal condition.

7937. Do you find that a number of the skilled artisans prefer to remain in America?—All I can say is that in going across to America several times backwards and forwards, I have taken the trouble to go to the steerage and find out various men there and have a talk with them, and I have over and over again come across bricklayers going out to America earning very high wages. As they said, they have to work in a very different way to earn those high wages from what they did here, but they were quite satisfied to work very much harder and earn the additional wages, and come back to Glasgow to their wives and families in the winter-time.

7938. In your list on page 6, you have put against the heading "labourers," 1,242; were there any agricultural labourers among that number?—I should imagine there were men employed in at least semi-agricultural labourers' work, loading manure and all that sort of thing.

7939. Did you find at any time during this depression that large numbers of agricultural labourers come in to Glasgow to obtain employment?—No; but we found from 40 or 50 miles round all over the country, after the relief works became known and through various exaggerated reports getting about, there was a stream of loafers from the country directed to Glasgow.

7940. Did you find the agricultural labourers proper coming to Glasgow?—No, not at all.

Mr. *Bartley.*

7941. Did I understand you to say that you spend about three-quarters of a million a-year in municipal works?—No; we spend very much more. Our municipal expenditure is very close on two millions.

Chairman.

7942. Three-quarters of a million, I think, you said was the amount of building and public works that you have going on just now?—Yes; we have a bridge building just now, and an infectious diseases hospital, and the water and gas works.

Mr. *Bartley.*

7943. Have you heard of the proposal that this kind of work should be largely put off till the winter, in order to find work for the unemployed?—The work could not be done during the winter time.

7944. Could a good deal of it be done then?—No.

7945. You do not think it would be wise to try and arrange to do municipal works in winter, inorder to find w ork for the unemployed?—We are there as trustees to dispense the public money to the best of our ability, as we would do in our private capacity; and to try and make the contract for, say, the building of this hospital, that is costing us 200,000*l.*, and to provide that this hospital, which we absolutely require in two years, should be built in the winter time, would be quite against what, I consider, the injunction laid on us by our constituents that we are to disburse the rates to the best possible advantage.

7946. You think that any system like that, which would tend to give more work in the winter, would not be a benefit to the community at large?—I think, in practical working, it would break down at the first attempt.

7947. You think it cannot be regarded as the solution of the question of the unemployed at all?—Undoubtedly not.

7948. As regards these smaller places, where you said it might be necessary to have a rate, do you mean that you think, under no circumstances, the cost of the unemployed should be paid for by the Imperial exchequer?—I think most distinctly not.

7949. You think that would be very mischievous?—Most mischievous.

7950. I gather you consider that any laxity of State or local aid tends to reduce thrift, and those qualities which tend to make a community better?—Yes; we cannot disguise from ourselves that there are a good many who would rather do a little work or no work at all, and others who would expect that in winter time that relief would enable them to drift through in a comfortable way. If you look at the top of page 9 of my statement, you will see that a large number of men and women availed themselves of the shelter of the police office. We found a good many workmen coming into the police office and kicking up a row at five o'clock in the morning to get to their work and making a pillow of their boots in order to save threepence or fourpence for the night.

7951. You think such remedies may aggravate the very evils they were intended to meet?—I think they weaken the characters of a certain class of persons.

7952. And that weakening of the character is more serious than any other circumstance?—Yes. It was simply the climatic condition that caused us to open these works in Glasgow. The death-

Mr. *Bartley*—continued.

death-rate was mounting so quickly that, as administrators of a large city having to do with the health and general conditions of the people, we felt that we should open these works and give these facilities for relief in the general interests of the people. Without the severity of the weather we would have had no relief works at all.

7953. Do you think the locality is quite able by its own resources and private charities to meet even such extreme weather as we had last year?—If you are referring to Glasgow, I think so distinctly.

7954. Do you think that is generally the case in most large cities?—Yes, I think so.

7955. You think State aid would be mischievous?—I cannot help thinking that, if there were any powers behind us under which we would be, in a measure compelled to give assistance or relief, we would be in an invidious position, and it would be difficult for us to carry out such relief and I think it would be certainly detrimental to a certain proportion of the population.

7956. May I take it that you, as the head of the second largest city in the country, are strongly opposed to any idea of State grants to assist the unemployed?—I am, and the magistracy of the council are unanimous in that opinion.

7957. You think that would really tend, if it were done, to increase the suffering of the poor in the long run?—Yes, I think it would in the long run.

Mr. *Renshaw.*

7958. In the case of Glasgow, I should like to ask whether there has been any demand at all for putting people who have come to you as unemployed out on the land; we have heard a great deal of evidence in regard to London and other parts of the country as to the great desire that exists for putting back a considerable portion of the labouring population that drifts into large cities upon the land; are you conscious of any demand of that sort existing in Glasgow on any considerable scale?—There is an association for improving the condition of the people of Glasgow proposing to set up a farm colony; but personally, I think, it is just a glorified poors house; nothing more nor less.

7959. So far as your experience goes, could you mention to the Committee any case in which either allotments or small holdings have been taken up on a large scale for a portion of the population in Glasgow?—No, it is not within my knowledge that anything has been done.

7960. It is not within your knowledge that there is any great demand for anything of the kind?—There is none at all, so far as I know.

7961. You do not know of a single case anywhere in the counties, in the immediate neighbourhood of Glasgow, where such colonies have been established?—No.

7962. Nor that they have been asked for?—There is that proposal I have indicated by this association in Glasgow; but personally I do not see in it any solution whatever of this problem that we have had nine times in 50 years; it perpetuates the evil which now we have only intermittently.

Mr. *Renshaw*—continued.

7963. I presume you hold a very strong opinion as to the undesirability of giving extended powers to the Poor Law authority in Scotland to give them power to administer out-relief to the able-bodied, which at present they are prohibited from doing?—I am not quite conversant with the powers of the Poor Law at the moment. I cannot really answer that question. I have never been a member of any Poor Law Board.

Mr. *Mather.*

7964. On page 9 of your paper you make the following statement: "At present we have no rating powers enabling us to open any relief works; and what we have done has been paid, as far as the value of the work was concerned, by a rating body, say, parks or roads trustees, and the balance, viz., the difference between what we paid and what we could have got the work done for by contract, fell to be defrayed either by private contributions or from the Common Good"; what does the phrase "Common Good" mean?—It is a Scotch phrase; it is the accumulation of centuries of odd money and land that has been sold and passed into the Common Fund for the Common Good. It forms a fund which is entirely at the disposal of the members of the council for the time being. We have our city halls and the lands that have been feued, and many other little items that accumulate and amount to a large sum. It represents about 500,000*l.* now.

Chairman.

7965. It comes largely from bequests, does it not?—Yes, but the origin of the great bulk of the Common Good in Glasgow is lost in antiquity; we do not know where it comes from.

Mr. *Mather.*

7966. You spoke of the Citizens' Fund; is that another fund, apart from the Common Good Fund?—The Citizens' Relief Fund represented some 10,000*l.* subscribed in money, food, and clothing. The other fund was 4,854*l.*, expended for stone-breaking.

7967. The Citizens' Fund was a special fund obtained from the citizens during the past winter?—Yes, the 10,000*l.* was specially contributed.

7968. Is this Common Good Fund of Glasgow a perennial source of money for distribution for the general welfare of the city?—No; only on two or three occasions has it been touched.

7969. Is there any condition attached to this fund, that it shall only be used for certain definite charitable purposes?—No, there are no conditions whatever. It belongs to the corporation, and is very jealously guarded by the members of the corporation.

7970. I presume it is invested and you have a regular income from it?—Yes, we have an income of 40,000*l.* a year.

7971. Is it a growing fund?—Yes, it will grow; and then we use it again for municipal purposes.

7972. You never touch the capital; you spend the interest, I presume?—Yes, we never touch

Mr. *Mather*—continued.

the capital. We accumulate part of our interest, too.

7973. On the same page you say that the problem of dealing with the unemployed "is totally different in large cities from what it is in small towns"; "in a city like Glasgow there will always be a normal percentage of unemployed in all trades. This in the aggregate may be considerable." Have you any reason to suppose that in the administration of your fund during the last winter a large proportion of this skilled artizan class unemployed applied to you for relief?—Not a very great many, I think.

7974. You have given us a table in your paper showing the occupations of those who did apply?—Yes. You will find in the figures that after you deduct the labourers only four and a-half men per individual trade applied to us for relief.

7975. Would you suppose that at the back of all the applications you received from these skilled artizans there was a large amount of suffering among the artizan class out of work who would not make their suffering known?—I do not think so.

7976. You believe by the humanitarian methods you adopted such a class of respectable well-conducted artizans would not be debarred from coming to you on the ground of losing their self-respect?—I think not. I think the crisis that was occasioned by the bad weather of last year was very well got over, and that we had no excessive number of respectable artizans out of work.

7977. Coming to the statement which has been already read out by the Chairman, to which you yourself called attention; this very emphatic statement, that "the solution of this unemployed question is to make it perfectly clear that no Government and no local authority have incumbent on them in the slightest degree a responsibility either to procure or to provide employment or to maintain persons while out of employment"; do you mean that also to cover another body not specifically named here, viz., the guardians of the poor?—No; the guardians have a certain authority now. I cannot exactly tell what it is.

7978. They have the authority, but you say here the solution of the question is to make it perfectly clear that no local authority has such a responsibility; would you abolish the Poor Law?—No, I do not take it in that way at all.

7979. What do you mean by saying that the solution is to make it clear that no local authority has such a responsibility?—I may have used a wrong word in speaking of it as the "solution"; but what I mean is that we should not have laid upon us any obligation in any way to find employment or to provide employment or to help people when out of employment; they must get that for themselves.

7980. Surely that refers directly to the existing Poor Law, and, if so, may I take it that you think the Poor Law is a mistake?—No.

Chairman.

7981. Does not the question come to this: do you include boards of guardians in the words "local authority"?—No; I do not look upon the Poor Law side of the question at all. I take it from the municipal point of view, and from no other. I say we should not have resting upon us any responsibility of that sort.

Chairman—continued.

Mr. *Mather.*

7982. Then we must take this in a limited sense?—Yes.

7983. Your solution as applied in this limited sense is to make it clear that municipal bodies and local sanitary authorities should not have power to maintain persons out of employment, or relieve them when out of employment?—You have a certain authority in the shape of the Poor Law guardians now to relieve distress, but not in Scotland in the case of the able-bodied.

7984. The term "solution" is used again in the next sentence: "The solution of the question" (that is the question which this Committee has been appointed to consider) "rests with the people themselves and not with any authority"?—I am there giving my personal opinion.

7985 You are a person of great authority; you have had the jurisdiction of a great city under your control for a considerable time, and these statements are very deservedly accepted with great respect; you say you look for the solution to the exercise of all the virtues of prudence, thrift, industry, and sobriety?—Exactly; that will solve it.

7986. That, you think, will be the true solution?—That will solve it.

7987. That is a very high state of civilisation at which we have not yet arrived; you spoke of Glasgow being a very opulent city, and in such opulent cities as Glasgow you think there is no difficulty, whatever the suffering may be, in meeting the distress; you think the citizens of such a city and the local authority may deal with the exceptional distress whatever it is?—I think so.

7988. You think that no legislation of any kind is needed, and no other plan than what you have adopted from time to time in Glasgow?—I think there is a responsibility incumbent upon us which we will always rise to when occasion requires.

7989. Glasgow is a very conscientious city?—I hope it has been so, and will always be.

7990. Glasgow is a city set on a hill in that respect; but you do not wish the Committee to apply your remarks to any other towns in the country?—I give my impressions as entirely confined to Glasgow.

7991. Speaking of farms, would you say whether this municipal farm upon which you dispose of the refuse and waste products of the city now pays its expenses?—Yes.

7992. What do you produce on the farm?—On the one farm last year we grew hay, straw, oats, wheat, and barley. I can give you the figures if you wish.

7993. That is quite sufficient for my purpose?—It is an arable farm, as we call it in Scotland.

7994. No milk is produced, I presume?—No.

7995. Do you pay your labourers the full labourers' wages?—Yes, the ordinary rate of wages; very full wages, indeed.

7996. You have to incur all the expenses in connection

Mr. *Mather*—continued.

connection with farming, less that of manure; the manure is free?—Yes; but in addition to that we have to provide a sinking fund and interest. This fund will be paid over in 31 years.

7997. Having taken a piece of moss-land, you have put upon it the labour of 32 men, I understand?—No; the moss-land is only 100 acres.

7998. What was the larger farm of 550 acres?—Poor clayey and hilly land.

7999. Out of cultivation?—Not out of cultivation, but yielding a very poor crop.

8000. That you obtain for a shilling an acre rental?—No, that is only the moss-land; for the other we paid 22*l.* per acre.

8001. You bought it out and out?—Yes, paying 22*l.* 5*s.* 4*d.* per acre.

8002. What would that land be worth after you have done with it?—Not a very great deal more. It could only be worth the agricultural value in that neighbourhood at the time. What we use it for really is to get rid of our excess manure. I can give you the quantity of stuff we put on it last year. We disposed of 33,000 tons of manure on it.

8003. What did it cost you to take it down there?—Sixpence per ton.

8004. This moss land of 100 acres you obtained at 1*s.* per acre rent, as I understand?—Originally 1*s.*, and then it advanced to 5*s.*

8005. What do you produce from that land?—Just the same as from the other.

8006. That is now in a high state of cultivation?—Yes.

8007. Can you take any crop off it?—Yes, except wheat.

8008. At the end of your term that land will be worth twenty times the rent you paid for it at first?—Yes, distinctly; but we cannot get any more land within the circle within which we can get cheap railway carriage; there is none available.

8009. Upon the 100 acres how many men do you employ?—Nine permanent men, and then at the potato planting and at the lifting and at harvest time we employ women who are working at other work during the rest of the year.

Mr. *John Wilson* (Govan).

8010. I think you stated to the Committee at the beginning of your examination that the only test you put these people to was stone-breaking?—Yes; we originally opened the works with the intention of only employing men who had been resident in Glasgow three months prior to the date of opening the works; but when the weather got so intensely cold we could not make inquiry and we allowed anybody to work.

8011. It was very severe weather, was it not?—Yes, dreadfully severe; we had never had anything like it.

8012. Had these poor men any covering where they worked?—No, only at meal times.

8013. The discrepancy between the value of the material and the wages is so great that I am surprised anything was got?—It is just about the same proportion as we have always had in times past.

8014. Do not you think they would have done

Mr. *John Wilson* (Govan)—continued.

better if they had had some shelter?—I think not. There were shelters, but not for them to break stone under.

8015. Is it not very hard for these men to work without a shelter?—It is the ordinary conditions of outdoor labour; you do not put up a shelter for men working in the fields or anywhere else.

8016. You referred to the assistance which the police gave to the authorities in distributing the benefit the citizens had provided for those in want?—Yes.

8017. I suppose a good many of those who got that assistance were not very considerate, and got a great deal more than they were entitled to?—You will always get a percentage of people who will take all they can get.

8018. May I take it from you that those who got assistance were the very lowest type of society?—No, I would not put it so. There may have been a good many who were not very deserving recipients; but undoubtedly the fund did an enormous amount of good; it lowered the death-rate, improved the health of the lower classes, and very many deserving people got assistance from the fund.

8019. Are you aware of the police in many of the neighbouring boroughs doing the same?—Yes; I think Govan did the same, and Edinburgh.

8020. Are you aware that Govan has done the same thing for eight winters?—Yes, but it is not quite the same thing.

8021. They have done something in the same sort of way, have they not?—Yes.

8022. I quite endorse what you say about the citizens appreciating the services of the police in this work, because it has had the same effect in the borough I represent. Were you troubled with men coming into the city to take advantage of the citizens' generosity?—We could not very well get at that, because as regards the soup kitchens, we gave soup and bread to everybody who came and said they were in need of food; but certainly outsiders did not get any benefit under the heading of the provisions ticket, and clothing and coals; that was entirely given to the citizens of Glasgow.

8023. There are a great deal of railway operations about Glasgow at the present time?—Yes, there is a railway running through the centre of the town being made at present.

8024. During the severe weather were those operations stopped?—Not the underground operations; those above ground would be, no doubt.

8025. Did that cause a great many of the labouring class to fall back upon the benefits derived from the citizens?—Yes; even the shipbuilding-yard labourers were thrown out; metal became too cold to handle.

8026. A good deal has been made of the common good fund in Glasgow; that is a fund that is under the corporation, is it not?—Yes, it is the capital account of the corporation, which is not placed against any rating body.

8027. It is a very satisfactory thing to have upon which they may lay their hand when any occasion arises?—Yes. It is absolutely necessary

Mr. *John Wilson* (Govan)—continued.

to maintain it intact, and increase it as far as possible.

8028. So far as your knowledge of Glasgow and Scotland generally is concerned, you do not see the propriety of any Imperial grant or assistance being given for the purpose of meeting distress among the unemployed?—No; I think the municipality should be able to do that for themselves.

Mr. *Acland.*

8029. I want to ask you one or two questions about dates, not for the purpose of criticism, but to compare your action with what might be the action in the case of an English city council. The first important step in regard to relieving distress in Glasgow was the meeting of the magistrates, on some date prior to the 4th of February, as would appear from page 4 of your statement?—On the 4th of February two stone-breaking yards were opened.

8030. At some earlier date the magistrates had come to a resolution to open the stone-breaking yards?—Yes; on the 28th of January.

8031. On the 28th of January the magistrates passed a resolution to open those yards?—Yes.

8032. In doing that they were acting on behalf of the town council, or what you call the corporation?—Yes.

8033. They bound the corporation by that resolution?—Certainly.

8034. The magistrates are the bailies, are they not?—The magistrates are the bailies, and it was remitted to them to associate one or two members of the council with them; it was remitted to them with power to open these works if they thought it necessary after due inquiries.

8035. They being members of the council were acting on behalf of the council?—Certainly.

8036. In the case of an ordinary city council they would have known at that moment that they might be by that resolution bringing a burden on the rates. In the case of Glasgow, I assume they knew that they were not going to do so, because, at any rate, they had the common good behind?—They had. I do not think we have yet decided how the money is to be got; whether we will get it from a private source or from the common good. The question was raised in the first instance how should we pay the deficit, and the answer was, we will decide that afterwards; we will meet the urgency of the present case without deciding the further question.

8037. Might it come out of the rates?—It is not decided yet; but it cannot come out of the rates, for we have no rating power.

8038. Then it could not have come out of the rates when that resolution was passed?—It could not.

8039. The resolution was passed by the public representative body, with the knowledge that it could not come out of the rates, but that it would be found by the city?—Somehow.

8040. Then the work began, and it was known that there would be a loss, and yet all the time it was understood that while the public authority was carrying it on that loss would not be found

Mr. *Acland*—continued.

out of the rates, but would be found in some way or another?—Exactly.

8041. Supposing there had been no subscription, and supposing there had been no resolution to use any part of the common good, it might possibly (I am only putting an extreme case) have come out of the pockets of the very councillors themselves, might it not?—It is quite possible.

8042. You will understand that I am only putting an extreme case?—I think it could not have come out of the councillors' pockets, because the corporation remitted to that committee, with powers to carry out those relief works, and the corporation would find the money. It might have come out of the individual pockets of the members of the corporation, but not out of the pockets of the members of the committee.

8043. That might be so simply because there was not a power to spend the rates on this kind of work. That is not one of the powers you possess?—Yes; I say so distinctly in the body of my statement.

8044. I quite follow that. When the parks or roads trustees were taking part in the work, they were taking part at the desire of the corporation, and they were administering a fund which was going to be partly contributed from outside?—The parks committee was simply the medium for carrying out the work, supposing we employed people on a park, putting it as an example. The parks committee did not carry out the work this year; it was statutory labour, of the roads and streets committee. The parks committee did it where bigger work was concerned.

8045. The corporation willingly lent themselves and their committees to carry out these works with funds which were contributed by the city at large; was not that so?—No, the citizens' fund contributed by the city at large was not used for any purposes connected with the corporation. They were two quite distinct funds.

8046. May I put it in this way: they lent themselves to the expenditure of money on which if there was a loss the loss would not come from the rates?—I do not quite follow what you wish to get at. We had two funds altogether; one, from which we drew the money to pay the wages and the cost of the stone and the shelter and food, from the City Chamberlain; whichever department took over the stone it would belong to the statutory labour, the streets and roads committee, and they pay to the City Chamberlain the value of those stones at the same rate as they would have purchased them, and the balance is to be found by the corporation in some way or other. That is the point you elicited before.

8047. And yet that balance or loss cannot come out of the rates, but will come from some voluntary sources?—Yes, voluntary so far as we can vote it away.

8048. I mean that it is an example of the corporation willingly using money, as to which, if they take the whole of it, part will come from a voluntary source?—We entirely accept the responsibility; the corporation has always done

Mr. *Acland*—continued.

done so in Glasgow, where the case of undue distress has existed ever since 1878. Up to 1878 there was a Citizens' Committee who carried out these works; after that date they handed over a balance to the corporation of some 840*l.*, and the corporation have always, where undue distress has existed, felt it their duty to collect money and disburse it; or if they did not collect the money from the public they found it in some way from some funds in their possession.

8049. In the meantime, they are quite willing that their own machinery should be employed for the work?—We consider it our duty, in the case of exceptional distress, to do that.

Chairman.

8050. There is a surplus, I believe, on the Glasgow Distress Relief Fund of upwards of 5,000*l.*, is there not?—Yes.

8051. You do not propose to use any part of that to make up the balance on the relief work, do you?—A majority of the corporation might decide to do so. What we think is that our machinery was the best equivalent for relieving this case of undue distress.

Mr. *Acland.*

8052. It is an interesting point to see that you are so ready to lend your machinery for purposes of this sort when you know you have not got rates to fall back upon?—We would be very sorry to feel we had the obligation to do so. We do it simply as a matter of humanity, to increase the health and the well-being of the city.

8053. I understand that, although you do not advocate the using of the rates for purposes of this sort, you are not opposed to the principle?—I am opposed to the principle in this way: that I would rather leave it to the citizens than let it become an obligation.

8054. I gather that you would not be opposed to the principle outside Glasgow?—I cannot speak for outside Glasgow, but I should say that the obligation should be the same for all cities; that they ought to be left to do it themselves.

8055. I was reading your own words—"but, as smaller cities and local authorities may not be in this position, it seems to me the remedy is to enable local authorities to impose a small rate for the establishment of temporary relief works."—There are small towns, as I explained, where they may not have so much surplus to fall back upon.

8056. May I put it that you are not opposed to the principle outside Glasgow, and other large cities?—I am not opposed to the principle of a small rate being applied for exceptionable distress, arising, say, from the changes in the seasonal trade in a small place.

8057. Such rate being specially limited?—Specially limited, and special marked.

8058. You spoke about the death rate during severe weather. That rising death rate, I suppose, was not merely amongst the old who died from the cold weather, but it was something more serious?—It was all over the city. Of course, the old people were cut off in very great numbers.

8059. That commonly happens; but I suppose it was more than that?—It was more than that. The death rate went up tremendously. It was 24·6 in January, and in the week ending the 2nd of March it was 53·6.

8060. That would include people of middle age and children as well?—Yes. I can give you the conditions, if you care to have them.

8061. That means, I suppose, that there must have been a good many people before the frost came who were in very precarious conditions, living on from week to week?—It does not follow. In 1875 we had the same climatic conditions, and we had the same high death rate. Glasgow is very subject to fog, and we had alternative fog and east wind, with the thermometer down below zero. Any weak constitution was bound to be affected.

8062. Did you look upon it as showing that there were a great number of people who were in a weak or precarious condition?—We recognised at the time that nothing would enable them to regain their normal condition but additional food, fire and clothing.

8063. Which they had not got?—People do not usually provide against such a condition of weather as we had last year; they were not normal conditions.

8064. That is very much what I meant by that?—I am afraid that with a winter like last winter, even with every man employed, and the conditions of the best, you will find a certain proportion who will be caught unprepared for the climatic conditions that we had last year.

8065. Then when there is no frost at all and no cold, what is your view about the workers of whom you speak, and who suffer from an infirmity of person or temper, or who have got beyond their working days?—That is a question beyond my giving any opinion upon. It may be a matter for the Poor Law Guardians.

8066. You do not offer any opinion as to the way to meet that case?—No.

8067. In the case of piecework, I suppose there is a very great physical difference between the different men who come to work?—Yes.

8068. And some of those who might be quite as deserving as any might be very weak in physical capacity?—Yes, unfortunately we had a great many of those.

8069. Then how would piecework work out in their case, supposing you had begun that after the first week?—In the one case the man who is physically strong and well would do his work in three or four days, and the other might take five or six days. In the one case the man got his food during all the week, and in the other case he did not; he had to take his 7*s.* and go and look for other employment and come back on the Monday next if he wished to do so.

8070. So that a man who works more slowly and takes longer is not at a disadvantage as compared with a stronger man?—He gets his food additional. He has this disadvantage, that he cannot get away to look for employment; but under no possible conditions will you get a perfect scheme.

Mr. *Acland*—continued.

8071. I am not criticising the scheme, I am merely asking for information?—I wished to show that we try to make it as fair as we can. Where the one works longer he gets his food in addition.

Mr. *Round.*

8072. I should like to ask you one question. I suppose the character of the work that these men were employed on on the farm was moving manure?—We did not employ any of the unemployed on the farm at all.

Mr. James Russell Motion, called in; and Examined.

Chairman.

8073. You are acting Inspector of Poor of the Barony Parish, Glasgow?—Yes.

8074. Are there two large parishes in Glasgow, the city parish and the barony?—The city, the barony, and Govan; there are three.

8075. And you are clerk of the parish council?—Yes.

8076. Previously to that, what position did you hold?—I was collector of poor rates in the same parish.

8077. From what date?—1878.

8078. And you had been in the service of the barony parochial board before that?—Since 1866.

8079. What is the population of the barony parish?—The population of the barony parish is 309,812.

8080. And the area?—Twenty-one square miles.

8081. And that is partly in the borough and partly in the county?—Partly in the borough and partly in the landward.

8082. What is the proportion?—The proportion is about 10½ square miles in each.

8083. Then, what are your last statistical returns of pauperism?—The last statistical returns of pauperism, made up to the 14th of February last, show that for the six months ending at that date there had been 3,105 applications, against 4,169 for the period ending 1885.

8084. Ending at the same period in 1885?—Ending at the same period in 1885.

8085. Ten years previously?—Ten years previously; and the number of paupers chargeable to the parish at that date, the 14th of February 1895, numbered 6,764, compared with 7,070 in 1885; showing a decrease in applications of 1,064, and a decrease of individuals, chargeable at the same period, of 306.

8086. What are the figures for lunatics?—The number of lunatics, who are included in these figures, in 1895 numbered 596 in the asylum, against 490 in 1885; lunatics boarded out, 201 in 1895 and 20 in 1885.

8087. Then on lunatics there is an increase?—On lunatics there is a large increase.

8088. What is the increase?—Two hundred and eighty-seven.

8089. Then as regards boarded-out children, what is the comparison?—The boarded-out children in 1895 were 498; and in 1885 they were 439.

8090. And the total paupers chargeable?—6,764 against 7,070.

8091. You have for many years taken a considerable interest in the question of the unemployed, I believe?—I have.

8092. And you have written on the subject?—Yes.

Chairman—continued.

8093. The Committee understand that the Poor Law Act of 1845, which is the leading Statute in Scotland, did not provide, as in England, for the relief of able-bodied persons?—It did not.

8094. Has that provision been altered by practice at all?—It has not been altered by practice, further than that the House of Lords decided upon a case that the assessment raised for the relief of the poor could not be diverted to the relief of able-bodied men and women. Since then the Board of Supervision has advised a reasonable interpretation of that decision; and the parochial boards give a wide scope in the consideration of cases of able-bodied men who have wives and children dependent upon them.

8095. What do you mean exactly by giving a wide scope and a reasonable interpretation?—If an able-bodied man has a wife in bad health, or children in bad health, we provide for them in the hospital.

8096. Is the condition of destitution enforced in Scotland in the case of relief, as it is in the case of out-door relief in England; you have any such provision as that?—No, it is simply whether the applicant is an object of relief; that is the point the parochial boards consider.

8097. An object of parochial relief?—Yes.

8098. A fit subject for relief, that is to say?—Yes.

8099. What is the condition of in-paupers; what is the condition before a man is admitted into the house?—Practically, destitution is the test of admission to the poor-roll, either on the outdoor roll or the indoor roll.

8100. Will you explain how a man gets on to the outdoor roll?—He gets on to the outdoor roll if he is unable to work and earn a living for himself, his wife, and children; but he may be partially employed as a watchman, and such like.

8101. And so be able to contribute to his maintenance?—Able to contribute to his maintenance.

8102. What is your opinion as to the amount of distress which prevailed in Glasgow last winter?—Until the appearance of the late severe frost it appeared that there was no immediate necessity for exceptional measures.

8103. How did you gather that impression?—The outdoor assistant inspectors—the district-inspectors, who are constantly moving about in these areas and are going in and out among the people—observe what is going on, and they reported to me in January, from the 16th to the 18th of January, that there was just the usual number of men hanging about; that shopkeepers found no unusual distress. In one district in particular

Chairman—continued.

particular the inspector says there are always a number of so-called unemployed men who would rather loaf or beg than work, and that the time for the unemployed was past and gone; meaning by that that the season of outcry for that had disappeared.

8104. In January?—In January.

8105. Do you mean that trade had become brisker?—It was just in its normal state. Another says it is quite a common thing for men to be thrown idle by failing to rise early enough in the morning, and also through drink. This statement is made upon the authority of the manager of a large engineering work in the west end, in the Anderston district.

8106. He says that they have a difficulty owing to men not being willing to get up early enough?—Entirely. I might read this statement illustrating another point of it. The foreman of a brass and copper work says they are very busy working day and night, different men for each shift, wages 30*s.* 6*d.* per week; and that there are many who will not work. Some time ago a woman successfully pled with him to get her husband a job, but he worked only two days when he, without any assigned cause, disappeared and sent his son to the works for what he had earned.

8107. And it was represented to you that that sort of thing was the cause of a great deal of such want of employment as existed?—That is so; and there are other similar statements; that is just a sample.

8108. Now, when in February last the Lord Provost, as he has told us, inaugurated a special fund for the relief of the unemployed, what did you do?—The inspectors of poor attended the various relief stations and gave assistance. The committee, as I took their instructions from their observations, were so anxious to see that no one was turned empty away in a sense, that very slight investigation was made; certainly there was no organised inquiry into the circumstances of each applicant.

8109. It was considered an urgent matter?—It was considered an urgent matter.

8110. It did not even admit of the time being spent upon those purposes?—No, they were so numerous. The people relieved were generally of the lowest description of the populace, and a great many were already in receipt of poor relief. They were recognised by my assistants, and, in point of fact, when these people saw my assistants they cleared out of the place. In another instance, it was observed that there was a decrease in the number receiving soup in a district. I sent the assistants to our poorhouse, where we were giving soup out to people, and it was found that they were going to Barnhill, to the poorhouse, and getting soup there, as well as at this soup kitchen; and two women were given into the hands of the police, but they were allowed to go away.

8111. That was regarded as a fraud, by the police, of course?—Entirely. Then there were an unusual number of children sent for soup, and rations were supplied to these without any inquiry whatever. It is to be observed likewise that, from information given to me by the governor of the poorhouse, who catechised people in a casual way, that the whole of the people who went up there seemed to have enormously large families.

Chairman—continued.

8112. There was not, I presume, time to investigate into the genuineness of the alleged famine?—That is so.

8113. But these circumstances were, I suppose, inevitable under the pressure of the case?—Quite so. I give you these also to illustrate the class of people who were taking advantage of it.

8114. Were there many among them who were genuine tradesmen out of employment?—Very few comparatively.

8115. They were what we have heard spoken of as the loafing-class generally?—Entirely the loafing-class; the men really who have never done any work; as anyone who took the trouble to observe the palms of their hands would have seen; and also that class who mainly frequent the model-lodgings in the city, where they get a bed from 2½*d.* upwards.

8116. Mr. Burns's lodging-houses, and the others of that kind, that we have heard of?—That is so. There is, roughly speaking, accommodation in the city for nearly 9,000 sleepers, distributed over the three parishes, and last year nearly 2,500 inmates of the poorhouses came from these model lodging-houses.

8117. You mean that the model lodging-houses did not make them any worse than they were before; but that was their last stage?—That was the last stage.

8118. You do not mean to imply anything against the lodging-houses, do you, as conducing to that state of life?—They do not improve the class between 18 years of age and 40 years of age.

8119. I suppose, after that, they may be feeble people, who must have something of the sort?—Who probably finish their lives in the poorhouse.

8120. But in the earlier years the morals and general tone of those who go to them are not improved?—That is so.

8121. Do you think that that is really a considerable evil?—It is a considerable evil. For instance, the average number of deserted cases; that is, applicants for relief whose husbands or fathers have deserted them, is about 279 for my parish alone. The criminal officer makes his first visit to these models, and is usually successful in finding his man there.

Mr. *Lawrence.*

8122. Two hundred and seventy-nine out of what total?—About 3,000.

Chairman.

8123. But where would these people go if there were not those houses for them to sleep in?—In the first place they should go and live with their wives, and in the other cases they should live with their parents.

8124. You think that many people frequent those lodging-houses who really are not driven there by necessity?—That is so.

8125. They get away from the constraint of their wives and families by going there?—That is my point. And there were 51 of these cases suffering from venereal disease.

Chairman—continued.

8126. Fifty-one out of how many?—I will put it in this way: that out of a total of 3,685 persons admitted to the poorhouse last year, 479 came from model lodging-houses and 172 came from police offices, while 51 out of that total suffered from venereal diseases, acute and chronic.

8127. But you do not imply, do you, that those who came from model lodging-houses were especially those who suffered from venereal diseases?—I say that 51 came from the model lodging-houses.

8128. Out of how many?—Out of 479.

8129. I thought you meant out of the 3,000?—No, there were 479 from the model lodging-houses and 172 from police offices; and out of those 51 suffered from venereal diseases.

8130. Then you have discharges from Barlinnie Prison, which increase your less reputable loafers, have you not?—We have, roughly, from 50 to 60 men (there are a good number of women, certainly; but I keep myself entirely to men) who leave Barlinnie every morning. Barlinnie is about two miles from Glasgow—three miles, say, from the Exchange. These men are brought on in vans in the morning and deposited at the Glasgow Prison in Cathedral-square, where they are discharged and allowed to go where they choose. There is a prison-gate mission established just below Alexander's Mill, which you know yourself, where these people who choose to go are taken, and they get coffee and bread, &c., and the officials there pray with them and read the Word of God to them, and try to instil proper ideas into their heads. These, again, leave that place probably about nine o'clock, or half-past nine o'clock, and go in to swell the crowds of the existing unemployed in the city. These men, as the Lord Provost of Glasgow has stated, come from 29 different police-courts throughout the West of Scotland. In addition, there is the Sheriff's Court, and the Justice of Peace's Courts, *et cetera*.

8131. So that the accumulated discharged prisoners from all the West of Scotland, you may say, are all poured into Glasgow?—Brought into Glasgow.

8132. At the rate of 50 or 60 a day?—At the rate of 50 or 60 a day.

8133. How many prisoners are there in Barlinnie altogether; do you know?—Some time ago there were 800, but I think the number has increased to somewhere about 1,200 now.

8134. Fifty or 60 seems a large number?—I might explain that that probably arises through the short sentences.

8135. Thirty days and 60 days?—No; seven days and 14 days.

8136. Still, a certain number of those men would find their way back to their homes, I suppose?—Yes. I have authentic figures here from the superintendent of the Discharged Prisoners' Aid Society, showing that in the year 1892, out of 11,509 discharged from prison, 40 per cent. had been convicted from one to three and four times, and it was then stated that there were 500 professional thieves in Glasgow; and as I am giving these figures, I might mention, in addition, that there are from 500 to 600 certified vagrants in Glasgow, as per the Return to the Home Secretary, taken in June and December of each year.

Chairman—continued.

8137. Now the unemployed, as shown in the Lord Provost's statement, have been dealt with on previous occasions from 1848 downwards?—From 1848 downwards.

8138. There was a sum then raised, was there not?—A large sum was then raised.

8139. And paving and stone-breaking were organised?—Paving and stone-breaking, and emigration were then resorted to. In September, 1862, the newspapers reported that there were 5,000 out of employment, but only 310 came up for employment when it was offered. Complaints were then being made that the bulk of the men were loafers. At that time free passages were obtained from the Queensland Government, of which three-fourths went to Lancashire and one-fourth to Glasgow. The total amount realised then of relief was over 36,000*l*.

8140. The efforts made this last year were not so ambitious or extensive; but during this late period of distress, with a view to ascertain who were the applicants, did you make a suggestion to the Lord Provost?—I made a suggestion to the Lord Provost.

8141. Will you tell the Committee what that was?—"That the Lord Provost be requested to nominate a Commission of Inquiry from among the magistrates, the Poor Law authorities, the Charity Organisation Society, and such other representative bodies as his Lordship may think necessary, to take evidence for the purpose of ascertaining to what class or classes belong the great mass of the people who were employed on stone-breaking, who received orders for provisions, coals &c., and who were supplied with soup at the various depôts, and what class or classes received shelter at the various police stations, for the purpose of advising as to measures to meet such recurring periods of distress, or if necessary to advise the Government regarding measures of relief to meet the classes discovered in the inquiry." This recommendation was made more for his Lordship's consideration, because I felt, after sending it, that it was too wholesale for anyone to take up; but I thought it necessary to put these notes before his Lordship.

8142. Has anything been done on that recommendation?—Nothing has been done, so far as I know.

8143. And, of course, so far as the last witness is concerned, it would be difficult or impossible to go back upon the cases, then, at this time of day?—I think sufficient information could be got upon which any committee of gentlemen could form an opinion as to what class they appeared to belong to at the period of the late distress.

8144. Is it, under the Scotch law, any part of the duty of the Poor Law authorities, such as yours, to deal with the relief of distress by furnishing employment?—Oh, no.

8145. You have no obligation to find work for the unemployed?—We have no obligation to find work for the unemployed.

8146. You deal only with the destitute poor?—With the destitute poor entitled to relief.

8147. And

Chairman—continued.

8147. And is it your opinion, from your knowledge of the whole question, that it would be a desirable thing that the other public authorities should have that duty put upon them?—I am strongly of opinion that the question of dealing with the able-bodied poor or the unemployed ought to be under the care and control of the Poor Law authorities, either by express enactment or through some machinery which may be created under the authority of the Secretary for Scotland. The conditions under which the Court gave that decision about 1858 are entirely changed now. The expression "the stigma of pauperism" is frequently used; but it would do no harm whatever to have some power like these in the hands of the re-constituted parochial boards or parish councils, under the control of the Local Government Board.

8148. What sort of power do you speak of?—Power to afford them relief for work, as I suggest. I think they might. To meet the claims of the unemployed, measures ought to be taken to provide for the class of men bordering upon pauperism, who subsist on casual employment and begging, by providing them with work, shelter and food upon farm colonies which might be attached to poorhouses. That is the form I think that any change might take. Farm colony is perhaps not quite a good name to use in relation to that; but under the Poor Law authorities let everyone have the right to apply there, and let the Poor Law authorities deal with the case in the way best suited to that case.

8149. Whether the want of employment be owing to exceptional circumstances or not?—That is so.

8150. Would you say that any man in normal times out of employment, whether from fault of his own or not from fault of his own, should be entitled to go to the Poor Law authorities and claim work and relief for work, or would you confine it to cases where from exceptional causes beyond the man's own influence he is out of employment?—In the first place I will put it in this way: that the Local Government Board of Scotland should have power, upon the application of a Parish Council, to give relief in cases in periods of exceptional distress.

8151. That the Parish Council should, as it were, apply to the Local Government Board to have the existing condition of things declared an exceptional condition of things justifying exceptional measures?—Quite so, and the local authority, the Parish Council, would then have power to reply to the application of each of these men as they come up, so that the so-called well-doing workman who is thrown out of employment would get different treatment from a man who had a bad reputation. And, in addition to that, some more stringent provisions should be taken for the prevention of vagrancy and begging.

8152. What sort of provision do you point to there?—Just now under the Poor Laws we cannot detain a person in the poorhouse longer than 24 hours. The result is that we have known and proved disreputable characters who trot out and in of the poorhouse 50 times in the year. They are outside doing casual work; the

Chairman—continued.

women are washing and such like, and the men are doing something certainly when they are out; but these men prevent the honest labourer getting his proper share of the work.

8153. They compete with the honest labourer?—Yes, it is subsidised labour competing with what is not subsidised.

8154. What would you do to prevent them?—Before the Committee presided over by Sir Charles Cameron I recommended something in the same line, that they should be committed. This class of men and women, who are a disgrace to our streets and a disgrace to their sex, ought to be committed, on the power of a sheriff or other magistrate, to an institution. There is plenty of room in the present poorhouses of Scotland for the whole of what I would call the certified tramps and vagrants; and these people ought to be committed to those institutions which already exist, until they are able to rehabilitate themselves in the eyes of the judge who has sent them there.

8155. But do you think that in a sort of penal colony of that kind they would have the chance of rehabilitating themselves?—I do.

8156. By being kept steadily at work and by being kept from drink?—By being kept steadily at work and kept from drink; because it has proved itself in my own poorhouse. In 1882, following the example set by several English workhouses, we built test wards, 60 for men and 60 for women. In less than 10 years we have not a test case on either side; the whole of the people who were test cases in 1882 have disappeared, where I cannot tell; they certainly are not paupers; they certainly are not in the poorhouse, and we have no record of them.

8157. What do you mean exactly by a test case?—Men who have come to the poorhouse through their own misconduct, and who are certified by the medical staff as partially able for work. A man probably has been on the beer for a week, and he is run out and cannot get even a model lodging-house bed, but sleeps on a stair in the night, probably gets cold; the medical officer certifies catarrh, or something of that kind, he is unfit for work, and he is sent to the poorhouse. That is a test case.

8158. Then while you would deal with the regular constant unemployed loafing class in that way, you would give greater powers to and make it the duty of the Parish Councils, who take the place of parochial boards, to give relief to the unemployed?—I would; that is my opinion.

8159. Your view is that it would be greatly in the interest of the respectable, hard-working, decent living working man that these people should be dealt with?—Most decidedly, I think so.

8160. Because they run down his standard of wages?—Entirely.

8161. In fact you would advocate the introduction of some sort of system like the colonies in Belgium and Germany?—In Germany. I was sent by a committee to Germany with three other gentlemen to inquire as to the farm colonies, and I signed the report with a qualification.

8162. When was that, may I ask, and who

Ch airman—continued.

sent you?—It was the outcome of an Association for Improving the Condition of the People of Glasgow; and this is a quotation from the report: "It has to be borne in mind, however, that the German criminal law is more comprehensive than our own, in so far as it confers more extensive powers over the class of persons for whom a labour colony is intended." Those powers are contained in the 361st section of the German Penal Code. Shall I read them?

8163. If you please?—"By the 361st section of the German Penal Code, amongst other provisions, it is enacted that 'he is punished with imprisonment'—(1) Who, after he has been put under police supervision, breaks through the restrictions under which he has been placed. (3) Who goes about as a 'tramp' (Landstricher). (4) Who begs, or directs or sends any children to beg, or fails to prevent persons from begging who are under his control and supervision, and belong to his household. (5) Who gives way to play, drink, or idleness, so that he falls into a state in which the help of outsiders (fremde Hülfe) has to be claimed through the intervention of the authorities for his maintenance, or the maintenance of those for whose support he is responsible. (7) Who, if he receives relief from public poor funds (Armenmittelu), refuses, and of dislike of work, to perform a task suitable to his powers, which is assigned to him by the authorities. (8) Who, after loss of the lodging which he has had up to the time, has not, in the interval permitted him by the proper authorities, procured for himself a lodging anywhere else, and cannot show that, notwithstanding the trouble he has taken, he has been unable to do so."

8164. Do you think that in the case of those deserving poor who might get assistance in one way or other from the parish authorities under the extended provision that you advocate, there would be any evil come to them from that support; would it lower their tone, their independence, on the one hand, or would you find them objecting to it because of the stigma of pauperism touching the pauper class?—No, I think that is nonsense. My experience points to that.

8165. You think that you can give a man in those circumstances help without lowering him in his own estimation or in that of others?—I do think so.

8166. Have you any strong view as to his losing his right of citizenship, his vote; do you think that he should lose his vote?—I have not thought about that.

8167. At present do you think, as things go now, that that would have any effect in preventing applications?—I have never heard it mentioned.

8168. I omitted to ask you as to some information that you wished to give with regard to your parish, which is set out on page 11 of your proof, as an indication that the ratepayer of your parish is not numbered among the distressed unemployed; can you give some figures of the rating as bearing upon that point?—Yes, I would like to refer to that. For the year ending May 1894 there was a sum levied by

Chairman—continued.

rating of 60,923*l.* Of that sum 60,015*l.* was collected, or 19*s.* 8½*d.* per £, or 98·5 per cent. The difference, which is 909*l.*, which we had to write off as irrecoverable, represented 10,296 receipts out of a total number of receipts of 85,144, which is equal to 1*s.* 9*d.* per receipt; that was the value; the 909*l.* divided gave 1*s.* 9*d.* to each receipt. Then for the year ending the 14th of May 1895, with 1*d.* less of a poor rate (and which 1*d.* yields 5,844*l.*), we had only 4,570*l.* less collected at the very worst period of the distress. Then when the warrants for poinding and the recovery of the rates were taken out in January, out of 86,621 receipts, or an increase of 1,477 over the previous year, only 29,237 names were in the warrants, an increase of only 965, that is to say, the principal body of the receipts had increased by 1,477, while the defaulters had only increased by 965; showing that the rates, *quoad* individuals, have been better paid; while at the 20th of April current 14,458 remained unpaid against 13,813 in the previous year, or an increase of 645. That is 645 put against the total increase of 1,477, showing that even with the bad eight weeks in the months of February and March last the rates were paid better than the previous year.

8169. Then you have, I think, the applications for poor relief during the distressed weeks of this year?—The new applications for poor relief during the eight weeks from the 2nd of February to the 25th of March show an increase of 722 over the whole city, the three city parishes. There was a gradual rise from the 2nd of February till it reached its height on the 23rd of February, when it began to decline, and so also with the numbers in the poorhouses, which reached a maximum increase of 280 upon the very same date, the 23rd of February.

8170. And what is the conclusion that you draw from these figures?—The conclusion that I draw is that this distress was felt mainly amongst the class verging upon pauperism, and those who live in a chronic state of poverty and who ought never to be out of the poorhouse. I would just like to mention that roughly over a year, taking year by year, there are about 450 people refused relief in respect of their being either able-bodied or that they have relatives able to support them; and who have a right to go to the sheriff and insist upon relief. In these cases, particularly for the year ending 1892, no such recourse was had to the sheriff. Now you have these 450 people, men and women, who have applied for relief and been refused; they also swell the unemployed. Then there is the other class who want out-door relief; they must have it, it is the only relief that will do them good, and is suitable for them; while the parochial authorities on the other hand say, "It is the poorhouse hospital you require or the wards of the poorhouse." They refuse to go in there. These again swell this class of unemployed and vagrants and beggars. We have no power, of course, to force these people into the house, but still they are left outside and swell the class before referred to.

8171. Do you wish to give the deduction that you draw from the figures in your proof as to the

Charity

Chairman—continued.

Charity Organisation Society's shelter?—I should like to put those on record.

8172. What have you to say on that?—This shelter for houseless men was organised by the Charity Organisation Society, and opened on the 19th of November last. From that date to the 31st of March 174 men were admitted. Of those, 50 were still in the house at the latter date, 31st of March; 31 are known to have got regular work; 22 left to look for work, but did not return; 14 left of their own accord; eight were discharged by order of the committee; nine left to seek admission to the poorhouse; four went to their native places; one went to live with friends, while 33 were dismissed by the superintendent for refusing to work; one was handed over to the police for being drunk and disorderly, and got 14 days' imprisonment; and one was discharged suffering from infectious disease. I have here a short history of 18 of those men, so far as I could get it, taken quite at random, and it discloses the class of people who make up this mass of unemployed. They are all comparatively young men; their ages were 38, 26, 34, 20, 53, 40, 55, 32, 44, and so on.

8173. Of what sort of class of the community did they belong to?—The very worst class. They have been convicted of drunkenness several times, and they are known to be intemperate, they admit it; this is their own statement taken down.

8174. Have you anything else you wish to say further?—No, I think not.

Mr. *Acland.*

8175. In the case of out-door relief, I understand that that is applicable to people who are unable to work, or are only partially able to work?—Those who are partially able to work and those who are unable to work; both classes.

8176. But you do give out-door relief to those who can partially employ themselves and earn wages?—We do.

8177. What is the proportion of out-door to in-door relief?—We have 4,000 recipients of out-door to 1,150 in-door.

8178. Would that be the common proportion for other districts besides your own?—That proportion nearly prevails in Scotland. Parenthetically, I might refer the Right Honourable Member to a Report issued by the Board of Trade, where the figures are given of the proportion of out-door to in-door relief for the whole of Scotland.

8179. Then you spoke of those of a certain class who ought never to be out of the poorhouse. I am not quite sure that I followed exactly which class that was?—The class who apply for relief, and whom the medical staff of the parochial board, and the inspectors, think ought to be in the poorhouse. They have no possible means of existence outside and they ought to be inside.

8180. And they ought to stay there?—They ought to stay there.

8181. Have they no friends to support them outside?—In these cases that I refer to they have none.

8182. And they are not physically strong?—They are not physically strong. There is an average of 257 people who apply from old age,

Mr. *Acland*—continued.

who have friends able to assist them, and who ought to assist them; while there are 280 who have no friends whatever to assist them.

8183. And they are mostly too old for work?—They are mostly too old for work.

8184. And some of them, I suppose, ought to be in the infirmary?—They would be in the infirmary. We persuade them to go to our infirmary or hospital.

8185. But they have a habit of going out notwithstanding?—That is so.

8186. Then you spoke of those who have been refused out-door relief, and who also swell the number of unemployed. Are they a class that could not get work very well?—They are a class who ought to be looked after by their own relations.

8187. But they are not?—But they are not. They are generally people of bad character who have lost touch with their relatives, and whose relatives would rather see them in the poorhouse, and pay for them there, than outside.

8188. But they are not destitute absolutely?—They are destitute in the sense that they are not able to work.

8189. But at the same time they are not considered worthy of out-door relief?—That is so.

8190. They may come into the poorhouse if they like?—Yes.

Mr. *John Wilson* (Govan).

8191. I think you stated in the beginning of your examination that there is a large increase in lunacy?—A very large increase.

8192. Can you give the Committee any information as to your view of the principal cause of that increase?—The General Board of Commissioners in Lunacy, since 1875, when the Government of the day gave what is called the lunacy grant, declare that the increase in lunacy has risen since that grant of 4*s.* per week was given. I do not agree with that; but my own opinion is that there is no increase in certifiable lunacy, but that it is an increase of chronic lunacy, which is going on accumulating in every asylum throughout this country.

Chairman.

8193. But is not that certified; what is the distinction?—It is certified; it is passed and certified, and the people are confined there. What I mean by certifiable lunacy is that if you have 200 certified cases this year, and 220 the next, and 230 the next, that is not an increase of lunacy; it is an increase of cases in the asylum at the close of a year. I will explain it in another way, that the average rate of recovery is 42 per cent. Now, where do the rest go that do not die off, that are left in the bottom of the bucket, as it were, in these asylums?

Mr. *John Wilson* (Govan).

8194. What my question points to is whether there is any assignable cause that you know of more than another that is the reason of this increase in lunacy?—Drink and heredity.

Chairman.

8195. And railway travelling? — I cannot define it so closely as that.

Mr. *John Wilson* (Govan).

8196. Then you stated that workmen were thrown out of employment through failing to rise in the morning, and you also said through drink. Do you think it is because they tipple at night that they are not able to rise in the morning. Do you think that has anything to do with it?—I quite believe it; I am sorry to say I quite believe it, particularly when it is bad tipple.

8197. Then you also stated that there were between 50 and 60 prisoners released from Barlimire prison every day. Many of those, I suppose, would be habitual inebriates?—That is so.

8198. Who have got themselves into bad company under the influence of drink, and have committed crime?—That has been proved.

8199. You also stated, I think, that the genuine unemployed, that is to say, the respectable working men, during the time of distress in February and March, were not to be found among the crowd seeking relief from the authorities in Glasgow?—No, they were not in the crowd. We came to their knowledge by other sources.

8200. Did you assist those men privately at all?—They were assisted privately, and I myself have assisted them. I made inquiry of a man who was said to be one of the unemployed,—a respectable man, and I found him so; but the reason he had gone below was that he lacked backbone. I got him work in two or three places, and he always fell out of it; he was what we Scotch call "fusionless."

Mr. *David Randell.*

8201. What is that?—Just a useless sort of creature, with no solidity and no backbone.

Mr. *John Wilson* (Govan).

8202. I suppose many of these respectable working men would be householders?—Yes.

8203. And I suppose under those circumstances they would be relieved from rates, would they not?—As a rule. The poor rates they were relieved from; but as to the police and other municipal rates I cannot answer.

8204. You stated that there were about 9,000 persons who slept in model lodging-houses in Glasgow nightly?—There is licensed accommodation for nearly 9,000.

8205. Are those model lodging-houses under private management or under the corporation?—They are mainly under private management; but the corporation have several.

8206. What do these people pay per night for their lodging?—I cannot tell you.

8207. Is it your opinion that the casually employed artisan or labourer,—what we may call the low-priced labour, if I may say so,—interferes very much with the better class of labouring man getting employment?—Yes, I put it in that way. I think I have said so.

8208. I think you did. And what would you do with those men to get them out of the way—that is to say, with those casual men who perhaps work a day and drink a day?—I would leave them to the Poor Law authorities.

Mr. *John Wilson* (Govan)—continued.

8209. And what would they do with them?—They would put them either into the poorhouse, or upon land which could be acquired in the neighbourhood of the poorhouse, and make them work there.

8210. Then I suppose if the Poor Law authorities took those men under their protection, they would see that they kept them there for a considerable time in order to wean them from their bad habits?—That is so. What we have been able to do in the poorhouse with careful management we are quite prepared to do outside.

8211. Then what is your opinion now, can you tell us, from your experience as an Inspector of the largest parish that there is in Scotland so far as population is concerned, of the cause of the great bulk of the destitution and poverty that we have; is it laziness?—There are two or three causes. There is a good deal caused by evil human nature, somehow the worst side of human nature. I cannot say that I can attribute it entirely to drunkenness. I have come across some of the worst characters out, who did not drink, but it is just what I call a low type of humanity both in men and women; and it is being perpetuated, I think, as the Lord Provost of Glasgow stated, by early and indiscriminate marriages.

8212. And they get into dissolute habits?—I know of the daughter, aged 17, of one pauper, marrying the son, aged 18, of another pauper, when they have not a rag to cover themselves with.

8213. Then is there any cure for that?—Education, I suppose, is the only cure.

8214. Do you think education would do that?—Probably the clergyman ought to be educated first.

Mr. *Mather.*

8215. Do you mean that the clergyman should decline to marry anyone in that condition?—I should say so.

8216. You spoke of having visited some farm colony in Germany, and you thought that the system which you discovered there might apply to a city like Glasgow, to certain parts of the population, is not that so?—Yes, provided we had certain improved methods of treating these classes before referred to, which I read to the Committee.

8217. You know that those colonies in Germany are supported by subsidy from the authorities?—I do.

8218. They are not self-supporting?—They are not.

8219. They are established for the purpose of the vagrant and criminal classes, and all the colonists are under very strict supervision and discipline?—That is so.

8220. It is a kind of penal settlement in fact, in a certain sense?—Yes.

8221. Do you think that there is any class in Glasgow that would do with the same sort of treatment?—Yes.

8222. You have a class of that kind?—We have.

Mr. *Mather*—continued.

8223. At the present time, how do you dispose of that class otherwise than in the workhouse?—They are not disposed of in the workhouse.

8224. They are left to themselves?—They only come to the workhouse when they require help or when they require treatment.

8225. Do you think that it would be a proper, advantageous and beneficial expenditure of money for the authorities of Glasgow to acquire land for farms of that kind in which they could dispose of this class of the population; that it would be well-spent money subsidising a farm of that kind?—Not to the extent, I think, that you apprehend. You refer to large farms.

8226. I mean the sort of farm colony that you saw in Germany?—Not upon the same lines. I would simply acquire land adjacent to our poorhouses, which need not necessarily amount to a farm in any case.

8227. But you would acquire land for the purpose of cultivation?—Fifty acres as an experiment.

8228. I mean that if that answered you would cultivate any amount of land required for that class of the population?—Yes. A task of the land; the work on the land, and the existing arrangements and administration of the poorhouse would be quite sufficient to meet those cases.

8229. You would blend the workhouse and the farm around it?—Certainly.

8230. And that would be, in your opinion, preferable to breaking stones in the city?—Yes.

8231. Or any fictitious employment of that kind?—Quite.

8232. You would not call farming and the cultivation of land a fictitious employment, but a genuine one, I presume?—Yes; they only produced vegetables for the poorhouse.

8233. Therefore, whatever money the Poor Law guardians had to bestow in the way of relief on any class of the population, you would say would be best bestowed, in making up the difference between expenditure and receipts, on a colony of that kind, rather than on giving work near a town in breaking stones, which would be an immense loss?—Yes.

Mr. *Renshaw*.

8234. You expressed an opinion that measures ought to be taken to provide work, shelter, and food, on farm colonies attached to poorhouses. Do you think that, in expressing that opinion, you are expressing an opinion which is generally held by those who have had, I will not say an equal, but a similar, experience to yours. I fancy there are very few who have had an equal experience with you, but do you think that that view is shared by those who have had a similar experience to you in the administration of the Poor Law in Scotland?—Yes. I think so; but I would not like to tie it down to farm colonies, but simply to the acquisition of land by the Poor Law authority to which these classes to whom we refer should be relegated; and I think that that opinion, which I have expressed, is pretty general among those men whom I meet. We have discussed this question of vagrancy over and over again, and a committee of Poor

Mr. *Renshaw*—continued.

Law inspectors has sat upon it several times, and certainly these opinions have been expressed.

8235. But, in your opinion, I gather that it would rather be as a test of the readiness and willingness of those who are applicants for Poor Law relief to work than it would be with any idea that you would be able, by giving men employment on the land on such farm colonies, or in any modified form that you suggest, to bring them back into the ordinary channels of labour?—Quite so. I do not believe in that last idea.

8236. So that you do not look upon it as a remedial measure?—No; it will remedy itself probably in 20 years.

8237. Then, you spoke about the parish councils having power to appeal to the Local Government Board to declare an exceptional state of matters, and for the Local Government Board then to have power to declare that an exceptional state of matters existed, if the evidence was sufficient; and, thereupon, I presume you would suggest that the parish councils should have the authority to give exceptional relief?—Yes.

8238. That is what you proposed?—That is what I proposed.

8239. Would you limit the applications on those lines to exceptional circumstances, or would you admit that in the case of a place where, for instance, there was a decaying industry, it would be a desirable thing to give special powers of that kind—for the Local Government Board to have that power of declaring that an exceptional state of matters existed?—In the first place, the Parish Council would require to be satisfied, and then approach the Local Government Board.

8240. You must, of course, always bear in mind (and I should like to put this to you) whether, in suggesting that the Parish Council should be the body to take the initiative in a matter of this kind, you are not suggesting a somewhat dangerous course in view of the fact that the Parish Councils are elected by the very men who would become applicants for relief?—I see your point.

8241. I would suggest whether the preferable method of arriving at the object you have in view would be that on the initiative of the Parish Council an inspector should be sent from the Local Government Board to inquire, and that on his report the Local Government Board might be able to put some such machinery in motion as you have suggested. Would not it, in your opinion, be a safer thing to do it in that way?—I did not express it so; but certainly I had that in my mind from the official experience of Mr. McNeill, the present secretary, and Mr. Barclay, general superintendent. Invariably they are sent, and I assume that the Local Government Board would take the same means to ascertain the existence of a given state of affairs.

8242. So that, in your opinion, it would be better that whilst the application might be made by the Parish Council the actual initiative in taking proceedings should be upon the report of an inspector coming from the Local Government Board?—Quite so. I would go a little further

Mr. *Renshaw*—continued.

by making some limitation as to the population and the parish council, by whom that could be administered. I think it is quite useless in a number of cases.

8243. That is to say that you would limit it to the larger parishes, and not give such power to the smaller ones?—Entirely.

8244. On the point of vagrancy, you expressed a strong opinion in regard to the prevention of vagrancy and begging. Could you tell us, from the experience and knowledge which you possess as a member of the Inspectors' Association, whether the application of the Vagrancy Laws in the Borough Police Act of 1892 has had any effect in reducing the amount of vagrancy and begging in boroughs to which that Act applies?—I do not think it has.

8245. You are not aware, from anything that has passed in any of your meetings that that has been the case?—I am not aware of that.

8246. There is only one other question that I want to put to you, and that is with regard to the figures of in-door and out-door relief that you gave us; you stated the number of indoor recipients at 1,000, and outdoor 4,000. I wanted to ask you whether that is at one time or whether it extends over a considerable period; whether, for instance, you have 1,000 in receipt of in-door relief on one day, and 4,000 in receipt of out-door relief; or whether that extends over a period?—That is the total number chargeable on the 14th of February last.

8247. On one day?—Yes.

8248. Is that proportion pretty uniform throughout the year, or does it vary between the summer and winter months?—That is pretty uniform.

8249. It is even in summer and winter?—It is. The percentage of out-door relief to pauperism in the barony is 60·55; in the Glasgow City Parish it is 54·57, and in Govan Combination, 68·74.

Mr. *Round*.

8250. Following what the honourable Member was asking you about entrusting of powers of relief to the parish councils, you have much larger parishes in Scotland than we have in England. You would not entrust such powers to small parishes, would you?—I have had no experience of the Act, it has only recently come into force, indeed the provisional council is only sitting now.

Mr. *Round*—continued.

8251. But you have very large parishes in Scotland?—Yes; there are eight or nine large parishes.

8252. And with regard to what you were saying as to farm colonies, or using land for a test, have you had any experience in that, or is it merely that you would like to try the experiment?—The city parish at one time had a track of land, probably about 40 acres, too far distant from Glasgow for proper supervision, and they sent the men out there, where they grew cabbages and such like. I do not think it is worth while referring to that; it was not an experiment, that was simply an adjunct to the administration.

8253. And it was not a success?—No.

8254. And you would like to see the experiment tried upon land more at hand?—Yes, land adjoining, adjacent to.

8255. But you have not, as a fact, known it to be tried under such conditions as you would like?—No.

Mr. *John Wilson* (Durham).

8256. Did I rightly understand you, in answer to Mr. Renshaw, to say that you would not entrust the dispensing of relief to parish councils, seeing that they were elected on a broader basis?—I did not put it so strongly as that.

8257. I might not have understood it rightly?—No, I would not put it so strongly as that, but I think in the administration, in the laying on of the rate, and the distribution of that rate, the governing power, that is the Local Government Board, ought to have some considerable discretion as to how it is to be laid out.

8258. But what is there in the new bodies now that would lead you to suspect them more than you would those under the old order of things?—Nothing more. These remarks apply to the old order of things as much as to the present.

8259. I understand that if the new Local Government Act had not come into operation, you would still have had the same idea as to the dispensing of relief?—Yes.

Friday, 10th May 1895.

MEMBERS PRESENT :

Mr. Bartley.
Mr. Benn.
Mr. Billson.
Mr. Bousfield.
Mr. John Burns.
Mr. Campbell-Bannerman.
Mr. Keir-Hardie.
Mr. Jackson.
Mr. Heywood Johnstone.
Mr. Lawrence.
Mr. Logan.
Mr. Mather.
Mr. Pickersgill.
Mr. David Randell.
Mr. Renshaw.
Mr. Round.
Mr. Whiteley.
Mr. John Wilson (Govan).
Mr. Stuart Wortley.

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN, IN THE CHAIR.

Mr. A. J. HUNTER, called in ; and Examined.

Chairman.

8260. YOU are, I believe, Secretary of the Glasgow Trades Council?—I have been so for the last 15 years.

8261. You are also Secretary of the Co-operative Bakers' Society?—I was for upwards of 20 years Secretary of the Co-operative Bakers' Society, but I am not so just now.

8262. You have also been a member of the Glasgow Town Council for some time, I believe?—Yes ; this is the fourth year running.

8263. In Glasgow you have experienced, have you not, the difficulty of dealing with the case of the unemployed?—Yes.

8264. Are you aware of the main lines of the recital given by the Lord Provost the last day the Committee met, as to the past history of the successive periods of distress in Glasgow?—Yes, I have read the Lord Provost's evidence.

8265. May I take it that substantially you have little to add to it?—I do not intend to give any evidence with regard to that, seeing it has been so fully entered into; but I would like to take notice of some of the other things that helped the men to come through the period of distress without more applying for relief from the Lord Provost's fund.

8266. Will you kindly say what those resources are?—The resources that I particularly allude to are the efforts of the trade unions in Glasgow, who pay their men a donation or aliment allowance during idleness. I will just mention a few of those who did so, and had been doing so for some time during the months of January and February (that is, just before the commencement of the great trouble in Glasgow, which was brought on very much by the weather, of course). The Blacksmiths' Society, numbering 2,370 members, paid in unemployed benefit during those two months 600*l.* The Scottish Society of Ironmoulders, with a membership of 6,390, paid, during the

Chairman—continued.

same two months, 2,800*l.* towards unemployed aliment to their members. I would also just merely mention other trades which I know did the same, though I have not the exact figures, such as the lithographic printers, the boiler makers, the tin-plate workers, and others. I know that the Scottish portion of the Society of Engineers paid during the whole of last year the sum of 6,500*l.* as idle aliment in Scotland alone. At the time when the distress was so great in Glasgow there were a great number of those men idle, and the same applies to the shipwrights and other trades that were particularly affected at that time. There was another party in Glasgow that I think it is only fair should be mentioned as having done what they could to relieve this distress; I allude to the management of the Gaiety and Scotia Theatres. They did a good deal in feeding the hungry at that time ; they started soup kitchens in connection with their places of entertainment, and they raised, with a view to further that object, a sum of 118*l.*, and they gave meals to the poor to the number of 10,363 meals. They did that until the great stress of the trouble was past, and then they stopped their work with a balance in hand in the fund which they had raised for this purpose.

8267. Was that from the proceeds of special benefit performances?—It was not so much that as just collected from the audiences.

8268. It was not their own money?—They collected it, and they also gave a performance, I think. I am not quite certain of the means by which the money was raised; but I know Mr. Angus Campbell appeared on the boards of one theatre and made an appeal to the audience, and the response was such as I have indicated.

8269. They took advantage of the pleased condition of the audience to get some money from them?

Chairman—continued.

them?—Just so; there was another point that particular stress was laid upon in the Lord Provost's evidence, namely, as to the number of people who applied to this relief fund. I do not doubt at all that there was a considerable number of what were termed "loafers." I do not know whether they are correctly so termed or not. I myself do not like the word, and I do not think it expresses correctly the position of a great many of those people who were talked about. Many of these men in such times are thrown upon their resources, although I do not think they are themselves very much to blame for it. I believe there might be a considerable amount of loafers, as they term them, applying at the time, but I know also that the distress, or rather the want of employment, at that time was not exactly understood. I may say that the parties whom I particularly represent here, such as the working classes of Glasgow, were very well aware, for a considerable time before the exceptional cold weather came on, that there were an immense number of idle men in Glasgow of a class who are not in the habit of applying for relief. We knew, for example, that there were in many trades vast numbers of idle men. The fact is, at that time some of what are called the seasonable trades, and more especially those connected with the building trades, were entirely idle for two months, and did no work at all on account of the weather. As regards such trades as the painters, I believe at one time there were two-thirds of the painters in Glasgow entirely idle. Perhaps a few of those men applied for relief, but very few, I think; they are men that do not do that sort of thing. What I want to show is that, although not many of those men applied for relief, there was an immense number of them that might have applied, and not be blamed very much if they had done so.

8270. It was observed on the last occasion when the Lord Provost was giving his evidence, and from the tables he put in, that in the classification of the trades of those who received relief, the trades which we know as the seasonal trades did not bulk very largely?—Quite so.

8271. And the Lord Provost said that in Scotland the members of those trades, the Masons, for instance, knowing that they were apt to be shut out in winter, were in the habit of laying up against the frosty day?—Yes.

8272. Those are the class of men you speak of, who live on their own savings and resources, and it is only at the last moment that they would apply to the public for relief?—That is so; but I would be quite prepared to give some statistics about the number of idle men in Glasgow, even yet. It was supposed seemingly by a great many people, that when this exceptional distress was over, there were very few idle men left in Glasgow. That is not exactly so. I think also, there was altogether too much made of the possibility of a working man laying by something for the rainy day, or the frosty day. Looking at it from my own position as a working man, who knows all the ins and outs about labour, I do not think that anybody has a great right to expect that working men, even in those trades

Chairman—continued.

that are said to be well paid, can, by any possibility, if they do justice to themselves, their wives and their families, lay very much aside for a rainy day. I do not speak against thrift, but I do not want it to be supposed that they have it so much in their power to lay by as a great many people seem to fancy they have. Many working men have not a pound a week, and I defy them to lay anything at all aside for any future contingency.

8273. It has been the habit, especially of your countrymen and mine, to do so in the past, has it not?—Yes; but we have always had these distresses with us for the last 40 years, so far as I am aware, and, in fact, I have known them for 50 years, ever since my connection with the trades commenced. I would like to show that there are a great many trades in which there are a very considerable number of idle men even yet. As Labour Correspondent for the Board of Trade, I asked, last month, the trades to let me know the number of men they had, and the number of unemployed. For reasons best known to themselves (which I can quite easily understand) very few of the trades did so. There were 14 Trade Societies (not very large ones) who reported that they had 3,064 members, and of that number 175 were idle. Many more of the other trades, without specifying the numbers at all, said that they had a certain percentage of idle men, varying from ½ per cent. up to, in some cases, 15 per cent. So that you will observe there are still a great number of unemployed men in Glasgow.

8274. You said you could quite understand the reasons that prevented some of these societies from making the return you asked for; what was the nature of the reasons?—They do not want everybody to know the number of unemployed in connection with their trades.

Mr. *Mather.*

8275. Are you speaking of the employers or the heads of trade societies?—I am speaking of the trades.

Chairman.

8276. What harm would it do to them to disclose the figures?—They do not think it is to their advantage that everybody should know the number of unemployed men that they have.

Mr. *Benn.*

8277. Does not it sometimes lead to the reduction of wages?—Yes.

Chairman.

8278. It discloses what may be regarded as a superfluity of labour?—Just so; and there is always a superfluity of labour, with the exception, perhaps, of the building trades at the present time.

Mr. *Logan.*

8279. When you speak of the present time, I presume you mean the spring?—Yes. There is an exceptional boom in the building trades all over the west of Scotland just now.

8280. You

Chairman.

8280. You cannot name any figure for the number of unemployed at present?—No, I really could not do that. I know there are a great number of men still unemployed.

8281. What is the reason, do you think, why there are so many men unemployed in your part of the world?—It is just because there are too many men.

8282. Too many competitors for the trade that is doing?—Too many competitors for the work that is to be done.

8283. That you consider the great reason?—Yes, that is a reason.

Mr. *Bartley.*

8284. You say it is *a* reason; it is not the only one, I suppose?—Of course the other ones lead up to that. I think the overstocked labour market is the very reason why there are so many unemployed. There are reasons which lead up to that, I think, such as the impossibility of competing profitably with foreign competition on the part of many of the workers in this country, on account of many things, mining royalties, for example, and other things of that kind: men are thrown out of employment on that account.

Chairman.

8285. What have you to say with regard to the remedies you would suggest?—It is a very general opinion amongst working men, and others with whom I associated, that the system as regards wayleaves, and royalties, and minerals should be changed entirely. They do not think that the manufacturers of steel and iron in this country competed fairly with foreign manufacturers when there is such a difference in what they pay for mining royalties. We were told a year ago at the meeting of the Iron and Steel Trades, in Glasgow, by the Secretary, Mr. Jeans, that taking the royalties on a ton of finished iron or steel in this country the figure was 6*s.* 3*d.*, while in Belgium it was only 2*s.* 6*d.* We believe that that handicaps the home manufacturers very greatly.

8286. Do you think that the number of unemployed in Glasgow has been at all affected by the long strike, or the difference between the masters and the men in the mining industry of Scotland, last year?—I intended to come on to that at a later period.

8287. Very well; will you go on with what you were saying?—A great many of the men with whom I come in contact still believe that one great means for relieving the unemployed would be the cultivation of all unreclaimed and cultivable land, and thus placing the rural labourer upon the soil, and preventing the rush of unskilled labour that is going on, and has been going on for years, into the large towns and cities of Scotland, more especially Glasgow, I believe. We think that if power was given to municipalities and county or parish councils to acquire land, and to try and induce the agricultural labourer to remain upon the land instead of coming to the town, that would have a great tendency to lessen the pressure in a city like Glasgow. I may say I have been in Glasgow for some years, and I know very well the immense number of men who have come from the country to compete with the men already there, who find it difficult enough to secure situations without this influx of labour; and we believe that were an attempt made somewhat in the direction I have indicated, it might have a tendency for good.

Chairman—continued.

8288. Would you say from your knowledge of the matter (which is extensive) that that influx has come from the ordinary agricultural districts, or has it come from the Highlands, from among the crofters and those people?—It has come, I think, from every agricultural district, judging from districts of the country with which I am acquainted (I allude to Berwickshire, for example, which I used to know very well, and know something about yet). I know that in some districts, and I think I may say in all districts, the 10 years' return shows that the number of inhabitants is now a perishing quantity, and that every 10 years there is a great reduction in the number of the inhabitants in many of these rural districts. We know that these men have all left the soil and come into the towns to compete with those already there.

8289. Taking Berwickshire, for example; is it your belief that in Berwickshire there is a large quantity of land that could be cultivated that is not under cultivation now?—Certainly I think there is. We think, at any rate, such an experiment is well worth a trial. We are getting tired, in fact, of these recurrent periods of awful depression and of nothing being done. I quite agree with the Lord Provost that Glasgow is quite able to cope with the difficulty of feeding the people who are in want during these periods of distress. But that is a mere makeshift, and does not deal with the real evil.

8290. That, you think, deals with a symptom and not with the disease?—Quite so.

8291. Are you aware at all whether the emigration from the country districts due to the lack of employment in the agricultural districts is still going on at anything like the same rate as formerly?—I think perhaps for some time it has not been so extensive, because a limit must be reached beyond which they cannot do without men. They cannot do without men beyond a certain limit; but of course with the introduction of machinery and other things they have done so to a very great extent.

8292. Possibly the men themselves have found that the great city is not such a certain El Dorado as they thought a few years ago?—Of course I could not exactly say as to that, but I have reason to believe that it is so.

8293. Will you kindly go on with what you were going to say?—I was intending to allude, in passing, to the numbers that come into this country from foreign countries to compete with the trades here. I do not pretend to say what should be done, but I do not know whether we might not take an example from our American brethren and see that we do not allow so many pauper aliens to be landed upon our soil as has been the case for some time.

8294. Are you familiar with the statistics as to the number of alien immigrants?—Not exactly; but I hear continual complaints from the trades,

Chairman—continued.

that are continually affected by these aliens coming in—such trades, for instance, as tailors, tailoresses, brush-making, boot and shoe-making, and the iron trades. I have not heard so much with regard to them for some time, but I can recollect some years ago a colony of Russian Poles coming to Glengarnock, and working for something less than half the men took.

8295. What has become of those Russian Poles now?—I do not know.

Mr. *Renshaw.*

8296. Was not that during a strike?—Yes, it was in connection with a strike.

Chairman.

8297. Did they remain there?—They remained for a considerable time. I lost sight of them afterwards.

8298. You do not know whether they were absorbed in the Scotch population or not?—No. With regard to the coal strikes, I think they had a very detrimental effect upon the working classes all round, and enabled foreigners to come in and take away the trade that otherwise would have remained here. They did more: they hurt the other trades. I may say that, of course, we did not come so much in contact with the English strike of 1893, which was, of course, virtually settled through the intervention of the Government through Lord Rosebery. The same remark applies to the boot and shoe strike of this year. But I would like to allude particularly to the Scotch coal strike of 1894. Great as was the suffering that was inflicted upon the miners in Scotland on account of that strike, I do not think it was anything in comparison with what was inflicted upon the general public; because at that time there were many trades that reported to me that they were completely idle on account of the coal strike. I refer to trades not, perhaps, very large in numbers, such as stoneware-throwers and bottle-blowers, and trades of that kind, but still they form a portion of the community to be considered. Then we know the ironworkers were completely stopped. I remember having one report, at all events, from Motherwell, saying there were 9,000 men idle in the Motherwell district, entirely on account of the coal strike. Those men suffered from what was not their own fault; they had no connection with the coal strike at all, but they could get no labour because of the coal strike.

Mr. *John Wilson* (Govan).

8299. That strike lasted for two months, did it not?—It was a strike of 16 weeks.

Chairman.

8300. That number of men you speak of were not colliers?—No, they were not colliers; they were steel workers and iron workers.

8301. Whose trade is dependent upon a supply of coal?—Yes, whose trade is dependent upon a supply of coal. In fact, as regards many of the trades reported to me, I had never understood before that the coal strike would have any effect on them at all, but still it was found that they were thrown idle on account of the coal strike. I think, and a great many people besides me think, that these strikes should never be allowed to take place at all, or that, at least, there should be something done to attempt to prevent them, and we think that that is a work which a Committee like this should try to take up.

Chairman—continued.

8302. I am afraid we have quite enough to do here without taking up a large question like that?—That is quite true; but what we think is that the question of these strikes should be carefully considered by this Select Committee; and, seeing the success of some of the interventions of the Government to stop strikes, we think it would be advisable that there should be a board of conciliation appointed, and that that board should have power to cite witnesses and to see the books of the employers, and in fact to know generally how things stand before a strike comes off at all; because it is always very well known for a fortnight or three weeks before any strike takes place that such a thing will take place if a certain thing happens. We believe that, unless there is some attempt made in this direction, the thing will just go on recurring again and again. We know, as I have said already, that the English coal strike was stopped by the intervention of Government, and I know perfectly well from personal experience that the Scottish coal strike would have been stopped quite easily had it not been for the impossibility of getting the coal owners to meet with the representatives of the men. We believe that a conciliation board is the only means of averting these things in future. We are not quite content with merely getting through one of these periods of depression, but we want them hindered in the future if we can. Anybody who knows anything about the recent distress in Glasgow knows that it was very much intensified by the coal strike; there can be no doubt about that. I believe that such a board of conciliation as I have suggested might be a remedy for these strikes. I will not go the length of saying that it should be compulsory, but I think the power of public opinion would have a very great effect, and we believe if there was a paid independent board of conciliation appointed—consisting of, say, three workmen and three employers, with a chairman appointed by the Board of Trade—to take up all these cases, that would be well worthy of consideration, whether it was made compulsory or no. Personally, I would even go the length of its being compulsory, so far as I am concerned, because I would do anything to stop the recurrence of these tides of depression that may come on.

8303. I think we cannot go into that subject in any detail, as it is rather beyond our scope; have you any other remedy to suggest?—There is another matter that I wanted to bring before the Committee in connection with what we think might have a tendency to hinder these recurrent periods of depression, and that is with regard to an eight hours day.

8304. You think that a better arrangement generally (however it may be brought about) of the hours of labour would produce a better distribution of labour and its reward, and might prevent,

Chairman—continued.

prevent, and would, in your opinion, prevent, the recurrence of these unemployed periods?—Yes; because there would be very many more men employed. We are prepared to recommend that all public bodies, such as municipal councils, parish councils, and others, should put their men upon an eight hours day to start with. We think it must be perfectly evident to every gentleman sitting round this table (because, I presume, like myself, they are always watching current affairs) that the tide is setting in very strongly in favour of an eight hours day all round, and we believe that this would be one of the most effective means whereby a greater number of men would be employed.

Mr. *Whiteley.*

8305. Do you think that the tide is setting in in that direction on the Continent?—I have never been there. I cannot speak for the Continent.

Mr. *Bartley.*

8306. Do you mean at a reduced rate of wages, or at the same rate of wages?—We have never found, so far as my experience goes, that a reduction in the hours of labour has reduced wages.

Mr. *Logan.*

8307. Has it increased them instead of reducing them?—It has increased them instead of reducing them.

8308. The men who work the least hours in England are paid the best money, are they not?—Yes. The parties that I represent here to-day are also very strongly of opinion that there should be some mode of knowing accurately the number of the unemployed. As the Committee are aware, at the commencement of their sittings they were quite helpless to ascertain how many unemployed there were. It was the very same in Glasgow. We believe that it would be a very advantageous thing for everybody concerned were we able to lay our finger upon the number of the unemployed, or to know it approximately.

Chairman.

8309. How would you propose that that should be ascertained?—I do not know whether it would be agreed upon by all the people I represent, for I have not had time to bring this special matter before them; but I think, and many of those whom I have spoken to think, an excellent way to get the exact number of unemployed at any time in Scotland (I do not speak about England, for I do not understand it so well) would be to get the information through the medium of the school boards. If all school board children were to receive a schedule on a certain date, to take it home, and to get it filled up stating the number of the unemployed and the number of parties ready for employment (because, of course, some of the members of the family might have done with schooling and never have been employed, and yet be ready for work) we think the school board officers could quite undertake that matter along with their other duties. In the case of the absence of the children the officers could call and give them the papers, and get them filled up.

Chairman—continued.

8310. How would you deal with the people who had no children?—We would have to get at them in some other way; that is a matter for consideration. Then the people in the model lodging-houses could be taken, dealt with in the same way. I think it would be very easy to get the necessary powers. I am not here to propose a cut-and-dried scheme; I only suggest what I think might to a very great extent obviate the difficulty.

8311. Have you attempted any census, or did you this winter attempt a census or estimate, of the unemployed?—No; we did not see that we were able to do it in time to be of any practical value. When this Committee was first appointed, we were asked if we could do it, but we found that we were not able. We supplied the Committee with all the information we could in regard to the different trades, but we could not ourselves go into any attempt to find out the exact number of the unemployed. Then there is another matter that has received a good deal of consideration from several parties, and that is with regard to farm colonies. Of course I know it never has been enthusiastically gone into in Glasgow. I may say, however, that there are very many influential gentlemen in Glasgow who are very much inclined to think that something should be done in this direction, and they are prepared, in fact, to buy a farm at any time that they would get sufficient encouragement to enable them to make an attempt to solve this difficulty by these means along with others. I think something might come of it if fairly tried.

8312. Do you mean a colony more or less of a penal kind to which men of the tramp description should be sent, or do you mean a colony to which hard-working, respectable working men, who are accidentally out of employment, might be sent?—I dare say it would be more of a penal character, in the first instance, at any rate.

8313. You have no strong opinion on that subject yourself?—No.

8314. Do you think that the working men of Glasgow, so far as you know them, look upon a scheme of that sort with favour?—I hardly dare to say that.

8315. There would be some difficulty in the case of men with families, would there not?—There would.

8316. Do you find a great repugnance on the part of respectable working men to take any relief in any form from the Poor Law authorities?—Well, yes; that has been a very general deterrent to many persons applying for parochial relief. So far as my recollection goes, in Glasgow, in connection with relief funds, many of the workmen have at all times had very strong objections to being subject to the investigations of the Charity Organisation Society. Still, I believe on the last occasion it was done with less offence to their feelings than at any other previous time. I think the work of the police was quite as successful, if not more so, than that of any of the other parties had been.

8317. Apart from the dislike to that sort of inquisition, do you think there is a special dislike to the Poor Law organisation being used?—I know there is, and of course I know very well there were hundreds of men unemployed at the time who might easily have applied for relief,

Chairman—continued.

but did not do it because they thought they could tide over without making any application.

8318. Have you any reason to think that the fact of its invalidating their position as citizens with regard to the vote, has had the effect of deterring them from applying for relief?—I think that would have a certain effect.

8319. But you do not attach much importance to that particular point in Scotland?—No; I do not want to say anything about the evidence which Mr. Motion gave at the last sitting, but I think his evidence was rather of a parochial character; I thought his answers showed he looked at the whole thing from a parochial inspector's point of view.

8320. Of course, that was very natural?—I do not deny that at all; but, at the same time, it is very natural for the working men to resent, and I know they do very deeply resent in Glasgow, the evidence given by Mr. Motion with regard to some of the things he said. They do not believe, for example, for a single moment that all the men that applied for relief during the time of depression were loafers. Mr. Motion's evidence went to show that, in his opinion, they were nearly all loafers. We do not doubt there were men to whom the term loafer might be applied, but I do not think they came from the loafer class to such an extent as Mr. Motion suggested.

8321. You think he pushed it too far?—Yes, I think he just looked at it from the parochial point of view.

8322. Have you any further proposals to make?—Nothing more. The evidence of the Lord Provost has rather taken away what I had to say.

8323. You confirm the opinion of the Lord Provost that a large city like Glasgow, at all events, with a generous community and a more or less a wealthy community, is able to deal, without any extraneous assistance from the State or any other quarter, with any distress that is likely to arise?—I believe they are quite able to feed the people in such times of distress as they did this year, and to do even more; but still, I do not think that that is a settlement of the difficulty at all.

8324. You would rather attack the disease than the result of it?—Yes, if we could by any possibility get at it, because I do not think that merely feeding the people is attacking the disease at all.

8325. In the case of communities smaller than Glasgow, in Berwickshire, for instance, or Lanarkshire, or Renfrewshire, in smaller communities, where there may not be so much wealth on the part of some of the inhabitants, and which may be affected by the decadence of some single trade and plunged into distress on that ground, do you think you can look to the same source for relief as in the case of Glasgow, or would it be necessary to give them power to rate for the purpose, or in some other way to provide them with the means of dealing with the distress?—Of course there are difficulties that come in there, but I believe in most of the localities they could overtake those difficulties as they did at Glasgow. I know they did at Pollockshaws, which, as you are aware, is very closely identified with Glasgow.

8326. It is almost a suburb of Glasgow?—It is almost a suburb; it is three miles from Glasgow. I know at the time of the late depression in the cold weather the Pollockshaws people were quite able to deal very effectively with the trouble.

8327. But they also probably had subscriptions or assistance from wealthy inhabitants?—There are very few places where there are not some people who have more money than I daresay they should have.

8328. Does that complete what you wish to say before questions are put to you by honourable Members?—I do not remember anything more at the moment that I wish to add.

Mr. *Logan.*

8329. You said that many of the trades unions in Glasgow have given pay to their men during the time that they were out of employment?—They always do so. They gave it at this time, not because of the exceptional distress, but because it is part of their government and rules. They pay at all times money to their unemployed members.

8330. Did you notice that the Lord Provost in his evidence said that, in the Table which he gave, something like two-thirds of the men who applied for relief were labourers?—Yes, I noticed that for myself.

8331. Have the labourers in Glasgow trade unions?—Yes, they have trade unions; but the unions do not pay idle benefit.

8332. Is that because they are unable to do so?—It is just because they have never put in the money; you cannot pay the idle benefit unless you pay in first to enable you to do so.

8333. Why do they not do the same as the other unions?—It is a very difficult question. The fact is that it is a new society and has only been very recently organised. I do not think they have had full time to learn the exact advantages that would come from it. But it is well known in Glasgow, and the secretary of the labourers' trade told me so himself, that for two months at the time his men did nothing whatever—they were idle for two months entirely, and it was very natural that those men should apply for relief. I do not think they were loafers at all who applied in that way.

8334. Do you think if the labourers got better wages they would also be able to put by, as the masons do, to provide for the slack time?—I believe the labourers as a class are just as respectable as the masons are. Of course there is a difference of nationality very much, but they are just as keen to save as any other portion of the community if they had the means. But, as I said at the beginning, I think it is attempting too much to fancy that men with such small wages can lay anything by for a future time.

8335. What do the labourers earn?—A great many are paid at the rate of 5*d.* or 5½*d.* an hour in Glasgow.

8336. And you contend they cannot save out of that?—There is another consideration to be borne in mind. If they were constantly employed

Mr. *Logan*—continued.

ployed with that standard rate of wages, I think they could save; but you must understand that the labourers' trade is one in which the work is very often interrupted by the weather.

8337. You spoke about the depopulation of the rural districts in Scotland; can you tell the Committee why the men leave the rural districts?—They do not find employment there.

8338. You think it is not on account of the wages there?—Of course, the wages are small; but they do not find employment. The introduction of machinery has had a certain effect, and the use of machinery in harvesting and at other times.

8339. One member of the Committee elicited a statement from a former witness to the effect that in some rural parts of Scotland the agricultural labourers or ploughmen receive as much as 22*s.* a week with a house; is that in accordance with your experience?—That certainly must be a very great mistake. I could not pretend to speak with authority; but I do not think there are any labourers in any agricultural district that I have heard of who have any such pay as that.

Mr. *Renshaw.*

8340. Could you state what the usual pay was for a ploughman in the neighbourhood of Glasgow?—No. I do not know anything about that.

Mr. *Logan.*

8341. If they get that pay, can you see any reason why these men should come in from the country districts; because I personally cannot understand why men who get 22*s.* in the country should come into Glasgow?—You do not need to believe that, because it is not true.

8342. Your contention is that it is the smallness of the wage that a man gets in the country that drives him into the town?—Yes; I maintain that. If the working men in the country had 22*s.* a week and a free house they would never think of coming to Glasgow to fight for a guinea a week.

Mr. *Bousfield.*

8343. I understand you are secretary of the Glasgow Trades Council?—Yes.

8344. What does that body represent; does it represent all the unions?—It represents all the unions who are sensible enough to avail themselves of being connected with it.

8345. What are the principal unions your Trades Council represent?—It represents the ironmoulders and the engineers, and in fact most of the trades in Glasgow are represented on it. There are some that are not, but very few; 104 different trade societies are represented on the Trades Council just now.

8346. Have you any labourers' unions in Glasgow?—Yes; there are two labourers' unions, what is termed the out-door labourers and the dock labourers. They are both connected with the council.

8347. As regards the bulk of this question of the unemployed, it chiefly affects the less skilled class of workers, does it not?—Of course, there are more of them; but, taking the men in regard to the numbers in the other trades, I do not know but what it affects some of the other trades more. For example, in trades like bottle blowers, tobacco pipe makers, or stoneware throwers, I believe that there are more idle amongst those trades in regard to the number than there are amongst labourers.

Mr. *Bousfield*—continued.

8348. That would be owing to some special causes and changes that have taken place in those trades, I suppose?—There is a good deal in that. Foreign competition comes in there very strongly.

8349. Leaving aside any special depression in any particular industry, and looking to the main industries that are constantly going on in about the same volume, the chief difficulty is with regard to labourers, and the less skilled class of work, is it not?—Yes, it is more prominent there, because of there being a greater number of them, so that you can see it more easily.

8350. You also have to consider, have you not, a class that comes at the bottom; the thriftless and idle class; they all swell the number of the unemployed, do they not?—Yes. We do not recognise any members of our council as thriftless.

8351. No, I am speaking of the whole number of the unemployed; have you given the Committee any estimate of what the total number of unemployed in Glasgow was last winter, counting all those who had no work and wanted relief?—No, I could not give you anything like an exact figure.

8352. You could say whether it was 1,000 or 10,000?—One thousand would go nowhere; some of the trades themselves had a thousand idle.

8353. Did it go into tens of thousands?—I would not like to specify the number; but I certainly do believe, and a great many people in Glasgow believe, that there were a great many more than 10,000.

8354. When I spoke of the thriftless and idle, I was not throwing any reflection on your council, but I was referring to the whole number of unemployed; among this 10,000, or whatever number it may be, there would be a certain number of skilled workmen and a certain number of labourers, and there would be at the bottom a certain number of idle and lazy people who never do more than they can help; there always are such people, are there not?—There are, I am sorry to say.

8355. The hard-working artisan, the man who is careful and thrifty, find these people rather difficult always, does he not?—Yes; that is true enough.

8356. The bulk, I suppose, of the unemployed would consist of labourers?—Yes.

8357. What is your view, as a working man, as to what should be done for these labourers out of work?—I have suggested that the hours of labour are too long, for one thing.

8358. That is rather going to another field; but supposing there are no changes in legislation, and supposing next winter there are still 10,000 or more out of work in Glasgow, what do you think we could do to help them; what is your idea as a working man?—I would not like to give an answer to that question, because I could not

Mr. *Bousfield*—continued.

do so satisfactorily to myself, or anybody, I believe.

8359. You have not thought enough through the subject to be able to help us?—I have thought plenty upon it, but I have not arrived at any satisfactory conclusion.

8360. At present you are dealing with them in Glasgow by charitable means?—Yes.

8361. Your view is that that is not an adequate remedy for the evil?—No; it just keeps them in life.

8362. You differ from the Lord Provost's view in not thinking that that is a sufficient remedy?—I do not think it is. It is sufficient to keep them living, but it is not making any preparation for making things better.

8363. Is it your view that some sort of work, if possible, should be provided for them?—Yes, if it could be got; but if it is only to displace other labour, I do not see what good that would do.

8364. If the work given were the type of work that labourers usually have, ground work or something of that kind, it would not meet the case of the skilled workman at all, would it?—Not at all.

8365. How far do you think the case of the skilled workmen in Glasgow has been met by the unemployed benefit given by the unions?—It has only been met to a certain extent; because, of course, there are a great many men not connected with a union who receive no benefit from the unemployed fund.

8366. I understood you to say that those funds had run out this winter?—No; they are only available for members of the union and not for others.

8367. I understand that; but I gathered from what you said that there had been a stoppage of the unemployed pay this winter, was that so?—No.

8368. The unions that do give unemployed benefit have been paying it through this winter?—Yes.

8369. That deals adequately with the unemployed among their members?—It enables them to go on.

8370. That is all we can hope to do?—Yes, quite so.

8371. What is the contribution to the unemployed fund, is it 6*d.* a week?—Some societies pay more than others; some pay as much as 1*s.* 6*d.* a week, and some pay 1*s.*

8372. Is that for unemployed benefit?—For all the benefits.

8373. But I am asking as to unemployed benefit; in many societies you can separate what is paid for unemployed benefit from the other; do you know what it is for unemployed benefit?—I do not know exactly the sum they pay for unemployed benefit.

8374. The Amalgamated Society of Engineers have had the system going on for 40 years?—Yes, and they have different benefits.

8375. They pay 6*d.*, do they not?—They pay altogether about 1*s.*

8376. Is it not 6*d.* for the unemployed benefit now?—I do not know what it is for the unemployed benefit.

8377. Does not your trades council discuss this question?—We hear it occasionally mentioned, but I do not bear it upon my memory.

8378. Has not the Trades Council seriously tackled this question of the unemployed yet even from the trades union point of view?—It is not that; they find themselves helpless to do anything.

8379. You would agree, would you not, that the very best method of meeting this point, so far as the skilled workmen are concerned, is to insure themselves against want of employment by paying a weekly contribution to a fund of that sort?—Certainly, there is no doubt of that.

8380. As regards the skilled labour of the country, do you not think that if Parliament could in some way or other encourage the formation of a fund of this sort to which workmen would contribute, that would be very helpful towards meeting that part of the difficulty?—I do not know whether the men would care about acquiescing in that.

8381. You think there are many would not be willing to pay the contributions?—I think so, I do not think they would think that was getting out of the difficulty.

8382. Have you not found amongst the best working men that there is this spirit with regard to the matter, that they will not ask for relief, but they would meet the emergency out of their own savings; that they would put by something while they are in work to meet the time when they are out of work; is there not that spirit among them?—Yes, but I do not think any great portion of them would care about being compelled by the Government, or any other body, to do that.

8383. If some facilities were provided by the Government that would make it easy for the workmen to pay, say, 6*d.* a week, do you not think that a great many would take advantage of that?—I really could not answer that question.

8384. At all events, they would look upon it favourably, would they not?—They would consider it, but I could not say what they would do.

8385. As regards the other part of the problem, namely, the labourers and the less skilled people out of work, and the class of people who are very often in low water, and who could not afford to subscribe, is there not an opinion among the working men in Glasgow that the suggestion of, not exactly labour colonies, but labour in connection with such an establishment during the winter months, would give a good way out of the difficulty?—Yes, if you could find work for them.

8386. At all events, supposing that a town council or any other authority desired to take land, and as an experiment, to set the unemployed upon it, do you think the Government ought to step in and stop them from doing so?—I do not think they would.

8387. Do you think such experiments should be encouraged?—I think anything is worth trying in order to see if we can do some good in the way of remedying what we have been suffering under for such a length of time.

8388. You admit that there is at the bottom of the scale a lazy and incorrigible class that ought

Mr. *Bousfield*—continued.

ought to be dealt with?—There is that, I suppose, in all classes of the community.

8389. Do you know how they deal with that class of people in Belgium?—No.

8390. Supposing that Parliament were to enact that any man who was incorrigibly idle might be sent for two or three, or four or five years to a labour settlement, where he should be obliged to work for that time, do you think the feeling of the workmen would be to support Parliament in any action of that kind?—I have never heard that discussed by working men.

8391. As a matter of fact, working men, as a class, are ashamed, are they not, of the idle and lazy class who hang upon their skirts and who discredit them?—There is no doubt about that.

8392. If men of that class could be sentenced to two or three, or four or five years of hard work at a labour settlement would it not be a good thing from the point of view of the rest, the thrifty men?—I do not say but what it would.

Mr. *Keir-Hardie.*

8393. The Lord Provost, in his evidence, stated that there was no distress arising from want of employment in Glasgow previous to the frost setting in this last winter; does that statement correspond with your knowledge?—I think I have stated in the beginning of my evidence that that was not according to my knowledge.

8394. Mr. Motion replied to a question put by the honourable Member for Govan to the effect that the want of employment was caused by men tippling at night and not being able to go to work in the morning; is that the cause of the want of employment, in your opinion?—I intended to have taken some notice of that part of Mr. Motion's evidence, but it slipped out of my mind. I do not think it was a fair assumption at all to suggest that there are any appreciable number who have ever lost their work for that reason at all. I may say for myself, as a working man and belonging to a trade that is not remarkable for being very steady (I am a baker), I never scarcely knew a man who lost his work directly because he would not rise in the morning because he was drunk the night before.

8395. Supposing some one does lose his work through being drunk at night and not going out in the morning, is there not always someone available to take his place?—I am sorry to say in our own trade, for every man who did that there would be 20 men to take his place without the slightest difficulty.

8396. So that drunkenness is not a cause of want of employment; it may throw one man out of work, but that only makes room for some other man?—That is so.

8397. What hours do the bakers work in Glasgow and the West of Scotland generally?—The hours at the present time are not very excessive. I believe, in what may be termed the family trades, that is to say, those where they do not supply the shops, but supply mostly families, they work between 10 and 11 hours (in many cases 10½); and in what we call the machinery shops, there are very few of them at the present time work more than about nine hours, and very few of them even that.

Mr. *Keir-Hardie*—continued.

8398. How many bakers have you out of work in Glasgow and the West of Scotland?—The baking trade is getting very peculiar in Glasgow and the West of Scotland. There are a great many bakers in Glasgow who work only half a day. There are a great many idle in the baking trade at present; but I could not say how many.

8399. I understand your point with regard to the eight hours question to be that an eight hours day would absorb a proportion at least of those who are now out of work?—Certainly.

8400. It has been stated in evidence from Glasgow, and I think you more or less endorsed the opinion this morning, that the coal strike was largely responsible for the distress that prevailed this last winter?—Yes.

8401. Were not all the shipbuilding trades of the Clyde depressed for months before the coal strike was entered upon?—Yes, they were; but they were just beginning to rally and the coal strike acted very disastrously on them for some time.

8402. Do you remember what month the coal strike was in?—It was in the summer, about July or August, I think.

8403. So that five months had elapsed from the coal strike ending before the frost set in?—Yes.

8404. Do you not think the evil effects of the strike had passed away by that time?—To a certain extent certainly they had, but there were still a great many of the workers who had been suffering and had scarcely recovered themselves.

8405. My point was, that supposing there had been no coal strike, there still would have been a very large number of men out of work in Glasgow?—I quite believe that.

8406 What proportion of those out of work belonged to the shipbuilding trade, taking all sections of it?—I could not tell exactly the number. There were in the beginning of the year in some of the shipyards as many as 25 per cent. idle at Greenock and Port Glasgow; I do not know so exactly about Glasgow.

8407. You make special inquiries in your capacity as labour correspondent to the Board of Trade, and therefore you are in a position to give more or less reliable evidence. Shipbuilding has improved of late, has it not?—Yes.

8408. Have you still a number of men out of work in Glasgow?—There are still men out of work in Glasgow connected with the shipbuilding trade. I believe I may say the shipwrights are beginning to be very well employed now, but the others are still unemployed.

8409. Do you find that men who have passed middle age have considerable difficulty in finding work either in the shipyards or in the workshops connected with the shipbuilding trade?—I do not know so much about them in that trade, but, judging from our own trade, I believe that would be so; I know the difficulty in our trade is immensely increased where a man gets on in years.

8410. Have you heard as a matter of common report that the same thing is true of the shipbuilding and engineering trades?—I certainly have.

8411. Do you find amongst the trade unionists

Mr. *Keir-Hardie*—continued.

of Glasgow (who are the best section of workers there and elsewhere) any feeling in favour of some provision being made for these men who are thus displaced in the labour market; or, to put my question in another way: Is not the burden on the funds of the trade unions becoming unbearable through having to pay these men out-of-work benefit and superannuation?—It is getting very heavy, no doubt.

8412. Would not the trade unionists of Glasgow, speaking from your knowledge of them, generally favour a scheme whereby these men could be sent to useful work and provide themselves with the necessaries of life?—Certainly, if it could be found, that is quite evident.

8413. Not in the form of a penal settlement, but in the form of a colony, where the men would be as free when at work there as they are outside?—Yes, if it could be done.

8414. Anything like a penal settlement for these men would be resented bitterly, would it not, by the working classes of Glasgow?—Yes, I think it would.

Mr. *Heywood Johnstone.*

8415. Do I understand that your evidence relates entirely to Glasgow?—I also touched incidentally upon Motherwell.

8416. You give evidence, practically, as to Glasgow?—Yes.

8417. There I understand the labour market is overstocked?—Yes.

8418. There are too many men?—There are too many men.

8419. That I understand you to say is largely caused by the migration from outside. Is it not the fact that a good many of the men who come into Glasgow come from the Highlands?—There are a great number of Highlandmen in Glasgow.

8420. A certain proportion come from Ireland, do they not?—We have the Irish always with us.

8421. Is there any migration from Ireland in addition to those whom you have always with you?—I do not see anything different now; we have always had that migration going on since ever I knew Glasgow; that is for nearly 50 years.

Chairman.

8422. Do you know at all how many Irishmen there are in Glasgow?—No, that is a matter of history; anybody can ascertain the number, but I really do not know the number.

Mr. *Heywood Johnstone.*

8423. Your answer is, that you have always that migration going on?—Yes.

8424. There is that migration as well as the migration from the Highlands and the migration from the country districts; I presume that migration consists mostly of young men?—Most of them; there are some old men too.

8425. Are they skilled men; do they work at a trade or are they labourers?—They would include both: I have known a considerable number of joiners come from the Highlands, and men of that kind.

8426. Are they mostly married men or single?—I could not answer that question; there would be both single and married men amongst them.

Mr. *Heywood Johnstone*—continued.

8427. Cannot you form an idea as to which they would be for the most part?—No.

8428. Do you think they come with any jobs in front of them, or do they come on the chance of picking up jobs?—I think they come on the chance of picking up jobs.

8429. With the hope of getting better wages?—Yes.

8430. Am I to understand they are largely tradesmen?—There are a considerable number of them tradesmen, and a great number are not.

8431. At all events, a very substantial number of them are, I understand, carpenters, joiners, and so on?—I say a number of them are; I do not say a very substantial number.

8432. I ask your opinion. Would you say it is not a substantial number, but a very small proportion?—I believe more come to keep spirit shops than come to be joiners.

8433. Do they, in due time, swell the ranks of the unemployed?—They would be just like other portions of the community, they would have their vicissitudes, I suppose.

8434. Do I understand you to tell the Committee that there are more who come in to keep spirit shops than who come in to work at their trades?—No, I say more come to keep spirit shops than what are joiners.

8435. That is not my question; I want to know if a very large number of those who come into Glasgow are not men who are not what we call labourers, but who are tradesmen: joiners, masons, bricklayers, workers in iron, smiths, or something of that kind?—I am quite prepared to say I believe what you say is quite true, but I could not give you the relative number at all.

8436. But I think you have given me fairly to understand that the majority (I do not say the large majority) of those who come in are tradesmen?—Those I have known of them.

8437. Those men would get better wages as tradesmen in the country, would they not, than they would if they were cultivating the land?—I could not answer that question.

8438. You do not know what the wages would be in the country?—I have no idea of the wages in the Highlands whatever.

8439. I am not confining myself to the Highlands, but I am speaking of all those men who come into Glasgow. A large number, you say, are tradesmen; if they remained in the country they would be better off working as tradesmen than they would if they tried to cultivate the land, which I understand is one of your remedies?—Yes, I believe they would make more wages by working at their own business.

8440. The difficulty, so far as they are concerned, would not be solved by sending them back to cultivate the land at a profit. You said at a profit, I think, did you not?—I did not mention anything about profit at all.

8441. At any rate, the difficulty in their case would not be solved by sending them back to cultivate the land, would it?—We have not power to send them back, unless they would go of their own accord.

Mr. *Heywood Johnstone*—continued.

8442. I understood you to say that the cultivation of land was one of the cures for the unemployed?—Quite so.

8443. I put it to you that it is the fact, as I understand you, that a large number of those who come into the towns and fail to find employment there, or have dropped out of employment, would be more profitably employed at their own trades than in trying to cultivate the land; now let me put one more question with regard to the cultivation of land: you instance Berwickshire (which I believe is not contiguous to Glasgow) as a county where more land could be profitably cultivated?—That was not the point I was making about Berwickshire at all. My point was, that I knew that place best, and I knew of the displacement of the people from the soil there through my knowledge of the place.

8444. That leads me a step further; you were not speaking generally, but you had one place in your mind which you knew when you said that?—Yes.

8445. Is that land under grass now, or what is done with it: I mean the land which you said might be profitably cultivated?—It is in all kinds of culture, and some is under no culture at all; some of it would be heather.

8446. What is the nature of the soil?—I could not pretend to go into the merits of the soil; I am not a farmer.

8447. You do not know what the soil is?—No.

8448. It is simply land at present under heather; and for all you know it may be whin, or gravel, or anything else underneath?—I believe it is quite fit to be cultivated if it was attempted.

8449. You say you believe it is fit to be cultivated; do you know anything of the facts; do you know what amount it would cost to break up an acre of that land?—I do not know anything about that.

8450. The opinion you have expressed is just generalization?—Just so; I said so from the first.

Mr. *Bartley.*

8451. Are you a native of Glasgow?—No.

8452. What is your native county?—Berwickshire.

8453. You came into Glasgow; what induced you to leave Berwickshire and come to Glasgow?—I was working in Edinburgh long before I came to Glasgow.

8454. You were one of those who came from the country into the town: you came to Edinburgh?—Just so.

8455. But did you not say that you thought something ought to be done to prevent people coming from the country into the town?—Yes; but that does not prevent my coming in.

8456. You think the law ought to be altered after you came in?—I did not think of it at all from that point of view.

8457. Having come into the town, you do not want to be sent back, I presume?—No.

8458. You only wish this rule to apply to other people?—There was no such grip of distress in those days as there is now.

Mr. *Bartley*—continued.

8459. You said something about foreign immigration; you think that is an evil?—Yes, I think it is an evil to have people coming in without any ostensible means of supporting themselves until they get work, and taking work at any price. I think it hurts many of the trades in Glasgow.

8460. A great number of people leave this country every year to emigrate, do they not?—Yes.

8461. Do you know that many more people go out of the country than come in?—Yes; but they are not allowed to land if they have not some means to support themselves; they are sent back.

8462. Do you think that everybody who leaves the country has money?—As I understand it, if the Americans think they have not the means to support themselves till they can get work, they are sent back.

8463. Is it not the fact that a great many of those who leave this country are practically without means, and that more leave the country than come in?—I daresay the Americans must miss them, for, as I understand, they do not allow them to land unless they have means.

8464. Is it the fact that an immense number more emigrate from this country than immigrate?—I do not know.

8465. I can tell you it is a fact. If this evil of foreign immigration, as you call it, were done away with, would it not be a greater evil if we could not emigrate any of our surplus population; you say there is a surplus population, do you not?—Yes.

8466. Do you not think it desirable that it should be encouraged to go to the colonies and other parts?—Yes; but I do not look upon the colonies as being places in the same condition as this country in that respect. I think there is plenty of room in the colonies for anybody that you like to send.

8467. The colonies do not think so, do they?—I do not know.

8468. Their position is very much like your own, is it not; when you get to Glasgow you do not want any more people to come in?—I think it is only the paupers they object to. I think they have no objection to able-bodied men being sent to America or Australia, or any other place that I know of.

8469. May I take it that you would not object to able-bodied men coming into this country?—Not if they were able to support themselves till they could get work, and would work at a fair rate of wages.

8470. You do not mind them competing?—Not if they compete under fair terms.

8471. Then you do not object to their coming in?—I do not object if they are able to keep themselves and not become paupers just at once, and so impoverish other people.

8472. Provided they are not paupers you do not object to their coming in to compete with labour?—I could not do that.

8473. Do I understand you do not object?—I do not object.

8474. You said something about mining royalties being higher in this country than elsewhere?—Yes.

8475. I gather

Mr. *Bartley*—continued.

8475. I gather that you think that is a cause of the reduction of labour?—I think the amount of difference between the price of a ton of material here and in Belgium just makes all the difference against the producer here.

8476. You said one was 6*s.* 3*d.* and the other 2*s.* 6*d.*?—Yes, I made that statement from seeing it so stated; I did not verify it.

8477. Do you know what the wages are for the same quantity of material?—No.

8478. Is it not the fact that the wages here are very much larger than in Belgium?—In some places, I believe, there is a difference.

8479. Are they not much higher in this country than in Belgium?—I think they are.

8480. Is it not that more than sufficient to make up the difference?—That makes it worse.

8481. Still it is the difference of wages that largely enters into it, is it not?—Yes, no doubt.

Mr. *Whiteley.*

8482. As I understand, you believe that the influx of population from the rural districts into the town is a fruitful cause of the distress that exists?—I think it is a fruitful cause; the people coming in and competing with those who are here already; that must be quite evident.

8483. Does it tend to reduce the wages in the towns?—I did not say that, but I fancy it would have a tendency that way.

8484. To any great extent, do you think?—I really could not answer that question. It has a tendency to throw people out.

8485. You believe one of the chief remedies would be the cultivation of all cultivatable land?—I mention that as one among the other remedies. I think it is a thing worthy of consideration to try whether anything could be done. I do not put it forth as a perfect cure.

8486. Is it not the fact that land cannot be cultivated now, at all events, to grow corn at a profit?—No; I do not believe that is so.

8487. Do you believe that it is the importation of cheap food commodities from abroad which prevents people from cultivating the land at the present time?—It would have a tendency that way; but I think the ground in this country could be made to pay yet, and a great deal of it is paying.

8488. Even with produce at the present prices?—Yes, even at the present prices.

8489. With regard to the pauper aliens, it is the fact, is it not, that nobody is allowed to land in America unless he has 30 dollars in his possession?—He must have something in his possession. I do not know how much.

8490. I gather one of your remedies would be the reduction of the hours of labour to eight hours a day?—Certainly; or less, if possible.

8491. Is it not the fact that at the present time our markets are flooded with cheap commodities of every kind from abroad?—Yes, and also prison-made goods of all kinds.

8492. Would it not further handicap the manufacturers in this country if the hours of labour were reduced from what they are at the present time?—I do not know. I think if they are diligent with all the appliances they have the workers here could make up for that.

Mr. *Whiteley*—continued.

8493. Although at the present time we are almost beaten in nearly all our home markets by foreign iron and glass, and other commodities?—I do not know that.

Mr. *Renshaw.*

8494. How long have you been resident in Glasgow?—Since 1850.

8495. For 45 years?—I have been in the neighbourhood of Glasgow all that time.

8496. Is it not the case that Glasgow has been enormously developed during that period?—You can scarcely have any idea of the development unless you know it.

8497. Is it not the case that the industries of Glasgow have enormously increased during that period?—Certain of them, especially for instance shipping.

8498. And that a large number of new industries have been started, and developed in that period in Glasgow?—There is no doubt of that at all. It is also to be remembered that others of them have died out.

8499. Does that apply to any other except the cotton trade?—It applies to the cotton trade specially.

8500. Does it apply to any other trade?—There are some small trades that have gone out of existence nearly altogether.

8501. I may put it this way: the aggregate amount of employment generally in different industries in Glasgow is enormously larger than it was when you first went to Glasgow, is it not?—Certainly.

8502. At the time you first went to Glasgow, was there as large a population of Irish and Highlanders among those with whom you came in contact in the working classes, as there is now?—I do not know of any difference with regard to that.

8503. I may take it then that while the population generally has very largely increased the ratio of the Highland and Irish population in Glasgow is about the same?—Just about the same. Of course there are a great many men now of Irish parentage that are not counted as Irish at all, they are born in the country.

8504. You gave us to understand that the working population of Glasgow had been largely recruited from the neighbouring counties?—Yes.

8505. Could you tell me what countries in the neighbourhood of Glasgow you think the agriculturing population has come from?—No, I could not specify them, I believe all the different counties have yielded a certain percentage of workmen into Glasgow from the different countries.

8506. Are we to understand from that that you think the labourers employed in the country districts round Glasgow have themselves left labour there, and come into Glasgow, or that members of their families have come in?—I think there is less labour in the country districts than there was.

8507. Do you think that statement is supported by the census returns, comparing the

year

Mr. *Renshaw*—continued.

year 1871, 1881, and 1891?—I have known country places at both censuses, and the places I know have become less.

8508. In the neighbourhood of Glasgow?—I am not speaking about Glasgow particularly. I do not know any place round Glasgow that has decreased.

8509. In none of the counties round Glasgow?—I do not think so.

8510. So that the agricultural population which was employed, say 20 or 30 years ago, in the neighbourhood of Glasgow has not decreased in your opinion?—That is scarcely a fair way to put it, because there are very few places round Glasgow that have not had other industries introduced into their midst besides the agriculture of the district.

8511. Could you give us any information as to what you think the ordinary wage of a day labourer in the counties in the neighbourhood of Glasgow is at present?—As I have said already, the payment to labourers who are in trade unions is 5*d.*, or 5½*d.*, or 6*d.* an hour; a great many receive 6*d.* But I also mentioned that they are engaged on work that they cannot do in wet weather, and they very seldom have full wages.

8512. But there is another class of day labourer who works all through the year, such as people working upon the land employed by farmers, farm servants, and so on?—They would be much the same, I suspect.

8513. Could you give the Committee any idea as to what their wages are?—No, I do not know their wages.

8514. With regard to the employment of labour upon the land, is it not the fact that in the west of Scotland every year a considerable number of labourers come over from Ireland during the summer months, and work upon the land, going back in the autumn months?—I believe there is a certain percentage; but I do not think there are nearly so many come to work in the harvest-time as there used to be. There used to be a great many hundred of Irish people come over for the harvest; but that is almost unknown now.

8515. You are very familiar, no doubt, with what goes on in the potato harvest in the country districts; is it not the case that a very large number of those who are employed round Glasgow in the fields at the potato harvest come from Ireland?—I could not say that, because I notice that a great many of the people employed in lifting the potatoes are women.

8516. That does not prevent them being Irish?—I do not know; but I expect they come from the neighbouring towns, such as Renfrew, Govan, and all those places. I see the farmers driving them out to the fields in the morning.

8517. You are not aware where they come from, as a matter of fact?—No.

8518. Then you rather suggested to the Committee that one way of meeting this influx of the agricultural population (which you suggest comes in and increases the number of unemployed in Glasgow) would be to draw the people back to the land; are you aware whether any efforts have been made in the various counties round Glasgow in the way of offering allotments and small holdings, and what use has been made of those offers?—I am not aware of any such inducement having been offered.

Mr. *Renshaw*—continued.

8519. In no single case?—In no single case, so far as I am aware.

8520. It is not within your knowledge to take the county of Renfrew in which I am specially interested, that they have more than once advertised all the advantages that are offered under the Small Holdings and Allotments Act, and that as a matter of fact they have not had a single *bonâ fide* applicant from the working classes?—I was not aware of that.

Mr. *Mather.*

8521. You are familiar, I presume, with the plan adopted by the Municipality of Glasgow for the relief of distress last winter?—Yes.

8522. The Lord Provost described the plan to us?—I did not go into it, because the Lord Provost described it so well.

8523. Are you of opinion that any large number of the unemployed working classes objected to appeal for relief to that fund from fear of losing their self-respect or independence?—I heard of such instances, but I never met with any of them.

8524. Are you of opinion that the Lord Provost's plan of dealing with exceptional distress is quite sufficient for Glasgow, namely, that the methods adopted last year should be repeated whenever there is exceptional distress, and in the absence of that exceptional distress nothing need be done except what already exists in the city?—I would scarcely like to say that; I have said already that I believe the plan pursued this time was, after it began, quite sufficient to keep the people from starving.

8525. You think all the well-conducted working classes would go to that source of relief without any hesitation?—I would not be prepared to say that. I believe that had it not been for scruples of the kind you mention a great many more might have applied than did.

8526. The Lord Provost said that he did not think many men were deterred from coming to that fund in consequence of such feeling?—It may be, but I know there were thousands of unemployed who did not apply for relief; I do not pretend to say what the reason was. But all I say is, that they did not apply.

8527. Would those thousands of unemployed, of whom you speak, be out of need; would they be living upon their own savings?—I have no doubt in some cases they would.

8528. Have you any reason to believe that a large number of unemployed people in a condition of great need and great suffering did not apply to the fund of the municipality because of the fear of losing their self-respect?—No, I have no knowledge that that was so.

8529. Are you of opinion that there is much to be expected still in preventing this distress at all times of which you have spoken if habits of prudence, sobriety, thrift, and industry were more practised by the working classes of Glasgow?—In my opinion the working classes might

Mr. *Mather*—continued.

might certainly make a better use of their means.

8530. You think there is room for improvement?—Yes, by ordinary prudence and taking care of their money.

8531. Do you think that is the only solution to prevent the distress?—Yes, but I do not go away with the idea which some people seem to have, that the working classes on their present wages can possibly lay by much money to provide for times of distress.

8532. You do not agree with the Lord Provost that if working men saved in proportion to their earnings they might have sufficient to tide over times of distress?—I think I know more about that than the Lord Provost.

8533. You do not endorse what he said on that point?—Not exactly. I believe he was expressing the best opinion he could according to his lights, but the Lord Provost has never been in the position of a working man himself and felt the difficulty of keeping a house above his head, as the working man feels it.

Mr. *John Wilson* (Govan).

8534. You stated at the beginning of your evidence that in the months of January and February certain unions paid away large sums of money to members out of employment, but that the chief cause of the want of employment was the severity of the weather?—Yes, in a great many instances that was so; it was an exceptional winter for weather.

8535. May I ask, are you, at the present time, still continuing to pay men who are out of employment?—Of course those trades that pay idle aliment are paying it now just the same as ever; the weather has no connection with the payment of that aliment. The engineers and iron-moulders and trades of that kind pay this money whenever they have unemployed men.

8536. Is there much of that being done just now?—Yes, there is a great amount of it.

8537. Among those artisans?—Yes.

8538. You stated, in answer to the Chairman, that the reason there were so many unemployed was that there were too many men?—Yes, that is the great reason, I think.

8539. In your view, a legalised eight hours a day would employ a great many of those men?—Yes, we think so.

8540. Is it not the fact that, owing to the coal strike last year, a considerable amount of work left Glasgow, and the district of Glasgow, on account of so many places being closed for want of fuel?—I do not know of my own personal knowledge that such was the case, but that was reported at the time.

8541. Many of the ironworks particularly, and many of the shipbuilding yards and cognate trades were obliged to close their places, and, of course, many of their customers went elsewhere for material?—Most likely they would.

8542. They have now got over it, have they not?—Yes, the orders are coming in well now.

8543. You stated that the reason why so many people come into Glasgow was on account of the number of labourers coming in from the country districts who could not find employment in the country, and that necessarily caused a

Mr. *John Wilson* (Govan)—continued.

larger amount of labour to be at hand than was necessary for the requirements of the city. Do I understand you to state that there will not be now so many Highland people as there used to be?—We do not hear so much about them, but there may be as many; I do not know the number exactly.

8544. Do you not think that Glasgow, being so situated that it is easy for west Highland people to come there, especially for the families of crofters, young men and young women who cannot find employment on the crofts, and who have no other means of getting employment, they would naturally come into the city in order to find a means of living?—Yes, I think so. I included those among the numbers that come in.

8545. Speaking for Govan, I know there are a great many Highland people in the district of Govan; so many, indeed, that I think there is both a Free Church and Established Church with a Highland congregation?—Yes, there are a great number of Highlanders in Govan.

8546. So far as the Highlanders are concerned, if anything was done to give the people an opportunity of living upon the land, it would cure that almost yearly migration to Glasgow that takes place, would it not?—I think it would have a tendency in that direction. We know very well that Highlanders are very much attached to the soil if they can find a living there at all, but in very many districts they have been driven off.

8547. But I suppose you will agree with me that in any case whatever might be done in order to overcome the difficulty of the unemployed in a large city like Glasgow and the neighbourhood, you would always have a large number of indolent people who would not work if they could help it, human nature being what it is?—I am very sorry to say that there is always such a redundance of men in Glasgow, that if they were all anxious to get labour they would push somebody else out.

Mr. *John Burns.*

8548. I gather from you that in your opinion a general reduction of the working day would be one of the best remedies for the unemployed?—Yes, I think so.

8549. Does your experience in Glasgow lead you to believe that remedy is far from being exhausted?—I think so.

8550. I notice according to the Lord Provost's return which I have in my hand that there were, for instance, a large number of bakers who received relief?—I do not think there was a large number.

8551. I mean a large number relatively. That is a trade that is notoriously overworked, is it not?—Yes, and notoriously overstocked, too.

8552. Do you think if the men's hours were reduced, even in Glasgow, the 14 bakers who applied for relief could be easily absorbed into the baking trade by a slight reduction in the length of the hours?—There is great room for that; if the hours were reduced there could be no doubt there would be more men needed.

8553. If the hours of the baking trade in Glasgow were reduced even to nine hours per day (as apart from eight hours) all the bakers who

Mr. *John Burns*—continued.

who applied for relief would be absorbed, would they not?—A great many would.

8554. Glasgow would absorb the 14 bakers, surely?—Yes, but there were more bakers idle in Glasgow than that.

8555. I am speaking of those who applied for relief?—Yes; we have idle bakers coming into Glasgow from all parts of Scotland; Glasgow is the great place to which they all run.

8556. Supposing the hours in the baking trade all over Scotland were reduced to nine hours per day, the unemployed bakers all over Scotland would be able to secure employment in their own trade, would they not?—Yes; I am perfectly certain of that.

8557. With a margin for other trades?—If other places in Scotland secured an eight hours day, that influx into Glasgow would be quite stopped.

8558. And without reducing wages?—There would be no reduction of wages; we would get wages up.

8559. Your experience, I presume, is that the best way to raise wages is to reduce the hours?—Exactly.

8560. You were asked some questions about foreign competition; do you think that if you had a shortening of the working-day in those trades not liable to foreign competition you would be able to get rid of many of the unemployed by absorbing them into the ranks of their own trade?—Yes, I think so.

8561. Such as railway work and tramway work?—Yes.

8562. And such trades as baking, general dock work, and many other trades with notoriously long hours?—Yes, that is my opinion.

8563. Is it your experience in Glasgow that the well-known extension of municipal employment by the municipality has tended to steady, and to make more regular the employment of unskilled labour?—I think so.

8564. And to that extent it is to be encouraged?—Yes, I think it should be encouraged.

8565. I gather from you that you are not particularly keen in favour of labour colonies?—No; there does not seem to be any great desire for them. I think myself that they would be a good thing if they could be taken up with spirit and gone into fairly.

8566. Simply in the way of experiment?—Yes, in the way of experiment in the meantime.

8567. If I gather your opinion correctly, instead of establishing labour colonies, you would rather prevent the rush of people from the agricultural districts in Scotland to the towns by improving the conditions under which agriculture could be now carried out?—Yes; that would be far more in consonance with my ideas than labour colonies.

8568. You think generally that would be a considerable palliation of the unemployed difficulty in towns?—Yes, if it could be done.

Mr. *John Burns*—continued.

8569. May I take it, you would rather do that than take out-of-work skilled artisans back to agricultural land to be employed upon work for which they are not specially well qualified?—Quite so.

8570. You do not think, for instance, that an out-of-work baker in Glasgow would make a particularly good hedger or ditcher?—No; but I think there are very few people but what can do work on the land of one kind or another.

8571. You mean the easier kind of employment?—Yes; bakers are a very handy class, and could soon turn their hand to anything.

8572. May I take it from you that you would rather the conditions of agriculture were so reorganised as to prevent the rush to the towns altogether?—That is my idea, if it could be done.

8573. Are you aware that a great number of the men who applied to the Mayor's fund in Glasgow came from those trades which are peculiarly subjected to long hours. Take, for instance, carters, there were a great many carters applied for relief, were they not?—A great number.

8574. Do you think that the hours of carters generally throughout Scotland might be reduced?—I think the length of the hours of carters in Scotland is a disgrace.

8575. You think it would be better to reduce the hours that carters are employed rather than to start labour colonies all over the country for unemployed carters?—I think so.

8576. And you think the results would be more economical?—Yes, and more immediate.

8577. And the home associations of the men would not be broken up?—Quite so.

8578. I find also that a great many engineers applied to the Lord Provost's Relief Fund?—So I see.

8579. In Glasgow, is it the fact that the engineering trade is peculiarly subjected to overtime?—I believe it is.

8580. Do you not think that in making their employment more regular by the abolition of overtime there would be room for a great many of the men who applied for relief?—It would be one of the greatest means of stopping the necessity of applying for relief that could be tried at all, I believe.

8581. Am I to gather from you, as a practical and experienced trades unionist of long standing, that the remedy you most approve of for immediate benefit to the unemployed is, that in trades where overtime is worked it should be abolished?—Yes.

8582. And in work where the conditions are casual and intermittent they should be made steady and regular?—Yes.

8583. And that generally the reduction of the working hours of all would be better than any experiment, however well meant, or however sentimentally advocated; is that your view?—Yes, that is my view of the matter.

Mr. Henry George Willink, called in; and Examined.

Chairman.

8584. You are Chairman of the Bradfield Board of Guardians, and of the Rural District Council, and were formerly a member of the Paddington Board of Guardians?—Yes, that is so.

8585. You, therefore, have considerable knowledge of the Bradfield Union?—I have been Chairman since the death of the late Chairman, in February 1892.

8586. What is the population of the union?—Eighteen thousand and seventeen, to be accurate.

8587. And the number of parishes?—Thirty parishes.

8588. And the acreage?—Sixty-two thousand six hundred and fifty acres.

8589. And the rateable value?—£.136,660.

8590. Are there any large towns in the union?—No.

8591. Are the villages scattered or aggregated?—They are mostly scattered villages, as is very much the case in Berkshire, I believe.

8592. And generally the district is one with a scattered population and small parishes, is it?—There is only one parish in it with a population of over 2,000, and only five with a population of over 1,000 each.

8593. What are the occupations of the labouring classes in the district?—They are chiefly agricultural. There is a good deal of woodland also, and heath country, and there are one or two large brewing firms, and a good deal of brickmaking; there is a good deal of clay there, and there are two or three large corn-mills, and then there is the usual amount of small shopkeeping, and so forth.

8594. Are there any large resident landowners who take an interest in the people round them; are you well provided with that luxury?—Yes, we are. That varies in different parishes; there are some parishes where there are very few, and there are some where there are, I think, rather more than usual. There are one or two very large owners. Mr. Benyon is a large landowner.

8595. Can you say anything of the range of farm wages?—That is a very difficult matter to give an exact statement about. I have a table on that subject, a copy of which, I think, you have before you; I do not know how far you would wish me to try and state it.

8596. I think it will be useful if you put it in, or I can put it in. (*The document was handed in.*) Can you say what the drift of it is?—The different classes of labour make it difficult to generalise, but I think you might say that the drift of it is to show that wages range from 10*s.* to 12*s.*, or 14*s.*, or even 15*s.*, nominally in cash, per week.

Mr. *Jackson.*

8597. When you say "nominally in cash," you mean actually in cash?—Yes, actually in cash, nominally as wages. There are other advantages. Of course this is not confined to our neighbourhood.

Mr. *Jackson*—continued.

8598. Advantages, such as what?—Such as a cottage at a low rent very often, especially in the case of the large landowners, who have let men have a cottage at a rent which does not at all represent its full market value.

Mr. *Pickersgill.*

8599. At what rent?—Two shillings or eighteenpence a week. Eighteenpence is a very common rent indeed in the case of Mr. Benyon's cottages.

Chairman.

8600. Nothing like the amount which would cover the expense of erecting the cottage?—No; eighteenpence does not cover the expense. There is a good garden generally. Then there is the money which can be earned on piecework and harvest money if there is no Michaelmas money paid; the Michaelmas money varying from 2*l.* to 3*l.* at Michaelmas. I have been told, and I believe it is pretty safe to take it, that a man who nominally is actually getting 12*s.* or 13*s.* a week will be getting nearly 15*s.*, 16*s.*, or even 17*s.* a week if you take everything into account at the end of the year. If all his takings were added up and his cottage allowed for he would be found to be earning as much as that.

8601. What classes of men does that apply to, carters and stockmen?—Yes, that would apply to them, the first-class farm labourers, but not to the under carters, or to the ordinary field hands; they would not get quite so high a wage.

8602. And the wages in the trades, at what rate do they run?—The building wages work out from a maximum of, say, 36*s.* 8*d.* per week for the stonemasons and plasterers, down to about 18*s.* 4*d.* and 18*s.* 6*d.* for the bricklayers' labourers and plumbers' labourers.

8603. The higher rates that you quote being about 8*d.* an hour?—About 8*d.* an hour; and the other down to 4*d.* and 4½*d.* Then it is to be reckoned that the wood and forestry and coppice work men would earn up to 14*s.* or 16*s.* a week, or something like that.

8604. Then the women earn something?—Yes; 6*s.* a week is practically the wage the women get on the farm; there is not much women's work done, and they work shorter hours, as a rule.

8605. With regard to the cottage rents, you have said that some of the larger proprietors, those who can afford to deal more generously with the people around them, give the cottages at a very low rent; but there are others, I suppose, who have to exact the full rent?—There are other small proprietors, who have bought the cottages, who have to do so. Many of the cottages are small squatter cottages, which were built before the Enclosure Acts were fully applied, and they are very bad tumble-down, miserable things, and even some of those run at rents of two shillings to half-a-crown.

8606. Without any land?—There is generally some garden ground with it, no doubt; sometimes

Chairman—continued.

times the quantity is very small, and sometimes it is better.

8607. With regard to the Poor Law administration of the union; on what principle have you acted in it?—The principle has been to reduce out-relief gradually, since 1871; the reform began about 1871, and it has now practically resulted in there being almost no out-relief given; no permanent out-relief, except to the old cases. For many years there has been no permanent out-relief given except to old cases.

8608. Old and quite disabled persons?—Yes; when I say "old," I do not mean old in point of age, but cases on the old list. Of course there are cases where people are not able to be moved, who cannot come into the workhouse, and in that case the relief has to be out-door relief; we get a certain small percentage of that, but it is very small.

8609. And has the in-door-relief increased proportionately, or what has happened with regard to it?—The in-door relief has diminished quite as strikingly.

8610. It has diminished?—Yes. This table which I referred to shows it very strikingly. On the 1st January 1871, there were 999 out-door paupers on the books of the union and 259 in-door paupers; 259 in the house; and on the 1st January 1895, there were 27 out-door paupers and 116 in the house.

8611. Can you give the percentage of population for the two periods?—The percentage of population was one in 13 at the earlier date, in 1871.

8612. Of the total number of paupers?—Yes.

8613. Both in and out?—Yes; out of every 13 one was a pauper; and at the present time, at least in January, it was one in 143.

Chairman.

1614. Has there been an increase in the aggregate population since that time?—Yes, there has been a large increase.

Mr. *Jackson.*

8615. The diminution has taken place notwithstanding the increase of population?—Yes, notwithstanding the increase of population.

Chairman.

8616. Can you make other comparisons between those two periods, in other respects?—It is quite possible to make a comparison in money also.

8617. There was an accidental circumstance in 1889, I see from this table, by the transfer of part of the union to another union?—Yes, that is so; but for that the increase would have been even more marked in numbers, the population I mean; as it is, it rises from 15,800 to 18,000.

8618. With regard to the expenditure, can you compare that?—The figures in 1871 (or rather it was on the 1st January, so it would be the year 1870) were for Poor Law expenditure, not including pauper lunatics (it varies from what you have down in my Précis there, that was the total Poor Law, but this is with allowances made and everything) 9,748*l.*; and during 1893 it was 1,508*l.* I do not give you 1894, sir, because we have had so much to do with the Local Government Act in 1894, and that has given us so much extra work that we have not got it out yet.

8619. Can you compare the rate in the pound?—Yes; we state it at 2*s.* 0½*d.* in 1871 and 4*d.* only in 1893. The cost per head of population, which was 13*s.* 8½*d.* in 1871, we compute at 2*s.* 6*d.* in 1893.

Chairman—continued.

8620. Is the expenditure you have been speaking of the whole of the Poor Law expenditure?—The figures which I have just given you make the allowance which is referred to in the note; it is the whole, I think.

8621. Does it include the amount expended on union officials through the county rate?—There has never been any contribution from the county rate. The following contributions from the Imperial Exchequer should, however, be taken into account, as the money was applied by the Guardians to the Poor Law purposes for which it was paid to them, viz.:—

	Lunatics.	Union Officers.
1871	£—	£268
1893	497	1,278

8622. You put in diagrams showing curves representing the weekly and yearly pauperism of the union?—Yes. I have constructed those. I keep them hanging in the board-room, kept up to date pretty nearly, so that we see how we are going on.

8623. Have you any observations you wish to make or anything to point out to the Committee on these diagrams?—The diagrams prove, I think, that our system, although it is upon a definite principle, is not a hard cast-iron system, as it is often said to be, because you will see that there are cases in which we are obliged to give, and think it right to give, out-relief; and you will see that the out-relief line goes up and down to meet those extreme cases.

Mr. *Jackson.*

8624. Are you speaking of out-door now?—Yes, I am speaking of out-door now.

8625. The odd thing appears to be that the out-door relief goes up just at the period when trade improves?—That is the yearly return; that is one return taken on the 1st of January, and it is just a little bit of a chance what you hit on the 1st of January. I would rather refer to the weekly diagrams, which do not go so far back, but are more complete.

Chairman.

8626. What would you state as the principles of the administration that produce these results?—The principle was practically what I have already stated; that is, that out-relief is only given in temporary cases of sudden and urgent necessity. The annual report states it in this form: "Out-relief is strictly limited to temporary cases of sickness or accident, and to widows during the first month of their widowhood only; although, sometimes, but very rarely, a case is, or becomes, practically permanent, because the condition of the recipient does not admit of his or her removal to the workhouse." It is always given on loan; that is to say, it is understood when it is given that if the circumstances of the applicant, in the opinion of the board, will permit it, we should require it to be paid when possible; and, as a matter of fact, the amount of money repaid either by relations or by applicants during the year varies, I may say, from 200*l.* to 150*l.*; we get back that much.

Mr. *Stuart-Wortley.*

8627. What percentage is that on the amount lent?—I have not worked it out.

8628. What is the amount?—Take this last year, 1893; 1,508*l.* was the total paid, and 160*l.* is the total repaid. It is not at all large, but of course you understand that the 1,508*l.* includes all the union officers salaries, and everything, and it is not easy to get back those.

Chairman.

8629. Do you know, is that a usual provision in the case of administrative bodies, such as yours?—No, I do not think it is very usual. I think Brixworth does it, or did it. The Local Government Board was once applied to to issue an order that should be universally the case, and they declined to do it; I believe the reason being that they thought it was better left to individual boards of guardians to settle the principles upon which they administered their own relief.

8630. Do you find it well regarded among your administrees?—Do you mean the recipients?

8631. Yes. Does public opinion support you in treating these grants as loans?—I cannot say that they like it; I do not think that they do. It is not often disputed; I have known disputes.

8632. Is it supported by the public opinion of the ratepayers?—Yes, I think so. I think I may safely say that.

Mr. *Pickersgill.*

8633. Do you ever enforce it at law?—Oh, yes, we have done so, but very seldom. It very seldom comes to that. We do not require it. Where we are not perfectly satisfied that there is ability to repay it; I mean we do not at all try to get blood out of a stone; we do not wish to try to do anything like that; it is only when we are satisfied that there is ability to repay, that we should require it.

8634. May I further ask if the system of loan has been continued since 1871; was it in practice in 1871?—No, I believe it was not.

8635. Can you tell us when it began?—I am afraid I cannot; it was long before I came there.

Chairman.

8636. You have full powers to take this course, I take it?—I believe so.

8637. That is to say, to make these advances in the form of a loan?—It is not the case of a loan of ratepayers' money in most of the cases, if I may say so.

Mr. *Jackson.*

8638. Whose money is it then?—It is strictly the ratepayers'; but if a person comes into the workhouse, or his or her child is taken into the workhouse, or if a person is sent to a lunatic asylum, the charge accrues, though they do not receive the money in their pocket; it is only that they get the benefit of the relief; and a great deal of this money which I am speaking of comes back for pauper lunatic relief.

8639. In payment of the charge taken at the time?—Yes.

Chairman.

8640. You would regard it rather as a recovery of the ratepayers' money?—It is the recovery of the ratepayers' money; it is not money lent.

Mr. *Mather.*

8641. You charge them, therefore, for the care you take of them, is that what you mean?—Yes, as far as we can get it. I am glad to say we have some cases of relations paying voluntarily who are not legally bound to do so.

Mr. *Pickersgill.*

8642. I am afraid I have misunderstood. I rather gathered that the out-door relief in the case of urgent necessity was given on the understanding that it would be repaid if the applicant subsequently was able to repay it?—That would be so; yes.

8643. Have there been cases in which you have actually enforced the payment?—I do not remember any case.

8644. I do not mean enforce it in a court of law, but actually getting it back by some means or other?—I do not remember any such case of out-door relief.

8645. That is what I want particularly to ascertain?—You see we give so little out-door relief; we only give it in extremely urgent cases.

8646. Then I may take it really that your practice as regards the loan does not extend to out-door relief?—Well, I do not think you may put it quite so strongly as that; it would if we thought we could get it; it is all given on loan, or in a special case we should enter it "not given on loan." It is understood to be given on loan, and it is so with our medical relief.

Chairman.

8647. But you think it a wholesome thing that those who receive it should understand that it is rather as a favour than as a right that they get it as it were; that they get it as a loan, and not as a free gift?—Yes, we think so. We find that very often when an application is made, if the relieving officer explains to the applicant that the relief will be given on loan and will have to be repaid if possible, the applicant says:—"Very well then, I would rather not have it." That has happened several times.

8648. Now turning to in-door relief. What principles do you apply to that?—The same principle; it is given on loan on the same terms; and in the workhouse, especially as regards the children and young women, we take the greatest care we can to keep them away from the other paupers, to give them a good training, and to get them out in the world when they are old enough to go; but I am thankful to say we have so few in the workhouse altogether that it becomes a very small question with us.

8649. Is it the case, supposing a family are driven into the workhouse by some severity, that you make a charge upon them when they get into a better position for the maintenance they received?—I think my former answer would cover

Chairman—continued.

cover that; I do not recollect its ever having happened in a case like that, because I do not think that their circumstances have ever admitted of their repaying; we should not do it unless there were a very clear case; and in the case of a family coming into the workhouse, it is extremely improbable that their circumstances ever would admit of repayment; I mean they have accepted the workhouse test.

8650. You do not consider the workhouse test as working off the liability to repay if they are in a position to do so?—No; quite so; and perhaps I may put it in this way; that it is not so much from the family who come into the workhouse that we should expect to get the relief repaid, but from relations who ought to support them at home; for instance, we have got now in the workhouse an old woman who has a son who is in very fair circumstances; he is a man of very violent temper; a very rough customer he was to tackle; when he came before the board he positively and flatly refused to pay anything whatever towards the support of his mother in the house; he would not keep her, and we had to take her into the house; because, of course, we were responsible for her life. We had to summon him. He vowed that nothing should persuade him to pay, but he has since been steadily paying. That was only under the ordinary powers of recovery.

Mr. *Bousfield.*

8651. You got an order against him?—We got an order against him. That is a case where the money was given on loan, and not given as a gift. We were recovering under the ordinary power of guardians, as I understand, to recover relief within six months after the date of its giving. You cannot go back for arrears after six months, I think. That is the rule.

Mr. *Jackson.*

8652. But that is rather recovering a charge?—Perhaps it is, if you would rather put it in that way; I am quite content. It is only that we use the powers we have already.

Chairman.

8653. Have you conceived the case put by an honourable Member here of a man, whether with or without a family, who was driven by stress of circumstances into the workhouse, afterwards going out and obtaining good employment, who became well enough off to repay; would you enforce upon him repayment of the cost of his maintenance while he was in the workhouse?—I think it is very improbable; unless he got extremely good employment we should not deal hardly with such a man.

Mr. *Jackson.*

8654. Suppose he had got good employment; could you enforce it?—I think so. Why not, sir?

8655. I am not a witness?—I beg your pardon.

8656. I want to know if there is power to enforce it?—I think there is; I have no doubt of it.

Mr. *Jackson*—continued.

8657. Supposing I was destitute and went into the workhouse for a month and subsequently got into a good position (somebody left me a fortune, say) would you have the power to recover from me?—I think there is no doubt about it.

Mr. *Bartley.*

8658. Is it the case that if you find out afterwards that anybody has got money you would claim the cost of their maintenance so far as the money would go?—Yes.

8659. For instance, supposing you found out that he had got a savings bank account, you would claim it from that?—Yes, within the limits of the law. We must not claim arrears beyond six months.

Chairman.

8660. Is not that a different case?—That is a man who practically palms himself off on the public as a pauper when he is not a pauper?—Yes.

8661. The other case is the case of a man who is a pauper for six weeks, or two months, and afterwards gets into a good position, or a decent position; do you think you could recover from him the value of his maintenance?—I believe we could; I hope the Committee will not think we are made of stone; that we should do it in a hard way.

8662. Oh, no, we do not assume at all that you would be hard-hearted, or skinflinted, or cruel in the administration of the matter; but have you power to do it?—I believe so, on that ground, that you may what I call recover relief up to six months limit of arrears.

Mr. *Stuart-Wortley.*

8663. Are the Local Government Board aware of your practice?—Oh, yes.

8664. And have they not interfered with it?—Not at all.

Chairman.

8665. You have a workhouse with sufficient accommodation, have you?—Quite. There were 259 as I have said in the workhouse in 1871, and we now have only from 100 to 150 according to the season; we may run up to 150. I believe the house will accommodate 224. I am told so.

8666. You have an infirmary?—We have an infirmary.

8667. Detached from the workhouse?—Detached; yes, well detached.

8668. A garden and cultivated ground?—We have a garden and cultivated ground; we have four acres of garden and about five acres of meadow.

Mr. *Lawrence.*

8669. Do you have trained nurses?—We have two trained nurses in the infirmary; one of them is a trained certificated woman; the other is a man who has gone through a course of hospital training; he is a male sick attendant, paid.

Chairman.

8670. May I ask what do you do with your farm?—We put the old inmates to work on it (that is one of the objects of the farm) and we

Chairman—continued.

get a certain amount of vegetables for the supply of the house. We keep two cows and a certain number of pigs the produce of which is all consumed in the house; but it gives the old agricultural men just the kind of work that they would be having to do at their own homes; they potter about in the garden doing a little hoeing, gardening, weeding, and things of that sort.

8671. It is a healthy occupation for them if it is nothing else?—Yes.

8672. How do you treat the children?—It is all subject to the orthodox classification of ages and sexes. The children go to the village school. We have a tailor and industrial trainer in the house who teaches them; there is a male industrial trainer; he teaches the boys tailoring, and sometimes we have had a man in to teach them bootmaking. The girls are taught the usual household work and sewing; they wear the ordinary dress of children of their own sex when they go out to school; and they have a very good playground.

8673. Are they healthy?—Extremely healthy considering the class from which they are drawn and the circumstances of their family originally. Considering that one has to deal with a class like that, I think they are extremely healthy.

8674. Let me ask with regard to your tramp-wards, how do you manage them?—We have two tramp-wards for males, containing altogether 13 different compartments, and one for females.

Mr. *Bartley.*

8675. Separate?—Separate.

Chairman.

8676. The tramps have to do some work?—They have to do some work. Down to the beginning of 1890 the work used to be picking oakum, for both males and females, but there was rather a large increase in tramps about that time, or some two or three years before then, and it was thought advisable to change the task; it was before I was on the Board even, before I was chairman anyhow; I was not on the Board I think. They changed the task for men to pounding stones. Instead of picking 4 lbs. of unbeaten oakum they were to pound eight gallons of stones.

Mr. *Stuart-Wortley.*

8677. Does that mean break?—They pound them with a bar; it is not like stone-breaking on a road, but reducing the stone to a powder.

8678. What is it used for after that?—It is used in mortar, as a sort of sand. The number of tramps fell off in a very marked way.

Chairman.

8679. When this new kind of labour was introduced?—Yes. We do not set any great store by it; it is only an instance partly to explain why we have so very few tramps, as you will see on my paper.

Mr. *Bartley.*

8680. Is that what began the cubicle system of treatment?—No, the cubicle system was in force before then.

Mr. *Lawrence.*

8681. You have not the Gloucestershire system of tramp tickets?—No; I have always heard it called the Berkshire system; it has never been used in Berkshire, but we have not got it, if it is the same.

Chairman.

8682. You can put in a Table showing the effect upon the number of tramps of your new system of working, I think?—Yes, I can. (*The document was handed in.*)

Mr. *Stuart-Wortley.*

8683. Can you summarise it briefly?—Yes, it is summarised.

Chairman.

8684. What is the gist of that, briefly?—I can give you the number of tramps for the last five years.

Mr. *Stuart-Wortley.*

8685. Is there a marked increase, a marked decrease, or a marked anything?—A marked decrease.

Chairman.

8686. Since 1890 what are the numbers?—Since 1890, 1,233 tramps; 1891, 470; 1892, 308 (those were years ending Michaelmas, but they were 12 months); 1893 (the year January to December) 221; and 1894, 184. We frequently have a week without tramps at all.

Mr. *Stuart-Wortley.*

8687. To what do you attribute this great decrease?—Partly to the change in task and partly to the fact that I think we are very favourably situated. We lie off the main road; we are three miles off the Bath road, and only about six miles out of Reading; and I think rather than go three miles off the road to come to us, where it is not pleasant, they will go into the town which is six miles off.

Chairman.

8688. That is as true of 1890 as of now, is it not?—I said it is something which they do not like.

8689. And is there any chance that the diminution of tramps in your wards is due to their being driven by you to more lenient wards elsewhere?—I think it is quite possible.

8690. So that you again may be the cause of a loss to some other place?—That is so. There was a very kind lady in the district who never turned away a tramp; she died about the same time; it was well known; there were always tramps coming to her at Bradfield. I tried to get the date to give to you.

Mr. *Jackson.*

8691. Did that good lady live to a good age?—I cannot tell you; I never saw her.

Chairman.

8692. Now, coming down to this last winter, what has been the experience of your district during it?—Well, shortly, that we had no exceptional distress at all.

8693. What

Chairman—continued.

8693. What circumstances had you that might affect employment; you had the hard winter that everybody else had, I suppose?—We had the hard winter; and before the hard winter, over the whole of the Kennett Valley, and near Reading, we had very bad floods, very extensive floods indeed, which lasted some weeks; to take it altogether, two or three weeks.

8694. Were many of the agricultural labourers turned off?—There were not many turned off, not the regular hands; the usual number of men were turned off, I suppose, who generally are turned off in winter, not having been taken on as regular hands; for the regular hands the farmers find things that they can do; they set them to do other work, such as hedging and ditching in another part of the farm, and so forth. I am told there was not much turning off of the regular hands.

8695. This sort of thing happens, I suppose, every winter, more or less?—We have had some flooding nearly every year, I think, since I have lived in the country, and frost, of course.

8696. And there are woodlands and other sources of employment which help you in these cases, are there not?—Yes; I believe the woodlands have been always very useful in the winter for this reason.

Mr. *Lawrence.*

8697. Not in the very depth of frost?—Not perhaps in the very depth of frost.

Chairman.

8698. On the whole do you think the usual number of men were employed in the winter?—I think there were more men out of work; there were in my own parish I am pretty sure.

8699. But there was no sign really of what might be called exceptional distress?—No, I think not; the landlords gave as much extra employment as they could find.

8700. Let me ask you as to this, which is really the main question we are dealing with on the general question of the best means of dealing with exceptional distress, if and when it does arise. What have you to tell us about that; you have had a varied experience, I think?—I had some little experience in London when I lived in London at one of the Committees of the Charity Organization Society. It was about the time of the Trafalgar Square excitement when there were so many men out of work and they were hanging about Trafalgar Square. Mr. Kitto, Captain Gretton, and the Charity Organization Society between them undertook to sift a number of cases and go into them with a view to finding out whether any of them were fit for employment, for emigration, or for any other helping; they were referred to two committees, and my committee was one of the committees.

8701. Will you tell the Committee please what suggestions you would make generally about the treatment of distress. Perhaps, first of all, you would prefer to take country districts and town districts separately?—As I say, I have never seen a case arise in the country and I do not know for certain how we could meet it but my impression is that we should find the workhouse test certainly sufficient in times of ordinary distress.

Chairman—continued.

8702. In the country districts?—Yes; and I think it would have to be a very bad distress which the workhouse test could not deal with in the country.

Mr. *Jackson.*

8703. Would you just explain. How does the workhouse test deal with distress?—We should offer the workhouse to anybody who applied, and if he did not accept it we should consider he was not in such distress as to warrant our giving him money out of the rates.

8704. You mean, of course, that your rates would be sufficient to meet the distress?—The rates would have to be sufficient to meet it.

Chairman.

8705. So that in-door relief would be sufficient for it?—In-door relief would be sufficient for it. That is the way I should say we should probably deal with it.

Mr. *Jackson.*

8706. Suppose the accommodation of the workhouse was not large enough?—Then, if it was really not large enough, and could not be made large enough by temporary arrangements, I suppose we should have to go to to a labour test, which would be carried on, so far as we could arrange for it, inside the workhouse precincts.

Mr. *Bartley.*

8707. That has never occurred, has it?—It has never occurred with us; it is not within the knowledge of any man now living, I think.

Chairman.

8708. What do you say to relief works as they are generally known?—I do not think they would be of any permanent benefit in such a country as that in which I live. Whatever they might be elsewhere I do not believe in them anywhere; I do not think in a rural district such as ours there is the least possibility of their being advantageous.

8709. Will you say why you do not believe in them?—I think they would only draw together, like the benevolent lady I was talking of, a number of people who are always anxious to get something to do. There are plenty of tramps who would be very glad to be put on to relief works instead of stone pounding (I think we could collect them together very well), and the *bonâ fide* unemployed, if there were such, would, I think, be rendered permanently unemployed, instead of being able to get back into the regular rut of labour work.

8710. You think it would interfere with the natural healing process that goes on when a mischief of that sort arises; a natural re-adjustment of labour in different districts?—Yes, I think so.

8711. To what would you ascribe, in most cases, the distress arising in country districts?—Well, it might be a kind of permanent want of employment which recurs regularly every winter, which one is accustomed to meet, and which ought to be met rather by laying by in the summer for the needs of the winter. There are plenty of trades which are always out of work more or less in winter when the hard weather comes on; building men cannot get anything to do; they get very good wages in consequence; or it may be of course from hard weather interfering, such as

Chairman—continued.

we have had this winter with some of the farm work, and in those cases I cannot see that relief works will really tide the men well over it, because they have got to get back into work as soon as ever the need is gone, and you do not always find the work for them ; farmers do not like to keep on men who will leave them at a moment's notice.

8712. Therefore improved habits of foresight and character, you think, are more likely to have effect?—I think so.

8713. Of course it might be due to a real and solid disturbance of the labour market?—Yes.

8714. Now with regard to the case of towns? —I still think the workhouse test is the best way of dealing with it, and if the workhouse test is not sufficient if the workhouse was full, and it would be impossible to make other arrangements, then, I suppose, it must be the labour test inside the workhouse, if possible ; or there is what is known, I believe, as a "Whitechapel Order," which means the offering of a workhouse order to the man when he applies, coupled with the offer to take care that the wife and children are properly relieved by out-door relief in their own home without breaking up the home. Legally the guardians cannot give the man relief without taking in the wife and children, unless they have leave to make such orders as that. I believe that has been found to work well, but that is not within my own personal knowledge.

8715. Now do you find and do you believe in the existence of a great reluctance on the part of decent working men accidentally, from no fault of their own, thrown out of employment from one cause or another, to accept help from the Poor Law authorities?—Whether out-door or in-door you mean?—Yes.

8716. Yes?—I think there is great reluctance to accept in-door relief; I do not think there is very great reluctance to accept out-door relief. I think it is a very creditable reluctance indeed; I should be very sorry to minimise it.

8717. Do you not think there is a feeling of degradation in their minds as to receiving even out-door relief from what may be called the Poor authorities?—I think there is a growing feeling of that kind in our own Union ; I think men do not apply ; we certainly do not get applicants.

8718. It is a very healthy and creditable feeling if it exists?—Very ; and one which we try to do all we can to foster.

8719. Is it your experience that it does exist to a large extent?—Yes, I think it does, I think there are signs of it.

8720. Then relief given in that shape has the effect of causing the man to lose his vote, has it not?—Yes.

8721. Do you think that has a material effect upon his disposition of mind?—I have never come across any definite instance myself; I only know what I have read in the newspapers, and general statements ; I have never come across it personally.

Mr. *Bartley.*

8722. Might I supplement that. You think that with a very little relaxation the feeling of objection to coming for out-door relief would very soon wear off?—I think so.

Mr. *Bartley*—continued.

8723. You do not think it is very keen at present?—No, I do not think it is very keen. People seem to think there is a distinction between in-door relief and out-door relief, that the in-door relief is disgraceful, but that the out-door relief is not so disgraceful. I myself think that that is an entirely imaginary distinction.

8724. Still you think that any relaxation would tend to do away with the great feeling of objection to out-door relief?—Yes, I do.

Chairman.

8725. To pursue that a little further ; there are some people who think that, while all the present restrictions should be maintained against ordinary out-door relief in ordinary circumstances, they should be suspended or modified, including the restriction connected with the vote, or the franchise, when there is an exceptional amount of distress arising from some disturbance of trade, or general want of employment, so that a man is forced to receive public relief in some form or another although his want of employment is not due to his own fault. Many people think that a distinction can be drawn between these two cases, and that relaxations could be allowed in the latter case which are not allowed in the former. Do you think that that would have a demoralising effect? —I am afraid it would ; I am afraid it would be the small end of the wedge.

Mr. *Jackson.*

8726. You are not in favour of relaxation?—No, I am not, distinctly not.

Chairman.

8727. You have given us your opinion on relief works in country districts, would you apply those same considerations to relief works in town districts?—Yes, entirely. I think I have made it as clear as I can in that respect also.

8728. Now, to come to another proposal, the proposal of the farm, or labour colony, to meet the case of a large number of unemployed men in some big centre of population ; what is your view of that?—I do not think it would answer. That brings one rather near the other subject does it not?

8729. No, not the foreign question. We will stop short of the foreign case and have you on that again if you will allow us; but on the face of it, putting foreign examples aside, treating it not as being an expert in the matter of foreign colonies, but merely on your Poor Law experience in this country; would you be disposed to look favourably upon a scheme of farm colonies? —For town cases I distinctly should not. I think that the farm colony would be intended, as I have always understood the descriptions of it, to deal with men who are unfitted for farm work. The ordinary townsman, from what I have seen of him and from what I have heard of him, is not well fitted for taking up agricultural work, such as he would be required to do on a farm colony. I have talked with farmers about it in the country and I know their feeling is very strong to the effect that in the very few cases they have known of a man who is a townsman coming to farm

Chairman—continued.

farm work, he does not make a good agricultural labourer; they do not believe in him at all. They have known cases of men who have been countrymen, men who have gone into towns and have then come back from the town to the country, and taken up the work where they left it, so to speak, and have made satisfactory labourers again, but they do not think it would be possible to make good use of town material.

Mr. *Jackson.*

8730. I suppose the man, even in a case like that, would only come back when he was a damaged article, would he?—I should think that is probable too.

8731. The fact that a man would come in from the country, spend a portion of his time in the town, and then go back into the country, implies failure from some cause or other, does it not?—Yes, it does. His suitability, however, for the country work might be the very thing which made him unsuitable for town work; he might not have that kind of experience which would fit him for it.

Mr. *Jackson*—continued.

Chairman.

8732. You have not, yourself, investigated any of the farm colonies that have been attempted in England?—No, I have not.

8733. Of course the farm colony would seem, on the face of it, to involve the man being taken away from his family in most cases, would it not?—Yes; it is proposed in some cases, I believe, to take the family too.

8734. It would be a very large colony if every man took his family?—Quite so.

Tuesday, 14*th May* 1895.

MEMBERS PRESENT:

Mr. Bartley.	Mr. Lawrence.
Mr. Billson.	Mr. Logan.
Mr. Bousfield.	Mr. Mather.
Mr. Campbell-Bannerman.	Mr. Pickersgill.
Mr. Heneage.	Mr. David Randell.
Mr. Wootton Isaacson.	Mr. John Wilson (Durham).
Mr. Heywood Johnstone.	Mr. John Wilson (Govan).

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN, IN THE CHAIR.

Mr. HENRY GEORGE WILLINK, re-called; and further Examined.

Chairman.

8735. I HAVE now to ask you some questions as to the knowledge you have of labour colonies in foreign countries; I think you have visited both the Dutch and the Belgian labour colonies, have you not?—I have; the Dutch colonies I visited in Easter 1888, and the Belgian colonies in October 1890.

8736. You have printed the results of your inquiries, I think?—Yes. My report on the Dutch colonies was printed and published separately by Messrs. Kegan, Paul and Co., and my report on the Belgian colonies was published in the "Charity Organization Review," of January 1891.

8737. Are both of those papers referred to in the Report by the Labour Department of the Board of Trade on the Unemployed?—Not that I am aware of.

8738. If you look at the footnote on page 308 of the Report of the Labour Department of the Board of Trade on the Unemployed you will see that you were the authority referred to?—I was not aware of it.

8739. You cannot tell how far the summary of information on the subject in that Blue Book is an accurate representation of your conclusions?—I cannot; I have not seen the book.

8740. Then we had better take your evidence independently. Will you tell us about the Dutch home labour colonies first?—I should like to say, before beginning to do so, if I may, that my report on the Dutch colonies I sent to the director of the Dutch free colony, who looked through it and practically passed it; and I sent my report on the Belgian colonies in the same way to the director of the Belgian colonies, who also, with some small modification which I embodied, passed it; so that my reports have in both cases been seen by some authority on the point.

8741. Will you first deal with the Dutch labour colonies?—In the first instance, both the free colonies and the beggar colonies were the idea of a Dutch general, General Van den Bosch, who, having seen a great deal of colonial

Chairman—continued.

life in the Dutch colonies abroad, just after the close of the Great War conceived the idea that the large numbers of the poor and unemployed classes in Holland might be satisfactorily dealt with by settling them upon the land. He seems to have thought that if an ordinary savage, without any of the tools and appliances of modern civilisation, could support himself, much more could the ordinary poor man in civilised Europe, with such help as a society could give him, support himself. It seemed to me, when I went into the question, that such an experiment, if it was to be tried, started under very favourable conditions in Holland; it had at the head this skilled, enthusiastic officer of great experience; it had a great deal of enthusiasm in the country; the King and the Royal Family took it up; and the land was not at all expensive; so far as I could make out it cost from 4*l.* to 1*l.* an acre for the freehold; it seems to have varied in different parts.

Mr. *Bousfield.*

8742. It was most heather land, was it not?—It was mostly heather land. Then, again, the Dutch character would seem to be particularly fitted to take up and carry through such an experiment. The neighbouring inhabitants were doing well on similar land; at all events they were getting along very fairly. And the State was prepared to back it up, and did, as a matter of fact, back up the experiment. The colonies are situated in the north-eastern part of the Netherlands, and, as I say, they were of two kinds: what are called free colonies and the beggar colonies. The free colonies were founded the first; they were founded in 1818. They came to consist of about 4,000 acres, and to comprise about 1,800 inhabitants. It was not very long before they reached that total, and I need not, I think, dwell upon the initial stages. They were founded for the benefit of practically three classes: (1) the families or households, consisting of six or more persons; (2) boarders; and (3) orphans. The mode of taking a family in was this: Holland was plotted out into a number of

Mr. *Bousfield*—continued.

of districts (*afdeelingen*), and the district to which the family belonged had to pay a sum of money amounting to about 140*l.*, which would give the district the right to have in the colony a family for ever.

Chairman.

8743. Where did the district find that money?—In voluntary subscriptions. For double that sum they had the right to have two families. A yearly subscription of 60 guilders, which is about five pounds, would give the right, as long as the subscription went on, to have one boarder at the colony; and a yearly subscription of 45 guilders, which would be rather less than four pounds, would give the right to have one orphan at the colony as long as the subscription continued. Taking the first class, the family class, they were started off with a house to live in, about eight acres of land, and a certain amount of furniture and clothing, and stock: two cows, or one cow and 10 sheep.

8744. Was that provided out of the 140 *l.*?—Yes. I think some of the subscription money must have been spent in building the houses, because the house is only put down to cost 41*l.* 13*s.* 4*d.*, and that seems a very small sum to build a house with; and, as the colony had large sums of money provided otherwise than by these subscriptions, no doubt it must have done something in that respect. The principle was to set before this family class from the outset the prospect of each family becoming practically the owners, within the regulations, of the piece of land on which the head of the family was placed. He began as a labourer working for wages; part of his wages were set aside to repay a certain amount credited to him as a loan when he began; and when he had paid off the loan, which was about 20*l.*, as far as I can recollect, which he was expected to do in about 16 years, he would then be in the position of being free from debt, and he would be raised to the position of a free farmer. A free farmer was a man entitled to retain for himself (subject to the rent he paid) whatever profit he could make on his land in the colony; but until he was a free farmer he remained a labourer. As regards the second class I have mentioned, the boarder class, they consisted of single persons who were sent to the colonies on payment of a certain yearly sum, and there boarded with colonists willing to receive them. As regards the third class, the class of orphans, they were orphan children who were placed out with the families.

8745. Do you know on what grounds those people were selected?—They were selected on the ground of poverty, and I may say, almost destitution.

8746. And of deserving character?—Yes; inquiry was made into their characters.

Mr. *Bousfield.*

8747. You are speaking now, I understand, of the free colonies, and not of the beggar colonies?—So far, I am speaking of free colonies and not of beggar colonies. That state of things went on without much alteration until about the great reform of 1859; but several things happened in between which perhaps I had better refer to.

Chairman.

8748. Did they go on taking in new people to an extent of beyond the original 4,000 acres?—The 4,000 acres was the extreme amount to which they came to grow ultimately, but it was reached within a very few years from the foundation. The colony was founded in 1818, and at the end of 1821 they had attained the full size of 4,000 acres, so that I did not think it necessary to give the details.

8749. So that since 1821 it has not been really in that aspect in the nature of a colony at all?—There has been no extension. Of course families have occasionally gone away, and their place has been taken by others; but there has been very often, especially of late years, some difficulty in getting the vacancies filled up. The rule of the society was that if a district was in arrear with its subscriptions for its boarders, or did not find its 140*l.*, it should have no right of presentation, and no other district might pay the money for it, so that they lost their interest; they had no right to present anybody, and could not awaken interest in their subscribers. As a matter of fact, it was found that it was difficult to keep the numbers up.

8750. The beggar colonies were on a different footing, were they not?—The beggar colonies were on a different footing. They were in the original scheme, but the first colony was not founded until 1820. By 1888 the population in the beggar colonies had come to consist of about 3,500. They were founded for able-bodied persons who were convicted of begging, which was and is a punishable offence in Holland; for poor persons entering voluntarily; for old soldiers' families (it was stipulated from the first that the families of old soldiers who had fought in the wars should be entitled to go in there); and for orphans. These colonies were very expensive, the labour was very inefficient, and I think the financial difficulties of the first stage of the colonies were very largely attributable to the drawback of having the beggar colonies hanging round the neck of the free colonies.

8751. Those *pensionnaires* were not subjected to the same conditions with regard to the 140*l.*, and so on, as the others, were they?—No; and they had no prospect of owning anything at all. They had a certain pay, very small; but they had no prospect of keeping any profit, or of farming the land on their own account at all.

Mr. *Bartley.*

8752. It was a sort of punishment, I suppose?—It was a sort of punishment; they were forced to remain there.

Chairman.

8753. That was not so in the case of an old soldier, I suppose?—No, he was not obliged to remain; but the larger proportion of the population at these colonies, so far as I understand (at any rate, when I was there it was very much the larger proportion), consisted of those who were sent there for begging.

8754. They did not take any other criminals?—No; it was only for begging that the men were sent there.

8755. Will you continue what you were saying about these colonies?—By 1834 the finances of

Chairman—continued.

the society had got into a very backward state. They had been obliged to borrow large sums of money from the State and they were not able to make both ends meet, and a Royal Commission was appointed, which inquired into the condition of the society and recommended that it should be dissolved, or that, at all events, the two colonies should be separated. That was not done. About that time, or rather before that time, in 1829, Count Arrivabene made an inspection and a report on the state of the colonies, which was embodied in an account published in 1835 by Mr. Nassau Senior, which gives an extremely interesting and fully detailed account of both the free and beggar colonies as at that date; and Sir George Nicholls, of the Poor Law Board, visited Holland and Belgium in 1838, and gives a short account in the report that he wrote also.

8756. There was a charge with regard to the colonies in 1859, was there not?—Yes. Before 1859 Sir John MacNeill visited both colonies, and reported very fully in a report which is to be found in the Eighth Annual Report of the Board of Supervision for the Relief of the Poor (Scotland). I am not sure that I could do better than give you some points from his report. But perhaps, before I do that, I might read this passage from Count Arrivabene's report which comes earlier in point of date. It is quoted at page 11 of my report. He says, "The nature of these institutions" (that is, speaking of both the free and the beggar colonies) "appears to have been imperfectly understood in England. They are, in fact, large agricultural workhouses; and superior to the previous workhouses only so far as they may be less expensive, or, without being oppressive, objects of greater aversion. It is scarcely possible that they can be less expensive. The employing persons taken indiscriminately from other occupations and trades, almost all of them the victims of idleness and misconduct and little urged by the stimulus of individual interest in farming the worst land of the country, land so worthless that the fee simple of it is worth only 24*s.* an acre" (it will be remembered that I said it varied from 4*l.* to 1*l*, and my basis for that was that I found that the society paid 4,600*l.* for 1,200 acres), "at an expense for outfit, exclusively of the value of the land, of more than 130*l.* per family, and under the management of a joint stock company of more than 20,000 members" (those are the subscribing members) "cannot but be a ruinous speculation. Nor does the institution appear to have repressed pauperism by the disagreeableness of the terms on which it offers relief." (In that case he is speaking of the beggar colonies.) "We have seen, on the contrary, that it has not prevented its steady increase." Probably one of the greatest causes of the colonies not answering the expectations formed was that the labour of the colonists had been expected to be much more efficient than it turned out to be; and that led to even less being asked and received from the State than the State would possibly have been willing to give, and which might have pulled them through if given at the beginning. The discipline of the free colonies as well as that of the beggar colonies was at first very unsatisfactory. Many of these

Chairman—continued.

things have been remedied since, so that it is only as matters of history that I mention them, and I hope you will stop me if I go into too much detail. But, perhaps, I might give a summary as far as I can of Sir John MacNeill's Report.

8757. Would that be superseded by your own observations at a later date?—Of course the whole management was changed a great deal in 1859; but his report would show the kind of difficulties through which these colonies did go, and through which a colony of this kind is likely to go.

8758. It would perhaps be more instructive to the Committee if we knew what you found when you visited the colonies, and what the condition of them has been more recently; Sir John MacNeill is a great authority; but his information relates to 30 years ago?—That is true. My object in quoting his report in my paper and mentioning it now, is this: This society, when it began its operations, began with just the kind of object in view which anybody, I suppose, would have now in beginning a similar experiment in this country; and therefore even its mistakes are not without their lessons; so that whether, when I visited it, I approved of the system or disapproved of it, the fact would remain that that experiment had led to these faults, which were afterwards remedied to some extent, no doubt.

8759. Could you give us shortly the results of Sir John MacNeill's report?—Sir John MacNeill sums up at the end of his report the results that, in his opinion, might then be deduced from the experience of the free and pauper colonies, as follows: You will find them quoted at page 18 of my report:—"(1st.) Indigent families can rarely be made self-sustaining by providing them with houses, land, and all that is necessary for its cultivation, and for their own maintenance, until they are able to support themselves. (2nd.) Children brought up in the families of persons who are maintained by charity, though well educated in excellent schools, rarely become self-sustaining if there are means of subsistence provided by public or private charity on which they can fall back. (3rd.) Of all the branches of secular education for the working classes, the most important, both to the community and to the individual, is that which teaches self-reliance. (4th.) Paupers, even when able-bodied, cannot be made to contribute to their own support by employing them in agricultural labour on land belonging to the body which undertakes to maintain them, but, on the contrary, the attempt so to diminish the cost of maintaining them tends to augment it. (5th.) Paupers can be more advantageously employed in manufactures and handicrafts than in agricultural labour, but it is doubtful whether the price obtained in the market for the produce of their industry, after deducting expenses, will diminish the charge for their maintenance. (6th.) The combination of agricultural labour with manufactures and handicrafts leads to similar results. (7th.) The moral effects of the system pursued in the pauper colonies of Holland do not appear to be more satisfactory than those obtained from the systems adopted in other countries." That was his summary after his inspection

Chairman—continued.

spection. I have forgotten to say that one of the most marked features, both in the free and the beggar colonies, was that, whereas the society intended at the beginning to make them agricultural, they found that the class of men who were sent to them, coming as they did almost entirely from towns, were not suited so well for agricultural pursuits, except possibly for the simplest form of digging. Some of them were good at just the merest hand work. They were accordingly led in the first place to spend a good deal in supervision, which supervision led to instruction. It also led to the starting of other occupations, manufactures of one kind or another, which again led to supervision, and again to instruction; it led to the foundation of schools, forestry schools and manufacturing schools of all kinds, so that the expense went on multiplying and multiplying year by year in proportion as they got away from the original idea. That certainly, in the case of the beggar colonies, was one of the great difficulties, because they found themselves encumbered with a large quantity of products which they had to dispose of. They did dispose of it, in fact, to the State, at a price above the market rate, which was very good for the society, but was not particularly sound financing; so, at least, Sir John MacNeill thought, and other people better qualified to judge than I am.

Mr. *Bousfield.*

8760. All that you have been speaking of was before 1859?—Yes, that is before 1859. But they still manufacture a good deal. Perhaps I might give the Committee the leading changes which have been made as regards the free colonies since 1859. In the first place, there are now many more free farmers in proportion to labourers than there used to be. In 1859 the number of free farmers was only 176, and the number of labourers was 2,400; in 1860 the number of free farmers was 1,098, while the number of labourers was 1,630; in 1865 the number of free farmers was 1,298, and the number of labourers 820; and in 1870 the number of free farmers was 1,313, and the number of labourers 530.

8761. These figures rather indicate what would be the natural outcome of the system in process of time; for it takes so many years, you say, for a labourer to become a free farmer?—Yes, I think that partly accounts for it; but I am told they also set themselves to work to try and bring that about. The difficulty of making the men do the agricultural work well was partly met by starting six large model farms, belonging to the society, and worked by the society officials, employing the labourers upon them; so that they were in the nature of instructional farms as well. Then in the next place the principal non-farming work was formerly weaving, which was carried on for the Government at a loss. This has been discontinued, and other better manufactures substituted. Then, again, a forestry department, to which I alluded just now, has also been introduced and organized. There are about 1,000 acres of forest. Further changes are that the colonists are now allowed to keep all they earn (formerly the balance over a certain sum belonged to the society); a token coinage, which did obtain, has been discontinued; more piece-work is done instead of time-work; and the work is better done in consequence, and the tone of the colonies, and the discipline of them, is much better. When we were there we were very pleased indeed with the apparent tone of the colonies; the men did not seem to be loafing, idle kind of men. They were respectful people, and decently turned out; their houses were neat and the land looked decently farmed, and altogether, on the face of it, it looked like a fairly prosperous concern.

Mr. *Bousfield*—continued.

Chairman.

8762. Let me ask you this: Supposing one went over there to-day, one would find the free farmer established with his family, working his little farm; in what respect would he differ from an ordinary farmer owning his own land, or holding it on any other kind of tenure; he would simply be a farmer permanently settled there, would he not?—That is all.

8763. He may have been originally, or his father before him may have been, in destitution when brought there; but his condition now is that of an established farmer, is it not?—An established farmer, who has been established in the first instance by charitable aid, and who now has an extremely kind landlord, to whom he does not always pay all his rent. That, however, is not confined, I fancy, to these farmers now-a-days.

Mr. *Bartley.*

8764. Would the present men be descendants of the original men, or new men?—They never send men away. If a man chooses to go away his place is vacated and filled up.

Chairman.

8765. When a man dies, does his son succeed?—Yes, he has the right to do so.

8766. Then would they be largely descendants of the original men?—Yes, I believe so, very largely.

Mr. *Lawrence.*

8767. I understand you to say that there are very few additions in the course of years?—Very few. The annual turnover, so to speak, that is, the number of new families, when we were there, was something like five. There was all this large machinery at work.

Mr. *Bousfield.*

8768. Then this system is not now playing anything more than an insignificant part in dealing with the question of poverty in Holland?—That is what I thought at the time when I was there, and I put that very strongly to the director and the president, and the answer they made, which is in the director's letter at the end of my Report, is that I dwell too much upon that side of the question, and forget that it is a charitable concern; and they regard every family at the colony as a family that is being well helped by that charitable system. There are, however, very few new families brought in; so that it is doing little to solve the question.

Mr. *Mather.*

8769. It is more like an orphanage?—Yes.

8770. Is it not like a workhouse?—No, the beggar colonies take more that position. We were speaking of the free colonies, when I said the turnover was very small. In the beggar colonies, on the other hand, the turnover is very great, because they are always having men sent there by the magistrates.

Chairman.

8771. As to the management and condition of the free colonies, what was the impression you formed; did you think they were well managed?—They were thoroughly well managed. I thought the director was a very practical, hard-headed, sensible man, and the whole place seemed to be very well managed.

8772. Is there a demand for admission to the free colonies?—I was told it was difficult to get people to come. I was told that the idea had come to obtain that there was some sort of disgrace in it. How that came about I do not know.

8773. With regard to the beggar colonies, would you tell the Committee what your impression was from what you saw of them?—I should like to say I saw only one of those colonies, and that rather the smaller one. I saw the original beggar colony at a place called Ommerschans, which is now being vacated, or which by now probably must have been vacated. I may say that I wrote to Holland when I was summoned to give evidence before this Committee in order to try and bring my information up to date; but I am sorry to say I have received no answer. I did not see the second colony, the larger half of the beggar colonies as they existed in 1888, which is called Veenhuisen. The Ommerschans colony certainly on the face of it did not recommend itself to me; it did not seem to me to be very well managed. Of course the people there were a very inferior class of inhabitants to the class in the free colonies which we had just been visiting. They were obviously very inefficient workmen; it was much more like the ordinary workhouse labour which one sees in England. Sir John MacNeill in his time said that it took 15 colonists to do the work of one good labourer. I quoted that to the director of the colony and asked him what he thought of it, and he said "Well, it is about the case now." So that, so far as inducing habits of labour goes, the beggar colonies were not succeeding.

Mr. *Pickersgill.*

8774. Can you tell us about what the numbers were in that colony when you visited it?—There were about 400.

Mr. *Bartley.*

8775. Those men do not stop there permanently, do they, as they do at the free colony; they come and go, I suppose?—They come and go.

Chairman.

8776. Do they come and go and come back, do you know?—They come and go, and come back. The tendency to return is very marked indeed. You will see a Table at page 31 giving details with regard to that.

Chairman—continued.

8777. I see some were there even up to the fifteenth or twentieth time?—Yes. Mr. Herbert V. Mills' story about the head gardener at Veenhuisen, which is told in his book, "Poverty and the State," gives a striking instance in point. He was very much impressed by the colonies in a contrary sense to that in which I was impressed; but even he tells the story of the head gardener at Veenhuisen, who is one of the most useful men there, that when his time was out he used to beg from a policeman in order to be sent back again.

8778. He went through the form of committing an offence in order to be sent back?—Yes. But, of course, one cannot argue from an individual case like that. However, this Table of figures, on page 31 of my Report, is very significant in itself.

8779. Generally speaking, did you form an opinion as to the applicability of either system to this country?—Yes. I thought they were neither applicable to this country; and I may say that the director of the free colonies, who knows this country pretty well (he lived in Scotland for a good many years, and he speaks English very well indeed), thought, from his knowledge of his own system, and from his knowledge of the beggar colony system, that they would not be really of any use to this country. The impression that remained on my mind, after visiting the beggar colony and doing my best to get at the back history of it from reading reports and books, was that the Government would have been extremely glad to have done away with it if they were not committed to it; but there the things were, and they could hardly give them up.

8780. At all events, there is no disposition to extend the system or to create a new colony?—No, I think I may safely say that. That is one of the questions I asked when I wrote to Holland the other day, but I have had no answer.

8781. Is there any fault found with these colonies in Holland on the ground of their competing with the outside agriculturists in the market?—I do not think that is so in the case of the free colonies.

8782. With the benefit of public charity or public funds in one form or another, they are able, I presume, to compete to the disadvantage of the outside farmer?—They consume their own productions to such a large extent that I do not remember that striking us very much. The manufactures, of course, did compete, especially in the case of the beggar colonies, the manufactures competed a great deal there; there was a considerable output of manufactured articles from the beggar colonies.

8783. There would be some noise about that if we attempted it here, I suppose?—I should think so, probably.

8784. As regards the cost of these colonies, I understand that the sources of support are public subscription and some State aid?—Those were the original sources entirely. In 1859 the beggar colonies were separated definitely from the society, and were taken over by the State. The

Chairman—continued.

The State took them in part satisfaction of the debt to the State, and the State has the complete management now of the beggar colonies. The free colonies alone are managed by the society.

8785. The beggar colonies are paid for by the State?—They are now paid for by the State.

8786. What do you consider the success of the free colonies (so far as success has followed them), has been due to?—I suppose I should say to the fact that they have had good directors and have had good officials working with them, and that the districts have been pretty careful in their choice of families, and have not sent families that were not likely to succeed, and these men with the money advantages that they get, and the instruction, and being taken away from old surroundings, I suppose, have had a better chance than they would have had if they had tried to settle in the country on their own account. But, as I say, they do not manage to pay all their rent. I found it very difficult to get at the bottom of the financial question, and I do not think I succeeded in doing so; but in order to test the position of the free farmers, I particularly inquired on these two points: whether, as a matter of fact, the rents were well paid, and whether there was any sign of putting money away. In reply, I was told quite distinctly (and figures were supplied to me), that the rents were not fully paid, but that every year there were always some arrears of rent, and that there was no sign of saving to any great extent; it generally took the form of keeping another pig; there was no money laid by. So that I do not suppose that these men, with all their advantages, have been really doing much better than the outside farmers on similar lands just outside.

8787. It is an essential part of the system of free colonies, is it not, that the residence should be permanent?—Yes; they are not sent away.

8788. So that there is a very small output or input of subjects?—Yes, that is the essential part of it; they cling to that now, and that always has been so.

Mr. *Bartley.*

8789. There is nothing to induce them to go?—There is nothing to induce them to go.

Mr. *Bousfield.*

8790. Apparently there is something to induce them to stay?—I was told that of late years there has often been a difficulty in filling up vacancies.

Chairman.

8791. As regards the numbers in their families, families in Holland are, as a rule, larger than in many other parts of the Continent, are they not?—I am not quite sure I could speak about that.

8792. While you acknowledge the success, up to a certain point, of free colonies, the beggar colonies, you say, cannot get along at all without considerable expense and without assistance from the State?—Yes, without large assistance from the State.

8793. They are compulsory in their constitution, are they not?—They are essentially compulsory in their constitution.

8794. Did you find that they were at all deterrent in their action upon begging; has this system had any effect in stopping begging or stopping the offences it is directed against?—Yes, I should say it has. You hardly ever see a beggar about in the streets; but I suppose it would be comparatively easy to bring that about; for if begging was always followed by imprisonment in this country, we should not see so many beggars either.

8795. Is there anything else you would like to say about the Dutch colonies before we turn to the Belgian colonies?—I think not.

8796. Now, as to the Belgian labour colonies, when did you visit them?—I visited them in October 1890; but I may say I did not go into the matter with regard to them nearly so minutely as I did in the case of the Dutch colonies. I happened to be at Antwerp for a conference that was sitting there, and the conference authorities arranged for an excursion on one day to the Labour Colony at Merxplas, and I naturally chose that particular excursion. The Director of the colony supplied us with a printed statement of the history of the management of the colonies, and I took that as the groundwork of my report; and I wrote into it everything I observed myself, and had it looked over by the Director.

8797. The Director found no fault with it?—What little alterations he made I embodied in the report, so that it is practically what he said.

8798. Where are the colonies situated?—They are situated at the north-east of Antwerp.

8799. If I recollect rightly, that is the same moorland heathery country as in the case of the Dutch colonies?—It is very much the same kind of country I should say.

8800. Can you say anything as to the origin of these colonies?—They survive out of a number of old *Depôts de Mendicité.* These were the provincial *Depôts de Mendicité* in the country in 1830, and there were certain colonies of a society rather like the Dutch society, the *Société de Bienfaisance.* They have all been closed now except those at Hoogstraeten and Merxplas.

8801. Then is there also a free colony at Wortel?—There are no inhabitants at Wortel; it is only ground where the inhabitants of other colonies go to work, at least it was so in 1890. The size of these three together amounts to about 950 acres.

8802. What is the population?—The population is about 4,000; it is rather larger in winter. They have accommodation for about 4,900.

8803. How is that population brought together; what is the compelling force?—The compelling force is that they are brought by the decision of the police courts under the law of March the 6th, 1866.

8804. So that they are penal institutions?—They are in the nature of penal institutions.

8805. For what class of people are they provided?—Every able-bodied person above 14 years of age found in a state of vagabondage must be arrested and brought before a police magistrate. If found begging he may be arrested, and, if arrested, must be brought before a magistrate, and may be punished with from one

Chairman—continued.

to seven days' imprisonment, and from 15 days to six months' state of subjection to Government disposal. They send them to these colonies in the course of their Government disposal. Then every non-able-bodied person or every person under 14 years of age found begging or in a state of vagabondage may be arrested and brought before a magistrate, and in this latter case the period of subjection to Government disposal may be extended to two years; so that two years is the maximum period and 15 days the minimum period.

8806. Do any people come in voluntarily to these colonies?—There are also some who come in voluntarily, "indigents," which I translate as "paupers"; although I do not suppose it answers to our technical word "pauper." "The colonies receive paupers ('indigents') who choose to offer themselves, provided that they are furnished with the necessary authority from the burgomaster and aldermen of their place of settlement." "Such voluntary inmates may be discharged after one month, if it is their first admission, and after six months, or one year at the most, if they have returned within 12 months after their last preceding discharge." So that even the voluntary inmates when once in are only allowed to go out subject to that rule.

8807. Is the place enclosed or shut in in any way?—There is no wall round the outside. I do not think it is enclosed. They have a number of soldiers there. It is a small military post. When I was there they had 140 soldiers and officers there, simply in order to keep discipline, and to prevent the colonists running away. But the colonists do not very often run away; the authorities look after them too sharply.

8808. Are these colonies self-supporting in any way?—No; they do not make both ends meet; that I was clearly told. The daily cost is fixed every year by order of the Government, the amount the communes are to contribute is fixed, and they pay so much per head per day.

8809. For each man, according to his residence?—Yes; and according to whether he is able-bodied or not able-bodied.

8810. Could you say what the cost so charged usually is?—What I found was that it was 65 centimes a day for an able-bodied and 85 centimes for an un-able-bodied or infirm person. That was the rate at the time when I was there.

8811. Do you know if that is supposed to cover the cost of keeping them; it is a small amount, is it not?—It is small; but then, of course, there is whatever they can make besides.

8812. Do you regard these penal institutions as being either deterrent on the one hand, or reformatory on the other?—I was given to understand that they were not so; but of course I could only judge from what I was told. I had no back figures to go upon in that case; but I was told it was certainly not so. The men certainly came back to the colony over and over again. If I remember rightly, one of the officials to whom I spoke told me that when 86 men were brought in at one time to the place, and he directed those who had never been there before to stand up, out of the 86 only six moved.

Mr. *Wootton Isaacson.*

8813. Are they all mendicants?—Mendicants or vagrants; the classification is very careful and very well done.

Chairman.

8814. Is it your impression that the colonies were well managed?—The discipline was extremely good. The people worked much better than they did at the Dutch beggar colonies; they were evidently kept up to the mark much more.

8815. The conditions were altogether more stringent?—Much more so.

Mr. *Bartley.*

8816. They seem to like it, as they come back?—They do come back. I suppose vagabondage is rather a difficult habit to shake off.

Chairman.

8817. Again let me ask you, as I asked about the Dutch system, what do you think of the application of this system to this country; do you think it feasible?—I think if it were applied it would not apply to the kind of unemployed cases which, I presume, your Committee are principally considering. It might do for beggars and vagrants, but there is nothing particularly cheap in it, and I do not think it can really compare with our ordinary workhouse system.

8818. If public opinion in England is prepared to go the length of supporting a law that beggars are to be punished by this kind of detention, there might be some chance of success for such institutions?—I think so. Certainly they do show that they keep the people out of the way; and the sexes being separate, there are certain advantages from that course also.

8819. But, as you say, it does not touch the case we are dealing with, of the usually well-employed and laborious man, who, through some circumstances not directly affecting himself or arising from his own conduct, cannot obtain labour and therefore falls into distress?—It seemed to me as if it would not touch that case. I cannot see how it could be applied for that purpose.

8820. Do you think any State labour farms are likely to be of use in that respect?—I do not. I imagine the unemployed question which the Committee is considering arises chiefly in regard to town people and operatives, and that kind of people, who are not fitted for agricultural pursuits, as a rule, and that any labour farm would probably follow the history of the Dutch labour farms in this respect: that manufactures would have to be started, or some other kind of occupation found besides agricultural work, and it would drift away from being a labour farm into being a State manufacturing industry, which some people think is advisable, but I do not.

8821. But is there any sense in which you think labour farms might be of use?—The only way it has ever occurred to me in which they might be utilised was that if private individuals choose to start such labour farms as a mere training-ground through which to pass men or families in order to render them fit for emigration to other countries, where their agricultural training

Chairman—continued.

training would come in useful, then, with carefully-selected characters, it is possible people might be made fit for emigration, and likely to succeed as emigrants, who otherwise would not succeed. But from what I saw from the cases that came before me on the occasion I mentioned in my former evidence, I think there are very few such instances among unemployed cases which are likely to turn out well in that way. That, however, is the only way in which, so far as I can see, labour farms might be utilised.

Mr. *Bartley.*

8822. They have not worked in that way abroad, have they?—Not at all; because they have gone on a permanent line. It would be an entirely different thing from the free colonies of the Dutch.

Chairman.

8823. Any such experiments as you speak of you would leave to private enterprise and not to the State?—Yes, I would. I do not think it is within the duty of the State to undertake or support such experiments. They can only hope to succeed by re-creating the very energy and self-reliance, the loss of which has probably caused the need.

Mr. *Mather.*

8824. Your experience of the Dutch colonies, judging from your evidence, would lead you to conclude that they were institutions established in Holland by public charity in lieu of a national workhouse system or Poor Law such as we have in England?—You are speaking of the beggar colonies, I suppose.

8825. I am referring to the whole scheme. The free colonies, of course, arise out of the beggar colonies to a certain extent?—Yes, or rather it is the other way.

8826. From the nature of these colonies, judging from your description which is given in greater length in your book, it is obvious that in Holland there is no Poor Law system, there are no workhouses, and, I should judge, few orphanages; in this charitable, philanthropic movement on the part of a certain society they have gathered together the means to mitigate the conditions of life to the halt, the lame, the blind, the depraved, and the vagabond class, and to give an opportunity to such as may rise out of such classes of gaining a decent livelihood?—The free colonies do possibly raise a man, if he was not doing well before. When he gets into a free colony he has a chance of raising himself from the position of a labourer to the position of a farmer. The beggar colonies deal more with the class you speak about; that is to say, they take people who have altogether failed; but I do not think they raise them.

8827. They are more like our workhouses?—They are more like our workhouses.

8828. But, in addition to the workhouse occupations that we pursue here, they have these land-tillage and out-door occupations connected with the colony?—Yes, they take able-bodied people, of course.

8829. If in Holland they had the same workhouse system or Poor Law system as we have, these beggar colonies would naturally have never been started, would they?—I should think not.

Mr. *Mather*—continued.

8830. You made a somewhat emphatic statement, during your evidence, that manufactures seem to be a necessary feature in the colony; or you intimated that, unless manufactures could be started amongst these people, and manufactures which necessarily compete with the outside market, the colony could not be made to pay out of the land itself?—I did.

8831. Of course you are aware that the land selected in Holland for these colonies is extremely poor land?—Yes.

8832. It was an arid desert practically, to begin with; and you give us, in your Appendix XI., the value of the products of such land after some years of cultivation?—Yes.

8833. If I understand you rightly, you consider that the yield from the land of the colonists at the present time is a very poor yield compared with any equal area of land in England of an ordinary character?—I will not say I have expressed any definite opinion about that. The test was that the farmers did not succeed in making enough money to pay their rents.

8834. I have made a calculation from the figures you give in Appendix IX.; I see you say that the average yield per hectare was, in the case of beans, 16 hectolitres; I suppose a hectolitre is about 2¾ bushels?—Yes.

8835. And a hectare is about 2½ acres?—Yes.

8836. Then that would represent 18 bushels per acre as the yield of their land?—Yes; that is so.

8837. Is it too much to expect that ordinary English land would give 30 bushels per acre of the same crop, beans?—I would rather not express an opinion about a farming point.

8838. In barley also you give the results as 23 hectolitres to the hectare, or about 25 bushels to the acre reduced to English measure?—Yes.

8839. I suppose English land would produce about 38 bushels to the acre, between 35 and 38?—I daresay you are correct.

8840. You do not mean to say that the land of these free colonies, or any of the land they use for this purpose, is land at all equal to ordinary English land?—No.

8841. So that, so far as the product of the labour can be estimated, whatever the labour might be (good, bad, or indifferent), the result, when working on very poor land, could not possibly be as good as when working upon the land which we have to deal with in England generally?—Of course the prices in 1888 were not the same.

8842. The Hadleigh Colony, in Essex, had an idea of starting manufactures when they began, and they rather largely spent their money in putting down plant for manufactures, and the consequence was that they lost about 4,000*l.* in one year; but when they stopped them, as they have done in the last year or two, and devoted their labour to agriculture, they have turned their loss into a profit; are you aware of that fact?—I was not aware of it.

8843. You gave rather a positive statement about manufactures being necessary to make these

Mr. *Mather*—continued.

places pay, and you said that the manufactures have to be sold in the open market, therefore competing with the ordinary workmen of the country; I only want to point out that in the case of the only experiment in England that we have at all on similar lines for the vagrant and criminal class (that is the class at Hadleigh Farm; the Submerged Tenth as it is called), the labour was found to be most profitable when devoted solely to agriculture; are you aware of the facts in regard to the Hadleigh experiment?—I have heard a good deal about it. I do not wish to give any evidence about it. I believe the condition of the colony is subject to a good deal of qualification as to figures; the cost of supervision, &c.

8844. You have referred to a letter sent to you by the Director of the Dutch Free Colonies after having read your article upon the colonies?—Yes.

8845. May I call your attention to the fact that he, in criticising your article, says that you "too much overlook the fact that this is an institution of philanthropical character; it would not, indeed, be difficult to modify the present system in such a manner as to show a profit. Certainly the society could cease to support aged and infirm colonists," and so on; he somewhat doubts your conclusion as to the colony having proved a failure altogether, and reminds you that the colony was established not for the purpose of making any profit, but for using the contributions of a certain charitable society to help a certain number of people?—That is the part of his letter which I referred to in my former evidence. I have never said it was a failure. I only said it did not make such a yearly output as to give us any reason for supposing it could deal with big questions as we have to deal with here.

8846. He also calls your attention to the fact that in Holland they have very extraordinary expenses, in consequence of the nature of their institutions, for the erection of schools and churches, and so on; so that they were not establishing the colony for the purpose of farming only, but really to supply the wants of the indigent population of the whole colony; that is the conclusion, I think, that he puts before you?—He refers to a number of points.

8847. So that in no sense of the word is the colony regarded, by the Director at all events, as anything but a means of supplying workhouse life with the test of labour through agriculture instead of the test which we employ in this country?—I do not think the free colonies were ever meant to be like the workhouse. I think it was more as the Director puts it, a philanthropic institution. There was no question of test at all; it was intended to be a charitable society, and that it claims still to be.

8848. The society continues, I presume, in full vigour at the present time?—I believe so; but, as I say, I have received no answer to my recent letter.

8849. But you are aware, no doubt, that other reports have been issued about the colonies since your visit in 1888, even so recently as 1893?—I have heard so.

Mr. *Bartley.*

8850. You consider that these colonies, as I understand, are no cure for the unemployed problem here?—I think not.

8851. To carry them out large State grants are necessary, are they not?—I think the history of the Dutch colonies proves that is so.

8852. And nothing could be done without large State grants?—Large grants from some quarter or another.

8853. Do I understand, in your judgment, they have failed as a means of raising the people that work on them?—The free colonies have certainly raised those who have worked on them; but it is by reason of their permanent nature.

8854. Have they made the people more independent?—I should fancy they have; because I believe they were people who were in great want when they were presented to these particular livings, so to speak.

8855. Have they made them able to fight the battle of life themselves without all this machinery?—It is very difficult to say. Of course they are not called upon to do so.

8856. Anyhow, as regards the beggar colonies, the Dutch scheme has not done so?—No; nor in the free colonies have the farmers there succeeded in doing what the farmers outside are doing every day, namely, standing on their own feet.

8857. That is to say, they have not made them independent men?—No.

8858. They have been very costly, have they not?—They have been very costly.

8859. The labour in many cases, I understand, has cost 15 times its proper cost?—That was in the beggar colonies.

8860. Then they have hardly promoted thrift?—No; there seems to be no sign of that at all.

8861. Can you say that they have really reformed the characters of the men, and made them into ideal citizens?—In the case of the beggar colonies I should say certainly not. In the case of the free colonies they are inmates of a charitable institution, and they seem to be a very self-respecting, respectable sort of people; but there they are; they are provided for to that extent.

8862. Really and truly, the philanthropic idea of making the men absolutely independent has not been realised?—No.

8863. Do you recommend this sort of system in any way to this country?—No, I do not.

8864. You think it would not be of use?—I do not think it would. That is my own opinion.

8865. You would not wish certainly to see it tried with State funds?—Certainly not with State funds.

8866. If it were tried at all, even by private means, you think it would be a doubtful experiment?—I think so.

Mr. *Wootton Isaacson.*

8867. These farms do not take in the whole of the pauper class of Holland, do they?—No, by no means.

8868. Do they take in the unemployed class?—The beggar colony farms certainly do, so far as the unemployed might pass through the police courts as beggars or as vagrants.

8869. Have they any task allotted to them as to

Mr. *Wootton Isaacson*—continued.

to the amount of work they have to do every day?—Yes, they are subject to very strict discipline in the colonies when they get there.

8870. That discipline is instituted by the Government?—Yes.

8871. Now, do you suppose that any private enterprise adopting a system of that kind could succeed, without the intervention of a strong government to enforce discipline?—I think it would be very difficult indeed.

8872. I see the cost is about 62*l.* a-head per annum; does that include women and children?—Are you speaking of beggar colonies?

8873. I am speaking of what you call free colonies. I gather from this Blue Book that you state that the annual outlay, exclusive of interest, is about 739 gulden; that is the amount given in this Blue Book as being the amount in 1891?—I may say I have not seen anything of the Dutch colonies since 1888. I was not there in 1891.

8874. Are there any foreigners in these beggar colonies?—I cannot tell you, I do not know.

8875. Are they confined to the Dutch nationality?—I do not think they are confined to the Dutch nationality. I suppose if a foreigner was taken up for begging he would be sent to the beggars' colony.

8876. Are they allowed to work at any other trade but farming?—Yes.

8877. Do they work at any other trade?—Yes.

8878. What trades do they work at?—In Appendix XIII. of my report is a list of the products of manufactures from the Dutch beggar colonies in 1885, which I think would answer your question. They turn out linen, cotton, calico, woollen and sacking goods, and a whole number of things.

8879. How do they dispose of those goods?—They were disposed of to a large extent to the Government.

8880. They are not allowed, I suppose, to sell them on their own account in the big towns?—No. I think not.

8881. Does the population of these labour colonies increase in bad times?—The free colonies remain very stationary. As regards the beggar colonies I have got no means of giving you the figures over a period of years, and therefore I cannot tell you.

8882. I think you told Mr. Bartley just now that you did not think that this system would in any way meet the unemployed difficulty in this country?—Quite so.

8883. You say there is strict discipline in the Dutch beggar colonies; are drinks allowed in the colonies?—I think not, but I am not quite certain. The discipline I was thinking of was that they have different description of punishment. I see there are punishments for indulging in drink, so I suppose sometimes they got it whether they were allowed it or not. I do not think they were allowed drink.

8884. What I wanted to arrive at was this: I wanted to know whether any restriction was placed on the colonists as to whether they would be permitted to get any quantity of drink of various kinds?—Certainly, speaking to the best of my recollection, I think the regulations would not allow them to have drink.

8885. Are the colonies carried on on the principle of temperance?—Yes, I think so; I think I am clear about that. I have before me here the diet, and there is no mention whatever of any intoxicant.

8886. And yet you say some men were fined and punished for drinking?—I suppose they got the drink smuggled in; it must have been managed in that way.

8887. Can you tell the Committee whether these colonies are managed on total abstinence principles?—I believe they are. I cannot give you the information more clearly than I have.

Mr. *Heywood Johnstone.*

8888. The principle of your union, I gather, is to give no permanent outdoor relief at all, except to the old and infirm?—Except to those who are not capable of being moved to the workhouse.

8889. In fact, you only give it to those to whom you cannot give indoor relief on account of physical infirmity?—That is the principle.

8890. May I ask how much you give in the case of outdoor relief?—It depends entirely upon the case. We always go upon the principle that when we give it we give enough. I have known relief given to as high an amount as 12*s.* a week.

8891. Was that a single case?—It was the case of a family. It was a case where a man had met with an accident and could not be moved and could not follow his ordinary avocation.

8892. Was that a permanent case?—No; it went on for about three months, I think.

8893. I am asking about these permanent cases of relief to the old; can you tell me what the amount would be in such a case?—I know of one case where we are giving relief to the value of 4*s.* 6*d.*, and a nurse at 7*s.* a week.

8894. That is relief partly in money and partly in kind?—Yes, in that case we are giving relief to the value, including the nurse, of 11*s.* 6*d.* a week to that one woman.

8895. Have you no voluntary association for providing nurses?—Some parishes have and some have not. I think that particular parish has not. But in this particular instance, from the nature of the case, there has to be a resident nurse in the house with the woman.

8896. Had you much change in the constitution of your board at the last election?—Yes, a good deal. We had, I think, 10 or 12 new members.

8897. Was the question of out-relief in any way made a test question at the election?—It was in some parishes.

8898. What was the result in those parishes?—In certainly one or two parishes the members of the old board were not returned on that particular ground; but in many cases, where I believe it was also fought, they were returned, and as a matter of fact we have now on the board, I think, a majority, if it came to voting, of something like 25 or 26 in favour of the existing policy of the board.

8899. But, at all events, there are a certain number

Mr. *Heywood Johnstone*—continued.

number of electors in your union who are not entirely in accord with the policy of the board in that respect?—Yes; I think there is every sign that it is telling gradually and by degrees upon the habits of the people. But there always will be, I am afraid, people who would like to get out-relief if they could.

Mr. *Bousfield.*

8900. You expressed the view that these penal colonies hardly touch the question of the unemployed?—I did.

8901. Just let me draw your attention to one point; your own district, in which you are chairman of the board of guardians, is a rural district, is it not?—It is.

8902. In the urban districts, is it not the fact that considerable difficulty arises in dealing with those out of employment from the fact that the incorrigibly lazy, and idle and worthless, are more or less mixed up in the question with those who would work if they could, but who have not any work to do?—Yes, I believe so.

8903. And if we had in this country the same system of dealing with tramps and beggars, and incorrigibly lazy persons throughout the year, so far we should deal with a certain number who otherwise, when pressure from want of employment came, would swell the volume of those who were seeking for relief?—Do you mean dealing with them in the sense of a test?

8904. No, I mean if throughout the year we had in operation such a system as is in operation in Belgium and in Holland, of dealing with all tramps and beggars and incorrigibly idle persons who are left to prey on society in some form or other, we should so far get rid to a large extent of a portion of the population who now in times of want of employment help to swell the number of unemployed and make it more difficult to deal with the question?—No doubt it is quite true that if you get them shut up they would not be there to swell the numbers of the unemployed.

8905. You have said that the result of this system so far as you saw it in Holland was that there were no beggars to be seen in the streets?—Yes.

8906. Would that include the class of tramps do you think?—I should say so. They seemed to be very free from that class of person in Holland.

8907. A person tramping about the country from place to place such as we have here, living on charity, would in Holland be arrested and sent to a penal colony, I take it?—Yes; if he was found begging he would.

8908. There are a certain number who according to your figures come voluntarily to these colonies?—Yes.

8909. Does that really show that this system has no deterrent effect, do you think?—Of course you may put it either way. You may say you always are getting the very people you want to get, and therefore it is a success; or you may say that because you are always getting them, therefore you are not improving their condition.

8910. There are a certain class of idle and worthless persons, are there not, who, rather than earn a living by any efforts of their own, would even prefer to be in a prison, much more a workhouse or a labour colony; you know that there are such people in this country?—I believe there are. I am glad to say we have very few of those in Bradfield.

8911. Still we know there are certain persons who are willing to commit some offences against the law with the object of spending their days in prison when they have come out of prison?—I have understood so.

8912. But that would hardly show, would it, that the prison was not, after all, a deterrent to a large part of the community; you follow what I mean?—Yes.

8913. When you come to look to see what the results of these penal colonies are, do you not think it is rather a question of statistics; is it not a question of the proportion of tramps and beggars to the total population; is not that the fair way of looking at it?—No doubt that would be a very interesting line to follow up.

8914. I suppose there are no such statistics available?—I am afraid I have not got them.

8915. You may perhaps be able to tell us what the total accommodation in the Dutch penal colonies is at any one time?—I think I can give you that.

8916. I see at page 31 of your book it appears that in December 1885 there were 3,253 beggars and vagrants in the two colonies you mention there?—Yes.

8917. Are those the two penal colonies?—Yes.

8918. Those two colonies exhaust the 4,000 and odd acres you spoke of?—Yes. I was looking at page 27, where you will see this passage, "At Ommerschans at the time of our visit there were about 400 souls only. In January 1886 there were about 1,400. The transfer from Ommerschans to Veenhuizen will be completed in about two years. At Veenhuizen there were then" (that was in January 1886) "in the three colonies about 2,020; so that it works out at very much the same total, taking the two together; that is to say, 3,420 in January, as against 3,253 in December.

8919. I do not know if you could go further and give us any idea of the number of people dealt with there in the course of the year?—I am afraid I could not give that.

8920. For what sort of terms are these beggars and mendicants sentenced?—You will find at the foot of page 27 a translation of the two articles in the new penal law of March 1881, under which they are sentenced; under Article 432, "Public beggary is punished by imprisonment of 12 days at the utmost."

8921. That imprisonment of 12 days does not refer to being sent to a penal settlement; it refers to imprisonment in a gaol, does it not?—Yes, it refers to imprisonment in a gaol. Then Article 434: "If at the time of the committing of one of the offences named in the two former articles a year has not elapsed since the delinquent was sentenced irrevocably (in last instance) for one of those offences, the punishment can be increased by one-third, and the delinquent, if capable to work, be condemned to be placed in a Government working house for at the most three years."

The

Mr. *Bousfield*—continued.

The "working house" there referred to, I understand from the translator of this passage, is the same as the beggar colony.

8922. Then three years is the maximum?—That is the maximum.

8923. Have you any idea of what sentences are given; I suppose they do not send a man there for a week?—No; the sentences are longer than that.

8924. I see on page 27, at the bottom, you say "the period of their stay varies from six months to three years"?—That is so.

8925. Now we may go, perhaps, one step further: taking the figures you gave us of 3,252 as the number being there on one day, if the period is from six months to three years, there would perhaps be from 5,000 to 6,000 dealt with in the course of the year; it would not be more than that probably?—No, it looks something like that.

8926. What is the population of Holland?—I am afraid I cannot tell you that at the moment.

8927. After all, as regards the general effect on Holland, the proportion of the number of beggars dealt with in these colonies, as compared with the total population of Holland, is an important matter in considering the relative success of these colonies, is it not?—I suppose it is; I do not know how you are going to determine the proportion of beggars in this country; you would have to get a series of years to show whether it was increasing or diminishing.

8928. I was coming to that; I would like to ask you could not you give us a little better idea than you have done hitherto of the part which these beggar colonies play in the complete system, whatever it is, in Holland for dealing with the poor and the idle; you have given it as a separate thing; I want to know how it works as an integral part of whatever system there is in Holland, and what part it plays in that system?—There are worse cases, which go on from these beggar colonies to other places of restraint. For instance, you will find at Hoorn there is a place of restraint for beggars who are sent there from these colonies as a punishment. They are practically the same class of men, but the worst kind of that class. I am afraid I cannot give you more information about it than what is given in my Report.

8929. Perhaps you a little misunderstand my question. Supposing a person in Holland is starving, is there any State or municipal system by which he could get relief?—I have been told he gets relief through the ministers of religion.

8930. Has he any right to it?—I believe he has a claim to it as charity. I have asked my relations in Holland that very question. I have not gone into it as a matter of looking it up in books of authority, but I have talked to my own relations on the subject, and I have been told that if a man was in need and in danger of starvation in their particular neighbourhood, if he went to the ministers of religion of his own particular denomination they would be bound to see to it; and I am told that they do.

8931. You say there is a kind of Poor Law system in Holland which is worked by the clergy?—That is what I understand, but of course without any workhouse, and only as a matter of charitable relief; how they get over the difficulty of begging, and why it is that the man is not sent off to a beggar colony for begging, I do not understand.

8932. How does that system work. Supposing there is a man permanently disabled without means, somehow or other, I understand from you he would have, on applying to the clergy, say, a weekly allowance?—Yes.

8933. How would that money be raised?—I fancy it comes from charitable subscriptions, or money in the hands of the clergy; but I would rather not be pressed much about that point, because I am afraid I should give evidence that you ought not to rely upon as being very accurate. It is some years since I talked to my people about it, and my memory may be inaccurate.

8934. You are chairman of a board of guardians, and you have condemned this system of penal colonies in Holland, and I put it to you whether, to judge it fairly, you must not look at it as part of the whole system, whatever it may be in Holland, of dealing with the poor?—Yes; that, I think, is very fair.

8935. We have a certain class of unemployed in England who are called tramps, and are dealt with as tramps; let me put, with regard to our treatment of them, two or three questions that were put with regard to the Belgian system. Do you think our English system with tramps reforms them?—No.

8936. Do you think that it makes them more thrifty?—No.

8937. Do you think it has been a financial success?—No, I do not.

8938. Again, ought you not, as an element in judging of the cost of the system, to compare how much per head is spent in Holland in poor relief, with the corresponding figure that is spent in England in poor relief?—Yes.

8939. Those figures you cannot give?—You will see Sir John MacNeill's statement on that point if you will turn to page 17: "A Dutchman" (Sir John MacNeill concluded) "was made a colonist and kept a pauper at the rate of about 6*l.* 10*s.* a year; a Scotchman, if the difference of living in the two countries were taken into account, would be made a colonist and kept a pauper at the rate of about 8*l.* 10*s.* a year."

8940. Is that through the Poor Law in Scotland?—No, that would be if they established colonies in Scotland. "With no colonies," he says, "the Scotch pauper costs less than that sum."

8941. Ought we not to look at the thing as a whole. Here in England we have a certain system of Poor Law. Can you say what it costs altogether in England if you take the whole of the poor rates throughout the country?—I would rather not make a guess at it.

8942. That is an element that really ought to be considered, is it not, if you are to make a real comparison of the systems as regards their efficiency?—Yes. If you are to compare the two systems as regards their efficiency in dealing with the beggar classes, I think you are pursuing a very right and wise line, if I may say so; because

Mr. *Bousfield*—continued.

because there is no doubt if public opinion would back up a law in England authorising the authorities to deal with the beggar classes in England on lines something like those adopted in Holland, you would get rid of a great deal of public scandal and beggars, and a great many objectionable persons would disappear from view who would be treated more or less well, and more or less economically in institutions to which they would go, and it might show a good result, a not more expensive result, or perhaps even a less expensive result, than the present system. But whether one would be justified in trying to get such a law passed, or could get it passed, is another point.

8943. Public opinion is a thing we shall have to deal with, and I hope we shall help to form it a little by our conclusions. But let me ask you, as chairman of a board of guardians, and knowing the Dutch and Belgian systems, is it not your view that our Poor Law system would be improved if we had the means of dealing with tramps and beggars and the incorrigibly idle by sentencing them in some way to some penal sort of work for a year or two, or three years, or whatever the time might be, in a somewhat similar way to what is done in Holland and Belgium?—I do not think you would improve your tramp or your vagrant. It is true we do not improve them now, as it is. I do not think we have succeeded at present.

8944. But looking at it from the point of view of the rest of the country, other than tramps and vagrants, would it not be an improvement?—I should not be prepared to go the length of thinking that we ought to punish people because they are poor, for that is what it would really come to: you would take these people and put restraint upon them because they were poor.

8945. No, not because they were poor, but because they were idle and refused to work?—There you come to the difficulty of ascertaining whether they were refusing to work; you simply find that they are not at work.

8946. That, of course, is a practical difficulty?—If you could be sure you had found a man who was idle because he would be idle, then, I think, you would almost have solved the whole problem.

8947. Then it comes to this, that if it were possible to select the idle class from the class of those who would work, you think they might be dealt with by means of some penal work imposed upon them?—Yes; if the man was out of employment simply from his own choice and not because he could not get employment, I would go so far as that; but I am afraid that is a large "if."

Mr. *Lawrence.*

8948. I suppose the financial failure of both the free and beggar colonies was founded on the idea, which did not prove to be correct, that when the labour had fully developed the ground, the ground would be an adequate asset to meet the expense?—I think that was the idea.

8949. That really is not found to be the case?—Apparently not.

8950. It is the case, is it not, that about

Mr. *Lawrence*—continued.

80 acres are required for 40 or 50 men in the beggar colonies?—Yes; I think that is right.

8951. And in the Dutch colonies and in the Belgian colonies you have to have horse patrols and other means of keeping the people on the ground?—Yes. There is much less supervision required in the Dutch colonies from what I saw than in the Belgian.

8952. But there are rewards for the recovery of fugitives in Holland; are there not?—Yes, it is so.

8953. So that if in England we passed an Act to forbid people tramping, and if we confined them on a model farm of this character, the chances are we should have to go in for the same methods of detention?—Yes.

8954. In nine years, I understand, only 41 families were affected by the free labour colonies?—Yes.

8955. You have stated that there is difficulty in adding to their number; have you stated to the Committee the advantages which the free labour colonists started with already?—I do not think I gave them very fully.

8956. Is it not the case that the free labour colonists started with a low rent and no interest charged on arrears?—That is so.

8957. And with an outfit, with cows and manure, &c., on easy terms?—Yes.

8958. And work to be had in the society's workshops in bad times?—Yes.

8959. Cheap doctoring and education, besides instruction and superintendence gratis, and the general indulgences granted by a friendly landlord?—Yes, that is so.

8960. Your information now is that practically this favoured class has great difficulty in adding to its numbers; it is practically stagnating in its social advance?—Yes, that is so.

8961. I suppose that the psychological failure was owing to the fact that a competence was secured to all, and extra diligence brought no adequate aid to stimulate further diligence?—Yes. That is specially true of the beggar colonies.

8962. I believe in the beggar colonies they actually give medals for good work?—They did. I think that is discontinued now. That was under the old system.

Mr. *Pickersgill.*

8963. I want to ask you a question or two about your evidence last week with regard to your mode of giving relief in the Bradfield Union; you told us, as I understood, that in every case you granted relief by way of loan and not by way of absolute gift?—That is our practice.

8964. Do you inform the applicant that the relief is given on those terms?—Yes, we do.

8965. I believe you are the only board of guardians that carries that practice to that extreme?—I did not know we were.

8966. Can you give me the name of any other board of guardians that acts as you do in the matter?—I thought that Brixworth did, but I am not certain of it.

8967. You are probably aware that the Poor Law Act of 1834 gives you power to do this, subject

Mr. *Pickersgill*—continued.

subject to an order made by the central board?—Yes, I believe that is so.

8968. The central board has made such an order, and accompanied the order with an instructional letter. I want to ask you whether your attention has been called to the following words in that instructional letter?—Would you kindly give me the date of the letter you refer to?

8969. It was circulated when the prohibitory order was issued. It is dated 1852, but it is not out of date, because it is quoted in current text books on the subject. I am quoting from the original document. The words of the instructional letter are as follows: "The power of lending is only to be exercised where the guardians think fit to do something less than absolutely give the relief applied for in cases where the application is lawful. In such cases, and in such only, they may lend it; and such loans should never be made without being in due time strictly recovered." My question is, whether you carry out the terms of that instructional letter, and whether you do strictly recover those loans?—I am bound to say we do not always recover the loan. The applicant is informed at the date of application that relief, if given, will be given on loan; but as a matter of fact, if these circumstances are such that we do not think we can recover it, we do not enforce it.

Mr. *Pickersgill*—continued.

8970. As a matter of fact, you only get back a mere fraction of what you ought to get back in this matter?—Yes.

8971. Then does it not follow you are not complying with the instructional letter of the central board by which you are bound?—I should like to have another opportunity of looking into it. I may say I found this practice in force when I joined the board. It has never been called in question before, either by the auditors or in any other shape or form, and it is a new point to me that any doubt should be expressed as to the legality of it. We have found no difficulty in enforcing payment when we thought it was a proper case to enforce it.

8972. Does not it appear to you, now that I have read the words of the letter, that you are not complying with the instructional letter?—It seems to me, so far as I followed the words, that our fault is rather that we do not enforce the payments more than we do.

8973. Do not the words I read rather imply that you are only to grant money by way of loan when there is a reasonable prospect of recovering the loan, and that you are not to grant it by way of loan in all cases indiscriminately?—You may put it in that way, no doubt; but I should like to have an opportunity of looking into it.

Friday, 17*th May* 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. Bartley.
Mr. Billson.
Mr. Thomas Henry Bolton.
Mr. John Burns.
Mr. Campbell-Bannerman.
Mr. Heneage.
Mr. Heywood Johnstone.
Mr. Logan.
Mr. Mather.
Mr. Renshaw.
Mr. Round.
Mr. Whiteley.
Mr John Wilson (Govan).
Mr. Stuart Wortley.

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN IN THE CHAIR.

Mr. WILLIAM MATHER (a Member of the Committee), Examined.

Chairman.

8974. YOU are a Member of this House and of this Committee, and you are desirous of giving evidence before the Committee?—I am.

8975. I believe you wish to make a preliminary statement?—Yes, I desire to make a general statement before the scheme which I am about to put before the Committee is examined in detail; because I think I need to offer to the Committee some justification for the temerity I have displayed in venturing, as a manufacturer in one of the great industrial districts of the country, to trespass, as it were, upon questions relating to farming and agriculture. But I hope to show, in the statement I shall make, that there is a distinct relation between the two questions so far as the subject is concerned with which we have to deal in this Committee; and I hope my colleagues will feel, when I have made my general statement, that at least I have some slight *locus standi* on the question.

My object in submitting this scheme is to afford to our Committee the opportunity of examining into the merits of farm colonies as a means of employment (*a*) of a *temporary* character for those working men, the bread-winners of families, whose regular work from any cause may have been suspended, and who have been in search of fresh employment without success, whose savings have been spent, and whose homes would next have to be sacrificed and their goods pawned or sold; (*b*) of a *permanent* character, for those who have been displaced, without hope of restitution, in the ever-changing conditions of labour in the manufacturing industries, from the trades and occupations they have always followed.

It is necessary to take a view over the field of manufacturing industry before anyone can judge of the necessity for these proposals; and I will ask the Committee to permit me to make a general statement on the subject of employment. My experience as an employer of labour in Lancashire in one of the staple trades of the country, viz., that of engineering in various branches, has brought me into relation with many industries in which machinery is used, and has convinced me that severe hardships are suffered by a considerable number of well-conducted and eager working men, whatever the general prosperity in trade may be, while in times of great depression that number swells to a serious magnitude. The savings of such men and the resources of friendly societies and trade unions afford relief for a time, by a process the most wasteful that can be conceived of. No return can be made by the man spending from his own savings or from the savings of his fellow-workmen in the mutual help societies. He eats the bread of idleness, unwillingly and with humiliation. His whole life and character place him above the class who readily apply to the guardians for help, though he may, of all, be most entitled to benefit by the laws which were designed to help honest, diligent, but unfortunate men. He will not accept aid from the public or from charity. After receiving and exhausting what he may be entitled to from his former thrift, he proceeds to realise what simple possessions his home may contain, and he, his wife, and children, sink deeper and deeper into abject poverty.

Chairman—continued.

Now, this class of persons I have known all my life. They increase rapidly at times from various causes, and again diminish in number. The introduction of machinery in processes formerly performed by hand will, at least temporarily, displace men; and though improved machinery generally leads to cheaper production, followed by increased demand, and consequently affords in the long run new channels for more labour in the aggregate; yet, for a while, there is enforced idleness among the men displaced, and occupations have to be sought for, often in vain, by the first sufferers from a change which in the end may be a benefit to the community as a whole.

Another

Chairman—continued.

Another cause of displacement is in the inability of some men to readily adapt themselves to new methods of doing work. They may be slow of thought, and, though diligent and painstaking, they will not compare with some men of natural intelligence, though the latter may be objectionable in character and habits. When changes from any cause have to be made, the least resourceful and skilful are the first to feel it. Such men may be said to have missed their vocation. Manual labour has its tastes and proclivities. When an occupation accords with the natural taste of a man, he becomes skilful without conscious effort; when it is discordant, the utmost effort and self-coercion will not make a rapid and dexterous worker. I have had constant experience of this. I have no doubt whatever that thousands of men are now employed in manufactures who would be happier and more successful in agriculture, and *vice versâ*.

But the displacement of labour follows from a still more important cause, and one which will inevitably increase. Our manufactures themselves, under the competition of intellect and international rivalry, are ever changing, and changing at shorter intervals. A whole district is affected by a change of fashion in the world's garments. A successful novelty in the working up of raw material will denude a whole district of employment; and if such novelties are produced in a foreign country, as not infrequently happens, there is no possibility of our workpeople rushing to where the demand is, as they might from one district to another in our own country. Many examples of this have occurred. The town of Bradford was almost built up by the great alpaca and the allied trades many years ago; but not long ago a complete stagnation set in with most Bradford goods, and the production of novelties by Germany and France left Bradford actually stranded in idleness. This, however, was remedied by the courage and enterprise of its citizens. But re-construction and re-absorption are long processes in such cases, and meanwhile the manufacturing districts suffer terribly from want of work on the part of those who form the very pith and marrow of our industrial classes, and who, from their very nature, cannot, and will not, be paupers. We have had evidence before this Committee of this in another form in the case of the tinplate industry of South Wales.

All trades in this country have been subject in the past, and I think will be more subject in the future, to these contingencies. They are not inconsistent with real progress and general prosperity; for our own knowledge, education, taste, and enterprise will doubtless keep pace with other countries, now that we are well equipped with the means of using more of science and art in our industries. But even our own success in beating our neighbours will not diminish the changes of occupation and displacement of labour. It may not be that less labour in the aggregate will be required, say, from decade to decade, as increasing population absorbs more manufactures; but it may well be that in each manufactured thing less labour will be needed. Indeed, the novelties that attract the markets of the world are generally the result of cheapness

Chairman—continued.

with effectiveness; and the constant effect of invention is to arrive at this. To this end, economy of labour-cost is the first desideratum, not economy by reducing wages per man but by reducing labour as a whole; and the higher the wages per man the more this may be done. It gives a great incentive to mechanical devices, in the working of which the wages of the few persons needed may be largely increased with economy of result, owing to the increased intelligence demanded to work machinery that saves manual labour. We have seen this in a remarkable degree in the textile trades. Formerly a Blackburn weaver would work one loom at low wages; now he will work four looms and earn much higher wages. But much higher qualities are needed in the weaver; alertness, deftness, and forethought are rendered necessary by the high speed of weaving with more perfect machinery. Immensely more material is worked up into goods with immensely less labour, though the cost per weaver is much higher. And so on through all the trades, these changes are constant and will ever increase, displacing and curtailing labour, though adding to the gains of those who adapt themselves readily to work appliances which demand higher intelligence. In the iron and steel trades the same process is going on.

These changes are impossible of prevention, and lie in the very nature of things. But the sufferings, more or less of a temporary character, from these changes are unnecessarily intensified by abnormal movements from another source. While we are increasingly using our natural resources in this country in the form of minerals in our manufactures, we are decreasing in the use of our greatest natural resource, the land. Agricultural industry is decaying, and the population which ought to be occupied in cultivating to higher uses and greater increase the resources of nature, is streaming steadily to the manufacturing districts, there to intensify all the difficulties of employment, if it be not indeed the one great cause of those difficulties. The perennial source of employment and wealth, the land, is robbed of the labour whereby alone its fruits can be realised; while the labour required for manufacturing our mineral resources, and the other imported raw materials that we can profitably use in our manufactures, is far in excess of the demand. On the one hand, in our manufactures we are meeting the increasing competition of other nations, which compels us to economise labour at every point, not by diminishing the wages of individuals, but by reducing the number of workers; while, on the other hand, we are gradually forcing the population of the country to crowd our towns and manufacturing industries with labour that can only find employment by displacing the labour already there. If it were not for this anomaly, this subversion of natural law, our manufacturing industries of themselves, notwithstanding their fluctuations and their changes of methods, might absorb the population which grows with them. To find room and employment in the towns for those born in the country districts as well, is an impossibility.

It has been suggested that if the hours of labour for each man were to be reduced, more

Chairman—continued.

men would be employed, and consequently the manufacturing districts could carry, in comparative contentment, all the labour which is offered. If this were true, it would be only a temporary palliative. But the experience I have gained in reducing the hours at my own Works to what is called the eight hours day, makes even this doubtful. It has proved that an eight hours day is the day in which a man works at his best and produces most, because he feels continued zest in his work. It is natural to an honest and true man to love work. In all ranks of society, the honest, true, manly men love work. A man who does not love work, whether peer or peasant, is not a fully-developed man, mentally and morally. With shorter hours, therefore, there would be no guarantee for more men being needed, except to replace, by occasional night shifts in times of extraordinary pressure, overtime, which, under an eight hours day, cannot exist. It must always be borne in mind that there is the ever present possibility of substituting mechanism for men; and I have not the slightest doubt that in the future constant efforts will be made to employ less labour by increasing mechanical contrivances to supplant men, making the wage amount of these fewer number who remain a matter of comparative indifference; for only the picked and specially intelligent would be selected. In a universal eight hours day, or 48 hours week, however desirable in itself, there is no hope of permanent relief for the want of employment caused by the unnatural accumulation of working men in the manufacturing districts from the agricultural districts. It is not improbable that the opposite effect would be produced. But it is most desirable to work the shorter hours for other reasons altogether. Health and leisure on the one hand, and more enjoyable labour on the other, are in themselves most valuable and necessary. Once let employers and employed feel, by examples of this, that such boons may be acquired without diminishing production or reducing wages, and voluntary adoption of the shorter day will follow in all trades. This would, however, leave the ever-increasing volume of labour untouched.

But were the agricultural industries in as high a state of development as the manufacturing, a vast amount of labour would find employment, to the benefit of both. At the present time we have the reverse of this. For, although our manufacturers have profited by scientific methods, great energy, business capacity, and enterprise, they lose the advantage of much home demand for their manufactures owing to the gradual decrease in the yield of the land, and the absence therefrom of a large population of consumers who should exchange the fruits of their labours for the products of the manufacturing districts. And not only so, but this population burdens these districts with multitudes of men who are unproductive themselves, and who lessen the value of the productions of others. These are the conclusions which I have formed after many years' experience in the manufacturing districts as an employer.

It will not be disputed that our manufacturing industries are highly organised and developed. Of late years, through technical education and

Chairman—continued.

the spur of increasing competition, a continuous effort has been made to extend still further this development. The raw materials employed are worked up with a vigilant eye to their economy as to quantity and the excellence of the manufactured products.

Let us apply the test of criticism to the use of the raw material, namely, the land, in what should be the sister industry of agriculture. The contrast is immeasurable, and the spectacle deplorable. Take the Reports of the Royal Commissioners on Agriculture, Messrs. Wilson Fox, Hunter Pringle, Henry Rew, Jabez Turner, Aubrey Spencer, and Dr. Fream. They testify to general ruin and decay even in the best agricultural districts of the country. If our systems and methods of manufacturing the raw materials required in any branch of industry had remained where they were even 25 years ago, ruin and decay would have been stamped upon every manufacturing district, such as is now recorded in the agricultural districts. If, on the other hand, the same spirit of knowledge, enterprise, energy, intelligence, and co-operation had been displayed in the agricultural as in the manufacturing industries, there is no room for doubt that the yield of the land and the labour on the land would have been increased, tending to afford employment for labour from the towns instead of gorging the towns with labour from the country. Moreover, the whole nation would have been richer; for Nature would have responded to the hand of man and yielded greater increase to the general store.

Much has been written and spoken on the subject of colonies on the land. Prejudice, together with proofs of failure in some experiments, undoubtedly exist. But the condition of agriculture in England to-day affords altogether fresh elements in the question for us. The most favourable conditions exist for the revival of agricultural industry on new lines, which, while meeting to a large extent the employment of a class unable to live by work in our towns, would bring to agriculture the forces it needs to improve its position.

The proposals which I have submitted are not based on mere theory, or the imagination of benevolent persons. They are the result of investigations into many experiments under varied conditions, though differing from all hitherto existing in the selection of a class of the unemployed, which, being superior to the pauper class or casual workers so familiar to the guardians of the poor, are debarred on that account from accepting relief on like terms, either in the form of doles from the charity organisations, or through the workhouse system. The literature on this subject proves how largely the public mind is possessed with the idea that farm colonies have become a necessity. Expert agriculturists, scientific and practical, have expressed favourable views on the subject.

Benevolence and philanthropy have no part in the scheme submitted. Attempts to deal with so large a problem by private societies supported by subscriptions of benevolent persons would necessarily give the character of a charitable institution to the enterprise. To leave the question

to

Chairman—continued.

to speculative investors would be to leave it untouched, for no investors could afford to give the initial steps to prove what may be done. Their capital can only be used in enterprises which may be reasonably expected to yield speedy profitable results. However good the security, some immediate return is looked for, though it may be very small, before capitalists will enter upon such an enterprise. But where both the philanthropist would fail, and the capitalist decline to invest for profit, the State may enter to take the initial steps to promote the common weal, provided that the security for its capital be reasonably guaranteed against loss. In the vast sums of money expended by the State on national education, the common weal is advanced without any possibility of the capital being repaid, or even secured, except in the increasing power which knowledge gives to the people to add to the wealth and well-being of the nation as a whole. Public authorities spend from the rates millions a year in the aggregate to support the poor and destitute (as we have seen by the evidence given before this Committee), simply to save society from the effects that would arise from a large class of abject persons in misery and want, whatever may be the cause. None of this capital is ever repaid, nor is it in any sense ever indirectly productive, as education is. It is a continual drain upon the resources of the classes who are less unfortunate or depraved.

Any plan which would convert this waste of money and labour into productive uses, must be a great boon as well as a great economy to the nation. The scheme submitted is not intended to primarily affect the conditions of this lowest pauper class; but indirectly it will tend to reduce it, and in so far it will save the waste now prevailing.

I suggest that the State should take the initiative, if the object is desirable in itself; because from no other source can the means be provided. The State does not seek profit. It looks for, and must provide for, security of its loans, or for property, which shall belong to the nation, giving a return in some form or other, as in education, for the benefit of the nation.

On these grounds I think it may be shown that the proposal to invest the money of the State in the initial step to prevent the continued decay of the land on the one hand, and the accumulation of unemployed labour on the other, is justifiable from the purely economic point of view. I say the initial step, because, owing to the condition of agriculture and land ownership at the present time in England, there is reason to believe that no purchase of land by the State need be repeated after the first moderate investment to prove the economic value of the enterprise. Judging from the Reports of the Commissioners, landowners abound who would be glad to accept such a rental in perpetuity for some portion of their land as that which the State would receive as interest, after the land was brought to a high state of cultivation. Confidence can only be inspired on business grounds by examples of success and practical experience. No tentative

Chairman—continued.

experiment can prove anything. Risks would be incurred by inadequate means, and no means could be adequate which required immediate returns. The State alone can afford to wait for the returns; for it alone can afford the means to provide the skill and knowledge to direct the culture of the land on new lines by the labour which is waiting employment, and which, if guided and assisted, can be profitably used.

But should the State not be inclined to undertake even the slightest risk for its capital invested in the initial step, the plan suggested in the scheme, by which the Poor Law authorities would undertake to cover any deficiencies, would obviate the difficulty. These authorities could not fail to be benefited even by the experiment. They are by law and common consent committed to the provision of maintenance for destitute persons, and, as we know, at enormous cost of a wholly unproductive character. They could not fail to benefit by the result, if even a limited number of such persons sustained themselves, who otherwise would have a right to claim maintenance without any adequate return. No deficit on a farm-training colony, such as is proposed, could exceed the cost to the guardians if the persons working there had to be sustained in the usual way; while, on the other hand, the guardians would immensely benefit, if it were proved that such employment would tend to relieve the rates altogether as regards such persons, and open the channel of profitable employment to larger numbers even of the well-conducted and respectable poorer classes.

The establishment and control of these colonies I propose to vest in county councils, because they are large and responsible bodies of widely representative character, accustomed to large affairs. They are charged already by the State with great functions. In the education necessary to industrial pursuits, they have the control and supervision of large funds. In this work they possess the power to invite the co-operation on their committees of management of citizens expert in the subject. The magnitude of the benefits involved by the success of such proposals for restoring the land to a condition in which it may yield the maximum increase, and may absorb largely the labour of a rapidly increasing population, would call forth the zeal and devotion of many capable men and women. The co-operation of such forces as the State, the county councils, the Poor Law authorities, and the well-conducted unemployed working classes, together with the aid of special knowledge and practical experience to direct the labour, would at least bring to bear on agriculture advantages hitherto unknown, and an adequate trial would certainly be of national interest.

It has been urged during the investigations of our Committee that increased products from the land would compete with those now in the market, and thus interfere with the labour already employed. But the enormous quantity of farm products imported each year from abroad, which, exclusive of bread stuffs, may be taken as at least 50,000,000 sterling, is sufficient proof that such farm products are not supplied by home

Chairman—continued.

production. The labour and land of other countries are employed to produce what our land and labour, properly used and directed, is equally fitted for. We have not largely produced such products, because the system of big farms and grain crops, and the absence of hand tillage, have been the prevailing custom. This system has proved unprofitable, and in some places disastrous, in competition with the great corn-growing countries to which we have access by water carriage. But not only do we now import such corn crops, but little has been done to cultivate the land by the hand tillage necessary to produce the great variety of products which that method of cultivation alone can deal with successfully, and which are much more profitable than the crops which require little labour. Yet the labour is lying idle in our congested manufacturing districts. The best of the agricultural labour has left the land for want of proper occupation there, and only the least capable is left behind to make agriculture more difficult. One of the agents of a large landed proprietor said to Mr. Wilson Fox: "If the Commissioners are anxious to help the landed interest, this can only be done by finding money at a very cheap rate and putting labourers on the land. . . . Landlords are anxious enough to find the land; but what is the good when working men cannot get on it?"

It has been further stated during our inquiry that the supply from abroad of so many millions worth of dairy produce, and the like products of hand labour, is no loss to us, because we export things in exchange and we pay for them in our manufactures. It is true we supply with some of our manufactures other countries from which we obtain large supplies of food products. But it would be a great fallacy to assume that we supply our manufactures *because* they send us agricultural products. They take our manufactures because they are the cheapest for them; we take their products because, under our free trade policy of unrestricted and unfettered trade, they are cheapest for us. We do not avoid growing such products for ourselves *because* they buy our manufactures. Our land would not be left out of cultivation if we could produce eggs, butter, cheese, bacon, fruit, flax, and other products in quantity and cheapness sufficient to supply our needs. And we certainly should not put it out of cultivation that we might take more from abroad in exchange for our manufactures. Holland would buy from us her locomotive engines and machinery if they were the best and cheapest, whether she sent us eggs or not. We should buy her eggs if they were the cheapest, whether she took our machinery or not. The greater the exchange of products between two countries of that which each produces best and cheapest, the better for both; but neither would stop an industry of any kind for which she was well circumstanced for home uses, because the other country bought largely of the other industries. Unhappily, in England, we import great quantities of certain products for which our own land and labour are admirably adapted, but which we cannot now raise owing to agricultural capital being absorbed in profitless agriculture of another kind. Meanwhile, labour languishes and land lies unproductive, even of the crops for which the capital was originally invested.

Chairman—continued.

For these reasons I ask the consideration of the Committee for the scheme, on the ground that while it proposes to offer the means of employment for a certain portion of the unemployed working classes, it will also tend to promote a system of agriculture which may arrest the decay of what should be our greatest industry.

It is necessary, I think, that this Committee should give some judgment on this question; because, more or less, the scheme represents a very large amount of public feeling outside the House of Commons. Societies have been formed for encouraging these views, and for the establishment of colonies for the utilisation of hand labour. This Committee, it appears to me, will perform one of its most important functions if it can throw light on this question. If, on the one hand, it proves that all such schemes are unworthy of the attention, even of the benevolent people of the country, or if, on the other hand, it can show that the whole or any part of it is a possible remedy for the present state of agriculture, and the accumulation of labour in our manufacturing districts, I think it will have been of great advantage to the country that we should have considered it.

8976. You have given a very full account of the general principles upon which your scheme is founded, and the considerations which have led you to frame and adopt it. Dealing with it in detail, do you make any discrimination between different classes of unemployed? — Certainly. The basis of my scheme is, that such a training colony, as is here described, should be in the first instance occupied by that portion of the working classes described as the well-conducted, respectable, but very poor working classes, who are gradually sinking into a state of abject poverty, and who feel that they cannot appeal to charity or to guardians under the present system.

Mr. *Bartley.*

8977. How would you find them out?—That is provided for by a department of the Poor Law authority in any town or district having the means of coming into contact with these people by the application of the people themselves when they are in that state. Those who desire work only, and who refuse to take relief from the guardians either in money or in kind, and who have spent their own savings and only want work in order that they may earn more money to keep themselves until their trade would revive, might go to such a department of the Poor Law authority, and there, without losing their self respect, ascertain the conditions upon which they could get employment upon the farm labour colony.

Chairman.

8978. I understand from you that you distinguish between those of the unemployed who are temporarily unemployed and who perhaps have no experience of work on the land, and on the

Chairman—continued.

the other hand those who being out of place, either through being absolutely displaced or finding themselves not successful in the industry that they have followed, may seek to be permanently placed upon the land?—Quite so. Part I. of this scheme relates to the means by which all such persons would be introduced to the land; and all would have to go through this training, whether they were persons who desired to occupy the land as a permanent living in the future or not. Primarily the Poor Law authorities would only find accommodation, so far as their means extended, for the persons actually needing work and needing sustenance. That would be the first class of persons the guardians would deal with; and, of course, for some time to come it would be the only class probably that would be affected by this scheme.

8979. How do you designate the kind of colonies to which such persons would be sent?—The Farm Training Colony, which is dealt with in Part I.

8980. Will you say what you mean by a farm training colony?—You will find the description of those colonies begins at paragraph 12 of my scheme on page 3. In Sections 1 to 4 you have the scheme described for the introduction of those persons requiring work and desiring to work, in order that they may be sustained during their temporary difficulties. The description is fully given there of what the procedure would be.

8981. You refer to the paper which I hold in my hand, headed "Draft Scheme to provide Work for the Unemployed Classes"?—Yes.

8982. Will you put that in, in order that it may be before us, and may be printed in the Appendix?—Yes. (*The same was handed in—vide* Appendix.) The land which would be acquired by the means described in the body of this scheme would, of course, be that upon which the people who desired work would be employed. The land of the colony would be under the control, as I have described, of a committee of the county council, and it would be under the management of a skilled agriculturist and practical farmer with scientific knowledge, who would take the direction of all the labourers sent down to the colony for employment in the form of hand tillage. The application of the land to those products which would be of the greatest advantage and the greatest value for the carrying out of this scheme would be at his discretion, and he would direct the labour of every working man who came there, after having put him to a certain test as to the physical power he had to perform any work at all (to some extent the man might be tested by an inquiry on the part of the Poor Law authority before he was sent down to the farm), and, having judged as to the employment which each particular man could best follow on the farm, he would direct his labour in the most profitable manner. The farm, as described in this scheme, is to consist of two classes of land: one a cultivated portion of land, and the other semi-cultivated land, or land under pasture, or land which has gone out of cultivation for some years. There would be on such land a great deal of rough work, in every such training colony, for the labour that was in no

Chairman—continued.

sense skilled, the labour being divided according to its qualities; and there would be labour on the cultivated portion for, it may be, agricultural labourers who were out of work, or for such men sent down by the Poor Law authorities who might be most fitted for that part of the farm cultivation.

8983. Do you think you will often find those two classes of land in juxtaposition?—I find from the Reports, which I have very carefully studied, of the Sub-Commissioners who have been inquiring for the Royal Commission on Agriculture, that there is unhappily too much possibility of acquiring this kind of land. There is, of course, cultivated land everywhere, and there is just a boundary somewhere between the cultivated and uncultivated land. The sites for these colonies would have to be selected where those two conditions existed; and I think there is no difficulty whatever in finding in some parts, and in fact in many parts, of the country the conditions named, namely, land under fair cultivation, which could be obtained at a very low price, and contiguous land which was in a state of starvation or absolute waste.

8984. By "uncultivated land" do you mean what is called derelict land; land that has been once cultivated, but is not cultivated now because it does not pay to do it; or do you mean absolutely unenclosed moor land, or marsh land, or some land of that sort?—I do not think it is necessary to limit the choice to moor land and marsh. I believe, judging solely from the Reports, which I have very carefully studied, from the Commissioners on Agriculture, much land exists which is becoming derelict, and which might again be brought under cultivation, and form part of the land which this scheme deals with, so that the conditions of the scheme would be fulfilled, viz., that there should be one portion of land which is fertile and fruitful, and another portion of land which requires to be brought into a fertile and fruitful condition. In that respect this scheme differs from all other trials which have been made in the support of this class of men upon the land; because generally it has been assumed that these men can support themselves at once out of waste and uncultivated land (which, I believe, is impossible); whereas by putting them upon land which is already yielding something, plus an equal area of land which requires to be brought into that condition, the colony is sustained by the food produced by the cultivated land, upon which there are a few skilled farm labourers under the management I have described; and on the uncultivated land these fresh uninitiated labourers would be employed on work in which they would earn sufficient to maintain themselves out of the fruits of the cultivated portion of the land. I may say, in relation to the question which you have put and to which I have generally replied, I shall have expert evidence to offer. Mr. Harold Moore, who, as an estate agent and land surveyor, knows well the character of the country, at any rate for very many miles round London and in the Midland Counties, will be able to give you specific examples of land of the character which I have described.

Chairman—continued.

8985. So much as to the kind of land required; will you now say how you would proceed with the formation of such a colony?—I would now call attention to paragraph 14 on page 5, which sets forth that "to such a colony the Poor Law authorities might send men of the unemployed working classes who seek for relief through employment only. These men would have to undertake to remain and work on the colony for a definite period, during which they would be mainly employed upon the land, and would receive their maintenance in return for their labour. That period should be not less than a month; and no man taken on to a colony should be allowed to quit it without giving a week's notice, unless he can satisfy the manager of the colony that he has the offer of a definite and immediate engagement in some industrial occupation. Of course, on their admission to the colony, their physical capability for hard outdoor work and agricultural labour will be tested." I should like to call attention to the point in that statement that these colonies ought to be entirely free. They should be places where there is no necessary obligation on the part of the men who go there to remain beyond such reasonable time as men and women now remain under the ordinary terms of employment in any kind of work known either in agriculture or in manufacturing industries. They would be simply seeking work, and they would get work given to them under the conditions stated there as to the length of time they were to remain. If an immediate situation were offered to a man who was temporarily unemployed, the manager of the Colony would use his discretion as to allowing him to take that situation at his ordinary employment. But in the absence of any such special circumstances, some undertaking as to the length of the man's continued occupation on the farm is essential. Just as all of us now employ men and women under certain conditions, so in this case it is proposed to require a week's notice. That is what I call perfectly free employment. There is to be no punitive or penal feature about these farms at all. The man has to go and do the work allotted to him, and he lives under the conditions prepared for him. The work would be very hard, and no man would probably remain there longer than was absolutely necessary to keep him during the little while he or his friends were looking for a situation for him at his own trade; and consequently there would be a shifting population through this Farm Training Colony. Those men who cared to go to the hard work for the purpose of preparing themselves to take part in the second section of this scheme (namely, the Small Farms Settlements section of it) would pass through the Farm Training Colony with the distinct purpose of passing from the uncultivated on to the cultivated land, and getting to understand farming operations, with the distinct view of living upon the land altogether, and taking advantage of the opportunities offered under the second portion of this scheme.

Mr. *Heywood Johnstone.*

8986. What is to happen if the man will not stop the month?—Precisely what happens if any one of our servants or workmen or people we employ, who having undertaken to fill a situation, after a week is never seen again; that man, of course, has debarred himself absolutely from the privilege of having this means of employment; he simply is recorded on the books of the Poor Law authorities, and such a person would sink down to the Submerged Tenth, with whom this scheme has nothing whatever to do. This is a scheme not for the Submerged Tenth; it is not for the pauper class, for the indigent, the depraved, or the drunken; but it is a scheme to find employment for a class which has often been referred to, and described before this Committee as the unemployed classes who will not take charity, and will not come under the provisions laid down by the Poor Law for their relief. That is precisely one of the points in the scheme which I desire to emphasise; that this employment is to be free-will employment, without coercion, and only for those persons who are absolutely honest in their statement that they want work in order that they may live, and do not want charity. On that basis alone let this scheme be considered, and if the Committee consider it on any other basis it will be only a waste of time; it has no relation to any other class, although indirectly it will tend largely to diminish the class of paupers or the depraved class of the population, inasmuch as it removes the despair of any man who is beginning to sink. It arrests the tendency to sink, and keeps a man in employment until he can find an occupation in his own trade, and by so doing it prevents an addition to the Submerged Tenth, or the depraved class, which is largely increased owing to the desperate conditions in which a good man often finds himself.

8987. I think you fully explain in your scheme the particulars as to the number of men that you would employ, and so on; but one element in your scheme is that they should have auxiliary employment, as you call it?—Yes, certainly. One of the most important considerations for the manager of such a colony would be that such tillage should be selected as by the use of hand labour would produce products requiring to some extent manipulation after they were produced. I give, in my draft scheme, a list of those products, all of them being imported articles; there is not one article that I have named there as a product of the land which is not now imported into this country in very large quantities.

8988. Which paragraph do you refer to?—On page 6, paragraph 20 deals somewhat largely with that question. The products named in that paragraph do not by any means exhaust the list of those that may be produced; and I should like to refer the Committee, if they care to go deeply into the study of this question, as I have done, to the authority I have for all the statements here made. I keep strictly to the line of the Commissioners' Reports for all these statements made concerning the possible products of such farms, and they show the profitableness of hand labour in comparison with the other labour which has been so largely employed upon land hitherto. Mr. Wilson Fox, in his Report upon Lincolnshire, at page 105, gives in considerable detail the kinds of products which can be got from the land with hand tillage under such conditions

Mr. *Heywood Johnstone*—continued.

ditions as would be provided by the scheme of this Farm Training Colony. He shows how this hand tillage may be utilised in the increased production of things mentioned as being produced already in Lincolnshire, but, of course, on a very small scale. There is one rather striking statement of Mr. Wilson Fox's with regard to Lincolnshire. The ruins remain in Lincolnshire of what formerly was a large industry, viz., the growth of flax. The sheds and buildings required for that purpose remain in the landscape as monuments of the past state of prosperity. The flax industry is, we know, very large in our own country, and the quality of flax grown in different countries differs, of course; there is Irish flax, Dutch flax, German flax, and Russian flax. There might be English flax. We import very largely indeed, as stated here, flax from foreign countries; and it is mentioned by Mr. Wilson Fox, in his Report upon the conditions of Lincolnshire, that flax is a product suited to portions of that county, and there seems to be no earthly reason why it should not be again produced, excepting that it is a crop requiring a great deal of hand labour. If cheap hand labour were employed in the production of flax, it would be a crop that could be grown in England; but where the farmers with larger ambition have put the land to growing enormous grain crops, of course flax has been neglected.

Mr. *John Wilson* (Govan).

8989. Does a crop of flax not tend to impoverish the land?—Only under certain circumstances. Flax requires very poor land. But on that question I prefer to wait for the evidence of an expert agriculturist, who will be the only witness upon this scheme besides myself. In order that I may not run any risk of being charged with venturing on subjects that I have not worked at myself, I prefer (though I could give a more definite answer) that the minute evidence upon that point should be given by an expert witness at the next sitting.

Chairman.

8990. You say that there are monuments of an expired industry in flax in Lincolnshire; does the report from which you quote give any reason to believe that it was a prosperous industry while it lasted or whether it died from natural causes?—I will quote from Mr. Wilson Fox's Report: "In this district, particularly at Pinchbeck, Surfleet, and Gosberton, a great quantity of flax used to be grown; but this industry, as in the west of Ireland, no longer exists, and the flax mills are either pulled down or are standing in ruins. There are in Spalding some large empty premises which were formerly used as storehouses when the flax trade was thriving."

8991. It may have declined because it was found unsuitable to the climate or soil, and from other circumstances?—One would not say it was unsuitable soil in Ireland, I presume. The soil in Ireland produces flax; but the fact remains that we import flax and flax substitutes to the extent of about nine millions sterling; and we have at one time grown it in this country. It is a product requiring a great deal of hand

Chairman—continued.

labour. That to some extent, I think, accounts for the fact that it has not been more generally cultivated in modern times; but upon that point I can afford very clear evidence at a later stage. I should like it to be understood that I am not here advocating in detail the growth of any particular products; I am only endeavouring to illustrate to my colleagues and yourself that there are grave facts connected with the products of our land, which seem to be deplorable, arising from the want of hand labour and hand tillage; and I utilize those facts, which I gather from the Government Reports, Reports, I presume, absolutely reliable, and I say in the scheme proposed we should bring together the two elements, which hitherto have not existed together, thus giving the opportunity for advantage to both.

8992. Besides land cultivation, you refer to what you call auxiliary trades in connection with the colony?—Yes. The industries connected with farming are various, and of course may be selected according to the necessities of the case. Taking flax, for instance, that is a product upon which a considerable amount of hand labour would have to be bestowed in sheds under cover, and that work could be done in wet weather and in inclement seasons, and in the winter months. That is a product that would illustrate to a great extent the application of an auxiliary industry to the cultivation of the land. Then there is straw-plaiting from the straw grown on the farm. Straw plaited is imported into this country now very largely. It is purely a hand product. After straw is grown, it is manipulated by hand and imported very largely into this country. Then you have various products from rushes, pith, and osiers; you have the means of milling by hand-milling what you might require to crush and grind. You could do that, of course, in the bad weather and the winter months. Then the growth of seeds for the market is a very remarkable industry. Enormous quantities are imported into this country. It is a matter of pure hand-tillage and individual care. In Holland and Germany, and other countries, this culture is developed to a very great extent, and I see no reason why English people of the same class are not quite as competent to undertake this work. In connection with such seed growing, there are many occupations afterwards under cover which would be auxiliary work in bad weather. I presume we may take it for granted that for not more than two-thirds of the year would they find occupation on the land; that is to say, in the open. One-third of the working time would probably have to be given to other things. It appears to me that great advantage would come to the agricultural classes, even at the present time, if an organised system of auxiliary employment in their cottages or in the villages could be undertaken by some authority who may think it worth while. Many societies have been started (I am a member of two or three myself) for the encouragement of industries among agricultural labourers in their homes or in a room common to many of them; and the success of such attempts, from an economic as well as a moral point of view, is such as to justify the belief that in a

Chairman—continued.

farm training colony, under management such as I have described, these auxiliary industries might be carried out in a way that would employ the labour of almost every man on the place. I have presented now only an illustration of the kind of auxiliary employment to be derived from the products of the land itself; the list may be extended very largely. For instance, fruit might be grown on a portion of the land. There would be a certain amount of pasture for the milch cows, but the other portion of the land (the arable dairying portion of the land, so to speak) would be divided up into small plots, each plot growing such crops as would be most profitable for the amount of labour put upon the plot. Those products would mostly have to be disposed of afterwards. Peas and various fruits might be grown and preserved. You might, for instance, have Mr. Gladstone's famous process of making jam, which would give an immense amount of employment to the persons upon the farm; and under the conditions that would exist in such a village, life would quickly develop, and such industries would seem to be quite reliable as a source of income.

8993. You would not make them consume their own jam?—The products would go for sale. As to the question that has become so hackneyed, will not the products of this unemployed labour compete with this or that, I think there is nothing in it, it is a mere bubble that one could prick with a very small amount of argument. It is self-evident that there might be selected occupations arising from the land, or industrial occupations in cottages, which would enable these people to earn money beyond the actual amount of labour which they actually bestowed upon the land itself out of which they are kept.

8994. You are still speaking of the training colonies?—Entirely. I would ask you for the moment to remove the other section of the scheme from your mind.

8995. Your general theory is that, even supposing the work upon this land did not pay commercially, it is a cheaper way of relieving these men than any Poor Law system provides; that is to say, even supposing it was a loss, the loss would be less than the payment through the Poor Law authority; and you think that by eking it out by these supplementary industries, these men may be made actually to earn money?—Yes. I have given great thought, of course, to that part of the question, and I feel convinced, so far as anyone can feel convinced who has not actually seen the thing at work, that on a scheme of this kind it would be possible to pay for the general expenditure of the colony after the land had been obtained and the buildings had been placed upon it by the money which, as I say, ought to come from the central authority. As that money will not bear interest for say five years after it is loaned, there would be, during the years of what I may call the training part of the scheme, no rent to pay, although there would be an accumulation of value all the time equivalent to the amount of money which had been lent by the State or the central authority.

Chairman—continued.

8996. In the improvement of the condition of the land?—In the improvement of the condition of the land, apart altogether from the indirect benefit.

Mr. *Bartley.*

8997–8. That is only a pious opinion, is it not?—No, it is not a pious opinion. I should be very glad to give my honourable friend detailed evidence of certain results which have been achieved in one or two important experiments in this country, which are now beyond dispute so far as that point is concerned. Those schemes, I may say, are not based on this plan. They are less favourable, therefore, I think, to covering all expenses than this scheme would be. But I can show how in actual cases which are less favourable in the sense in which you put the question to me than this would be, all expenses have been covered both in Germany and in England, in Germany especially.

Chairman.

8999. Supposing we now turn for a moment from the commercial or economical aspect to the personal aspect; how long do you think these men would stay on these farms?—In the first place, the training colony, as I have before stated, is not for permanent residence; because the object of the Poor Law authorities is to let these men get back to their own regular employment as quickly as possible. I have spoken of this class of men being displaced *temporarily* owing to the depression of trade or displacement of labour by one of the various contingencies which arise in industrial life. Such men, instead of idling about the streets and getting into a state of despair after they have spent their savings (because they would not abandon the hope of finding a situation for many weeks, it may be, after having lost their situation), and having arrived at a state when they must either work or starve, before they sold their goods or broke up their homes, would, knowing of the refuge afforded by this work, apply to the Poor Law department having charge of this particular branch and ask for employment. Such a man would be received at this farm (provided the farm was not already full), and directed to work that the manager found him fitted for; he would be taken for not more than a month to begin with. There would be no obligation to keep him there more than a month; the less time after a month the better. The month's work got out of the man would be a safeguard to the colony to have some little return for what he had received, and he would in a sense be benefiting out of the profit which the colony derived from the labour of men who had preceded him, and especially from the men on the cultivated parts of the farm who were going on with their training to become farm settlers according to the second part of the scheme.

9000. What do you contemplate would be the ordinary time of a colonist of that class; he goes for a month, but do you think he would stay six months or a year?—It is not desirable, according to this scheme, that he should stay for much more than a month, or from month to month, unless the man intended to pass through this training

Chairman—continued.

training colony for the purpose of becoming sufficiently well acquainted with farming occupations either to go out to one of the colonies as an emigrant, or on the other hand to become trained to farm work, giving his work in return, to enable him to take up one of the settlements which are gradually created out of the training colonies.

9001. With regard to a man who merely goes for a little temporary work instead of loafing and idling, and who then has to secure employment again at his ordinary occupation, there is this difficulty, is there not, that he would be taken away from his home. For instance, to take a place that occurs to one as a town that has suffered very much occasionally from changes of trade, Coventry; supposing a man was a working man at Coventry and the trade for some reason left the place or he was thrown out of employment, he goes to a farm colony; but as the farm colony is, perhaps, on the banks of the Wash, or somewhere where there is reclamation of land side by side with some other land, as you propose, he cannot find work there or in the neighbourhood, but he must come back to Coventry to find it, must he not?—I am glad you put that case, because it is one that naturally arises in one's mind, and I am prepared to meet it on this simple ground: Supposing such a man, wishing to have a month's or two months' work rather than let his family starve, applies to the department as I described. He goes there precisely under the same conditions as Mr. Logan or myself, being employers of labour, would send a dozen or 50 men, to undertake work in a part of the country remote from their homes. That is occurring every day in the week all the year round, under different conditions, no doubt; but, so far as the separation from his own locality is concerned, that is a thing that is occurring with thousands and thousands of men all the year round in the industrial world. Therefore, so far as the men would be going to work at a place remote from their home for a certain period, there is no novelty in that; it is a custom already prevailing throughout the industrial world, and is a thing perfectly well known to workpeople. As regards the inability to get employment which such a man might experience from being in a part of the country remote from his original home, that I think is easily obviated; for, taking such a class of man as you are thinking of, in the first place they are supposed to be men with characters, men with a past; they have had occupations and employment before, and have got their friends and their chums, and they may, and probably would, belong to friendly societies. Those men, therefore, if they were on the farm colony, would act as they do now; they communicate with their friends and they hear what is required in one place and another, and they communicate with men on the spot who may help them to find a situation. The case of Coventry, which you put, is a simple one compared with other cases I could speak of. A man who had been employed at Coventry would be perfectly well known, and have lots of friends and acquaintances to let him know when occupation is being given out. That is a far less difficult case than that of a man who is thrown out, because his special industry has gone down permanently. Take, for instance, the silk industry in Coventry; he knows Coventry is no longer a place for him if he is to follow the occupation in which he was brought up, but he ought to be going over other towns in the country to find work, as they do frequently. But even in this case the man on a colony on the banks of the Wash would be no worse off than the man in Coventry, because he could communicate with all parts of the country as easily as the man who was loafing about Coventry. Those are the common practices of the trade with which I am perfectly familiar, and they present no difficulty to my mind.

Chairman—continued.

9002. Is there not another difficulty in establishing a colony of this sort; that you propose to have a number of individual men, and I think one or two families?—Yes; families may go there.

9003. Is there not some danger of want of discipline among men so separated from all their domestic belongings and left to themselves; I will not say herded together, because that is an invidious word, but at any rate living together?—I think there is no difficulty in the particular case of a colony, any more than in any other cases to which I have referred, where men are separated from their homes; in fact, under the certain discipline that there would be there (that is to say, there would be law and order in a community of that kind) the disposal of the arrangements for the sleeping and living of those men would be of a nature to preclude the possibility of herding together in the sense you spoke of. I should deprecate in any sense of the words anything like a huge barrack system, which I think is abominable from every point of view.

9004. You regard it as less dangerous and less open to objection than the ordinary transfer of a considerable number of working men away from their homes to carry on engineering work or navvy work, or anything of that sort?—Certainly; I think there is less danger, at all events, of the immoral conduct which we have to deplore at times.

9005. The draft scheme which you have handed in explains the whole thing so clearly that I hardly know what questions are necessary to be put in order to elucidate the points, and indeed I do not know that any more questions are necessary. Would you prefer that you should now be asked questions by the members of the Committee on this question of the farm training colony before we go to the other question of the farm settlements, which is really a separate one?—I should very much prefer if you would let me take Part 1 and Part 2 quite separately, because they each have distinct objects in view; and while on the one hand Part 1 might find favour with certain members of the Committee or of the House of Commons or the public generally, on the other hand Part 2 might be open to greater question.

9006. They are quite separate and distinct from each other, are they not?—Yes. Before passing

Chairman—continued.

passing from that, may I be permitted to read a letter or two on the scheme which I have received from those persons whom I named in my general statement as being expert agriculturists, scientific and practical.

Mr. *Bartley.*

9007. Are they coming to give evidence before us?—No; it was to save you the trouble of calling them as witnesses that I proposed to read their letters. They are gentlemen whom I do not know personally; they have read this draft scheme, and they have sent me voluntarily their opinions of it. I only offer their letters as a proof of the statement which I made that I have the testimony of agriculturists, scientific and practical, in support of the scheme.

Mr *Stuart Wortley.*

9008. Are these letters from experts?—Yes. One is Professor Sheldon, who is the greatest authority in England on arable dairy farming. He wrote me a letter on this question which I think is valuable. Another is Professor Wright, a Scotchman, who is also an instructor in agriculture in the West of Scotland Technical College. I may say I have myself visited farms and discussed this question with practical farmers. I should specially like to mention in connection with this matter that a portion of Essex—which, as you know, is regarded as a county in a state of considerable decay—has in the last four years come more and more into the possession of Scotch farmers. I travelled 12 miles throughout the county without getting away from a Scotch farm, and I have got information from one very intelligent young Scotchman there with regard to his own experience in farming on a certain system which proved that there is great hope for agriculture still, when the right men get upon the land. These are merely indications which I give to the Committee to show that I have given great study to the question in detail, and have tried to fortify my views by absolute facts.

Chairman.

9009. It would, perhaps, be sufficient to mention that you have those letters, and if honourable Members desire to ask questions about them you can give further particulars?—I only mention the fact that I have them, because I said in my statement that I knew the opinions of scientific agriculturists on the main question. I brought those letters because they were the letters of the best-known men; I have many others.

Mr. *Acland.*

9010. As to the method of management of your scheme I do not quite understand the relations between the Poor Law guardians and the County Council. Are the Poor Law Guardians to be the sole recommending authority as to the persons to be employed in the colony?—Yes, the channel for admitting persons to the colony is the Poor Law authority.

9011. Are the County Council to be formally called upon to start these farm training colonies if the Poor Law Guardians desire it?—Quite so.

Mr. *Acland*—continued.

I named the County Councils, because, of course, these farms must be in country districts, and they would require to be under the control of some body that had large enough functions and experience to undertake the control of a thing of this magnitude.

9012. With whom is the initiative to lie; it is a voluntary action on the part of the authorities, is it not; they are not to be compelled?—No, there is no compulsion about it. When once there is the power to start these colonies, I contemplate that the County Council would express its willingness to undertake it on being applied to by the Poor Law authorities, the boards of guardians, to provide the means for a scheme of a training colony, they would get their officers to inquire about the land and the conditions for the scheme, and having satisfied themselves that it was proper land for the purpose, they would obtain from the guardians an undertaking that a certain number of persons would be sent there; it may be a colony of 100 or 200 or 400 (I do not think more than 200 would be desirable). Having assured themselves of the necessity, and of the proper conditions obtaining, the County Council being willing to undertake the work, they would apply for the assistance necessary to start the farm through the Local Government Board.

9013. I gathered the County Council would take the initiative of expressing themselves willing?—Yes.

9014. Supposing the Poor Law guardians find it undesirable to send, or having begun to send men, they should say "We will send no more," the County Council would have the colony upon their hands?—The responsibility would be entirely upon the Poor Law authority. The Poor Law authority provides any deficit under the scheme, whatever it may be, and consequently the Poor Law authority would be the party primarily interested to see that the scheme was successful.

9015. Are the Poor Law authority to find the money and the County Council to do the management?—Certainly, the County Council is simply the managing body.

9016. Then surely I must be wrong in supposing the County Council take the initiative; the Poor Law guardians are to take the initiative, are they not; and call upon the Council to manage the colony?—What I intended to say was that the County Council was suggested simply in order to obtain a governing body for the whole thing of sufficient experience and sufficient knowledge of affairs, so that it would be a guarantee for the colony being conducted upon the lines laid down. But as to the means afforded for the colony being established, and for colonists fit to occupy it being selected, all that would come entirely through the Poor Law authority.

9017. It is rather a serious matter, is it not, if one authority is to have the whole power of management and use the funds that come from another authority who are really responsible for the use of those funds?—I do not think it differs from many other means which we adopt in this country to get our work done.

9018. Would

Mr. *Acland*—continued.

9018. Would you suggest an analogy?—Take the analogy of technical education. The money that is provided by Parliament for this purpose, and for the reduction of local rates, is used by the County Council.

9019. It belongs to them?—It belongs to them indirectly. This other money would also in a sense belong to them; they would have the responsibility of failure or success resting upon them, just as they have now in controlling other things for which the Government finds the money. The State gives now to each County Council each year a certain sum of money out of taxation.

9020. In this case, if the County Council made a failure, the whole responsibility for the loss of the money would rest upon the Board of Guardians, would it not?—Yes.

9021. The County Council would not pay a farthing towards it?—Certainly not; that is a suggestion that may be naturally open to criticism, but it is one mode of obtaining a very good body, in my opinion, to manage the whole affair. A combination of the Poor Law Guardians with the County Council, might be another method of doing it, or the Poor Law Guardians might do it themselves; if for instance, four or five Boards of Guardians agreed to take charge of the colony, they would have a committee of their own for its management and control, and also voluntary helpers. The suggestion of the way in which it should be controlled is quite another consideration; it rests between two or three plans, and you might suggest one as good as the other; but to put it in a concrete form, I adopted the plan set forth in my scheme, to show how it could be started.

9022. The bulk of the men I suppose who would come, would be men who wish to get back to their own trade when an opportunity offered; it would be only the minority I suppose, who would be permanently training for another form of occupation?—That I cannot do more than make an assumption upon. I think it is not unreasonable to suppose that a considerable number of men, at any rate, of those who had been displaced from an industry which had passed away, or is passing away, might be attracted very much indeed by farm life, and might themselves ask to be continued through the training until they obtained a footing upon the farm settlement. But whatever the proportions were of the one or the other, of course, the larger number remaining for the longer time would render the colony less available for the transient men who go for two or three months.

9023. It is a very real part of your scheme to provide for men who are out of work from their own trade, for a short time, and who are to return to their own trade?—Certainly.

9024. With regard to those men, supposing there is a considerable number of them, as there must be, how far do you think their work would be of a repaying character, that is, profitable to the institution, supposing they stayed for a couple of months?—I think we have had ample demonstration on that point from the work already undertaken by such men on the land. Not only in the Hadleigh Colony is that fully demonstrated, but also if you take the experiment made by Mr. Hills, in West Ham, on the

Mr. *Acland*—continued.

Wanstead Flats. All those men were proved to able to earn 2*s.* a day on the labour to which they were placed after they had been employed for a fortnight or three weeks, and men may be kept under these circumstances for 5*s.* a week, so far as food is concerned, and shelter (there, of course, there is no shelter required). You may say, therefore, there is no trouble at all in finding labour on a large farm where everyone of these men would receive something in kind equal to 1*s.* 6*d.* or 2*s.* a day.

9025. Is there not some trouble in making quite sure that these men would do profitable work; would you dismiss a man the moment he appeared not to be doing a good day's work?—I think it is beyond the necessity for proof that if a man works at all (that is to say, unless he declines to work) on this simplest form of tillage which would be given, he cannot fail to do such work as will keep him in food for a week; that is demonstrated beyond dispute, I think.

9026. Do you really think that is the case. Surely we should hear a great deal less about agricultural distress if that were the case?—I am speaking of the work men can do, working with other men, on such land as a number of men can be employed upon, assuming it to be allotted out and directed by competent management.

9027. It is always assuming, is it, that the man is capable to work, and is working with the best will in the world, and under the best conditions?—I do not think it is necessarily under the best conditions. I went to Wanstead Flats to examine the work there (as I believe Mr. John Wilson did), and I had indisputable testimony that with all sorts and conditions of men, provided they were men capable of doing work, though some were very weak when they arrived, the labour they did upon the land in the manner in which it was there bestowed was sufficient to keep all those men perfectly well, so far as food was concerned.

9028. Without any loss of money to anybody?—Certainly, without any loss; the work they did was equal to what they received.

9029. Is it not the case that there was a large fund of money at the back of that scheme when it started?—Yes.

9030. Is it not also the case that there were some groups of men at work there whose work was totally unprofitable?—No, I do not think there was any work there unprofitable, after the first fortnight—so at least I was informed.

9031. The groups were classified, and some groups, we were told by Mr. Hills himself, were extremely unprofitable in their work?—They were unprofitable in this sense, that they did not earn more money than would pay for their food.

9032. Is there any proof that they did that?—Yes; I understand, without exception, after the first fortnight that was so. There were on that land very extraordinary differences between the men. I examined a plot of land which was being tilled by all sorts of men, and on asking the question as to what those men were when in regular employment, I was struck with the fact that one was a watchmaker, a sufficiently delicate employment one would have supposed to

Mr. *Acland*—continued.

disqualify a man from such rough work as tillage.

9033. At this training farm I understand you would have some fairly good land?—Yes, about half the land should be cultivated land.

9034. And fairly good land?—Fairly good land; such as you find in Essex.

9035. Immediately adjoining it there is to be rough land which nobody has yet cultivated?—Not necessarily land which nobody has yet cultivated, but land that is not being cultivated; land that has gone back into pasture; it may be natural grass or land which is going down to that condition, or other land that has not been cultivated for many years.

9036. Do you think you can easily find land of that character, with land immediately adjoining it so good that it will bear good crops at once for the support of the colony?—The cultivated land would be of such a character as I saw in examining the farms in Essex, where a Scotch farmer goes and takes up 500 acres of land and finds it has been starved. The land I refer to was arable land, and this man wants to take it for arable dairying, and he pays a rent for it of something like 17*s.* or 18*s.* an acre, but the farm buildings happened to be extremely good, and he was willing to pay a larger rent on that account.

9037. I perfectly understand what a farm of that character is, but I thought you made a great point of half the land being cultivated land and half uncultivated?—Yes, half of it would be land cultivated in the sense that that land was cultivated in Essex and half of it uncultivated.

9038. Has that farmer in Essex got uncultivated land, such as you speak of, immediately adjoining?—No, because he did not select his farm on that account; but you would, in dealing with this scheme, take land where there was also a considerable amount of land derelict or under grass, or which had not been cultivated before.

9039. It would be natural to expect that in the neighbourhood of land so derelict and uncultivated, the land that came next to it would not be the best land but only slightly better?—That does not necessarily follow. The line of demarcation is sometimes extremely clear and defined. I see myself in looking over possible properties for this purpose land absolutely unfit to grow anything simply divided by a fence from land that is extremely well tilled.

9040. You make a great point of having certain land that is uncultivated for these men to work on?—Certainly.

9041. When the colony have worked through the uncultivated land and cultivated it all, the colony would have to move somewhere else, I suppose?—That land then would be a farm settlement and belong to those who remain on the farm, as small farmers and small settlers, for the rest of their lives under the conditions set forth in Part 2 of my draft scheme.

9042. Then would you start another colony?—If it is found to be beneficial and economical, and based upon sound principles, then these colonies would be developed until you practically bring under cultivation the whole of your unfertile land in the country.

Mr. *Acland*—continued.

9043. You think there would be so large a number of men passing through the colonies besides those who settled, that this scheme would extend to very large dimensions?—I think it is very possible that the whole scheme might be taken up eventually by landowners in order to get the land out of the condition in which so much of it lies at the present time, as is fully borne out by the evidence I have referred to of the Commissioners employed by the Royal Commission on Agriculture. I think it is quite possible that the landowners in this country would themselves, upon a successful experiment of this kind being made, look at this as a plan for obtaining a rental in perpetuity for their estate, with which they would be satisfied.

9044. That is to say, that the colony is to provide them with a rent better than the farmers themselves have been able hitherto to do?—Certainly.

9045. Do you think you could find a large supply of skilful managers thoroughly understanding the management of land who would do better than the farmers, and who would manage these colonies on a fixed salary?—Yes, I have evidence from Scotland that you could get a very large number of men who would be willing to come.

9046. You think those men on a fixed salary would be more successful than farmers who have been working on the land for their living?—I think you will find plenty of evidence if you look through the Blue Books, that from the fact of our farmers in this country not requiring any great skill or intelligence in the cultivation of those big grain crops in which machinery is largely used, there has been no incentive to them to develop into farmers of another character. They are really in the same condition to-day that our manufacturers of Lancashire were a quarter of a century ago.

9047. You think these paid managers will set a great example as to new methods of agriculture which would very likely be followed by the farmers themselves?—I think that is absolutely proved to be possible by many experiments.

9048. You think these schemes, if extended, might not result in much financial loss to anybody?—I do not think it is probable that there will be any loss attending them at all, except to the extent of a portion of the money which the Poor Law authority might have to bestow upon men in the training colony who otherwise would have been vagrants, and would have applied for workhouse relief. Beyond a portion of that contribution which the Poor Law authority would be obliged to make under any circumstances if appealed to for relief, I do not think any loss could come upon the State or the Poor Law authority.

9049. And yet agriculture is a very dangerous operation?—Agriculture, as we have practised it in this country (judging from the report of the Commissioners), I should say must be an extremely hazardous enterprise on the part of those who pursue farming under conditions such as have prevailed in England in times past.

Mr. *Whiteley.*

9050. And it is said to be very hazardous on the part of those who know anything about it; these people do not know anything about it, do they?—I must not allow the honourable Member to confuse two totally different things. I am speaking now with regard to the cultivation of small plots of land for purposes which have never been attempted in this country, except in isolated instances. That would be the prevailing custom, and for that the technical knowledge and skill which we are gradually producing in our various colleges of agriculture, and in our large farms, would be available to bring to bear upon the crude labour, which costs very little, just the control and direction which is necessary to make it profitable.

Mr. *Acland.*

9051. You have no fear as to being able to find capable managers who would do all this?—There would certainly not be any difficulty in finding them under the gradual growth of such a system in England.

9052. Just let me put this one point; take the case of a colony where, say, two-thirds of the men were men passing through, who came from a town industry and were going back to it; those men would not come under your method of auxiliary industries or trades in the colony, would they?—They would be occupied with whatever they were suited to be occupied with during the time they were there; it would be of no consequence whether they were there a week or a month.

9053. They could not do straw plaiting or things of that sort, could they?—I am not speaking of industries on the farm colony being such as would have to be pursued for the purpose of training. The colonists would themselves be men probably having various aptitudes and dexterity of one kind or another besides the mere hand labour which they bestowed upon the farm.

9054. The auxiliary country industries, as a rule, which you suggest would not be available except for the men who are spending some years at the colony?—The full training in these auxiliary farm industries, of course, will not be given to men who are there for a short time, but the work to be done from day to day might very well be assisted in by men staying at the colony for only two or three months.

9055. Do you not think from a financial point of view that your laying down the rule that saleable products of the Colony must not compete with existing home products, would handicap the enterprise?—It is merely a suggestion that there are so many products now imported from abroad which we ought to produce in this country as cheaply as they are produced abroad, and therefore it would be better to try those products at the colonies. There is no fetter or restriction on one side or the other, and there is no earthly reason why these products which are now sent in so many millions per annum into this country should not be undertaken here, if it is worth while for anybody to undertake them and to bestow the pains necessary to start them.

9056. Your point, as I understand, is not that

Mr. *Acland*—continued.

because these colonies are helped by the money of the State, and because any loss concerning them must ultimately be paid out of the rates by the guardians, therefore aided colonies of that sort must not compete with the ordinary producers in the market, that is not your point, is it?—No, it is not an essential point; I think a great deal too much has been made of that argument. But as a matter of policy, and to prevent public prejudice being created against the scheme, I would prefer to take the products such as we are now receiving from foreign countries as the main products for the land tillage for the people on these colonies.

9057. You would start some industry quite unknown in the district in preference to the one that was going on in the district?—Certainly, I should give it the preference.

9058. Would there not be some disadvantage in doing that?—I do not think so. I think the choice is so large that, at any rate for a long time to come, a great number of men might be employed in the way I suggest without anybody feeling it at all.

9059. You think whatever might be the character of the land in the particular district where the colony was, you would always discover some crop other than that grown in the district which your colony manager could at once start?—That grown in the district at present is precisely that which would not be grown at all under this scheme. The whole scheme depends upon this, that whereas under the present system you have big farms growing grain crops and a large cultivation requiring machinery and very little hand labour, those are the sort of things no one would think of doing upon a farm colony.

9060. Your desire is to introduce a non-competing crop of a new character?—Certainly.

Mr. *John Wilson* (Govan).

9061. You stated, I think, in the beginning of your evidence, that your Works were carried out upon the eight hours' day principle?—Yes.

9062. You also stated that the result was that you got as much done in eight hours as you did in the old day of nine hours?—Yes.

9063. Do you think if we had a universal eight hours' day it would take up any of the unemployed men in the country?—I think I have already in my general statement made an exhaustive reply to that question. I have told you that in my opinion I think it would be a very false hope, which amounts to delusion upon the part of some people, to suppose that an eight hours' day universal throughout the land would affect largely the question of the employment of the people. I have very carefully gone through the argument on that question in my opening statement, and I do not think I have anything to add to or take from it. It is the result of practical experience and of very long experience.

9064. I do not know whether you have any experience of the minimum wage question, but we have in the north. May I ask what is your experience of the minimum wage rule, that is to say, that no man in employment is to have

Mr. *John Wilson* (Govan)—continued.

less than a certain amount of money wage; have you had any experience of that question?—Yes; I always have a minimum wage. I always fix a minimum wage, which is the highest minimum wage fixed by any trade union, and then I go as much above it as I possibly can.

9065. In the north the trades' unions in one particular department of the trade laid down the law that no man was to accept employment under a given wage, and in all those Works that were under the minimum wage, the men were to come out on strike. They came out on strike in every other Works in the city but the firm with which I am connected, and the result was that when this firm began to look into the matter they found there were only one or two who were under the minimum wage, which was so small a moiety that we raised them to the minimum wage, and our Works were kept going; you have had no experience of that?—I have experience by coming in contact with cases where disputes concerning wages have ended disastrously for both parties; but if you ask my opinion whether these disputes are unnecessary, or whether there ought ever to be quarrels about wages, I do not think there is any necessity to have these disputes about wages.

9066. My point is this: you know when a man comes to a certain age he is not able to do the work you would give to a younger man at the same money, and the consequence is that those men are naturally thrown out of work where this law holds; is not that the case?—That does occur with some people.

9067. Does not that very considerably enlarge the number of unemployed?—All men who are thrown out of work naturally enlarge the number of the unemployed, whatever the case may be.

9068. But their age is a cause they cannot overcome?—Quite so.

9069. Is it not hard lines on those men who have served their time, and being engaged all their days in one particular branch of trade, to be thrown out when they come to a time of age that they are no longer able to compete with the younger men?—No man is thrown out on account of his age, so far as my experience goes; I do not know of any man who would be thrown out at all until he was actually incapable of doing the work he formerly did, whether the younger man would take it or not, because you must remember although age is a disadvantage in one respect, it is an advantage in another respect so far as the workman is concerned; you have experience and stability of character in the old workman which you are not always sure of in the younger man, and therefore, as a fact, unless you come to the age of 60, or over 60, I do not think the skilful artizan of any age is displaced for any other cause than ill-health or incapacity by a man 20 years his junior.

9070. I presume you object to overtime as being unnecessary?—I object to overtime, because I think an eight hours' day or 48 hours a week is sufficient for a man to work, if he works properly in the spirit I have described in my preliminary statement.

9071. Do you think if it was the universal law that overtime was to be abolished, it would give employment to a considerable number of more men?—It would give employment, as I described, only to the extent in which double shifts could be given in manufactories during times of great prosperity or industrial pressure; it will not very much affect the question of employing a larger number of men on daywork in the ordinary course of trade.

Mr. *John Wilson* (Govan)—continued.

9072. There is one part of your scheme which struck me to which you have referred already in your evidence, and that was that to your farm-training colonies you would only send single men, or if they were married men they would be required to leave their wives and families?—That is at the training colonies, where they are only going for temporary work.

9073. You stated that that of course was a thing that was done almost every day by employers of labour who were sending their men to put up machinery or to work in foreign countries, or 100 miles away from their homes?—Certainly.

9074. But in those cases the men get an additional sum to pay for lodging over and above the usual wage, do they not?—Certainly.

9075. In the case of farm colonies there would be nothing of that kind?—No.

9076. The wives and families would be left at home, and you could not expect that a man going from a textile industry, or an engineer, or a man of that kind at a farm colony, could do anything to support his wife and family apart from himself?—You observe I have provided in the scheme for such a case by saying that the wife at home should receive 4*s.* a week from the guardians of her locality. The man would be maintained by his own labour on the colony, and probably would earn, certainly after the first fortnight, sufficient means to return something to the guardians towards the amount they have already paid the wife. But in no case would the guardians be called upon to pay more than they would have to do if the man, instead of going to the colony and working there, had gone to their workhouse door and asked for relief.

9077. I am afraid he would take a considerable time, would he not, to support his wife and family by working on the land?—Judging from actual experience as to what may be derived from the labour of a man properly directed doing the best he can at a special kind of work, as I said before, the maintenance of the man himself at any rate is provided for by that work. In so far it is a gain to everybody. What he may earn beyond the actual food he consumes would be a contribution to his family, or he can have it himself to dispose of as he likes. But as long as the guardians were paying 4*s.* a week to the family in the town, they would have the right to take from the man such earnings beyond his food and lodging as he made upon the land.

9078. As to the land that would be reclaimed by these colonists—is it your view that the State should first of all purchase the land before anything is done to it?—Certainly; the means to start the whole scheme would have to come from a loan through the usual channel, through the Local Government Board.

9079. If they took a proprietor's land which was lying derelict or had never been in cultivation, and cultivated that land, and then gave it up, it would be too good a plum, would it not, for the landlord

Mr. *John Wilson* (Govan)—continued.

landlord to get it back again?—He would not get it back again. If the money spent on it was not repaid by the colonist under the system set forth in part second of my scheme, the land would be national property; it would be nationalised to this extent that the nation would have paid for the land, and it would be dedicated to this kind of use in future.

9080. You heard the evidence of the Lord Provost of Glasgow in regard to the reclamation of bog-land near Glasgow?—Yes.

9081. He stated that they paid, first of all, 1*s.* an acre rent up to 5*s.* at the end of the lease, and at the end of the lease, when they left the land, it would be worth 1*l.* an acre to anybody coming in; is not that rather too good a plum for the landlord to get for nothing?—I do not see how the landlord could get it.

9082. He did get it there; that is my reason for asking if your scheme embodies the principle of the land being bought by the State before it is brought into a state of cultivation?—Under one arrangement it is bought by the State; under another arrangement it is simply leased in perpetuity.

Mr. *Stuart-Wortley.*

9083. You limit your scheme to men whose physical capability for hard out-door work and agricultural labour has been ascertained; have you considered what percentage of respectable working-men that would exclude?—I do not think it would exclude a serious percentage. I think very few men would go to the Poor Law authority for such work unless they knew themselves to be capable of it.

9084. To whom are the profits of these training colonies to go?—The profits of all the work would go to the colonists themselves, beyond the expenses of the establishment.

9085. The losses to be borne by the guardians?—There would, of course, be a contribution from the first. The whole of the profit would not be bestowed upon the earnings of the men, but a certain contribution would be paid to the general fund, out of which preparation or any temporary loss would be covered. If the whole thing were based upon wrong principles and never could pay, that would have to fall upon those trying the expense, viz., the Poor Law authority.

9086. The managing authority under the scheme would be independent of both the loss and the profit?—The managing authority would be a purely managing authority, just as it would be for any other commercial or industrial enterprise.

Mr. *Renshaw.*

9087. On the second page of your scheme, where the summary of proposals is given with regard to Farm Training Colonies, you deal with the suggestion in regard to which Mr. Acland asked some questions, to the effect that the management should be placed in the hands of the county councils, whilst the expense must be contributed by the Poor Law authorities?—Yes.

9088. I understand you do not adhere to that as being a fixed portion of your scheme?—Certainly not; that is one of two or three modes of managing it. As I explained before, I thought

Mr. *Renshaw*—continued.

that since this is a question dealing with agricultural districts, the county councils being important bodies and being charged with so many functions of this sort, would be the best authority to be entrusted with the management, and they would be a body who, in concert with the Poor Law authorities, would be able to administer all the details of such an enterprise perhaps better than the Poor Law authorities, who would, a number of them joining together, naturally form a sort of partnership in the colony; whereas a central body, such as now exists in the county council in every county, would be a permanent body and would have the means of obtaining the co-operation of many outsiders who are anxious for this kind of work to be done, just as they obtain the co-operation of many educationists in carrying out the Technical Instruction Act, for which they have funds, and so make it rather a matter of public interest and public responsibility, the Government having once shown they would allocate certain sums for the purpose under the security set forth in the scheme.

9089. Is there not this great difference in regard to the administration of the funds devoted by Parliament for the purpose of technical instruction in the county, that these funds are administered by the county authority because they come to the county council for administration within the area for the administration of which the county authority is responsible; but as I understand your scheme, each Poor Law authority is to be asked to contribute towards the expense of this work, which is to be carried out by the county council. You may have a large urban or, as we should call it in Scotland, burgh Poor Law authority, and they would be called upon to contribute towards the expense of carrying out work in the county, which would be managed by the county council. I should like to ask whether you have ever considered this point: The county council might decline to assume the responsibily when it was proposed to burden them with the administration under a scheme of this kind, which would include large town areas, and might give them a large amount of work to do?—They would be quite within their right to decline to undertake the responsibility, and I do not say it is at all essential that that authority should be the one to exercise the control. It would probably be equally well done if you could conveniently get three or four or five Poor Law authorities to combine for the purpose of starting and managing such a scheme: that is a mere matter of convenience; it is not a matter of principle at all; it is only one suggestion out of two or three, which might be equally worth consideration as to the best way of managing it.

9090. Are we to understand you would leave to each Poor Law authority to express readiness to go into the scheme?—Yes; until you have a consensus of opinion among certain Poor Law authorities to adopt a scheme of this kind, and to pledge themselves to use it for their own purposes, in connection it may be with others, I do not think any advance could be made from the Government for the funds necessary to buy the land.

Mr. *Renshaw*—continued.

9091. That is to say, the Local Government Board would not be justified in advancing money under this scheme for Farm Training Colonies, unless they were satisfied that a sufficient number of Poor Law authorities in the particular locality were interesting themselves in the matter, and were prepared to come under obligations that would have to extend over a period of years?—Quite so. The Local Government Board would have to be satisfied that there was a demand and a desire and a capacity for management, and general prudential considerations connected with the establishment of such a colony, before they would advance the money, just as they do now with regard to all town improvements.

9092. Would you limit those who could obtain work on these Farm Training Colonies to those who were inhabitants of the particular locality for which these contributing Poor Law authorities were responsible?—Yes; I think in any such combination as that, where the undertaking had been promoted entirely by a certain number of unions, those would be the unions supplying that colony with colonists.

9093. You would not allow of any people, other than those coming from the particular unions, to participate in any benefits derived from it?—I do not say I would not allow any others to participate; that is a matter that would be settled only by experience. For instance, supposing such a colony not to be occupied for the time being by the men sent down by these several boards of guardians, I think it would be quite open then for those managing the colony to receive colonists from any other board of guardians, under the condition that the guardians sending them would take upon themselves any responsibility of contributing in case of any deficit arising.

9094. In the 19th paragraph of your proposal there is this suggestion: "There should be no restriction as to the places from which the men might come. In many counties it would be difficult to find suitable land for a colony." That rather presupposes moving men from one county to another?—Yes; I would give the possibility of their coming from all parts when the colonies were once established, unless they were already occupied by the promoters of them, and then other colonies would have to be instituted.

9095. The provisions of paragraph 19 must be read in the light of the explanation you have now given, namely, that the men, though they might come from other places, would have to be paid for (if there was any deficit) by the places from which they came?—Yes.

9096. What would you do, supposing they came to the colony on their own account?—They could not come to the Farm Training Colonies on their own account. That is all carefully provided for in the scheme. In the case of each man, application must be first made to his own local authority, and his own local authority must be satisfied he is a person duly qualified, and that he deserves the benefit, and that having been done, you start upon a safe line from the very beginning.

Mr. *Renshaw*—continued.

9097. In paragraph 14 you have already explained to us what precautions you would take to make men who have undertaken to work upon the colony remain upon the work; how would you propose to deal with this case? Supposing in a colony where you had accommodation for 200 men you had in one month 100 working, in another month 200, and in a third month you had only 10 applicants for work, how would you propose to carry on the work of that particular colony if the amount of labour necessary to carry on the operations you had started with the 200 men was not forthcoming?—That is easily provided for under the system. You must not forget that at least half of this colony is the cultivated portion over which there is a manager, and two or three, it may be, skilled labourers from the colony or elsewhere; and after the first start of the enterprise, there would be a certain number of men always remaining on that cultivated part who had passed through the uncultivated part, and were preparing themselves for and intending to occupy the land themselves under Part 2 of this scheme. A sudden diminution or cessation of labour such as you have foreshadowed as possible would only be a cessation from the uncultivated portion of the colony, not from the cultivated part. The cultivated portion of the colony is, as I say, only worked by those men who have indicated a desire to have full training of this kind in order that they may become possessors of a holding under Part 2 of the scheme. Consequently the fluctuating portion, which comes for a month we will say and goes away, is simply dealing with the tillage of the uncultivated portion of the land; that work may be left at any moment, and it may be resumed at any moment. If you take digging, for instance, as long as the land is dug it is worth so much a rod; when the digging stops, the land is not wanted; it is not productive; the colony does not depend upon the products of that land; the whole colony is being kept out of the cultivated portion. Therefore you have an enormous reservoir, so to speak, out of which you can meet the varied requirements of that class of labour which you suppose to be of a transient character.

9098. But even on this cultivated land you would have to carry on a certain amount of agricultural operations, would you not?—Yes; but those men on the cultivated portion would be permanent, and would be put there because of their intention to remain.

9099. In fact they would be regular agricultural labourers?—They would be regular colonists; they would do all the work necessary for the particular class of hand tillage for which they would be paid according to the scheme; it would be on their own desire that they would remain on the cultivated portion to complete their full training to qualify them either as emigrants to go out to the colonies, such as Canada or elsewhere, or to avail themselves of the second portion of the scheme of farm settlements; and such men would be capable of taking over that land under the same management and control, and become themselves small holders, working it under

Mr. *Renshaw*—continued.

under the co-operative principle, under conditions of production and distribution such as have not yet been known hitherto in England.

9100. In the 23rd paragraph of the scheme you suggest a certain number of occupations to which these men might be put?—Yes.

9101. I understand from other portions of the scheme you look upon it as an important feature of the scheme that there should be these other means of occupation in the colony; is it not the case that such work as you describe in that paragraph used to exist to a large extent in villages throughout the country formerly?—To what do you refer chiefly?

9102. For instance, is it not the case that some years ago there was a much greater amount of local tailoring in the villages, and a much greater amount of local joinery work done, and chairs made in the locality, and matters of that kind?—No doubt.

9103. There used to be clockmakers also very often in the villages?—No doubt.

9104. Is it not the case that that sort of work no longer continues to the same extent?—I daresay it is possible that villagers now are buying from wholesale clothiers what they formerly obtained from the local tailor; but there is no suggestion in the paragraph you refer to that any business, like tailoring or clockmaking or anything of that kind, should be established in the village. The suggestion simply was that among a community such as these colonies would be, there must be at least repairs to be undertaken, and that is one of the means of occupying such people in wet weather, not as a daily regular occupation, but only at such times when their proper and real occupation on the land could not be carried on from any cause.

9105. Is it not the case that those local industries which all of us who are acquainted with village life know used to exist, have died out simply because people have found it more economical to purchase those things from larger sources of supply, and so it is impossible for economical reasons for these village industries to be carried on?—Yes, but there is nothing proposed in this paragraph which really touches the establishment of these village industries.

9106. I understand that you are proposing to do work in these colonies which would be less remunerative than if it had been purchased from other sources?—You are mistaking entirely the purpose of this proposal. I say in such a community as you would get in these colonies there must necessarily be some amount of boot-making, or tailoring, or repairing clothes, or building work of various descriptions required, and the suggestion is that, instead of that work being sent to large tailors or large builders, the men would do it themselves; but it is only so far as the life of the colony itself is concerned that this labour would be used. It is not suggested to supply boots and shoes and clothing for the whole country side, but it would be simply to give the occupation necessary for the purpose, and only so far as it was profitable, and only so far as it suited the purpose of the colony; there would be no supplying articles outside; there would be no ready-made clothing to be sent into the market,

Mr. *Renshaw*—continued.

but it would only be for the colonists themselves.

9107. You would have men who had been more or less trained as tailors to do that tailoring work, would you not?—Judging from the actual experience in Germany and in our own country, you cannot get a couple of hundred men together, such as you would have in such a colony, without finding among them a handy man who is capable of doing that rough sort of repairing that is necessary for that kind of life; and my point is that that is occupation for him, for which he gets paid over and above his primary work on the land.

Mr. *Bartley.*

9108. He is to be made to do that work, is he?—No; he simply understands that there is occupation of this kind if he cares to undertake it. Those are the occupations out of which a colonist may obtain a certain amount of money beyond his keep, and it is a great advantage to him to have an opportunity of using in that way any handicraft of which he may be possessed.

Mr. *Renshaw.*

9109. In the 25th paragraph you allude to, a few handicrafts which "might be introduced which have long since died out in competition with modern manufactures, but which, if now revived, having a quality of their own, might create a new demand for productions not now supplied in this country." Can you mention a few instances of what you mean?—That arises out of the experience I have had of what has been done in the way of encouragement of home industries among agricultural labourers in various parts of the North of England. There is a great deal of charming work done in the villages in that way, such as *repoussée* metal work and ornamental iron work produced by hand, which is not capable of being stamped by machinery, and therefore does not come into the market in the ordinary way; and you can find plenty of people who are glad to purchase works of this character. There is no doubt such a restoration of the old handicrafts might be very useful in such a community as these colonies. Then there is a certain class of weaving done (they call it art weaving) which is not represented in the markets of the country, and which is done in the leisure time of the people whose labour is not very costly. Those are occupations which could be very well carried on in these colonies. In fact there are many societies existing to-day for the promotion of such industries.

9110. I gather that the general feature of your scheme with regard to agriculture is that work that is now done on large farms where agricultural machinery of the most improved character is used has proved to be unprofitable; that is what I understand you to proclaim?—Yes.

9111. And you propose to replace it by farms on which a larger amount of hand labour would be employed, but in which crops, which are not grown under the present large farming system, will be cultivated?—That is so

9112. On that point you drew a parallel in the statement that you made in the beginning of your

Mr. *Renshaw*—continued.

evidence between manufactures and agriculture, in which I think you led the Committee to infer that the agriculturist did not understand much about his business, and that if the factories had not been more cheaply and better managed than the farms had, the factories would have gone down in the same way as the farms, and been a decaying industry?—Yes, I limited that comparison in the sense that I did not put it quite as high as you are putting it. I did not suggest that farmers were all a lot of stupid fellows. I put it in this way: Take instance the manufacturing district, of Blackburn or any part of Lancashire, where in former times there used to be a common cloth woven which they called "domestic" cloth, made of coarse yarn and requiring very little attention and care; there was no design about it, and, in fact, there was very little of either quality or thought put into its production. That cloth was at one time exported to all parts of the world; it was a very good trade and went on for very many years, and the happy owners of such mills and manufactories had a very good and easy time of it. But as factories in other parts of the world began to produce it for themselves, this quality of cloth was no longer demanded from this country, and probably some other countries might send some of this cloth to us instead of taking it from us as they formerly did. Under such circumstances the owner of the mill, as an intelligent man, instead of saying, "The trade in this cloth is awfully bad, and I cannot make money out of it, I am losing money, I am a most unfortunate man and I shall be ruined"—instead of doing that I say he sets himself to work to see whether he cannot by use of improved machinery make up his raw material in some more profitable form. He has to start with the raw material, and he has the machinery and he has his workpeople; he starts with cotton, we will say, and a certain amount of machinery and his workpeople, and he may, with the knowledge and skill necessary, so use his raw material and machinery by making certain improvements and alterations in his machinery, for instance, as to succeed in making an article which is not already manufactured in other parts of the world, and for which there is a demand, and will be a demand for a long time. The consequence is, that his industry increases in volume; it may be that he is not producing so many articles of the same quality as before, but he is producing other articles much more valuable. If an industry may be treated in that way, I contend that it is exactly parallel with the land. In the old times the land in this country growing large grain crops was able to supply the market before those crops came in from abroad. In recent years the land has become unprofitable for those crops, because corn is now obtained from foreign countries at very much less price than it can be grown in this country; but I say that farmers having the raw material, the land, to deal with, ought to do as the manufacturer does; he ought to turn the raw material to a different purpose; he ought to absorb the labour which he can obtain very cheaply. If he put more brains into the cultivation of the land by applying that labour to more suitable forms of cultivation, he should

Mr. *Renshaw*—continued.

from the same area of land be able to make a larger profit. If you read these Blue Books, you will see there is one cry all the way through, and that is that the land wants more brains; it is not only that it wants more manure—there are complaints about wanting manure, it is true—but brains are a great deal more valuable to it than manure. Just as a manufacturer has to change his products in order to meet the change in demand in the markets of the world, or to create a new demand when the old article has gone out of demand, so, on the same principle, the agriculturist must deal with the land of England; and now that our land can no longer be used profitably to grow these great corn crops with which the English farmer used to feed us, and which now come from abroad in such great quantities, the English agriculturist must utilise the land and all this hand labour that is available, to grow all these other products which can be grown as well in this country to compete with those that come in from abroad.

Mr. *Bartley.*

9113. This is only theory, is it not; you have no practical knowledge of agriculture?—I have all the facts given in these Blue Books in which this theory as you may call it is based. I can give chapter and verse for everything out of these Blue Books which are open to every honourable Member and everyone else.

9114. It is only theory, is it not?—No, it is by no means only theory, and so far as the analogy of manufacturing is concerned to which I have referred, it is based upon actual knowledge and experience.

Mr. *Renshaw.*

9115. With regard to the manufactures, is it not the case that the process has been that the factory system has steadily replaced by machinery the work that used to be done by hand in scattered communities over the whole country?—Yes.

9116. So that the change that has been going on in regard to factories, as against the old land system, has tended to draw the population away from the land and away from the village into the big centres. Is not the whole tendency of the cessation of manufacture by hand as contrasted with manufacture by machinery been exactly the opposite of that which you are suggesting with regard to the land; what you now suggest with regard to the land, namely, to revert to the methods of hand cultivation, is just the opposite process, is it not, to the change that has been made so successfully in the case of manufactures?—I am surprised that you should think there is any flaw in the analogy which I have drawn between the two cases. It is not exactly the same material in the two cases, of course. If you compare cotton with corn, I say that out of the raw material of cotton you can make every conceivable article up to articles as fine as lace; out of corn you can make nothing but flour. My argument is this: if you have 900 acres of land and used it in growing corn, and that corn can be delivered in this country from abroad at a much less price than you can grow it, surely it is not profitable to go on growing corn on this land, and it would be better

Mr. *Renshaw*—continued.

to give up these big crops and put the land to hand-tillage, and put all this labour which you can now get cheaply on the land and which would enable you to produce much more valuable products.

9117. Is it not the case that during the last 30 or 40 or 50 years, whatever period you like to take, there have been large changes going on in the whole system of agriculture in many parts of the United Kingdom?—That is quite true. I have not said that there are not changes taking place, nor that there has been want of skill in growing the particular products which it has been the custom in this country to produce for many years past; but I say that where skill and knowledge and enterprise have been wanting is in abandoning the old crops, grain crops, which can no longer be profitably grown, however skilfully and however well the farming is done in connection with them, and however much machinery may be employed with a view of economising labour. I contend that want of enterprise has displayed itself in the fact that the farmers as a whole, instead of abandoning their corn growing and adapting their land to other purposes, have remained too long trying to grow produce that we know cannot possibly be profitably grown in this country. It is only in that sense that I say there has been want of enterprise.

9118. Passing from that to what you said they should produce, you suggested the cultivation of flax should be very largely extended in this country?—I mentioned flax as one of the products requiring a great deal of hand labour which formerly existed in this country, and I say that instead of growing flax, the land has been taken to produce crops which can no longer be grown at a profit.

9119. I thought you led the Committee to understand that flax was given up in consequence of there not being sufficient people upon the land to work it?—No; I said the land which was occupied formerly by flax crops had been taken over probably for growing grain crops, because at that time the grain crops would pay better; I do not say necessarily the cultivation of flax was abandoned, because there was no labour, but because the farmers chose to put the land under a crop which at that particular time paid them better.

9120. I take flax because that is one of the crops you suggest in your scheme; are you aware that the cultivation of flax has fallen off very considerably in Ireland in recent years, notwithstanding the fact that in Ireland you have such a large population on the land?—That is so.

Mr. *Renshaw*—continued.

9121. Are you aware that in 1887 there were as many as 130,000 acres of land in Ireland under cultivation of flax crops, whilst last year there was something less than 70,000?—That is a sad fact.

9122. Can you suggest any reason for that which would lead the Committee to think that if flax cultivation was embarked upon by these new colonies it would be more remunerative than it has been in Ireland?—No, I should first of all have to inquire what are the reasons that have led the Irish to abandon flax and take to breeding cattle, or using the land for other purposes; but the fact remains that in Lincolnshire, to which I have referred, and to which the evidence of Mr. Wilson Fox refers, you have two things that are not profitable. In the first place, presumably the flax was not so profitable at the time it was given up as corn crops were at that time. But now corn crops, which took the place of flax, are not profitable, and arable farming, which took the place of flax, is not profitable.

9123. If the farmer formerly gave up flax when it was not profitable and took to growing wheat, would he not, if he finds growing wheat is not profitable, take to flax again if he thought that would be profitable?—I should say that at present he could not get the labour that was necessary under the present system.

9124. That cannot be the reason, can it, why this cultivation is going down in Ireland?—Many causes are attributed for its going down in Ireland,

9125. I see another product mentioned in your paper; take the cultivation of beet-root for sugar: you say, "with skill and ample hand labour, beet can be grown and its saccharine properties developed as successfully in this country as abroad." Is it within your knowledge, as it is within the knowledge of most members of the Committee, that great efforts have been made recently to cultivate beet-sugar successfully in this country?—Yes.

9126. Could you state of your own knowledge in proof of the statement in this paragraph, that the beet-root that has been cultivated in this country has had its saccharine properties developed as successfully as that grown abroad?—I have very precise evidence upon that question to offer; I do not propose to offer it myself, but you will have it on Tuesday from an expert witness.

Tuesday, 21st May 1895.

MEMBERS PRESENT:

Mr. Acland.	Mr. Lawrence.
Mr. Bartley.	Mr. Logan.
Mr. Billson.	Mr. Mather.
Mr. John Burns.	Mr. Pickersgill.
Mr. Campbell-Bannerman.	Mr. Renshaw.
Mr. Heneage.	Mr. Round.
Mr. Heywood Johnstone.	Mr. John Wilson (Govan).

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN IN THE CHAIR.

Mr. WILLIAM MATHER (a Member of the Committee); further Examined.

Mr. *Bartley.*

9127. YOUR proposal is intended to meet distress arising from want of employment especially, is it not?—Yes.

9128. Both permanent and temporary?—Temporary in the first place, leading to permanent employment on the land under certain conditions.

9129. It is to provide for temporary loss or want of employment from depression of trade or shifting of trade?—Yes, the want of employment from whatever cause.

9130. I gather your proposal takes certain points for granted as axioms. For instance, in paragraph 10 you say: "It is necessary to recognise the fact that the labour of any able-bodied man upon land can, under proper directions and conditions, be of at least an equal value to the cost of his maintenance"?—Yes.

9131. Do you speak on that point from actual experience?—I speak from such experience as it is open to everybody to obtain for themselves from the labours of others.

9132. Have you ever tried it yourself in your own experience?—I have never tried working upon land myself.

9133. What I mean is, have you ever taken land and worked it in the way you propose?—No. I have had no occasion to do so. But there is a notable example which I quoted on that point close at hand, which occurred to my mind, and which you may have seen, namely, at Wanstead Flats; and if we have the experience of the manager of that work, we shall, of course, have that proved beyond doubt. But already, in the course of the evidence before this Committee, we have had it stated that, even working upon an acre of land, or rather less than an acre of land, a farm labourer or agricultural labourer could earn 4*s.* a week in his overtime, in addition to the ordinary labour he spends upon the land; and if on an acre of land it is possible to do

Mr. *Bartley*—continued.

that, I do not think there can be any doubt that, under the management I have suggested, and on land of the character I have suggested, any one, even unaccustomed to ordinary farm work, would be able to earn his maintenance, his actual food, by the labour he performed on land prepared for the purpose.

9134. That is your theoretical opinion?—No; I think it is a commonly accepted and well-known fact. It does not appear to me to need any elaboration. If proof were needed of it, of course it could be had without stint; but I treat it as an axiom.

9135. A theoretical axiom?—There is no theory about an axiom; it is a law of nature.

9136. May I take it you have no practical experience of it?—I have such experience as justifies me in making the assertion.

9137. Then in paragraph 12 you say, as a condition of your scheme, that "a colony for men unskilled in agricultural work must mainly consist of land out of cultivation, but such land must be of a nature which is capable of profitable cropping when brought under cultivation." Is that possible in many parts of England at the present prices?—Yes; there appears to be from the agricultural returns no doubt whatever that, under proper preparation, there is very little land that cannot be made worth the culture spent upon it, and made to yield a profit.

9138. That is, again, a theoretical opinion, is it not?—No; it is gained entirely from the Agricultural Commissioners' Reports. If you care to have actual illustrations of this fact, although it does not come in so appropriately here as it might elsewhere, I might take a case of a labourer which is quoted by Mr. Wilson Fox in his report on Lincolnshire, page 71. He there gives an instance of what may be done by an ordinary labouring man hiring land even at 3*l.* 6*s.* per acre, with six acres of land. That man, after paying rent for this land, with his

Mr. *Bartley*—continued.

his wife helping him, was able to obtain a considerable profit from it; so much so that he was able to acquire 12 acres more land out of what he made from his six acres and from savings on his wages at his general work. This experiment shows that with the necessary skill and direction on a very small quantity of cultivated land, a man and his family could obtain a very decent living on six acres. But the point to which this paragraph 12 refers deals with the question from the point of view of waste land having been brought under cultivation by the system described, namely, that waste land adjoining the cultivated land would, for a considerable time, be under the tillage of those men who simply had to perform the operation of preparing it for seed for the growth of whatever product was intended to be put upon it, the first operation being performed by steam digging and by such machinery as would be hired in a country place to do work best done by machinery. For it is to be observed that under this scheme machinery is not to be excluded in the first preparation of the waste land to bring it into a state fit for hand-tillage. The land having been brought into that condition by machinery which would be hired, then even such labour as could be bestowed upon the land during the first year by men of the unemployed working classes with whom we have to deal, would be sufficient to maintain the workers and afterwards to more than maintain them.

9139. Then you consider that the explanation of the present outcry of agricultural depression is simply that the agriculturist does not know how to carry on his own business?—No, I do not say anything of the kind. I say that a large quantity of land is being used by the farmers in this country to grow crops which could not possibly yield a profit. They cannot afford on such crops to employ more labour, and in fact they do not require more than a very small amount of labour; and if they were to turn their land from that mode of cultivation into a cultivation that would require a large amount of hand labour, they would have to face a very serious question, and apparently very few of them have been inclined to face this question. The whole case is put in a nutshell, if you would let me refer to what you may regard as a high authority, viz., a leading article in the "Times" newspaper, discussing the Report of the Agricultural Commissioners. The leading article says: "Owners of purely agricultural land are face to face with a depreciation of their property which to all appearance seems permanent, and farmers can only hope to weather the storm by bringing a larger measure of skill, enterprise, and intelligence to the task of adjusting the cost of production to the diminished price of their produce. All forms of industry are liable to disturbance and dislocation from sudden and widespread changes in the economical conditions involved, and the only real remedy lies in the inherent capacity of human nature to adapt itself to the new conditions evolved. Nearly every industry in the country has had to undergo this ordeal in its turn, and few have emerged unscathed. It is the turn of

Mr. *Bartley*—continued.

agriculture now, and there is nothing for it but to accept the fact and make the best of it." That, I think, puts very fairly the conclusion anyone would arrive at on looking through these agricultural reports, and having regard to what is written generally at the present time on agricultural conditions and agricultural prospects. I should like the Committee to bear in mind that this scheme takes advantage of the very peculiar condition of things in this country at the present time—a condition that apparently must be permanent—viz., that land will not increase in value from these great crops on large farms which hitherto have been grown, although the skill necessary for the growth of these crops has possibly been present in abundance (I do not deny it), and machinery of the most perfect kind has been applied to the cultivation of the land for these crops. But seeing that a large quantity of this land is gradually going out of cultivation, it is an opportune moment to restore to the land of England, in part at any rate, that condition of things that obtained very many years ago, when hand tillage could be used to a profitable account on small plots of land in producing such things as at present we entirely depend upon foreign nations to send us. It is a peculiar concurrence of events. There is a coincidence, a happy coincidence in a certain sense, although very unhappy in another. At a time when we are requiring to provide a large amount of labour for the unemployed industrial classes that cannot be afforded in our industrial regions, at a time when we find a continual flow of young men away from the agricultural districts to the industrial districts, it seems to me a happy coincidence that land can be acquired at a very small price on certain terms of safety for those who find the capital, and that we can restore the ancient order of things.

9140. You think the surplus town labour which has failed in the towns can resuscitate agriculture which has failed in the hands of those who have been at work at it for years?—No, I have not said anything of the kind in a general sense. I have said the present state of agriculture gives an opportunity for the labour of those people on the land who at present cannot find employment elsewhere, and under such conditions as will produce a profit, or, at all events, if not a profit in money, what will be security for the money, and at the same time lead to the cultivation of the land and the maintenance of a large population on the land.

9141. You have never taken any land yourself and tried the experiment, have you?—I have not tried it myself individually; but I am connected, and have been for many years, with many societies that have made the experiment, and I have made my contributions to experiments of this kind for the purpose of discovering whether it was possible for a private society to undertake such a removal of labour from the town back to the land. My experience of those efforts, as I set forth in my opening statement, is that it is absolutely impossible for charitable associations or philanthropic associations to meet this question in any sense commensurate with its importance or with the

Mr. *Bartley*—continued.

magnitude of the demands that are now made upon it.

9142. Do you consider that this land, which is profitable for cropping, can be bought in fee simple for 10*l.* an acre?—I can give you chapter and verse for very large quantities of land to be obtained, unhappily, every day in the week at less price than that.

9143. Fit to produce 9*l.* per acre per year?—Certainly. I will give you a case in point; I mentioned it incidentally on the last occasion. There is a large farm in Essex, which I visited myself, which had become practically uncultivated. The land had become starved through the method of culture adopted by the former tenant. A young Scotchman came down and paid less than 1*l.* an acre rent, which is less than 20*l.* an acre, I presume, to purchase out-and-out. The rent of that farm, although it contained very excellent buildings, the most perfect farm buildings you can conceive of, and a very good house, was only 18*s.* per acre. Upon this farm this man has worked now for three years, altering the cultivation to the needs of the land, and in accordance with his own skill and knowledge, and he has upon that land produced a profit that pays him.

9144. You referred to Bradford in your former evidence as a town where, during a serious depression, your scheme might have been applied, as I understand?—I referred to Bradford in my opening statement as a town in which there had been great fluctuation in employment; and if, during that period, there had been a means of this kind for temporary employment, there is no doubt a large amount of that surplus labour would have been accommodated with work on the farm.

9145. If your scheme had been in operation Bradford could have applied for work under it?—Men from Bradford would most likely have applied to the Poor Law authority having such work at their disposal, for occupation on this farm.

9146. If this colony had been in existence at the period when you said that, owing to the alpaca troubles, Bradford was in great difficulty, there would have been a great exodus from Bradford to these farm colonies?—I did not say there would have been any exodus. I used the case of Bradford to show that very great dislocation took place from time to time in certain manufacturing industries, and during those periods it took a considerable amount of time and patience to bring back in other forms the industries that had been displaced. That occurred in the case of Bradford.

9147. During that time would not this farm system have been used according to your proposal?—Yes; I think a considerable number of those men would have applied for admission to these colonies, and would have maintained themselves for that period and helped to maintain their families, and some of them possibly might have remained on the land altogether.

9148. The population of Bradford is about 250,000, is it not?—At present I suppose it is approaching 200,000. It was not so large at that time.

9149. That means to say that many thousands would have gone from Bradford to these proposed colonies?—No; not necessarily many thousands, nor hundreds. It is merely used as an illustration that there are at times large masses of men thrown out of employment; and I say that such a scheme as this would have tided over the period of distress those of that number of men who were inclined to go through the ordeal of this hard work upon the land, and to prove that they would not receive any relief whatever during those bad times, except through the work of their own hands.

9150. Still my question is, would they have gone or would they not; because, if the scheme is to meet that depression, surely great numbers must have gone?—I should think great numbers of those men would have gone for temporary residence.

9151. Some thousands?—There might have been hundreds or thousands applying; it would depend upon the accommodation that had been provided.

9152. According to your scheme, for every thousand that applied you would have had to supply 5,000 acres of land; is that so?—Whatever the number might be, taking the training colony upon this basis, if it were adopted as a national institution for the purposes I have described, it would naturally have to grow with the growth of the demand made upon it.

9153. If a thousand persons went from Bradford, according to your scheme, which says you want six acres per man, would not that involve the immediate taking up of 6,000 acres of land to meet the want in Bradford?—It would not be possible to take up 6,000 acres to meet specially the want in Bradford. If this becomes an institution of the country, these colonies would constantly exist, ready to receive at times of great depression large numbers of persons upon the land for temporary employment.

9154. At a great distance from their homes?—At any distance from their homes; that has nothing to do with it at all. The men can be sent down to their own colony, and they may as well be a hundred miles away as five miles away.

9155. Would it have hastened the return of prosperity to Bradford if you had sent a hundred persons out of Bradford to a farm hundreds of miles away, where in the meanwhile they would have been utterly cut off from the means of getting work in Bradford?—No. I described very fully on Friday, in reply to the Chairman, what would happen in a case of that kind. The Chairman put a case rather more appropriate for his purpose than Bradford, namely, Coventry. I have made a full explanation of what would happen in that case.

9156. I took Bradford because you mentioned it in your statement?—I never used Bradford in the sense you are putting it. I used it in describing the causes which led to want of employment sometimes on the part of large masses of men. But that is a circumstance which happily does not occur every year; it may not occur once in a decade. I took it as an illustration to point the argument I had in view, that you must expect fluctuations in industries from time to time, whatever the condition of general trade might be. When you ask the question whether thousands of men could be

Mr. *Bartley*—continued.

be sent from Bradford hundreds of miles away, I may point out that the whole island is not hundreds of miles from shore to shore, from north to south; but it is within reason that in large counties, say in the Midland Counties, land might easily be obtained for purposes of this kind; and so far as these colonies were in existence, and so far as they could accommodate the men out of employment in such a crisis as that at Bradford, the men could be readily taken on at the colony. The mere distance from their homes does not impair in any shape or form the value of the labour of these men.

9157. You think not?—That occurs now from time to time; men go a very long distance from their homes for employment; they go out for weeks together. In my own experience, men have come to me who have not been at home for six weeks. Some men will come from Glasgow to the South of England, or *vice versâ*; they go long distances in search of work, trusting to their friends or trusting to something to keep them going.

9158. Here you are taking them away from their natural work?—Yes, to be employed; and in the meantime they have all the resources that they would have at home to inquire from their friends and families and connections, besides the public authorities, when their own trade is capable of offering employment. Moreover, I should like to point out that one great advantage of such a colony as this for unemployed labour would consist in the management which I have described being itself very helpful indeed in getting these men back to their regular work. The manager and committee of management of the colony would be interested in the case of every man that came to them. The man would confide to them the nature of his former occupation, and what he would like to do, and the management would announce through the newspapers and through all the ordinary sources of public advertisement, that there were very good men in the colony of excellent conduct who wanted situations. There would therefore be a sort of registry office for labour, or a labour bureau, incidentally arising out of the plan that I suggested, which would be an enormous boon to hundreds of working men who had been temporarily displaced from their occupations.

9159. Do you think that would make up to a man for the loss of the opportunity of getting back to his own work in the place where he was generally engaged?—I do not admit that there would be any loss of opportunity in that respect. I think the opportunity is better when he is employed under these conditions in the way of bringing him under the notice of other employers who might take him into their service. If a man had shown so much strength of character as to go away from home and work on these colonies in this somewhat hard, and by no means enjoyable, fashion, at all events for a time, I think such a man would have a claim upon a good employer, who wanted to have a man who would never eat the bread of charity, or depend upon his neighbours, but would earn his own living under the most unfavourable circumstances.

9160. I suppose during periods of depression, such as we have had, your proposal would be that a great many of these colonies would be in existence, covering a considerable area?—Yes, I should hope so. There is room for them, and I should hope they would be established.

9161. When the depression ceased, or was less, what would happen to the colonies?—One half of the colony is a farm settlement; the cultivated portion of the colony, say 600 acres out of 1,200, would be occupied permanently by those who resorted to a farming life as their permanent occupation. Entering through the uncultivated portion of the colony, they would then pass to work upon the cultivated part, and that cultivated land would gradually form a farm-settlement, as I call it, and upon that these men would be permanently placed.

9162. Is it part of the condition of your colony that you must have half your farm permanently inhabited by permanent colonists?—I do not say you must have it; but on the 600 acres of the cultivated portion you must have some 10 to 12 trained skilled labourers, who would receive the ordinary wages of agricultural labourers in the country, and become your permanent staff under your manager; there would be a farm bailiff, so to speak, and 10 or 12 men who remain there permanently. Those men would be able to keep it going, even supposing there had been no men sent to the colony at all (which is an impossible assumption), and they would work it under such cropping as would suit the labour that such men would bring to bear upon it.

9163. Like ordinary farming, in fact?—Such farming as these men could undertake.

9164. They would lose by that, I suppose?—No; on the contrary they would maintain themselves, and all the expenses of the farm would be met, and the only thing that would be wanting on the cultivated part would be the rental necessary to repay the State for the interest on its money, and that would only be wanting at the start until men could be found to work it permanently.

9165. The State would lose then to that extent?—Would you let me supplement my answer to a previous question of yours. You asked me about the prices at which the land could be obtained.

9166. I was asking about land complying with the conditions set forth in paragraph 12?—If you will look at this map of Essex, which is furnished with the Report of the Agricultural Commissioners, you will see there is plenty of land. You will see that the map is rapidly becoming spotted over with these black spots which indicate land that has passed out of arable cultivation. I will refer you to the actual facts given in Mr. Hunter Pringle's Report on Essex and the Isle of Axholme. He says that land was sold outright, both privately and by auction, at from 3*l.* to 5*l.* 10*s.* per acre, and that the same land, after restoration to a fair state of cultivation, would be worth from 7*l.* to 7*l.* 10*s.* The dates are given in his Report for the farms being sold. There is unfortunately no end of land to be got at the present time at such prices as I have named, and at much less price, in fact, than I have named in estimating the cost of such a colony.

9167. I am perfectly aware of that; but the question I asked was whether it would be land complying with your condition in paragraph 12, namely, that "such land must be of a nature which is

Mr. *Bartley*—continued.

capable of profitable cropping when brought under cultivation." Is not the whole tenor of the report you have referred to, to show that such land as you have spoken of is not capable of being profitably cropped?—No; on the contrary it is set forth distinctly in the report that this land has gone out of cultivation because the crops grown upon it were such as could not receive a remunerative price in the market, and there was no means and no money and no possibility, either on the part of the farmer or on the part of the owner, of converting that land to such crops as we should consider most profitable where hand tillage could be employed.

9168. Surely the whole difficulty there is that the land will not pay under ordinary cultivation?—That is so if you apply the term "ordinary cultivation" to these crops of wheat and grain, which, as you know, are at a very low price and have been so for many years in the market, so low indeed as to render it impossible for them to compete with foreign produce of that nature. The land has shown itself to be unfit for such crops under that system of cultivation; but to bring it under cultivation of another kind, which this scheme involves, there is no difficulty at all in taking land that hitherto has been used for wheat.

9169. You say, speaking without any practical knowledge, as I understand, that there is no difficulty in bringing this land under profitable cultivation, and yet all the farmers in Essex are being ruined simply because they will not adapt their farming to what you say will be a profitable undertaking; is that so?—In a great measure I think it is. That is not only my own pronounced opinion, but it is the opinion I have received from the persons I have spoken of. I have given a case in point about a farmer in Essex, which is a very strong case; but it is a case by no means exceptional, for the same thing happened not only with that Scotch farmer, but with farmers who occupy 12 miles of land in a straight line running from his own farm right through the county of Essex.

9170. You say that under your scheme this land in Essex, which is shown by the map you have referred to, to be becoming more and more derelict, could be made to do well by bringing this surplus labour of the towns to operate upon it with this superior knowledge that you speak of on the part of the management?—I should think a great portion of the parts coloured black upon that map could through this scheme, from being almost waste land, become a cultivated garden.

9171. That you say, although you have never cultivated land?—I have not cultivated land. I have a considerable number of acres in my possession, and I am in a small way a farmer; but I do not wish my own private experience of land to be placed on record as a guide for honourable Members of this Committee in a matter of this highly technical character. As I have intimated, an expert witness, Mr. Moore, will be here later, this afternoon or on Friday, who can give you chapter and verse for the answers to all these questions that you put, and I should prefer you to reserve them for him if you are not satisfied with the general views I have expressed.

Mr. *Bartley*—continued.

9172. Going to the question of the 4*s.* a week paid to the man's wife, I understand that when a man goes to a colony, his wife and family are to receive 4*s.* a week to help them while he is at work, and that he will get something more in the case of a certain amount of success?—As I said, supposing the man to be of the pauper class, he would come upon the guardians in some form or another, and would be the recepient of 4*s.* or 5*s.* a week; and what I suggest is that when he comes to this colony, instead of that being done, it would be in the public interest for a man who would not take money for himself, but would work upon this farm-training colony, if the guardians were to pay to his wife 4*s.* a week as an advance. If he did not do more than earn sufficient at the colony to maintain himself—the cost of his maintenance being reckoned at the price which the management of the colony would put upon the produce the man consumed—then, of course, the contribution of the guardians to the wife and children for keeping the home together in the town, would be an ordinary contribution of the guardians to the maintenance of the family. On the other hand, I say this man has an opportunity under the system laid down here, with the management provided here, of not only getting his maintenance for himself, but he has an opportunity of doing something more, inasmuch as he is paid piecework for one-third of his labour. Two-thirds of his labour he gives, but one-third is piecework; and out of the piecework earnings he can cover the cost of 4*s.* a week paid by the guardians to his wife, and probably make something more which would go entirely to his credit.

9173. Do you think the proposal of sending a married man 100 miles away and leaving his wife and family on the town at 4*s.* a week is the solution of the problem which we have under consideration?—I never said anything about its being the solution. I say this is a means, at all events, of employing the unemployed workman, that it prevents his home being broken up. In such a case his goods are not sold; there is nothing spent but the savings up to the time when the man applies for this work; and under this system his wife receives, at all events, a definite 4*s.* a week. That is a small enough pittance, of course, but it is better than nothing; and since almost every person has someone taking an interest in their welfare, if a man went away leaving his wife under those conditions, there would be a claim on the part of the woman upon others who might assist her, and there would be whatever work she might herself undertake to help to maintain the children for the time the man was away. But there is the incentive to the man under those conditions to earn what he might earn (which is considerably more than his own maintenance), that it would all go to benefit the family.

9174. He would not get it, would he?—He would get it or his wife would get it, according as the man might determine. Every week when the piecework was paid for (which is a third of the man's labour), that money would go to his wife

Mr. *Bartley*—continued.

wife in town, or would be given to the man to do what he thinks proper with; but it goes against the 4*s.* a week paid by the guardians to begin with.

9175. You think that is a satisfactory arrangement?—It means, at all events, saving the guardians' pocket, and enabling the man to keep his family, if he likes, and it enables the home to remain unbroken, with all the goods and chattels of their household.

9176. Then another feature of your scheme is that only well-conducted members of the unemployed class are to be allowed to go to these colonies; how would you select them?—By the same selection as one now adopts in the case of any service which these men accept. Every manufacturer has to engage labour from time to time.

9177. Who would select them?—They come either with a character or with references.

9178. Do you mean at the farm?—No; I mean the department of the poor law guardians, which is not a pauper department, but a department specially open for this purpose. On the men coming and asking for the work they require on the colony, the officers of the department would make such inquiry as they think fit, and engage the men in the same way as I should engage 100 men if I wanted them to-morrow for my Works.

9179. You think there is no taint of pauperism in all that?—None whatever. The man is perfectly independent, and as long as he is not disfranchised, and has not his Friendly Society's subscriptions confiscated, or his home broken up, and does not pass through the ordeal of the workhouse, but accepts labour freely upon the farm, just as he would in your employment if you engaged him as a coachman or a gardener, I think the self-respect of the man is maintained.

9180. As regards products of the farm, you refer in paragraph 20 to butter and flax, and a number of other things; how is it that those things are not now produced commercially; there is a very good market for butter and flax, and everything else, if it pays, is there not?—I have already said that a large amount of labour is involved in working up the farm products; for instance, in dairy farming, beyond the stage of milk, a very large amount of labour is needed, and that labour is not forthcoming.

9181. If that labour pays, surely it is forthcoming?—It pays under certain conditions. I say we make it available by this plan because everything on this colony is reduced in the way of expenditure to a minimum, and the principle of co-operation and skilled management is increased to the maximum; and by those forces so working together we have an opportunity, by means of this very cheap labour (labour which is paid for, in the first instance, by maintenance only), of producing things upon the farm which cannot be now produced by the present custom on most of our large farms.

9182. That is again based upon theory, is it not?—No, it is based upon absolute facts; but I should prefer that you should put these questions to the practical agriculturist who will follow me, and can give chapter and verse, rather than to me, because you might be inclined to discount whatever I might say on that point.

Mr. *Bartley*—continued.

9183. As regards finance, I should like to ask a question or two. You say in paragraph 27, "The money advanced by the State for the founding of these colonies would be in the nature of an investment"?—Yes.

9184. Do you consider it a very gilt-edged investment?—I consider it a fair investment.

9185. It is rather a deferred investment, is it not?—For the first five years I propose that the State should receive nothing, unless the colonies developed so rapidly as to enable the interest to be paid within that period.

9186. You expect the State, like the Irish landlords, to get fat on unpaid arrears, because they are not apparently to get anything for five years?—I think it is defined in the scheme.

9187. Do you consider that a fair investment?—Decidedly for the State. It would be a very good investment for some of us. If I had any return on my money in some cases for 10 years I should be extremely happy, and so would most people who are engaged in large enterprises. One continually has to invest large sums of money in manufacturing processes for which you may not see a single per cent. for five or ten years, and indeed you may see it sinking lower and lower before your eyes before the corner is turned. You cannot carry on any enterprise without that; in fact that is the soul of enterprise. No enterprise can be carried on without laying out a lot of money, and 10 years is not a long time to wait before you see your harvest, in the meantime using your intelligence and skill to direct your enterprise in a profitable manner.

9188. But you cannot live upon enterprise, however skilful, if it does not bring you any return?—You cannot live upon nothing, and if you put your whole means of living into such an investment, you would not be acting like an enterprising man, but acting very foolishly. But part of your capital might well be put out in such an investment.

9189. In paragraph 30 you give an estimate of the cost of such a colony; you say that for every 200 persons to be accommodated you estimate the cost at about 30,000*l.*, and 1,200 acres of land?—Yes.

9190. I understand that you still think that 10*l.* an acre is enough, and therefore we will leave that?—I think it is more than enough. It makes an average of 10*l.* You will see that half the land is put at 15*l.*, and half at 5*l.*

9191. We heard from one honourable Member of this Committee that in South Wales there are 12,000 people out of work at the present time, all wanting to be relieved in some way. I suppose this scheme of yours might fairly be applied to those people?—If any such colonies as these were in existence, of course, so far as their capacity went, they would be directly applicable to such cases.

9192. Then, if all those men, owing to the depression which appears to be, unfortunately, permanent in the tinplate district, wanted to come on to your colonies, you would want 60 such colonies, would you not?—If you had ap-

Mr. *Bartley*—continued.

plications for 12,000 all at once, you naturally could not supply them all at once.

9193. Then your scheme would break down?—My scheme is not a scheme that can suddenly, by a magician's wand, come into existence at a moment to meet the case of 12,000 persons wanting employment at once. I am proposing in this scheme a way in which the State should aid a new institution for the purpose of gradually meeting these cases in future, which I have tried to show is necessary, as I sincerely believe. I do not believe it willingly; but I am compelled to believe it from my own experience. This scheme is for the purpose of providing a certain number of such colonies, in the first instance, by a very small loan in the way of money, which will demonstrate the feasibility of using such colonies in a wide extension throughout the country, so far as such purposes as I have indicated render it necessary.

9194. Supposing your scheme were successfully worked, and it were able to take up the unemployed labour which arises owing to these unfortunate circumstances in South Wales, that would mean that you would want 72,000 acres of land, or 110 square miles of these farms, supplied for the 12,000 people?—I should submit that what the extent would be has no bearing upon the case. If 12,000 people were regarded as the number having to be accommodated from time to time on such farms as these, the farm colonies having proved to be an advantageous institution, the extent to which they would be magnified would be of no importance.

9195. That prospect does not alarm you?—No.

9196. You do not think 110 square miles of farm colonies, costing 2,000,000*l.* sterling, would be a serious drawback to your scheme?—I think if I were to propose to spend 2,000,000*l.* to-morrow upon a hundred schemes of this kind, it would be very foolish. But having spent the moderate sum I ask for, I say that would be at once a test of the utility of such a colony for a given number of people: and then I think it is not unlikely that, instead of the State having to do it, we should have the landowners of the country themselves very willing to avail themselves of such facilities for bringing men on to the land, and instead of any purchase whatever of land taking place, you might have simply a rental of land for the purpose.

9197. You would not think that such a quantity of land as that is at all alarming?—Not at all.

9198. I daresay you remember that the honourable Member for West Ham put the number of unemployed at something like 2,000,000; that would increase the figure I have given enormously?—That is, I hope, not likely to be in our time; it is not the case to-day, and probably will not be the case if measures of this kind are adopted. I would like the Committee to bear this in mind also: that in considering these proposals, if they are effective at all, at the time they relieve any one individual, they at once begin to retard the present displacement of labour from the land, the depopulation of the land; and they would set an example to a great

Mr. *Bartley*—continued.

number of farmers all over the country to cultivate their land on similar principles. By that means they would not only keep on the land the agricultural population that is there to-day, but they would attract back to the land the agricultural population that has been thronging into the big centres.

9199. If Mr. Keir-Hardie's estimate is correct of 2,000,000 for the unemployed, that would represent 18,000 square miles of such farms as you propose, and an expenditure by the State of 300,000,000*l.*?—I think it is quite beyond reason contemplating anything like 2,000,000, or even 200,000, in connection with a scheme of this kind. That is only a *reductio ad absurdum*; it is a process of argument which is not serious; and therefore I think it would not assist us in considering the scheme. I have limited myself to the principle; I have tried to give in detail the character of these institutions and the method by which they are to be conducted, and I have indicated that the State alone can undertake what I should call a practically satisfactory trial of this scheme. If there is anything in the principle at all, it can only be tried by the State; and I have suggested that the State, by devoting to this purpose a very small portion of the amount of money equal to that which they are giving every year for one specific object to the County Council, namely, technical education; by taking, as I say, only a portion of that amount, the State could establish six such colonies so as to accommodate a considerable number of people, and so benefit not only the men themselves but also their wives and families. The State could test these colonies by adequate means, which would give, at all events, the greatest possible chance of success; and if they were proved a success, there is no doubt the matter would be largely taken up by the landowners of the country, and the farmers themselves would adopt a system of cultivation that would keep on the land the vast population now thronging to our towns.

9200. If your scheme is good and pays, as you say it will, for 200 persons, there is no reason why you should not put a very much larger number on, is there?—For this reason I have developed the system of farm settlements, following after the farm training colonies; because I hope if the scheme succeeded in the first stage, that would be powerful to bring about the successful issue of it in the second stage, namely, that you would be able to bring back, through the landowners themselves, thousands upon thousands of people who are now not upon the land, but who would like to be there, and thus be able to cultivate to a high degree a very large surface of this country hitherto cultivated to a low degree, in the sense of not being profitably cultivated owing to the crops that are grown.

9201. As regards the returns from this colony, do you not think that 9*l.* per acre is an excessive estimate for this town labour to produce?—No, I do not; I think, from all the sources of information I have been able to apply to it, 9*l.* per acre or even 10*l.* per acre is not at all an exaggerated figure.

9202. Each man working six acres?—Yes, having

Mr. *Bartley*—continued.

having regard to the conditions I have laid down, namely, that each individual man working upon such a colony is subject to direction and guidance by a skilled agriculturist, skilled in the sense of working this particular land by those means and crops which will make it yield the best and highest possible price. Then the auxiliary industries connected with it would cause those products, such as are not consumed on the colony, to be prepared for sale at a price higher than agricultural produce is usually sold at. Having this direction and guidance, having these 12 skilled labourers and the farm bailiff, the consulting agriculturist, who would be the chief manager of the whole thing; with those conditions I say, you would get the skill and attention paid to every detail of this sort of culture, which has certainly not been employed on farming hitherto in this country, except only in the one case I have already quoted to you of a labourer who did this work for himself.

9203. Is it not the fact that, except possibly near towns where vegetables are grown, such a return as 9*l.* per acre is never realised on a farm, however it is conducted, at the present time?—Certainly not. I am sorry not to have made more impression by the statistics I have given; but I have stated already that on this very farm I have before alluded to in Essex, which is worked by an intelligent young Scotchman not more than 30 years of age, he receives for his produce over 10*l.* per acre; he has 50 cows, and he sells the produce of the 50 cows in milk (that is in its least profitable form, because there is no labour upon that except the milking), and he receives from his cows, from the sale of the milk and from the sale of young calves, 1,000*l.* per annum. And as he said, "If that milk could be worked up into other things by cheap labour, I should, of course, make more out of the cows than I do." This is in a district where agriculture is extremely depressed at present.

9204. You say great management is wanted; that is an essential feature of the scheme, as I understand?—I do not say great management; but I say if you have skilful management by persons who have to devote the whole of their day to the guidance of labour in the right direction, and to the treatment of crops in the right way, that would afford almost a surety for returns of higher value than ever has been obtained from the land before, when other kinds of large crops have been produced.

9205. Is not that management very costly?—No.

Chairman.

9206. If I may so, I think we have sufficiently ascertained Mr. Mather's estimate of what would happen in the circumstances he anticipates; and if it is a question of disputing his facts or the basis of his expectations, perhaps the question had better be addressed to Mr. Moore, who will speak on these technical points?—As I have already intimated, I would rather that such questions were reserved for the first-rate agriculturist who will follow me.

Mr. *Bartley.*

9207. Am I to gather that this scheme not only absorbs the unproductive labour of the towns, but really improves agricultural labour as well?—Yes, that is the indirect intention of it.

9208. You say, in your second paragraph, that you really have "no personal experience" of the working of the different methods of dealing with land which you speak of; therefore I gather whatever virtue there is in this scheme, you are putting it before us rather from a philanthropic wish and pious hope that this will be the result, rather than from any practical experience you have had?—No, quite the contrary. Although I admit I am not a farmer, yet I have the same means of judging of the results of farming, and the conditions of farming, as any person connected with large industrial matters can have. I have had to do with workmen all my life, and I have had a good deal to do with country life; not to the extent of being responsible for the products of the land, but so far as, by examining into such questions, I may judge what the labour portion of country life involves; I have some reason for knowing that my opinions are not based on visionary notions, they are not the result of Christian spirit, or philanthropy, or charity, or anything of that sort. I have endeavoured to look at this matter as a practical man acquainted with practical affairs. I have applied to agriculture, so far as the labour part of the work is concerned, such principles as I should apply to industry in other forms, and I have no reason to doubt that my conclusions are correct; because I do nothing more than state what is stated by the Commissioners who have reported upon agriculture, and the conditions of labour connected with it, and what has been written in the leading article of the "Times," which I have referred to. That is open to any man of ordinary business experience, and accustomed to deal with large affairs of capital and labour; it is competent to any man to work up a question of this kind and to bring it out in a practical form. That is all I claim to have done with this scheme.

9209. I presume you recognise that farming is a very technical industry?—Yes.

9210. Almost as technical as engineering?—I should say it is decidedly as technical in a certain sense; that is to say, the chemistry of agriculture requires to be as well known as you require to know the theory of mechanics or the application of steam. I venture to believe that had agriculture been treated as we have treated the mechanical industries of this country, it would not be in its present state. We have to change our industries from year to year, and to suddenly switch off from one line to another at a moment's notice.

9211. Do you think, however successful a farmer had been in his own line, you would consider that his opinions upon reforming a manufactory, of which he had no practical knowledge, would be worth much?—There are, I daresay, intelligent farmers who are natural mechanics, and whose opinions I should be glad to have on a mechanical question.

9212. But, as a rule, you do not consult them?—I do not consult them, nor should I myself

Mr. *Bartley*—continued.

offer an opinion to a farmer as to how he should cultivate his land. But, so far as common sense can be brought to bear upon the subject, it is open to me, as it is to any other man, to look at the question of agriculture in the light of common sense, and if the land has been cultivated with certain crops which have in no way proved to be profitable, instead of expressing the vain wish that those crops should be again profitable, I should say: "Why do you not do as we have done in other branches of industry? Why do you not use this raw material for other purposes and in other ways, and employ other means, so that you may obtain profit instead of loss?" We have abandoned branches of manufacture continually which have gone out because the competition, foreign and home, is too great, and we have had to put our money into other branches, and suffer for a time before we obtained interest for our capital. I think the same principle applies to agriculture.

9213. Do you consider generally that this scheme you put forward is a practical scheme for relieving distress from want of employment?—Yes. I venture to say, on the one hand, it is eminently practical from the point of view of gradually restoring the labour on large areas of our country which are becoming now depopulated; and, on the other hand, it is capable of taking away labour which in other places we do not want. That ought to be a double benefit: it would both bless the land and bless the surplus labour.

9214. You are not afraid of the enormous cost to the ratepayers, but you think they would be benefited?—I do not think there is any enormous cost involved in the scheme as I place it before you. I have proposed that we should begin with six such places, at a cost of about 120,000*l.*, loaned by the State, the security for which, I contend, is ample, and is absolutely reliable.

9215. Surely that would only cover 1,200 people?—I do not say what number it would cover. We are dealing with what the principle might be, if properly applied; and if it proved to be a really successful thing, there is no doubt that in a very short time a large absorption of this labour, directly and indirectly, would be brought back again on the land, either through the action of the farmers, or the action of the landowners, or the action of the local authorities.

9216. You think you have discovered a new plan for making agriculture successful?—I do not think it is a discovery, nor do I think it is a new plan. I have endeavoured to put in a concrete form the many thoughts of many minds. It would be presumptuous for me to suggest, and I do not suggest, that this is evolved out of my own inner consciousness. I have simply applied my common sense and knowledge to the ideas and results of the experience of others, and worked out the scheme as a business man, and all I claim for the scheme is that it is a practical scheme. It is not a fad, and has nothing of the faddist idea about it. If it had been, I should be the last man to advocate it; because I am nothing if not practical.

Mr. *Round.*

9217. One of the objects of this scheme is to find work for those who have been driven from the land?—Yes

9218. Do not you think that what should come first would be to try and remove the obstacles which hinder the successful cultivation of land now, so as to try and keep the poor men on the land from the risk of being removed off it?—Yes; indeed, that is a movement that I hope is taking place, as it ought to take place, on the part of those interested in land, without any delay, but you see this scheme refers to bringing land into cultivation which many persons would not think it worth while to touch.

9219. As a matter of policy you would think, would you not, that the removal of the obstacles which now hinder the successful cultivation of the land should be adopted first, before your scheme?—I think they ought to be adopted at once. They ought to have been adopted always. I do not see any reason why those movements should not go on of themselves, irrespective of any scheme connected with the unemployed.

9220. I meant rather with regard to the burdens on lands, such as rates and taxes; if they were removed, there would be more chance of successful cultivation of the land, and therefore less people would have to give it up as a bad business?—I think if landowners and farmers could prove to Parliament and the public that there is an undue burden in the way of taxation on the land, if they can make out a good case for that, it would be the duty of Parliament to remove that unjust burden; but I do not think the removal of even all the taxes would make all the difference which they require to have between farming at a profit and farming at a loss.

Mr. *Heywood Johnstone.*

9221. You have given a good deal of time and thought to this scheme, I presume?—I have.

9222. You believe it would be a commercial success?—For the purpose in view I think it would be a success on business grounds.

9223. Do you believe it would pay financially?—I do not say it would pay a profit; but I believe it would pay its cost, which is the object from the point of view of finding work for these people on the farm training colony, which is the first part of the scheme. I believe it would be quite a success in the sense of being profitable to those who were occupied on the farms.

9224. We are dealing at the present time, I understand, with that first part of the scheme only?—It is so. We have not arrived at part second yet.

9225. That is the farm training colonies?—Yes.

9226. That is a temporary measure for dealing with those who are out of employment?—Yes; that takes in a number of temporary unemployed.

9227. I understood you to say it was a preventive measure, to prevent their slipping down into the class which is now dependent upon the rates?—Yes.

9228. In that respect the Poor Law authorities as at present constituted would have no direct interest

Mr. *Heywood Johnstone*—continued.

interest in this scheme; it would not relieve them of those who at the present time are a burden upon the rates?—I think it would have a very important indirect bearing upon them.

9229. I used the word "direct"; it would have no direct bearing upon them, would it?—It would not have the direct effect of taking off their hands the pauper class who are now in the workhouses or are now obtaining out-relief under the test of breaking stones; it would not touch that class. It is not intended to touch that class.

9230. In other words, there would be no direct relief to the ratepayer?—There would be direct relief to the ratepayers, assuming those whom we wish to help would otherwise gradually sink by sheer necessity, after breaking up their homes, to the class of those who apply to the guardians for relief.

9231. But your scheme is purely preventive, to keep these men from slipping down?—Yes.

9232. It does not deal at all with those who are at the present time in that condition?—It does not deal with those in that condition, unless they were to bring themselves out of that condition and cease to be a claim upon the rates, and cease to make an appeal to the guardians, and acquire the character necessary to make them worthy to be put upon such a training colony. Then they would have the right to apply and be assisted in the same way. It might be from that point of view the means of very seriously reducing the class the guardians have to deal with.

9233. My point is, that for the present purpose the object of your scheme is to prevent people slipping down the hill, and in that respect it would be no direct relief to the ratepayer?—I do not quite know what you mean by "direct relief." If you mean that it would not save the rates next week or next year, of course, in that sense, it would not be direct relief; but, surely, stopping the supply of the pauper class, and turning that labour in a profitable direction, would naturally be in a short time a great relief to the rates.

9234. That I quite understand; but supposing the scheme was to come into operation during the next 12 months, it would make no difference practically to the ratepayer, would it?—It would make no difference to the ratepayer, unless a number of the persons who have hitherto asked for relief were to be diverted from that plan of obtaining relief, and were to seek it only through work of this character and were willing to go upon the colony.

9235. I should like to understand a little more clearly some of the details of your scheme. It requires the co-operation of three parties; the State to provide the capital; the County Council to provide the supervision; and the local authority to provide the subject-matter. That is so, is it not?—That is so as it stands, with the suggestion of the County Council doing the management.

9236. The State is to provide a capital, roughly speaking about 25*l.* an acre, including the purchase of the land and working capital; that is to say, it is 30,000*l.* for 2,000 acres?—Yes.

9237. The State receives no interest for an indefinite number of years?—For five years there is no interest. It is not an indefinite number of years, because I can bring evidence to show that in less than five years even a barren piece of land can be made profitable.

9238. That is all the part that the State plays?—That is all the part that the State plays.

9239. The State finances and owns the land, and gets no return for at least five years?—I will not say "at least five years." It might get a return in two years; but I mentioned five years because I wanted to base my calculation upon five years, which is the scheme at its worst; and if it is sound, takenat its worst, it must be a very reliable scheme from a financial point of view at its best.

9240. You think five years is the extreme limit of the time at which a return might come?—Yes.

9241. The County Council is to find all the supervision?—Yes.

9242. They working the farm colony?—Yes. The County Council is the body I selected, for the reasons I gave on the last occasion, for taking charge of the management of these farms, though I only mentioned that incidentally. It is not a fixed principle upon which the success of the scheme depends that the County Council should do it. The local authorities might themselves elect a committee of trustees who would take charge of the colonies for them.

9243. You would have the control in a separate body from the body that finds the subject-matter?—Not necessarily by any means. The Guardians, as I said, of a dozen unions might join together and themselves form a management committee for the whole thing; in which case the County Council would not be in it at all. That is a detail that would have to be discussed on its merits when we got as far as to begin to start these colonies.

9244. I did not quite follow the way in which the men engaged on the farm colonies are to be remunerated. They receive no direct wage, do they?—On the colony to begin with we will suppose a hundred men are placed according to their skill. One half of the land is cultivated and one half is uncultivated. The novitiates in work of this kind, and those who are somewhat clumsy, would pass to the uncultivated land; and the financial statement in the scheme provides for at least 50 men out of the 200 being absolutely unremunerative for the whole year; and the amount put down to carry the scheme on for a year includes the free maintenance of those 50 men who are not supposed to contribute a farthing to their own support.

9245. You say "free maintenance"; that means board and lodging I suppose?—Yes.

9246. Would you tell me what you calculate their board and lodging at for a year, or a week, or any time?—The amounts specified on page 9 are the lump sums.

9247. No doubt you made those up from some other figures?—Yes; the 50 men would be kept at any rate for 5*s.* or 7*s.* a week for their food.

9248. You put each man as costing 7*s.* a week?—Yes.

9249. 4*s.* is to be sent to the man's wife?—4*s.* would be sent to the wife under certain conditions, dependent of course upon the family, and all the surroundings of his home. On the recommendation

Mr. *Heywood Johnstone*—continued.

mea'ation of the guardians the wife would be entitled to 4*s.* a week.

9250. His board you put at 7*s.*; that pays for two-thirds of his time, and the other third is to be devoted to piece-work?—Yes.

9251. For that piece-work he is to be paid the current agricultural rates?—Yes.

9252. Then who is to settle how the two-thirds is to be fixed; is it to be two-thirds of a week or two-thirds of a day?—That would be entirely in the hands of the management. Rules would be laid down by the management committee, and those would be thoroughly understood by all persons before they went there, and they would have to go to work upon those rules, just as a man goes to a workshop to-day to work under the rules of his employer.

9253. It is part of your scheme, is it not, that at least two-thirds of the man's labour should be on the terms equivalent to 11*s.* a week?—Yes.

9254. If he worked an ordinary agricultural day and received an equivalent of 11*s.* for that two-thirds of his time, he would be practically getting 16*s.* 6*d.* per week?—If he worked the whole day.

9255. He is allowed to work the whole day, as I understand, and one-third of that is piecework?—Yes.

9256. The other two-thirds are represented by 11*s.*; so that he would get a minimum of 16*s.* 6*d.* per week?—That would depend upon the value of his piecework.

9257. But he could put that in if he worked the whole day?—Yes, if the work upon which he was placed was paid at such a price as enabled him to be paid that money.

9258. In which respect he would be better off than many labourers now earning 14*s.* a week?—Yes, he might; but it would be very hard work. You will understand the conditions under which this is all done are very much harder than ordinary agricultural labour.

9259. Is it to be penal?—No, there is nothing penal about it; but the conditions under which a man works here would have to be in conformity with the rules; there would be no room for loafers and idle men; such a man would be discharged, just as I should discharge him if he did not do his duty.

9260. Would it not work in this way: that an industrious man who was perhaps getting only 14*s.* a week as a labourer would come to your colony and get board and lodging representing 7*s.*, and send 4*s.* a week home, and get something in piecework also?—The 4*s.* has to be repaid out of the piecework; the manager repays himself for all the other labour of the man after the maintenance has been allowed. That is to say, all the other earnings of the man are first of all credited against the amount he owes in respect of the 4*s.* for his wife. He receives in cash as his final reward only the balance above the 4*s.* sent to his wife.

9261. If I may put it to you again, he would get board and lodgings representing 7*s.* a week?—Whatever it might be, 5*s.* or 7*s.*

9262. He might earn half as much again, or even more?—Yes.

9263. Out of that you deduct 4*s.*?—Yes; he is maintaining to that extent his wife and family by his own labour, as well as maintaining himself. All you would do is to give him an opportunity of doing so, and that is precisely all that the working men of the class to whom this scheme would apply demand. Their cry is: "Give us work; we do not want charity or money, but we want work, and out of the work we will maintain ourselves." I propose to give men work on such a plan that is can be directed into a profitable channel, to the extent at least of keeping them in very hard times, and enabling them to wait till the times mend in their own trades.

Mr. *Heywood Johnstone*—continued.

9264. You do not limit the scheme to married men, of course?—No. In coming through the bureau or office of the local authority specially charged with this undertaking, there would be inquiries made as to the necessitous cases, and those would be first dealt with; therefore, generally, married men would have the priority.

9265. You say the necessitous cases would be first dealt with?—Yes.

9266. So that a man would have no absolute claim?—None whatever.

9267. It would be a matter of grace and favour, would it?—Not a matter of grace and favour; it would be a matter of inquiry into the claims which the person had—Dick over Tom, or Tom over Harry—just according to the circumstances placed before the officials.

9268. You say it would not be a matter of right, and yet it is depending upon the mind of these officials?—It would not be a matter of right, unless you pass an Act of Parliament to say that every man in the country must be found work. But I have not gone so far as that. I merely adopt a permissive plan, which I think, if those three elements I have named were combined, would bring that result about.

9269. You do not propose to give every man the right to have work given to him?—Certainly not.

9270. Coming back to the unmarried man, he would have no particular right to work at the farm; but if he was accepted by the local authority and sent to your colony, he would have his board and lodging, 7*s.* a week, and he would be able to put in piecework and perhaps earn another 4*s.* or 5*s.* a week?—Yes; such a man would have undoubtedly to contribute something out of his earnings to the general well-being of the colony.

9271. Instead of repaying the 4*s.* which would go to keep his wife if he had been a married man, he would have to contribute, say, 2*s.* 6*d.* a week to the general well-being of the colony?—A certain proportion of his earnings would go to the well-being of the colony as a whole.

9272. I want to ask a question about the farm itself. Under your system the labour must be irregular in amount, depending upon the number of persons out of employment in various trades, and intermittent in its application, must it not?—Certainly.

9273. You quite grant that?—Yes. I do not say it "must be," but it may be.

9274. It is almost certain to be, is it not?—At times probably it would be.

9275. You cannot expect a steady flow of labour

Mr. *Heywood Johnstone*—continued.

labour either in amount or in application?—I think it would be very popular, and we should find more men going through the training colonies than could ever be admitted for some years to come, in order that they might get upon the land and into the farm settlement. It is a relief of the congested condition of things which would be profitable to the men and to society and to the country, and I think it would become very popular; for although the channel through which they would have to pass was itself a narrow way, it would lead to a different life.

9276. The regularity of work on your farm must depend upon the scheme becoming popular?—Regularity, so far as the cultivated portion is concerned. The 600 acres of uncultivated land would only come under cultivation gradually. The temporarily-unemployed persons, who come professedly for only a month or two months, would be put upon that land because it is known immediately they begin to work they would earn something for bringing that land under cultivation. As that portion of the colony is not relied upon to pay the expenses of the colony, you can stop that labour whenever you like.

9277. I take it that the labour upon that part of the farm is intermittent and irregular?—Quite so.

9278. Independent of the volume of labour, it must be greatly dependent upon conditions of weather; you could not set your men to dig in hard rain or in a very sharp frost or under snow?—Certainly not; that is all provided for.

9279. There must be a considerable portion of time, like enough the time when men in particular trades are out of work, when you can do nothing towards the reclamation of the land, and when you would have to fall back upon your auxiliary industries?—Yes.

9280. We have just dealt with the rough part of the farm; coming to the cultivated part, you propose to have a regular supply of labour there?—A certain number, say 12 regular skilled agricultural labourers to 600 acres, under the direction of one bailiff of the farm, the man who stands in the place of the skilled farmer.

9281. You would want a considerable number of extra hands at certain times, would you not; at the hay harvest and the corn harvest, and for seeding and pulling roots?—Yes.

9282. All those operations depend very much upon the weather, and could not be dependent upon whether you had surplus labour at the time or not?—Of course, in time of harvest all the men employed upon the uncultivated portion would be taken on to the cultivated part to take the crops in.

9283. You are now assuming that there would be men upon the uncultivated part; how can you assume that?—I cannot assume that there is to be a derelict colony. If it is a derelict the moment it is started, because the people do not require it, all the better for us; but since it can only be started on the ground that certain unions would agree that it would be a great advantage for them to have it, there is no doubt that such small colonies as these of 200 men would always

Mr. *Heywood Johnstone*—continued.

be well supplied with work, at any rate sufficient for the cultivated part.

9284. I put it that there must be certain times when there would be great demands for labour upon the farm, and likely enough those would be the very times when there would be no surplus labour in the union?—Do you mean that it might happen that there might not be a single individual working on the uncultivated portion, where we are doing the initiatory work of preparing the land for cultivation, at a time when there were crops to be harvested upon the 600 acres of cultivated land?

9285. I suggest that it is very possible that there was—I will not say not a single individual, but no efficient labour upon the uncultivated part that you could turn upon the cultivated part?—You have to assume also that you have very few men working upon the cultivated part either.

9286. I take your 12 labourers?—You assume there might be a time when this colony might be empty.

9287. Except for the 12 labourers?—I cannot follow you there, because that seems to be a paradox. To assume that in a large country like England, with all its manufactures and all its fluctuation of labour, you might have at any time a possibility of land of this sort being entirely unoccupied, is, of course, to assume that there is no ground whatever for such a scheme being started.

9288. I am not assuming that the land is entirely unoccupied, but I assume that at a particular time of the year, say in the middle of harvest, you have no able-bodied unemployed in the district or the union where the colony is who are willing to work at less than the farmers' rate of wages?—That seems to me to be paradoxical.

Chairman.

9289. The honourable Member puts to you the case of there being no unemployed in the particular district where the farm colony is; but, as I understand, you do not contemplate any restriction of the area from which the men working on the farm would be drawn, do you?—Certainly not.

9290. Surely over the whole country you would never be at a loss for men to be employed upon the farm?—To me the question of the honourable Member seems paradoxical.

Mr. *Heywood Johnstone.*

9291. I know perfectly well, from my experience of farming operations, there are times in the year when you want a considerable amount of labour, and if you can only pay a less price than the farmer on the other side of the road would pay, you cannot get that labour?—My answer generally would be this: that such a condition of things in the case of the colony would be no worse than a farmer in any part of the country has to face under like circumstances, and if he gets through the difficulty, I say this farm colony could.

9292. He gets through the difficulty by giving

Mr. *Heywood Johnstone*—continued.

a rise of wages?—The colony would have to do the same then, putting it as a paradoxical case.

9293. I gather you have pinned your faith on arable dairying as the most profitable form of cultivating these farms?—Arable dairying, together with the cultivation of certain products which are saleable in this country, which hitherto we have obtained wholly from abroad.

9294. You gave an instance of a farm in Essex where you said an energetic young Scotchman had made arable dairying pay?—Yes.

9295. What price does he get for his milk?—I think 5*d.* or 6*d.* a gallon; he sends everything to London to a middleman, who takes it straight away at the railway station and disposes of it.

9296. It is 5*d.* per barn gallon on the farm?—Yes, I think that is about the price.

9297. Perhaps the expert witness who is coming would know more about the details of that case?—No, he would know nothing about that case. I can give you the particulars. The Scotch farmer I referred to has between 50 and 60 cows, and he sells his milk to a contractor in London; last year the sale of milk and the sale of calves brought him in about 1,000*l.*; that is based on 5*d.* a gallon nett.

Mr. *Lawrence.*

9298. How many men does he employ?—Twelve men; of course, in harvesting, he takes on men, as Mr. Johnstone has explained, whom he must get as best he can in addition.

Mr. *Heywood Johnstone.*

9299. Did you say just now he was employing less labour than his predecessor had done?—No, I said nothing about his employing less labour. I said that a farm which his predecessor had let go down to an unprofitable state he had restored and made profitable, and he did that with the employment of 12 men as regular farm labourers: but, of course, with more men in harvest time.

9300. You do not know how many men his predecessor employed?—No.

9301. You do not know whether the result of his arable dairying has been to employ more or fewer men?—I do not know, as a matter of fact.

9302. Do you know the Aylesbury Dairy Company tried arable dairying on a large scale?—I believe they did.

9303. Do you know what has been the result; did they make it pay?—I do not think they are particularly pleased with their experiment.

9304. May I take it that the experiment is a failure?—I do not know whether it is a failure or not.

9305. They have, I suppose, the best supervision, and the best skill at their disposal; that would be so, would it not?—Possibly.

9306. You contemplate doing a great deal by spade-labour, do you not?—Yes; I can quite understand the experience of the Aylesbury Dairy Company, limited as it was to dairying only, the sale of milk. Unless it was connected with the manufacture of dairy products to a very considerable extent, I should think it would be

Mr. *Heywood Johnstone*—continued.

difficult to make it pay; and if you have not labour of such a character and such conditions as to obtain the dairy produce at a small cost, it would also be difficult to make it profitable.

9307. I will not take you at length into the story of the Aylesbury Dairy Company, but as a matter of fact they did not make it pay, and they gave it up, and were very glad to get rid of it. Then coming to spade-labour, what crops do you propose to employ your spade-labour upon?—There are a great variety of crops which I have set forth in my scheme merely as illustrations.

9308. Would you refer me to the page?—I think, perhaps, I might run through an illustration from a farm of a similar character, which I have referred to before. In that case the man grows early potatoes and bulbs of all sorts and bush fruits. I am giving that illustration from a small holding that grew those things; but to refer to the page in the scheme where these are enumerated, you will find them at page 6, paragraph 20.

9309. Let us take potatoes?—On this point, which is very important, I have special knowledge to submit to the Committee through Mr. Moore, who is an expert on these matters from actual experience, and it would be better to get the particulars from him than from me.

9310. But I will just ask two questions about potato crops; potatoes are very largely grown for the market in the Lothians and in Lincolnshire, are they not?—Yes.

9311. Are they grown there by spade-labour or by horse-labour?—By horse-labour, I should think.

9312. Presumably, because it is the cheapest way?—I do not know about that; I should think for the rough handling of the land to begin with, it is far better to use horse-labour, or even machine-labour; but the hand-labour that might produce certain crops and potatoes, which would never be applied generally by an ordinary farmer, might in those conditions be applied to early potatoes.

9313. On 30 acres of potatoes would it be more profitable to employ horse or hand-labour?—I think for the potatoes consumed in the colony it might be cheaper to use hand-labour. But if horse-labour is necessarily cheaper, you must use it. This scheme does not exclude horse-labour or machinery. Whatever would prepare the land best for hand-tillage, whether it be machinery or horse-labour, must be first applied; it is not necessary to exclude machinery or horse-labour altogether.

9314. If you are preparing land for a potato crop you would do better with horse-labour for ploughing it than by hand-tillage; you would catch your time better?—Yes; that is all provided for under the scheme.

9315. Now, coming to the auxiliary industries on page 9, which are to be carried on when frost and snow and other country disagreeables prevent the unemployed from labouring on the farm. I think you have somewhere made a suggestion as to how much of their time would be employed upon these auxiliary industries?—It is taken as one-third of the year. Of course it is very uncertain, but it might be from 40 to 60 days in the year

Mr. *Heywood Johnstone*—continued.

year that would have to be employed in that way.

9316. Out of the 365?—Out of the 300; they would not work on Sundays.

9317. I suppose it would not make any difference to your figures whether it was 40 days or whether it was 60, would it; do your figures depend upon that?—No, on the contrary, the auxiliary industries are merely to occupy the time well, and not wastefully, and not to make a loss to the men or to the colony, because of course the primary object of the whole thing is to get the most out of the land.

9318. Every day they lost upon the land would be a loss?—It would not be lost; it would depend upon the character of the men you had upon the colony. With a mixed number of men like this it is possible to find a considerable number of handy men for such handy work, and those men would earn for the colony something during those wet days.

9319. Would they earn as much on wet days as on the work outside?—It would depend upon the nature of the industries.

9320. The success of your scheme must be affected one way or the other by the number of days they could get outside?—Yes.

9321. It does, in some measure, depend upon that?—Yes; the more they are outside, the better.

9322. As regards these auxiliary industries, one of the things, I understand, is to mend each other's clothes and boots?—That is an incidental piece of work.

9323. And you propose they should do work by hand which is now done by machinery, such as milling?—For their own consumption.

9324. That they should mill their own corn?—Yes.

9325. And thrash it, too, with a flail, instead of having a machine?—That would be an occupation to be made out of the land in the spare time. I have tried to show, if you take two-thirds of the time on the land, you must get from the land in that period what the land can yield, and the rest of the time you would give to these products; and it would be the cheapest plan under the circumstances to put upon them the labour necessary to prepare them for the market.

9326. There are other industries that you have put down as being of an auxiliary nature; one is curing bacon, and another is making and packing butter; have you taken any price for your butter in calculating out the success of it?—Yes, I have got a complete scheme for this, which I would like you to refer to.

9327. You have taken the price of butter?—Yes, it has been all calculated.

9328. To get the best price, your butter must be even in quality and regular in quantity, must it not?—Yes, I should think so.

9329. Is that the kind of thing a man can take up as an auxiliary employment?—Not every man; you would have to select the persons out of the whole number; you would not put a perfectly ignorant person upon the work, but you would make a selection.

9330. Do you think you could always find somebody who was a skilled butterman?—Yes, you would probably have some married people who could do it.

9331. The colony would be so popular that you would have a sort of Swiss Family Robinson self-contained, and able to pick up an industry suitable to each member?—I do not say each member, but you would have a great variety of talent, and you could select your men.

9332. Would you even find men of sufficient skill to be able to clean and hand-pick seed?—Yes, under direction; all those industries would be carried on under the supervision of men who understand their trade and who give directions; and the men having always before them the inducement of being able to earn by piecework something more than their maintenance, there would be a strong inducement to learn as quickly as possible the particular art to which they were put.

9333. Taking it shortly, your scheme would mean that the county or the local authority would always have work at hand going on on the rough part of the farm, and would receive any surplus labour there was either in their own district or outside?—That expresses it in a certain way; perhaps, as you say, it rather roughly expresses it; but it means that these training colonies are to be instituted with the object in view of taking over the unemployed working classes, and putting them into an occupation where they would be maintained.

9334. The local authority is to agree to send a fixed minimum number; that is part of your scheme, is it not?—I suggest, as a practical and businesslike arrangement, that the local authority, or several of them together, should, if they require the County Council to take control, undertake to have a farm that should be large enough for a certain number of persons, and they should give an assurance (not a guarantee) that it was not too large for that purpose. Supposing that half-a-dozen unions joined and the colony was too large for their requirements, so much the better; but the spare places would then be at once occupied by other unions coming in and saying, "If you will let us, we will send more people there."

9335. My point is that the local authority guarantees to pay for so much accommodation?—Yes, if there is a deficit. I put as an illustration an extreme case of a deficit arising which I said might come to 1*s.* 3*d.* per head per week for the persons sent. That is quite the maximum deficit.

9336. There must be a certain expense; there must be the expense of starting to begin with?—That is all provided; it is in the financial statement.

9337. The money is provided by the State?—The money is provided by the State to start the whole colony.

9338. There is no additional cost to the county?—Not unless there is a deficit.

9339. But then there is no additional cost to the county, is there?—No, it is all done through the Poor Law authority; the management is paid out of the 30,000*l.*

9340. Everything is paid out of that; it is paid out of capital, is it not?—It is paid out of the

Mr. *Heywood Johnstone*—continued.

amount given for the first year to meet expenses; after that it is paid out of the products of the farm.

9341. That is what I call paying it out of working capital, out of the 15,000*l.*?—Yes.

9342. You suggest that there may be no payment falling upon the local authority, but it is probable there would be a profit?—I suggest two alternatives. I show there would be a profit under very reasonable returns from the colony; that is a profit which would of course not go to the Poor Law authorities; it would go to the persons employed, after a certain sum had been paid to the rate upon the colony, as it were, to provide for contingencies. The deficit which might arise I have shown to be a small one under any circumstances—far less than the amount of money paid by the week to a person coming upon the rates.

9343. But on the basis of your scheme I understand the local authority would have nothing to pay until perhaps the bill came in for a deficit at the end of the year?—It would have nothing to pay unless there was a deficit.

9344. They would have no control. They would have no control under your scheme unless they chose to adopt the plan of control which has been suggested?—If they care themselves to take the entire control, and not to ask the County Council, there would be no reason why they should not do so; they could take the control.

9345. Whether the County Council approved or not?—Certainly. In that case the Local Government Board, who is the ultimate court of appeal, must be satisfied.

9346. Taking an extreme case, the Local Government Board might purchase this farm at an expenditure of 30,000*l.*, and leave the local authority to work it at their own sweet will for three or four or five years, and not expect a penny back?—In the farm training colony there would be no expectation of a return for the first five years; I put that as the ultimate time at which the farm might have come under cultivation; and during that period there would be nothing paid back, because the increase of the value of the security of the State or the Local Government Board is provided for by the increased value of the land.

9347. Would the State have any control over the management or over the expenditure of their 30,000*l.* during the five years, or would it be left entirely to the local authority?—I think the local authority would have to make a return. Any arrangements of a detailed character could be settled between the Local Government Board and the local authority, as, for instance, that the money was loaned under an undertaking that there was to be an annual report, and a Local Government Board inspector sent down once a year to look at the farm.

9348. Supposing it seemed to the Local Government Board that the farm was not doing well, would they have any power to interfere?—The Local Government Board would have supreme authority. The sole control is vested in the State, and if the State by this means in five years had made land which was formerly worth 10*l.* an acre worth 25*l.* an acre, and if it then, for public reasons, determined to sell the land at once to the workers or farmers, and to clear out altogether, the State could realise absolutely all the money spent upon it.

9349. They could break it up?—Yes, there is full security for every farthing of the money advanced.

9350. They could break it up at any time if necessary in the public interest, but you say they would certainly get their money back?—I do not see how it could possibly fail.

Mr. *Logan.*

9351. If I understand your scheme right, you look upon this scheme as providing a means for setting men to work who might be out of employment during slackness of trade such as we have recently had?—Yes.

9352. Do I understand that these men, unaccustomed to working upon land, are to be first of all sent to these training colonies?—Certainly.

9353. Would you explain to me what the result would be, supposing after you had got a certain number of these men at work reclaiming this land, and getting it into a condition to profitably grow produce, trade suddenly revived, and those men you have got at work on the land had to go back again to their usual occupation?—It would be so much the better if they had. If you have read the scheme, or followed the examination, you will find it is just that class of persons who have been sent temporarily to the land that would be benefited.

9354. I am delighted that they should get back to work, but I want to know what is to become of your land, which has had, we will say, 60 men working upon it, and arrived at a certain condition of cultivation; how will you continue the process when those men are sent back to work?—If there is no relay of such men coming, it would be a very happy circumstance, and prove that this colony is not required by the country. If, on the other hand, these men go, having got situations in their own employment, as the uncultivated portion of the land does not yield anything for the profit of the colony or the maintenance of the men upon it, the work on it may be dropped at any moment, and be discontinued for weeks without any harm, if it were necessary, or if there was no labour to put upon it. So long as the land is not producing crops, but is only being brought into preparation, it forms a reservoir where all these men, according to the varying numbers, may be put on the work of preparing the land for cropping; but it is not cultivated land; it is only as, acre by acre, or 50 acres by 50 acres, it comes under cropping, that it ranks as cultivated land, and becomes part of the cultivated portion of the colony. It has then arrived at what I call the farm-settlement stage, and it is then taken possession of by men who desire to remain upon the land permanently.

9355. I follow all that; but what I want to gather is that you do not look with any degree of anxiety on the recommendation that the State should invest their money in land which might, under circumstances which exist this spring, be broken up, or have a certain amount of labour put

Mr. *Logan*—continued.

put upon it, with a view of bringing it into cultivation, and all at once that labour might be taken off; you do not look upon that with alarm?—There is not the slightest possibility of any danger or any loss to anybody. The land, so far as it has been cultivated, is on the road to coming into condition to bear produce, and you may leave it at any time, provided it is not left for years and years to go back again. The essence of this scheme is that you have not too large colonies, but colonies of such a size that they may be well maintained by persons constantly coming from the towns, and going away again.

9356. The only inducement you hold out to the State is that they should invest their money in this land, because this land will be eventually brought into cultivation, and pay?—Yes.

9357. Then, I ask, would you look with any anxiety upon the fact that you might commence operations on the land, and then suddenly have to stop?—No. I cannot imagine there is any cause for the existence of any such training colony, or any work of that kind, being provided either by private individuals or the State if we have no unemployed. Our reason for sitting here is because we admit, as an axiom and a proved fact, that these unemployed men exist in abundance. I do not admit the figures given by some of our witnesses; but it is beyond doubt, as I have tried to prove in my opening statement, that we have this class to deal with; and, therefore, to assume that this land on a 1,200-acre farm would go out of cultivation, because there were no people to put upon it, would be to assume that there was no difficulty to deal with, and that we had finished with our trouble of that sort, and that all the country was restored to a position of prosperity.

9358. I will not pursue that further. I see difficulties which you do not. Do you think your scheme is likely to keep the men upon the land that are upon the land now, and prevent their drifting into the towns?—Yes, certainly.

9359. You mentioned the word "investment;" do you look upon your scheme as providing an investment through the probable increased value of the land to the State eventually?—Certainly.

9360. Do you consider the guarantee for this money being advanced is to be looked for in the probable, and more than probable, increased value of the land eventually, or do you look to a profit being made out of the actual work of the men?—The work of the men is devoted to their maintenance; the increased value of the land is the property of the State, and forms the security for the original loan.

9361. You estimate 10*l.* an acre as the probable cost of the land?—For the purchase of it.

9362. These farm colonies, if I understand your scheme, if they are to be of any use at all, would have to be started all over England, or rather, Great Britain?—Yes, I should hope so, in time.

9363. Considering that the average price of land in England to-day, taking it at a low estimate of 25 years' purchase on the rental, would be 25*l.* an acre at the very lowest, why do you assume you can buy it for 10*l.* an acre?—Because I should never buy a piece of cultivated land without buying alongside of it a piece of uncultivated land that is not worth half that price.

9364. Do you say that 10*l.* is a fair average?—£10 is the average. Part of the land is purchased at 15*l.*, as you will see on page 9.

9365. Are you aware that our chief competitors for the sort of produce you intend to grow upon these farms of yours are chiefly the small owners on the Continent?—Yes.

9366. It is those people who send bacon, ham, butter, and cheese to this country to the value of 18 millions a year?—Yes.

9367. As these men are small owners and have every inducement to work, being the owners of their own property, why do you think that supervised labour in delicate operations of this sort is ever likely to compete with a man working on his own property?—If you read the scheme, in the first place you will find that the land on these settlements is the land absolutely of the occupier, just as much as the land of the French peasant is his own. It is his absolute property for his life, and no one can disturb him in any way whatever.

9368. That is on the farm settlements?—Yes. The training colony, of course, is not at all appropriate to anything of the kind until it becomes a settlement; but a man who has passed through a training colony, and undertaken the arduous labour of becoming a trained agriculturist in this way, would have a claim for a holding on the cultivated portion of the land, because he is a colonist.

9369. On many of the farm settlements a man and his family would be established?—Yes, with infinitely better conditions than have ever obtained in France, or ever will.

9370. You propose to give the men on the farm settlements fixity of tenure?—Certainly, and not only fixity of tenure, but to give their families an interest after their death.

9371. They would become then the tenants of the State?—I think this scheme, if it were successful, would induce landowners to take up the work which I have accorded to the State in the first instance.

9372. We can deal with that better when we come to the small farm settlements, which is the second part of your scheme?—Yes.

Chairman.

9373. Turning to Part 2, the Small Farm Settlements, you propose that these should originate in two ways; first of all, by the machinery of the farm training colonies and also by direct acquisition?—That is so.

9374. You state the matter so fully in your paper that I hesitate to occupy the time of the Committee in asking you to explain it. Have you any particular points that you think require special elucidation?—I should like to call attention to the fact, that in the formation of the farm settlements, other than those which have been produced by the farm training colony system, a procedure is necessary which has not been described in relation to the other part of the scheme. This proposal is based on the assumption that it would be a great national benefit to attract men to the land again who have left it in former

Chairman—continued.

former times, or to prevent agricultural labourers from leaving the land, especially the young men who now flock so much to the towns; and further, to give an opportunity to persons who wish to follow an occupation on land as a career in life, of getting on to the land under conditions that would with their labour and with their diligence ensure success. It assumes that the authority, which is the local government authority, the county council, would be willing to be charged with the initiative steps necessary to form such farm settlements other than those formed by the farm-training colonies, and to do that it would have to be made known publicly that land might be required for a certain number of men who would form a co-operative farming colony under certain conditions, and if the County Council or the committee of the County Council charged with this matter were satisfied that these conditions would be faithfully observed by the applicants, they would proceed to put the scheme into operation in one of two ways. They would either negotiate with landowners of a certain district to rent land in perpetuity at a certain value, or they would ultimately be able to use money advanced by the State on loan for the purpose of buying land outright. The main object of the scheme is to induce the landowners who now are complaining that they cannot get their land cultivated, that they cannot afford to put more money into the land themselves, that they cannot afford to reduce their rent beyond the present point, to induce such landowners to co-operate with the local authority very much as they ought to do under the Small Holdings Act, but on rather more easy terms. The landowners might say to the County Council, we have so many thousands of acres which we are quite willing to let you have on such-and-such terms; and on the applicants, who had come collectively as a co-operative body to the Council, proving to the Council that they had certain means to start upon, and that they were willing themselves to contribute a certain portion of money towards the outlay necessary upon this land, the rest of the money, in case of land purchase, would be advanced by the State. In case of rental, the only money to be provided would be that for buildings. The State would be required under the recommendation of the local authority to supply the money necessary for buildings, if not for the purchase outright of the land. Of course in the case of supplying money for the buildings only, the expenditure would be very much less, and the money would be more easily repaid. In these clauses, 3, 4, and 5, with an example of the whole thing in Clause 6, the scheme is set forth as to how it would work. As the whole scheme depends on each individual member of this community cultivating his allotted plot in the best possible way, in order to fulfil the obligations which he undertakes towards the County Council, there is reasonable guarantee, not only for the action of the County Council and for the money advanced by the State for buildings, but also that at any rate the best efforts of this man and his family would be exerted in order to produce the best possible results.

Chairman—continued.

In this case also, supposing the land to be the property of the State, there would be no ultimate loss on the purchase of the land only. The money advanced for the buildings would be of course a possible risk; but even upon the supposition that such a colony might not succeed, and might actually have to be taken out of the hands of the colonists or of this co operative society and disposed of, the presence of the buildings on the land, together with the cultivated condition of the land under the system here laid down, would bring back to the State the full amount of the original sum loaned by it for this purpose, and so it will never lose control of it. You will find in the details given in the scheme and from the evidence that could be offered, that landowners might regard this scheme with far greater favour than the county councils would regard such a scheme of going to the State and asking for money to purchase land. It appears to me to be unnecessary, except for the purpose of experiment, to regard the purchase of land as at all necessary for the working out of the scheme on a very large scale. The object is to show a method by which the landowners themselves would offer their land, provided they were satisfied that buildings would be put upon it and it was worked up to the best condition, so that their rent might be guaranteed to them. The amount of money lent by the State for the purpose of these buildings would be covered by the rents paid on the part of the colonies or the settlers in these settlements year by year. They would have free control over the area of land which they took up, say, eight acres, as set forth in Clause 6; they would pay a rental for this land on one of several plans, either so much for house and land, or so much in the form of the payment for a mortgage on the land; or they would pay a perpetual rent, with a sinking fund of so much per annum, till the land became their own, and on various systems this land might be taken up according to the means of the person who desired to possess it. Then, in this case also, the great advantages would come in that I have tried to show would accrue from the system of management of the Farm Training Colonies. In these co-operative settlements there would be the economy in purchasing all the materials required for the farm; the economy in distributing all such products as might be sent away; the common use of certain tools and implements and machinery for the cultivation of the respective crops; the presence of a manager who would have the control and supervision of the whole colony, so far as the purchase of materials and the distribution of products are concerned, and who would supply to the colonists, collectively and individually, skilful direction in the cultivation and treatment of the land for various purposes, and in changing it from one system to another, and from one crop to another. All this would give a productiveness to the land itself, and an incentive to the workers thereon, which would, I think, ensure the same satisfactory results from this part of the scheme as would, I believe, be obtained from the former part.

Chairman—continued.

9375. What guarantee have we that the County Council would undertake the duty put upon them; it would be entirely voluntary on their part?—Entirely so. It would be a permissive act on their part. If in their county they did not see the necessity, and there was no occasion on public grounds for any portion of the land in their county which was out of cultivation, or going out of cultivation, or any districts becoming depopulated and requiring to be resuscitated, if they did not think it was to their local advantage and benefit to re-introduce an industry that was decaying, of course nothing would be done. The whole of this scheme is based on idea that persons are interested, and especially the local authorities, in doing something for the public welfare.

9376. I have been told there is a recent case where a county council in the neighbourhood of the metropolis was offered ground for a farm colony or farm settlement of some sort, at no cost to themselves, if they would undertake the management of it or the direction of the undertaking, and they refused to accept it?—I have no doubt that would occur with more county councils; but, of course, it does not affect the question that facilities might be given, under this plan, for county councils to undertake the task without risk to themselves, and, at the same time, with great benefit to the nation as a whole, from the point of view I have put it. But I should rely a great deal upon the co-operation of landowners in this scheme. Once let it be understood it was possible under State grants to obtain means to put small holders on the land, plus the buildings and the land, at a fair rental, I think then that many hundreds, perhaps thousands, of men would like to take up this occupation who had left it, who would return to it in the hope of having a country life instead of the life which they are at present leading, and I believe the landowners themselves would, in every direction, try to promote it. There is also no reason why the matter should depend on the initiative of county councils; for if landowners were able to offer a guarantee for the repayment of any money advanced, in the way of loans or buildings, to form such colonies as I have mentioned, the colonies being under the supervision (until they were entirely free from all obligations of the State) of the local authority of the county as the controlling board, I think that landowners, under those circumstances, would themselves combine and endeavour to promote these loans. But, as I say, this is a sort of final outcome of the original idea that was in my mind, of creating training colonies to take in the unemployed at the present time, or as they come up from time to time, and passing them on to the land again by a system of this kind; and should the success of that farm training colony scheme, which would eventuate ultimately in the cultivation of large areas of uncultivated land, prove that a vast proportion of our population desired to get back on to the land again, in order to form such settlements, this scheme foreshadows what might be done to encourage that movement.

9377. Of course we shall have Mr. Moore, who will answer any questions as to the actual

Chairman—continued.

details; but is there any point that you would like to speak about with regard to this scheme. It is not desirable to repeat in evidence what is so amply before the Committee in this valuable pamphlet?—I think this scheme, as a whole, taken together with the explanations I have verbally given under examination, does clearly demonstrate what the principle of it is, and what I expect the ultimate end of it will be, and unless some member of the Committee has a desire to ask me further questions of a general character, I would prefer that questions depending on expert knowledge and experience of agriculture should be put to the only witness I shall call. I should like to say before concluding that I was debarred from putting in letters which I had received from certain agriculturists of known character and reputation, such as Professor Sheldon, who gave me his criticisms on the scheme in a very favourable sense, and therefore I cannot, of course, fortify the project by as much expert evidence as otherwise one would have brought, had there been time to go to any extent into the matter. I hope that in Mr. Moore's evidence there will be concentrated all those facts and proofs which are necessary to fortify the general statements I have made.

9378. You understand the reason that some members of the Committee objected to those letters, or thought it unwise that they should be read, was that others might wish to read letters of an opposite tendency, and we should not know where we should get to by that process?—Quite so. I have only to say in conclusion that it seemed to be a matter of duty on my part to submit what could be said in favour of some such land colonisation, owing to the amount of interest the subject excites outside; and as there would be no other opportunity for any public representative body to examine into such a scheme so well and so appropriately as this Committee is able to do, it seemed to me to be an opportunity that someone should take in order to put it in the best way before you.

9379. Whatever the Committee may think of the scheme, they are very much obliged to you for all the pains you have taken and the public-spirited way in which you have prepared it and laid it before the Committee?—I am obliged to you, sir.

Mr. *Lawrence.*

9380. Do you contend that these farm settlements shall be utilised by the class that we have heard of, vulgarly called the unemployed, having regard to the fact that we have already had in evidence from several witnesses that that class practically contains none of the late rural inhabitants, but the failures of town life?—The class for which the farm settlements are suggested is contained in the first sentence of Part 2 of the scheme: "In order to meet the case of those who are displaced from industries they have followed, and who may be encouraged to seek to obtain a permanent living from the land, it will be necessary to provide suitable estates for small farm settlements."

 9381. So

Mr. *Lawrence*—continued.

9381. So you do admit that it would be possible to put on the land people whom we have evidence to show never have been on the land, but are urban failures?—No, I do not think it is necessary at all to assume that no persons would ever undertake the responsibilities connected with these farm settlements who had not very good reason to believe that they would make them successful, and they could have no hold by right upon the public authority to admit them upon the settlements: it would have to be for some just cause represented to the local authority.

9382. What I was trying to remind you of was—we have already had from several witnesses' statements that the people who do figure under the unemployed category in our large towns are not people who have anything whatever to do with rural districts, but are urban failures; with that fact before us, how far do you think that these small farm settlements are likely to meet such a class of people who are purely urban?—I think I have already stated in my opening remarks upon Part 2 of the scheme that it had no connection with the temporarily unemployed, or the unemployed in industrial regions, excepting those of a particular character, and their character is completely set forth in Clause 12: "The first question to be considered in connection with these proposals is whether there is a large number of men who would farm these settlements. If the possession of not less than 20*l.* or 30*l.*, which is a third of the total amount of capital necessary for a settler on entering upon the land, be held to justify the loan of the remaining two-thirds, there can be little doubt as to there being many thousands of such men." Then there comes a description of them.

9383. Then it postulates that the people who are to form the small farm settlements are to have practically 20*l.* or 30*l.*?—Yes, that I have stated. I have distinctly drawn a line, and I think when I addressed the Chairman on that point, I drew a very strong line between the creation of farm settlements beyond those provided by the training colonies; I made a strong distinction between that part of the scheme and the scheme which arises out of the training colonies.

9384. Then practically this is not strictly in our purview, it is only ancillary?—I think that is so; I think you may fairly say this is rather the outcome of the other, which is not immediately under our purview.

9385. I suppose you allow that a man who had 20*l.* or 30*l.* could not have been unemployed for any length of time?—No, I have not regarded it as a question of unemployed. It was rather more the getting of the people on the land and decreasing the unemployed gradually.

Chairman.

9386. Your training colonies take hold of the unemployed?—Yes.

Mr. *Lawrence.*

9387. Is he to make 20*l.* or 30*l.* in the training colonies?—No.

9388. I understand these small farms at rents are simply for the people who have got some capital to start with?—These absolutely new settlements started in the way described. But I cautiously prevented myself from being misunderstood by stating to the Chairman on this main question, that it was only the outcome of the other, and it was not a necessary part of the scheme to begin with.

9389. I see that they are to put up fencing, and that of course postulates that they must have something in the way of capital, before they get on at all?—Decidedly so.

9390. Have you ever erected a house and buildings for 140*l.* in the country or anywhere?—I have not erected them, but I have had estimates for them. I have erected them in fact at very much less than that, but they were made of wood for temporary purposes. I have erected colliers' dwellings on a coal property which I had to pay for.

9391. Would you not think that the erection of a house and outbuildings for a cow or so would cost far above 140*l.*?—No, I have received some information on that point from people who do know, and I think Mr. Moore will be able to answer that question very fully if you ask him.

Mr. *Pickersgill.*

9392. I understand that your idea is that the State would advance the money for buildings on the recommendation of the County Council?—Yes.

9393. Would the County Council be in any way responsible for the repayment of the loan?—No.

9394. There would be no liability of the County Council?—No.

9395. Do you think it is quite reasonable to ask the State to advance money upon the recommendation of a body who incur no liability by reason of the recommendation?—The recommendation is not that they should incur the liability, but they would in a sense be responsible, as large public bodies, for the advance of this money and for the repayment of it, on such conditions as the State itself laid down. The provision made in this scheme for the charges of rent and sinking fund to the tenants who have permanent occupation, and are never turned out during their lives if they conform to these terms, appears to me to be security for the State under the management of some responsible body such as the County Council, and under the farming direction of a manager who is thoroughly acquainted with the best means of using this land and giving advice and direction to the labourer upon it. I might also say that in connection with that scheme there is co-operative banking:—the agricultural credit bank scheme, which is already taking hold in this country to a great extent, and which again forms a certain guarantee for the regular payment of the rents on the part of those settlers who are upon this land.

9396. Then I understand you contemplate that the County Council shall play a most important part in this matter, especially as regards recommending the State to advance the money, and yet the County Council shall incur no liability in regard to it?—I think so. I do not see why the County Council should; but it may, of course, be one of the conditions.

9397. Supposing the County Council incur liability,

Mr. *Pickersgill*—continued.

liability, would it not be likely to make the recommendation under a greater sense of responsibility?—It might be so.

9398. Would you not be willing to modify your scheme in that direction?—My scheme is capable of modification, so far as details are concerned, of course, very largely; it is very difficult to conceive a scheme, worked out as this has been by very diligent care, as a whole, and also with regard to the details; but I do not profess to have compassed by any means all the difficulties and details. I think the County Council might reasonably be asked to take some responsibility, but it would be better that should come after the first settlement or two have been made. I think it would not be wise to prejudice the scheme by asking for those responsibilities to begin with. I think the State might fairly take what slight risk there was in making an experiment for the purpose of seeing whether it would be a national advantage.

9399. Do not you think the Government would rather press for a part of the liability being imposed on the County Council?—I think you would impose a liability on each person.

9400. That I understand; but what I am putting to you is that the County Council itself should be responsible?—I have not the slightest objection to the County Council being made liable to the State. I did not think the risk was great, and therefore did not bring them in.

Mr. *Round.*

9401. Your proposal is that the State should advance money for these purposes. Do not you think that the State should first, or at all events at the same time, advance money to landowners for the purposes of improvement and drainage and building at a low interest. My point is that the existing landowners and occupiers should be assisted reasonably by the State first of all, so as to prevent depletion?—Our objects are somewhat different. I want to see means provided for the re-populating of the agricultural districts of the country with as large a population as it will carry, and increasing the bringing into cultivation of land which is now dying out or being put under different cultivation, and which land is cultivated unprofitably at the present time. I may be wrong; but I do not see any other way of doing it than by utilising the labour and the hand of man in addition to the use of machinery, together with skill, knowledge, and intelligence, such as at any rate has not been hitherto used on small holdings and small allotments. From that

Mr. *Round*—continued.

point of view, this being a great national advantage, I say the State would be justified in lending money for the purpose of putting buildings on such land, provided the landowners would offer the land at a low rental—a rental quite satisfactory to themselves, but probably better than the rentals they are getting now from the farmers. Landowners might be induced to accept these low rentals, which would be in perpetuity, and see the land most laboriously and carefully and skilfully tended, and therefore fruitful from year to year under this system of culture by small holders. I believe that landowners would be quite willing to let large tracts of land at a low rent, which could be divided up into small holdings for such co-operating colonies to carry out these operations. That is the national view I take of the matter, not the individual view from the owner's point of view; though I do see that the owner might have a great inducement through a scheme of this kind to offer his land in large quantities for this purpose, which would be a very small rental for the individual small occupier to pay.

9402. My point was that prevention was better than cure. If you could prevent the land from going out of cultivation, it would be better than letting it go out of cultivation, and then trying to replete it. You are aware that the land which has gone out of cultivation, taking the eastern counties, is generally a particular class of land, and you would find more difficulties in cultivating such land. The price of the better class of land which you might cultivate successfully would be probably beyond what you have estimated it at?—I have taken such prices as have in recent years, which seem to be extremely low years, governed sales of land, which appears to be good and cultivable land. Such parts of Essex as you have suggested are very heavy clay lands, and therefore to cultivate them would require a good deal of manure and a good deal of labour to bring them into a better condition under the farm training colonies system. But for the other part of the scheme, the farm settlements, it appears to me that many large farms can be bought at 10*l.*, 11*l.*, 12*l.*, and 13*l.* an acre, which would amply satisfy the requirements of such a settlement. I may mention that Mr. Moore, who will be called, will be glad to take up all these points which any member of the Committee would like to clear up, because he has dealt with them in a practical way connected with farm valuations and land produce and auxiliary industries connected therewith.

Mr. HAROLD EDWARD MOORE, F.S.I., called in; and Examined.

Chairman.

9403. ARE you a Fellow of the Surveyors' Institute and Fellow of the Royal Horticultural Society?—Yes.

9404. What experience have you had in the improvement and management and valuation of land in the eastern and southern counties of England?—I have been in practice as a land

Chairman—continued.

agent since 1885, and I have given special attention to that work.

9405. Have you had the actual direction of farming properties?—From time to time I have, and am now working 600 acres in Kent.

9406. In what part of Kent?—Near Maidstone.

Chairman—continued.

9407. You have particularly, I think, paid attention to the question of utilising hand labour in agricultural work?—Yes, I have done a good deal in that direction.

9408. You have had some experience in growing products not usually grown by English farmers?—Yes, for five years I carried on experiments on some 30 acres of land, and among other experiments tried the growth of new crops, in order to prove their adaptability to the present conditions of farming.

9409. What knowledge have you of convict farms, or institutions, or colonies of that sort?—I have been over the convict farm at Dartmoor. I know the reults of the work upon the Hadleigh colony, and other instances of employment of unskilled men on land in England; and in addition to that I have visited the penal and voluntary colonies in France, Germany, and Holland.

9410. You have prepared a paper on the subject of those continental farm colonies, I believe?—I have.

9411. Will you put in that paper, so that it may be printed upon the Minutes with a view to your further examination at our next sitting?—Yes. [*The same was handed in, and is as follows*]:

Continental Farm Colonies.

Voluntary Farm Labour Colonies in Germany.

In Germany there is a system of farm labour colonies working under the control of a Labour Colony Central Board. The earliest of these colonies, known as Wilhelmsdorf, was founded near the town of Bielefeld by the efforts of Pastor von Bodelschwingh in 1882. The results were considered so satisfactory that since 1884 other colonies have been started until there are now 26 in active operation in Germany.

All these are worked upon the same principle, and are defined as being institutions of Christian charity where able-bodied men who are willing to work are admitted without regard to religion, qualifications, or character; the special aim of the colonies being to secure moral and physical improvement of those claiming their assistance. Nine of the colonies have accommodation for less than 100 men each; 13 can accommodate from 100 to 200 men each; and four have sufficient accommodation for over 200, the total number of places in all the colonies together being over 3,200. The colonies are founded by loans either from public funds or private sources, some of which are lent free of interest. The annual expenditure is provided by grants from the State or local authorities and by charitable donations and subscriptions.

When Wilhelmsdorf was founded it was used by well-conducted men temporarily out of employment, and was successful not only in giving temporary work, but in finding permanent engagements; for, out of 1,200 men coming to the colony during the first 14 months, situations were secured for 830. The colonies, however, soon began to be the resort of the tramp and the criminal, with the result that they have gradually been disused by the respectable working classes,

Chairman—continued.

and now it appears that about 75 per cent. of those availing themselves of these institutions have had some term of imprisonment. The colonies have undoubtedly been useful in reducing the numbers of tramps, and have effected economy in destroying the system of indiscriminate almsgiving; while they have exercised good moral influence over large numbers About one-half of those coming upon a colony stop for a period of from two to six months; while a large proportion leave for a time, and then either re-enter or go to another colony. Some seem satisfied with continual maintenance on a colony, only leaving nominally for a few days at intervals of not less than two years, in compliance with a rule that no man shall remain for a longer time than that period.

As to the financial results, it will appear that the cost of the colonies varies from 3*s.* 6*d.* to 5*s.* 6*d.* per week for each man, including a payment made to him averaging about 1*s.* 9*d.* per week. This cost does not include capital spent in erection or extension of buildings; and though in calculating this cost the value of any current revenue arising from the labour is credited, no income is reckoned for the improved value of the reclaimed land upon which the labour is mainly employed. A deficiency of 3*s.* per week, in addition to the payment to the man, seems to be about an average result. From my inspection and from critical consideration of Wilhelmsdorf, I became of opinion that the colonies could never be made self-supporting, even if a better class of labour were available. This colony when acquired consisted of rather over 1,000 acres of sand or forest land of a nominal value. At a depth of two or three feet there is a friable limestone which has to be brought to the surface before crops can be successfully grown. At the time of my visit about 350 acres had been treated in this way, and of this extent less than 160 acres were under cultivation as arable land, the remainder having been laid down to pasture or plantation. Even if the land were of good quality this area is far too small to produce a sufficient value to pay for the maintenance of the 240 men for whom there is accommodation on the colony. Moreover, in the cultivation of even the small area named little economy seems to have been effected in the farm working expenses, or advantages gained from hand tillage; for eight working horses are kept, which would be considered a full number for an English farm of a similar extent. None of those crops specially profitable when hand-labour is available are raised, the system pursued being that of an ordinary dairy farm, about 25 cows being kept, with the usual piggery, the condition of which showed admirable management. The superintendent was evidently a competent farm stock manager; but it would appear that the labour of the men was only managed with the view of keeping them employed rather than attempting to obtain profitable results from the labour of each individual.

All the other German voluntary colonies are founded on the same general principle, viz., on land of a waste or unproductive character; while

Chairman—continued.

while the number of men received is not regulated by the returns from the land, or the labour required upon the same. In a few cases the land has originally been of a more useful character than at Wilhelmsdorf, and a smaller number of men are received in relation to the area of cultivated land, such colonies giving better financial results. Moreover, in some colonies the reclamation work (upon which, at least, 60 per cent. of the outdoor labour is utilised) has been of a profitable character, and if the improved value of the land, as indicated by annual valuation made under the authority of the Government, be taken into account, the cost of these colonies has been very small.

The useful experience gained from the German voluntary colonies I should summarise as follows:—

(*a.*) That no colony can be used for the accommodation of both vagrants and the unemployed working classes. If the colony system is adopted, colonies must, therefore, either first be founded for the former class, or the colonies must only be for the admission of persons selected from the latter class who volunteer for admission.

(*b.*) That the class of work on the land, which a man unskilled in agricultural work can immediately undertake with useful results, is the reclamation of uncultivated land.

(*c.*) That upon such work, on suitable land, a willing worker will at once be able to give such value as will more than provide for his maintenance, but the expenditure on the maintenance of those engaged in this class of work must be recognised as an investment of capital; and

(*d.*) That if an attempt be made to render any colony self-supporting, it must possess some good quality land, and only such a number of men should be received as could be supported from the probable returns, after deducting the probable working expenses, without the cost of maintenance of the men.

Forced Labour Colonies near Berlin.

In addition to the voluntary farm labour colonies, men who are inmates of German town workhouses are frequently employed upon farm work. I have visited the farms situated about eight miles from Berlin upon which 900 men out of about 1,300 living in the workhouse at the time of my visit were employed.

As a result of my investigation, I formed the opinion that the work was not arranged in such a manner as would economically utilise the whole power of the men. Far too large a number were employed to produce certain results; the individual direction was not skilful; and the expenses of administration was out of all proportion to the value of the work obtained. The small area devoted to gardening was, however, well-managed; and the results of labour in this department was thoroughly satisfactory, bearing in mind the class of men received, and the fact that no inducements were offered to obtain honest work.

Chairman—continued.

It must be remembered that on such a property there are great difficulties. The workhouse is situated some miles from the farms, so that much time is lost in journeying to and from the land; the labour is of a most ineffective kind; the work is regarded as prison labour, is, by us, viz., as a means of employment, and not as an attempt to provide self-supporting work to the men maintained, and no attempt is made to find the classes of work adapted to the capacity or experience of the men received.

In spite, however, of all these disadvantages from the report of the year preceding my visit, it appeared that the total cost of food and clothes for each man was only 3*l.* 0*s.* 9*d.*, or just 2*d.* per day in excess of the value obtained from his labour.

The experience gained in this work shows that penal colonies for vagrants might be a cheap means of dealing with that class in England. I am also of opinion that the result of these forced labour farms indicate that with a better class of men on a voluntary colony under the more favourable conditions which we could obtain in England; such additional return per man could be obtained as would not only make up the deficiency shown by forced labour farms, but provide all costs of administration and interest on capital.

Penal Colony at Veenhuisan, Holland.

In the year 1859 the Dutch Government acquired certain colonies which have been merged into one situated at Veenhuisan, about nine miles from the town of Assen. At this place about 2,500 persons were maintained at the time of my visit, the whole of this number having been convicted of begging or other offences against the law, and sent for a term of not less than one year to this colony.

The employment was mainly in land reclamation and cultivation, but many industries were also worked. The property had originally been a sandy waste which no landowner would have attempted to reclaim with the view of profit. By the work of those who have been on the colony a considerable area has been cleared and is well cropped and cultivated; so much so that generally sufficient food for consumption of those upon the colony is there raised. The colony seems to have no reformatory influence, those who have once been there almost invariably returning after they have been discharged at the expiration of their term. It can thus only be considered a penal settlement serving the purpose of keeping at a small cost some thousands of hopeless vagrants who would probably otherwise be begging in the towns of Holland.

It is not, therefore, necessary to consider further the results of this colony, as it does not give experience useful in consideration of colonies for men selected from the unemployed working classes.

Penal and Voluntary Colonies in Belgium.

The same remarks as I have made in reference to the Veenhuisan colony apply generally to the colonies in Belgium. These latter, however, are larger and better organised, and in addition to

Chairman—continued.

two colonies at Mexplas and Wortel, which receive all persons convicted of begging who are sent there in accordance with the very stringent law for the repression of vagabondage passed in 1891, there is another colony under the same control at Hoogstreeten, where 1,200 feeble and aged persons are received. The total areas of these colonies exceed 2,300 acres, of which about 800 acres are under cultivation.

The most important fact to be gained from the results of the Belgium colonies is the thorough confirmation of the principle that voluntary candidates and forced labour vagrants cannot be received upon one colony. Under a law of 1866 any able-bodied man out of work might apply to his commune to be sent to the Wortel colony, and upon his reception the commune was responsible for paying 6*d.* per day towards the cost of his maintenance. A voluntary colonist so received might leave at any time after he had been one month upon the colony from the day of his admission; but if he returned to the colony within 12 months of his departure, he would then not be admitted for a shorter time than six months. At first these provisions seemed to have been useful; but when it was recognised that those convicted of penal offences were sent to the same colony, the numbers of voluntary admissions rapidly decreased every year, and in 1885 had fallen to 232, and in 1889 to 78, while since the Act of 1891 I learn from the director that the voluntary principle has practically been inoperative.

Voluntary Colony, Switzerland.

The two examples of foreign colonies which are the most useful in considering the possibility of the foundation of self-supporting colonies in England are the two recently established, and small colonies which have been founded in Switzerland and France respectively, both only open for men selected from the unemployed working classes.

In April, 1889, a society was registered in Berne as a limited company, with a capital of 1,920*l.*, and obtained 107 acres of land to form a workman's home for the temporary maintenance of those who were out of work. During the four years to the end of March, 1893, from 75 to 100 men have been received each year, the average number remaining in the home during last year being 24. On December 31st, 1892, the property in possession of the company was valued at 3,974*l.*, with a mortgage and loans amounting to 2,106*l.*, thus giving a surplus of profit of nearly 200*l.* after repaying capital. It will thus be seen that the work has been entirely self-supporting from the commencement. A small sum has been received in donations, the income from this source during the last year having been about 100*l.*; but, on the other hand, wages have been paid to the men, in addition to their being provided with maintenance.

The whole area of land, it was estimated, would be under good cultivation in 1894, and the company owning the colony were then intending to secure more land of a poor character; as though the returns from the colony were sufficient to maintain the number of men received full

Chairman—continued.

employment for that number could not be found without some waste land.

This small example, therefore, supports an opinion that even a man unskilled in agricultural work can be supported upon a colony if an area of about four acres of cultivated land be secured for each man; but also shows that waste land is necessary if every man is to be kept fully and profitably employed.

Voluntary Colony, France.

The other continental colony founded for selected men is one established in the parish of La Chalmelle, in France, 70 miles east of Paris. A committee was appointed by the Paris Municipal Council in 1891 to visit the various foreign colonies, and report as to whether a colony could be founded in France with useful results, and, if so, the basis upon which it should be worked. As a result of the report of the committee so appointed, this colony was founded in January 1892.

The farm used for the purpose consisted of 316 acres, which was bequeathed to the City of Paris in 1663, and was leased for the purpose of the colony to a committee nominated by the Paris Municipal Council, the rent being 100*l.* per annum, while interest at the rate of 3 per cent. per annum upon the capital employed and advanced by them has also to be paid.

At the time possession was taken of the farm, to quote the words of the director, given in his first report, it was "très peu fertiles et très argileuses, elles sont fort sèches en eté, très humide en hiver, l'eau séjourne longtemps à la surface, et le sous-sol impermeable, très compact, ne permet pas les labours profonds sands l'introduction d'un amendement qui modifie la constitution physique." The whole farm had, moreover, been out of cultivation for two years. The farm buildings upon this property were fitted for the accommodation of 32 men, and placed under the control of M. Malet, an agricultural expert of special knowledge and experience in agricultural organisation.

At Easter of the present year (1895) I visited this colony by desire of Mr. Mather, in order to personally investigate the results obtained. Everything upon the farm gave evidence of most careful direction. Last year the area of cereal crops was 160 acres, the remaining area being mainly forage crops, while there is less than ten acres remaining uncultivated. About half the land is of fair average quality, but the remainder can never be expected to give an average return, although with more expenditure in improvements it will yield largely increasing crops. The amount of capital expended, however, has been less than the director would have wished, the total at the present time being under 2,500*l.*, this amount including the purchase of 50 cows, 10 horses, and a large quantity of other productive live stock. It is evident that a colony on such land, as above described, could not be self-supporting from the commencement. Its success, however, seems to have been speedily recognised. The Chairman of the Committee appointed to report to the Paris Municipal Council as to the results up to October, 1892, after giving evidence which

Chairman—continued.

which he thought showed that in three years, when the land was all under proper culture, the receipts would equal the expenses, closed his Report with the following clause :—

"Dans ces conditions, et en presence du succès de l'entreprise, succès qui n'est pas douteux, vous devez plus que jamais, Messieurs, perseverer dans la voie inaugurée par votre Commission de Mendicité, et faire tous vos efforts et tous les sacrifices possibles pour aider les societies privées qui tenteront de realiser des creations de colonies agricoles d'indigents destinées a arracher les ouvriers malheureux aux funestes consequences du chomage."

In the year ending October 1893, the nett cost of the colony was 600*l.* During this year 95 colonists had been received, 37 had secured situations through the colony, 18 went voluntarily to situations, 32 were on the colony at the end of the year, and the remaining eight had been discharged as hopeless. Experiments of great value for future guidance were made as to the cost of the labour of men unskilled in work on land taken at the cost they were to the colony as compared with ordinary labour at wages current in the district. These tests were of two kinds, harvesting, and pulling and packing root crops. As to the harvesting, the hand labour for over 60 acres was done by colonists at a cost of 12*l.* 5*s.*, which by ordinary labour would have cost 29*l.* ; while the work on the root crops which with ordinary labour would have cost 10*l.* 5*s.* was done by the colonists at a cost of nearly 1*l.* less.

In the year ending October 1894, 113 men were received, the total number of beds provided being fully occupied. The nett cost of the colony for this year was about 195*l.*, the receipts either in sales or value of produce kept for consumption upon the farm being 1,380*l.*, while the expenses were 1,575*l.* This latter amount included 78*l.* costs of colonists travelling to colony, which some might consider should not have been charged against the farm, 184*l.* payments in cash to colonists, and 173*l.* rent, interest on capital, and rates. The improved value of the colony is not brought into the accounts.

With more men increased hand labour can be profitably used, more particularly in growing garden and other produce ; and in presenting this last-named report to the municipal council application was made on behalf of the colony for the cost of erection of dormitories for a further 50 men. This proposal has since been sanctioned, and when the buildings are erected in accordance with the plans shown me by the director, he hopes to receive additional men, so that at least 200 will be able to come to the colony in the course of next year. The men are selected from among applicants in the Paris shelters ; and there is great competition for every vacancy that there is upon the colony.

The results have been considered so satisfactory, both from the reformatory aspect and financially, that a circular has been issued by the Minister of the Interior asking the prefects to consider the possibility of the foundation of a similar colony in each of the departments over which they have control.

Chairman—continued.

Settlement of Small Holders, Frederiksoord, Holland.

Hitherto every colony I have referred to has only dealt with single men as a temporary measure. I have critically inspected one colony in Holland, where the attempt has been made to settle families permanently each upon a small holding. This is known as Frederiksoord, and is situated in the same district as the Veenhuisen forced-labour colony already mentioned, and is under the control of the society which owned that colony until it was acquired by the Government.

The Frederiksoord Settlement consists of six farms of about 200 acres each, worked by the society owning the settlement, and over 220 farms of an area of 6½ acres each, worked by tenants. Men, with their families, are first taken as labourers upon the former farms, and when vacancies occur are admitted as life-tenants of a small farm, stock and capital being lent to them.

The condition and results of this settlement, in my opinion, are not satisfactory. The tenants all receive special assistance from the society ; several, even with this help, admitted they could not secure a sufficient maintenance without outside work ; a large proportion of the land was in poor condition ; both houses and the standard of living were very inferior, and many of the tenants were in arrear with their rent. As to the society, the costs of administration, expenses of education of the children, and the technical training, costs about 4*l.* 10*s.* per family each year in addition to the profits secured from the land worked by the society, this deficiency being met from charitable donations.

The failure of this settlement to give a comfortable living to those volunteering to work a small area as a permanent means of livelihood is owing, in my opinion, to the unsuitable situation and poor soil. As to the former, the cash return to each family is mainly from the proceeds of a cow, which, at Frederiksoord, distant from any market, is of the value of less than 4*s.* per week ; while in England for the same product 7*s.* 6*d.* per week could be obtained. Then, again, in the district of Frederiksoord, the wages average 1*s.* 2*d.* per day, with a possibility of getting a little extra at haymaking, while in England any small holder can spare four to six weeks at hay and harvest time, and if then assisted by a family, can frequently secure a total return of 10*l.* for that period. As to the soil of the colony, this was formerly either peat or sandy waste, and totally unsuited to intensive culture. It cannot grow wheat, and from almost every other variety of crop except oats, a less than average yield must be expected. I was able to see the acreage returns from the farms worked by the society for one year, and they fully supported what I thought was probable, for beans gave about half-the average English yield and barley less than one half. Then at Frederiksoord there is no good pasture such as can be found to some extent in England, and which gives so valuable and certain return without labour.

Chairman—continued.

To pay interest upon capital, to defray all costs of management, and to obtain a comfortable living, a small holder here must get an income of at least 20*l.* per year in excess of what a Frederiksoord tenant now does. The amount of the latter, putting produce consumed at the market price, may sometimes be as much as 40*l.*, though it would generally be nearer 30*l.* If a tenant was established under exactly the same conditions in this country as to soil, and obtained only the same returns, the increased value of saleable produce would make up half the additional income. It would, however, be difficult to find soil of so unsuitable a character in this country; and on average quality land the crops could safely be relied upon to yield not less than 50 per cent. more than could be secured at Frederiksoord by the same labour. A small holder under favourable conditions in this country will thus obtain an increased yield, a higher price for saleable produce, the possibility of returns from pasture land, and more profitable outside employment when not wanted on the land. The experience of Frederiksoord would seem to indicate that with these conditions, an English family on a settlement of small holdings of no larger area than at Frederiksoord, could secure

Chairman—continued

an adequate living, even if they possessed no better working powers or experience than a Dutch town family.

"*Home Colony*" *Settlement, Germany.*

One attempt has been made in assisting families in connection with the Voluntary German Colonies. In 1886 a colony was acquired for this purpose about three miles from Bremerhaven. The sum of 3,600*l.* was given for the land; nearly 3,000*l.* was expended in the erection and fitting of the buildings; and upwards of 1,600*l.* in stock. The small holdings so created were then let to colonists at rents sufficient to cover the interest on the capital; the colonists when they first come to the colony being housed in barrack buildings, subsequently being promoted to be "Home Colonists," having separate cottages. The colony was started with 12 of the former class in 1886, and in 1893 there were 35 of the former class and 15 of the latter. I have been unable to gather any reliable information as to the status and position of the tenants at the present time, nor have I visited the colony; but am told generally the results up to this year are satisfactory.

Friday, 24th May 1895.

MEMBERS PRESENT:

Mr. Acland.
Mr. Bartley.
Mr. John Burns.
Mr. Campbell-Bannerman.
Mr. Heneage.
Mr. Jackson.
Mr. Heywood Johnstone.
Mr. Lawrence.
Mr. Logan.
Mr. Mather.
Mr. Pickersgill.
Mr. David Randell.
Mr. Round.
Mr. John Wilson (Govan).
Mr. Stuart-Wortley.

THE RIGHT HONOURABLE HENRY CAMPBELL-BANNERMAN, IN THE CHAIR.

Mr. THOMAS PHILLIPS, called in; and Examined.

Chairman.

9412. WHERE do you reside?—At Llanelly, South Wales.

9413. You are the secretary of the South Wales, Monmouth, and Gloucestershire Tinplate Workers' Union, are you not?—Yes.

9414. How long have you acted in that capacity?—Nine years.

9415. How many operatives, men, women, and children, do you estimate are employed in that trade in your district?—About 30,000.

9416. The tinplate trade was almost confined to your district, was it not, until lately?—It was confined to South Wales and Monmouthshire prior to 1891.

9417. Now you have competition?—Yes, in America and on the Continent.

9418. In consequence, the trade has been in a somewhat crippled condition, has it not?—Yes, with the general depression that exists as well.

9419. The people have suffered from want of employment, have they not, to a very great extent?—Yes, immensely.

9420. Have you formed an estimate of the number, or have you any reason to conclude what the numbers are, that have been affected; can you give the Committee the figures for the different counties?—Yes.

9421. To take Glamorganshire, what are the figures?—There have been 5,250 men thrown out of employment there.

9422. How many works were there in Glamorganshire?—Forty-four works, containing 250 mills.

9423. Of those, how many are working?—There are 145 mills working, employing 7,250 men.

9424. And how many mills are idle?—One hundred and five, employing 5,250 men.

9425. How many men have been totally idle from the commencement of 1893 to the present time?—About 6,500 totally idle in the whole district.

9426. I am taking Glamorganshire only; what is the number there?—Two thousand five hundred and fifty.

Chairman—continued.

9427. Then there are some who have been partially employed?—Yes; 2,700 have been partially employed during the same period.

9428. And how many men have been working during the same period?—Seven thousand two hundred and fifty.

9429. Dealing similarly with Carmarthenshire, how many works are there there?—There are 28 works, containing 155 mills, employing 7,750 men.

9430. How many of those mills are working?—Ninety-seven mills, employing 4,850 men.

9431. And how many idle?—Fifty-eight mills, employing 2,900 men.

9432. Again, will you tell us how many have been totally idle since the beginning of 1893 in that county?—Two thousand and fifty have been idle.

9433. And half-time idle during the same period?—One thousand six hundred and fifty.

9434. What has been the number working during the same period?—Four thousand and fifty.

9435. Will you give the Committee similar figures for Monmouthshire and Gloucestershire; how many works are there there?—Twenty-one works, containing 109 mills, employing 5,450 men.

9436. Of those mills how many are working, and how many idle?—There are 51 mills working, employing 2,550 men.

9437. What has been the number of mills idle?—Fifty-eight, employing 2,900 men.

9438. Since 1893 how many men have been idle?—Two thousand nine hundred.

9439. How many have been continuously idle since the commencement of 1893?—One thousand nine hundred and fifty.

9440. How many have been working half time?—One thousand three hundred.

Chairman – continued.

9441. What is the number of men working during the same period?—Two thousand two hundred.

9442. What is the summary for all these counties: how many men in the whole of them have been totally idle since the commencement of 1893, according to your estimate?—Six thousand five hundred and fifty have been totally idle, and nearly 6,000 have been partially idle.

9443. Making a total of nearly 12,500?—Yes, nearly.

9444. As against that, how many are there in full work?—About 13,500.

9445. Are those all men, or men, women, and children?—Men, principally.

9446. It includes some women and children?—Yes.

9447. From what source do you derive your knowledge of these figures?—From our books; we get returns from the different centres every six months.

9448. You think you can reckon upon them as being correct?—Yes, they are very accurate; we have taken great pains to get them correct.

9449. Those are not all men belonging to your union, I presume?—They are not at present; because they cannot pay their subscriptions.

9450. But I suppose there were even originally some who did not belong to your union?—Yes. We had somewhere between 8,000 and 9,000 belonging to our union at the best of times; the others were not members of our union.

9451. The figures you give embrace not only the union men, but non-union men out of employment?—Yes; the total number employed in the tinplate trade.

Mr. *David Randell.*

9452. You have taken especial care, I understand, to ascertain these figures by sending out to the various secretaries of the districts for returns?—Yes.

9453. Can you state very shortly how this state of affairs has been brought about?—It was principally, I believe, by forcing the price of plates up in 1891 and in the autumn of 1890, anticipating the Tariff Bill coming into operation in July 1891. Then there was such an overproduction up to that time, to realise the big prices that were going, that the depression has continued to a great extent since: and America itself is producing perhaps 2,000,000 boxes of plates to-day.

9454. In consequence of that, in July 1891, I think the whole of the tinplate trade was idle for a month?—Yes; it was idle for the whole of the month of August.

9455. Do you think this depression is likely to continue?—I am afraid we shall have two or three ragged years.

9456. Would that be in consequence not only of the American competition, but also of the attempts to forster the trade on the continent?—Yes, in several places: Spain, Italy, and France especially.

9457. You spoke of America manufacturing 2,000,000 boxes of plates; for how many mills would that give work, and how many people?—It would give work to about 7,000 people.

Mr. *David Randell*—continued.

9458. What is the condition of the men and their families in the present state of affairs?—Hundreds of them are quite destitute. I have visited some houses where there is not a bit of furniture in them, nor food of any kind.

9459. Is it the fact that the men who owned their houses have had to sell them in order to tide over this year of depression?—Yes, in very many cases they have sold their houses, and in other instances they have been mortgaged.

9460. Have they been mortgaged up to the full value of the house?—Yes, and in dozens of cases money that was saved in the Post Office Savings Banks, *et cetera*, has been spent by the men in maintaining themselves during the period.

9461. That is to say, a large number of men of thrifty habits who had saved some money have exhausted the earnings they had laid by in that way?—Yes.

9462. May I take it that others have practically lived on the credit of the tradesmen?—Yes; for the last 18 months especially.

9463. May I take it that these men are all skilled artizans?—Yes, very nearly all of them.

9464. Do you find a reluctance on their part to apply for poor relief?—Yes, a very great reluctance.

9465. What are the reasons that they give you for their reluctance?—I believe the main reason is, going against their political interest; that they would be disfranchised if they accepted charity or relief from the Poor Law. I think they shun that as much as anything else.

9466. You mean the stigma that would attach to them from the receipt of poor relief?—Yes.

9467. And that they would be deprived of their franchise?—Yes.

9468. With regard to the remedial measures during this time, I presume there have been in various centres local relief funds?—Yes, in all the centres for some time.

9469. So far as your union is concerned, to which you are secretary, what assistance has the union given to the men?—There was a special fund raised at the beginning of 1892 which amounted to 3,500*l.*, and that was distributed on the basis of 7*s.* 6*d.* for each man and 1*s.* for each child. That was a special relief fund, independent of the union funds entirely.

9470. Your rules do not provide, do they, for relief in the ordinary sense?—No; but they were relaxed in this instance so that we would be able to assist men out of work, and we did so to the tune of 6,500*l.*

9471. In that way you subscribed an additional 6,500*l.*, making a total of 10,000*l.* that your union has distributed among the unemployed from December 1892 up to December 1894?—Yes.

9472. This year, I presume, the resources of the union have been exhausted, and you will not be able to render the men any material aid?—We have not been able to render the men any assistance at all this year.

9473. I assume you describe this state of affairs, with all these thousands of men out of employment, as being an extraordinary condition?—It has never existed in the tinplate trade for the last 30 years.

9474. In

Mr. *David Randell*—continued.

9474. In your opinion, some exceptional remedy ought to be dealt out to meet this emergency?—Yes, in my opinion, that is very necessary.

9475. I suppose it is really a grave condition of things, becoming more acute day by day?—Yes; it cannot be sadder; and things are growing worse every week.

9476. Suggestions have been made to meet special circumstances of this kind by aid from the Exchequer; do you advocate any relief of that description?—Yes; I do not believe there is any other possible method under the circumstances to give them assistance, unless there is something special done.

Mr. *Stuart-Wortley.*

9477. Can you give us the rate of wages in the tinplate trade before the distress began?—A very good workman would average somewhere about 2*l.* a week.

9478. That would be the maximum rate, I suppose?—Yes.

9479. What would it range down to?—It would range from a few shillings over 2*l.* a week to perhaps a few shillings under. The maximum average would be 2*l.*

9480. For the best workmen?—Yes.

9481. Has there been any change in the rate of wages since the period of distress?—The standard has not been changed, but reductions have been effected by percentages varying from 12½ to 15.

9482. The men have accepted the reduction of 12½, have they?—Yes, they have, for the last seven or eight months.

9483. Not before that?—No.

9484. Notwithstanding that the distress was already very acute?—Yes.

9485. Can you tell us any towns or places where the distress was specially great?—In the neighbourhood of Pontypool and Landore, near Swansea, and Kidwelly, in Carmarthenshire. All the men have been idle at Kidwelly for the last seven months, and they have worked very indifferently there, as regards the general body of men throughout the trade, for the last three years.

9486. Do you know what measures were taken in Landore and Kidwelly by the Poor Law authorities?—Yes; they gave the stone-breaking test, nothing else; and the men earned something between 5*s.* 6d. and 6*s.* a week, doing their best.

9487. What rate per hour did they give, do you know?—I could not tell you that.

Mr. *Mather.*

9488. When my honourable friend Mr. Randell asked you your opinion as to the remedy for this state of things, I understood you to say that the only remedy would be a grant from the Exchequer to assist this number of men out of employment?—Yes.

9489. In what way would you use the money if you got a grant from the Exchequer?—I think the machinery, so far as we are concerned, is already there.

9490. Would you distribute money in certain sums?—We have secretaries to the different branches. The number of men who are idle or working are divided into about 142 branches.

9491. I do not want to know how you would distribute it, but simply whether you would distribute the money so much per head of those out of employment?—Yes, and so much for a child.

9492. You would go on doing that until the money was exhausted?—Yes.

9493. What do you do when the money was exhausted?—We would hope better times would come soon.

9494. You would simply give the money in charity, and these men would keep on idling all the time the money lasted?—Yes, unless they got work.

9495. You would go on giving them money until it was exhausted, and for that money they would be doing nothing; is that your remedy?—Yes.

Mr. *Stuart-Wortley.*

9496. Could you tell us at about what date these withdrawals from the savings banks began?—Ranging from the end of 1893 until now.

Mr. *John Wilson* (Govan).

9497. I suppose you have never seen such a time of depression in the tinplate trade before? Not for the last 30 years.

9498. I assume that is caused by the Americans going into the trade themselves, who used to be large customers of Wales?—Yes, to a great extent, and the general depression that there has been throughout the world.

9499. Is it not possible for the men to accept a much greater reduction of wages, as compared with what they had before, in order to compete with the difficulty that has arisen?—The reductions that have been taken have been no remedy for the last seven months. Plates are cheaper to-day than they were before the reduction was accepted by the men.

9500. I know at present plates are very cheap; but still, with all the cheapness, you are not able to overtake the American market?—No, that is impossible, I think; it has been left too late.

9501. Do you think these men who have been engaged in the tinplate work would make any hand at it if they were put upon the land to do land work?—No, I am afraid not; or very few of them.

9502. There have been times of depression in the trade before, have there not, and they have recovered?—We had a spell of depression in 1879, but nothing so severe as at present. The trade was not so extended then as it is to-day, and the depression was not felt so keenly.

9503. A good many mills, apart from the tin plate trade, are engaged in making what is called black sheets, are they not?—Yes. It is a very small proportion; it was a large proportion 18 months or two years ago.

9504. Is it your opinion that, looking at matters just now, there is no hope for the tinplate trade in the near future?—Not unless new markets are opened somewhere.

Chairman.

9505. With regard to this number of between 6,000 and 7,000 men, who, you say, have been totally

Chairman—continued.

totally idle since the beginning of 1893, have they done anything to any great extent in seeking out other industries, going to other parts of the country, or in any other way trying to get employment?—Yes; in Monmouthshire especially we have hundreds who have been trying to work underground, and did work underground as long as they could get it; but they have been discharged. Underground work at the collieries is not very prosperous now, and they limited the working to four days a week. Then these men who had been discharged could not get work when they came back to their tinplate works, because the managers could not take them on.

Mr. *David Randell.*

9506. A large number of men have gone to America, have they not, in the hope of getting work there, and many of them have returned here again, in consequence of the unpreparedness of work there, several of the works not being complete?—Yes.

Chairman.

9507. Will you explain a little more how it is that these men who went to America (to which country the tinplate trade has gone) fail to find employment there?—There are too many gone there; and these men had been so long idle that they found it better to come back, because the special work for themselves was not ready for them to go on with out there.

9508. And yet the Americans are competing with you at home?—Yes, to the extent of two million boxes; but the Americans have been taking to the extent of six to seven millions from us.

9509. But I suppose the article you produce is required, and if the Americans are not in a position to go on with the work it would look as if you might still supply the trade?—Yes, we will continually send some to America, no doubt; but the proportion will be so small compared with what we have been sending that the distress will be very great for some years, unless other markets are found for tinplates.

9510. Has any idea been suggested or any effort made in the direction of finding some other industries suitable to these same men; I mean not that they should go underground or adopt a new mode of life altogether, but that they should find work in some other industries more or less similar to their former occupation?—No, we have none in South Wales. The closest approach to tinplate work would be the copper works; and they have been very badly off for some years.

9511. You are aware that there are other parts of the country where the trade, owing to the shiftings to which trade is always liable, has disappeared, but the community have set themselves to supply the place of the trade that has gone by some other industry; has the same thing occurred in your district?—There is no instance of that that I know of in this case.

Mr. *Bartley.*

9512. As regards the wages, we had a witness from South Wales, who said that if a considerable reduction was made in the wages he thought they could compete with America. What do you think of that suggestion?—The labour in America is 5*s.* a box; our labour is something like 2*s.* 6*d.* a box. So that if we gave 50 per cent. away we could not compete with the American, because if he gave 50 per cent. he would have only half as much as we have to pay altogether.

Mr. *Bartley*—continued.

9513. If America pays 50 per cent. more in wages than you do, how is it that you cannot compete with America?—It is because of the tariff. We have to pay 5*s.* 2*d.* on every box that goes into the country in consequence of the tariff.

9514. Is it not the fact that wages in America, although nominally much higher, are, in consequence of the price of food, and so on, much less than they are with you?—I do not think so.

9515. Does 1*l.* in America go as far as 1*l.* with you in Cardiff?—£.1 in Cardiff would, I presume, go as far as 27*s.* in America.

9516. Then, although wages are so high nominally in America, the difference is not really so great?—No; it is boarding and clothes that are dear, so far as I can find out.

9517. Then, as a matter of fact, there is room to compete with America by reducing the cost of production, is there not?—No; I believe if we worked for nothing we could not compete with America to-day, because, whereas we give 2*s.* 6*d.*, in America they give 5*s.*; and if we gave away the 2*s.* 6*d.* we could not compete.

9518. What proportion of the cost of the article does that 2*s.* 6*d.* represent; what do wages represent out of the total cost?—All round I should say 2*s.* 6*d.* to 2*s.* 8*d.* on the box.

9519. What is the value of a box?—9*s.* 6*d.* or 10*s.*

9520. Then about 25 per cent. is wages?—Yes.

9521. Then the great bulk of the cost is not wages?—No.

9522. You think there is not much margin for reduction?—There is not, so far as wages are concerned.

9523. There are a great number of works still going on in South Wales, are there not?—Yes.

9524. How can those works go on still if it is impossible to compete?—I daresay they make for special markets on the Continent and for home consumption as well.

9525. Would they make a special quality of tinplates?—Yes; there are different grades, and, perhaps, one works manufactures the article, and turns it out better than its neighbour.

9526. Do you mean in America?—Yes; or in Wales.

9527. Why cannot all works do the same?—I cannot say.

9528. If there was a State grant to help all the people while out of work, would not that tend to retard the time when they would accommodate themselves to the changed circumstances?—So far as our workers are concerned they would rather work in the tinplate works for 7*s.* 6*d.* than they would anywhere else for

Mr. *Bartley*—continued.

12*s.* or 15*s.* They run back from everywhere to their old work even if their wages are higher in other places.

9529. You have no solution to suggest for the difficulty, except a State grant?—That is all.

9530. If you had a State grant, would it not be reasonable that all other parts of the country should require the same?—Yes, I suppose so; and I do not see why they should not have it either.

9531. Do you think the State could help all of the unemployed all over the country?—This is such a general depression that I do not believe the world has felt the like of it before. There are now some signs of things bettering all over the world, and when things were better this would soon disappear. In the usual depressions which have existed, and which may of course come again, the workmen would not come to anybody for relief; but this is an extraordinary depression that the world has not felt the like of before.

Mr. HAROLD EDWARD MOORE, F.S.I., F.R.H.S., re-called; and further Examined.

Chairman.

9532. THE paper you put in on Continental Farm Colonies is printed in the evidence of the last occasion. Perhaps I may ask a question or two with regard to each of the colonies. In the first place, as to the voluntary farm labour colonies in Germany, I see that you deduce four conclusions from your examination of them; the first being that no colony can be used for the accommodation of both vagrants and the unemployed working classes?—Yes.

9533. Those two classes must be dealt with separately, in your opinion?—Yes. That is certainly a conclusion that I think almost any one inspecting the colonies would come to. I see that Professor Mavor in his report in the Government Blue Book on the Unemployed notices the same point.

9534. Then your second conclusion is that where a man unaccustomed to agricultural work has to be employed on a farm, the proper course is to employ him upon the reclamation of uncultivated land?—Yes, that undoubtedly is the case, in consequence of the extreme difficulty in getting the labour well regulated if the land is in cultivation.

9535. You think that a man who is a willing worker, a man of industrious habits, for instance, like the tinplate workers we have just been having evidence with regard to, could do a profitable amount of work in reclaiming uncultivated land?—Certainly. I think that is a class of man that could compare favourably with the agricultural labourer for similar work.

9536. What do you mean, when you say his labour would "compare favourably" with that of an agricultural labourer?—It would be cheaper to get the work done by that class of man, provided it was such work as you would usually employ navvy labour upon; that is to say, it would be cheaper to have the labour of such men who had previously been unskilled in agricultural work, provided they cost nothing beyond the cost of their maintenance.

9537. Your third point is that a willing worker on such work can give such value as will more than provide for his maintenance; but you think the expenditure on the maintenance of those engaged in this class of work must be recognised as an investment of capital; that is to say, I suppose, that the increased value he gives to the land is the return that is got for the cost of his maintenance?—That is so.

Chairman—continued.

9538. Then, fourthly, you say that, side by side with this uncultivated land, there ought to be some land of a better quality?—Yes, that is necessary, as otherwise there would be no produce to maintain the number of men who were upon that particular colony.

9539. A question has been raised with regard to the general scheme that has been put before us, as to what would happen if the supply of unemployed fell short. Supposing there is a period of depression, and a great deal of labour has been obtained, and you employ it upon the reclamation of a certain piece of waste land, and then these men happily at some period find their own natural work, what becomes then of the colony?—It would not affect the colony to any extent, except that it would defer work to a subsequent period, which, if the men were available, would be done immediately. It might mean that the cost of supervision might be rather heavier if that work was extended over a longer period, but otherwise it would have no financial effect.

9540. Is that work of a sort that requires to be done with the season?—No; as a rule one would only undertake the reclamation of waste land in the autumn and winter months, as an alternative to the cultivation work in the summer, when more labour is employed on the cultivated land. We should not undertake such a thing as land drainage or ploughing up any waste land except in the autumn after the harvest is in; it would be uneconomical. So that, assuming we were dealing with an area of land such as this derelict land in Essex, which has been described, that labour would not be placed on that land until the autumn; it would be uneconomical to undertake it at any other season of the year.

9541. What would these men do in the summer months?—I think those who have had some experience, at all events, would have a large amount of employment in the ordinary hand surface tillage on growing crops.

9542. And in the auxiliary trades we have heard of also?—Yes, to a small extent in the auxiliary trades. But I do not think there would be very much labour wanted upon them, at least not in proportion to the comparatively large number of men that are wanted upon the colony.

Chairman—continued.

9543. Do you know if they have found this difficulty in Germany on those voluntary colonies there?—In Germany, as you may notice from my remarks in my paper, the colonies have been founded almost invariably on waste land, or sandy heaths that would otherwise not have been cultivated, and they are employing a very small proportion of the men upon the actual agricultural work at any time. It is principally in the nature of capital expenditure in the case of those colonies. In fact, the colonies, from an agricultural point of view, are worked with practically the same expenditure of horse labour as if there were no men upon those colonies. The only way in which the men can be profitably engaged on agricultural work is as an auxiliary to steam power, using the most modern steam appliances and supplementing steam by the hand labour of those men in substitution of much of the work that is now done by horses.

9544. You go on in your paper to speak of the forced labour colonies near Berlin, and the inference you draw from them is, that "the result of these forced labour farms indicates that with a better class of men on a voluntary colony, under the more favourable conditions which we could obtain in England, such additional return per man could be obtained as would not only make up the deficiency shown by forced labour farms, but provide all costs of administration and interest on capital." You think that that system might be adopted with advantage here?—I have noted in my paper that the cost is only 3*l.* per man; that is without the cost of administration (which is very heavy on a forced labour colony); and I should naturally assume, even in the absence of any evidence which supports the same conclusion, that the 3*l.* deficiency could be easily made up, and a sufficient sum beyond that to pay for the administration in consequence of the extra power put into the voluntary labour that we should get here.

9545. Taking Holland, the Veenhuisan colony is not very instructive for our purpose, I think?—No; my opinions as to the failure of this colony seem to be exactly the same as those formed by Mr. Willink, to judge from the evidence already before the Committee. At the time of writing I had not read Mr. Willink's evidence (I have since done so), but I had read his book upon those colonies.

9546. You agree substantially, I understand, in the opinion he has formed?—Yes, certainly; as to the results of this colony.

9547. In Belgium you found the same lesson taught, namely, that "voluntary candidates and forced labour vagrants" should not be mixed together?—Yes, that seems to me quite clear from the result of the Belgian experience.

9548. The Swiss experiment appears to be an instructive one; have you any particular remark to make to the Committee on that?—I have not visited the Swiss colony referred to in my paper. I first heard of it from Professor Mayor, and I have had some recent correspondence with the director of the colony in Switzerland, and it is from that source that I have been able to derive the figures that are given here.

Chairman—continued.

As I have stated in these notes, it seems to have been founded upon the only principles likely to be satisfactory in the case of colonies.

9549. With regard to the larger experiment in France, that you have actually visited, I believe?—Yes, that I was on at Easter this year.

9550. That experiment, I believe, is considered in France to have been a success?—Yes, it certainly seems to be looked upon there as an entire success.

9551. Does it conform to the ideas you suggest as most likely to produce a good result?—Yes, it seems to have quite conformed to those ideas; the only point being that at the commencement of the colony it was entirely waste land, and consequently there was a subsidy necessary for the first year or so; but now that there is sufficient produce coming from the colony the number of men is going to be increased.

Mr. *Mather.*

9552. Is it your opinion, from the experience you have had, and the personal visitation you have made of all the colonies, so called, which exist in Holland, Germany, Switzerland, and France, that such colonies are not at all based upon the principles which are relied upon for success in the scheme now before the Committee?—I think the scheme before the Committee differs very materially from the conditions under which these foreign colonies have been tried, and their nearest approach to it is undoubtedly the French colony.

9553. Therefore you would not take any of the financial results of those foreign colonies as necessarily bearing upon, or to any extent qualifying, the results which have been set before the Committee in the scheme now under discussion?—No, not necessarily so. I think there is ample evidence in England as to the results of labour upon the land, without relying in any sense upon continental experience, although I think continental experience is useful to refer to.

Chairman.

9554. Your answer leads me to ask you about the colony at Hadleigh. The Committee have been told that you have examined that colony; will you tell us what you found there and what you think of it?—In 1891 I was engaged professionally in connection with the colony, and I was largely instrumental in laying out the system on which it was worked during the first year. Since then I have not been specially interested in it; but I have visited it from time to time and know, therefore, as to the work that has been going on.

9555. Will you tell the Committee what you know of it?—Simply dealing with the financial results of the colony, the first balance sheet was published at the end of 1891, and that balance sheet showed a profit of 43*l.* in its first year's working, after paying all the costs of the men, the rent that was included in the ingoing valuation, and all other expenses attaching to those men that were employed in the land work, exclusive of the general administration costs.

9556. That being on an expenditure of about what amount?—The balance sheet shows an income

Chairman—continued.

income of 6,862*l.*; with payments of 6,819*l.* That is, of course, disregarding altogether the capital expenditure upon the actual cost of the colony.

Mr. *Heywood Johnstone.*

9557. I understand there is no charge for interest on capital in that?—There is no charge for interest on capital in that item.

Mr. *Mather.*

9558. What class of persons were put upon the colony?—The class of men varied a great deal. The first thing that was done with all the men volunteering was that they were put on a piece of test work, which was digging gravel. We required a large quantity of gravel for the purposes of the colony, and it was felt that that was an efficient labour test. Every man coming on the colony, therefore, had either to go into the gravel pit or else was employed upon digging the foundations for the houses. Of the first 160 men coming on to the colony, I think, about 30 left the colony during the first week, not being satisfied with this requirement forcing them to work on arrival.

Chairman.

9559. Where had they come from; had they come from the East of London mostly?—They had all come from London; they had passed some time in the shelter of the Salvation Army generally speaking; one or two came direct.

Mr. *Mather.*

9560. What class did they come from; were they the submerged tenth, or what?—They were decidedly from the submerged tenth. We had all classes to deal with. The men that were the most difficult to deal with were the men of education. We had one University man, I remember there; but the men who were best, and who formed the largest proportion, seemed to me to be the Army reserve men who had been drifting about in London with no occupation of any kind, having no special experience and no skill. They formed exceedingly willing workers, and were able at once to do such work that we could get our land improvement work carried out there at considerably less cost than if we had paid ordinary wages to ordinary men accustomed to that class of work.

Mr. *Stuart-Wortley.*

9561. Had you there any genuine unemployed skilled workmen *bonâ fide* short of work?—There were a few skilled workmen; but, as a rule, the men coming seemed to be those describing themselves simply as labourers.

Mr. *Bartley.*

9562. Do I understand you to say that the cost of management was included in the 6,000*l.* or not?—The cost of managing the farm was included, but not the general costs of administration; that is to say, the London administration, and the cost of sending the men down to the colony, and the cost of clothes were all considered

Mr. *Bartley*—continued.

as general administration, and were not charged against the farming department. What was included in the 6,819*l.* was the whole of the expenses and payments made to all the men engaged upon farming work. When they came down they were referred to different departments; and during this first year, particularly, very large numbers were upon building work.

9563. What was the capital?—The total farm capital has never exceeded 7,000*l.*; it has varied from 5,500*l.* up to 7,000*l.*; that is, of course, independent of the capital sunk on the building (which is a large sum), and other work not pertaining to the farm.

Mr. *Mather.*

9564. Do you mean Salvation Army work?—No, I mean the money sunk in such things as building, and in starting speculative industrial undertakings.

9565. But the Salvation Army have large meeting rooms, a church, and so on, on the land, have they not?—Only 600*l.* was spent on that.

9566. But that is all on the colony, is it not?—Yes.

Chairman.

9567. That capital is apart from the purchase of the soil?—Apart from the purchase of the land.

Mr. *Heywood Johnstone.*

9568. The 5,000*l.* does not include the purchase of the land?—The 5,000*l.* is the actual working capital invested in live and dead farming stock.

9569. As tenant's capital, in fact?—Yes, as tenant's capital.

Mr. *Lawrence.*

9570. Does your expenditure include tithes, rates, and taxes?—Yes, it would include all that.

Mr. *Heywood Johnstone.*

9571. Does it include rent?—In the first year it would include some charge for rent; there was a heavy valuation. It includes an amount of over 2,000*l.* paid as an ingoing valuation, including rent on all the fallow land and all the wheat land for the previous year and a-half; but that is the only period in which any rent has been included in the accounts of this colony.

Mr. *Bartley.*

9572. Was 170 about the number of the men all the time?—The number did not average so many as 170 in the first year on the farm.

9573. About how many would there be all the year round?—Possession of the colony was taken on the 1st of May and this first balance sheet was up to 30th November. At the time of possession being taken on 1st May there were no buildings there to accommodate any number of men, and the men came down gradually as the buildings were ready for them. I think the number reached about 200 in October.

 9574. I suppose

Mr. *Heywood Johnstone.*

9574. I suppose you have not the balance sheet with you?—I have not the balance sheet with me.

Chairman.

9575. You were dealing with the year 1891, and you told us there was a small profit of 50*l.* or so; will you go on with your account as to the financial result of the colony?—In the two next reports dealing with the years ending September 1892 and September 1893, there were deficiencies in both years; but judging from the criticisms of the balance sheet, that deficiency seems to have arisen entirely owing to the employment of men in industrial work, and a comparatively small number seem to have been employed upon the land. I see in the Blue Book on "Agencies and Methods for dealing with the Unemployed" it appears that in June 1893 out of 241 men upon the colony only 48 were employed upon land work.

Mr. *Mather.*

9576. They were trying to convert the whole place into a workshop for manufacturing goods for the market, were they not?—Yes; the principal industry seems to have been brickmaking; 130 men were engaged in brick works at that particular time.

Mr. *Bartley.*

9577. That was because the farm did not pay, I presume?—That is a question upon which there might be a difference of opinion.

Mr. *Mather.*

9578. It would seem to be just the contrary; for you have showed that in the first year when the men were kept to the land they made a profit, but when they started workshops they began to lose money?—A most important point on this farming question is to be noticed last year. Apparently at the beginning of last year it was found the industries did not pay, or were a substantial loss, and in the balance sheet up to last September 1894, the farm returns showed a profit of 532*l.*

Mr. *Heywood Johnstone.*

9579. Have you the balance sheet?—I have not the balance sheet, but I have the figures of receipts and payments. The receipts were 17,782*l.*, and the payments were 17,250*l.*

Mr. *Mather.*

9580. It would appear that when the men came back to the land they began to make a profit again?—I could not say the number employed upon the land; but the last time I was in the colony, some few weeks ago, I was told that those industries were practically given up, and 150 men were now employed upon the land.

Mr. *Heywood Johnstone.*

9581. I understand you have not got the balance sheets here?—No; but I have got extracts here showing the amount of the capital at the end of each of the four years.

Chairman.

9582. As I understand, you are not stating these facts of your own knowledge, but you are merely, for the convenience of the Committee, stating what you gather from the publications relating to the colony, as checked and illustrated by your own observation of the colony itself?—Yes, that is all. I am giving figures accessible to any member of the public taken from the four balance sheets of the colony.

9583. May I ask what is the book you have before you to which you have been referring?—It is a book called "Labour upon the Land," published in the Social Science series by Swann, Sonnenschein, & Co., summarising the results upon various colonies; it is a collection of papers read at a conference last September.

9584. Will you continue what you were saying?—I was simply saying that these four balance sheets published by the colony show the total capital expenditure upon the colony (that is to say, the amount charged in the balance sheet to capital account) to be in the first year ending 30th November 1891, 36,200*l.*, and in the succeeding three it was 69,300*l.*, 89,900*l.*, and 94,400*l* respectively.

Mr. *Bartley.*

9585. Is that on the farm colony?—Yes; that is the total capital invested and brought forward in assets in the balance sheets in each of those four years.

Mr. *Heywood Johnstone.*

9586. Ninety-four thousand pounds is the total capital last year?—£94,000 is the value of the assets claimed on September last.

9587. On what acreage?—The total acreage is about 1,150 acres in possession; but I believe there are certain farms that have been purchased that are not being worked by the army, which may be included in this capital.

Mr. *Bartley.*

9588. Do I understand you to say there were about 300 people employed?—The number varied from time to time. In June 1892 there were 235, and in June 1893 there were 241. This last is the number taken from the Blue Book on "Agencies and Methods for dealing with the Unemployed"; since that time they seem to have averaged about 300.

Mr. *Mather.*

9589. Does the amount you have given us include the expenditure on the full gauge railway which has been made, and other work of a public kind that they have undertaken?—Yes, this capital includes the whole expenditure they have made on the colony.

9590. Nearly all the men who come to the colony are men of depraved character or men who have more or less lost their character when they come to the colony, are they not?—Yes.

9591. It is a colony established for the purpose of saving souls, and not for the purpose of saving the land. That is the definition they gave to me when I was there. They do not care what it costs so long as they raise these men from a life of depravity; they choose the submerged

Mr. *Mather*—continued.

merged tenth by preference, and give first place to the worst characters, not caring what it may cost, provided that by a year or two years' residence they make them fit to go out to the colonies with some kind of training, or can restore them to a healthy life. I understand that is the sole object that they care about. They do not care anything about expenditure. They do not pass the men through the colony but keep them to reclaim them, do they not?—According to the last figures they have had 1,600 men through the colony, and they claim to have reclaimed a large proportion of them.

Chairman.
